PRINCIPAL CONTENTS OF VOLUME IV.

*** *Ed.* after the Name of a Company means that the Figures immmediately following refer to Editorial Notices of the Company; *Cor.* to Correspondence respecting it; *Meet.* Meetings; *L. c.* Law Cases affecting the Company; and *Mis.* Miscellaneous information not included under any of the above heads. Where the References are few, this distinction has not been observed.

A.

Aberdeen and Inverness, Proposed Railway, 420, 1048.
Accidents, Coach, 21, 91, 218, 275, 419, 464, 536, 794, 830, 861, 975, 998, 1019, 1038, 1078, 1091, 1107, 1180, 1811, 1293, 1294.
Accidents, Railway, *Ed.* 110, 214, 389, 429, 821, 909, 975, 997, 1069, 1166; *cor.* 1098, 1125; *mis.* 17, 22, 29, 59, 67, 69, 91, 94, 100, 105, 138, 209, 207, 215, 217, 218, 233, 263, 337, 339, 344, 382, 385, 404, 419, 430, 450, 452, 470, 498, 499, 500, 501, 502, 551, 598, 635, 637, 651, 663, 686, 723, 775, 799, 804, 816, 898, 979, 982, 991, 992, 1038, 1049, 1055, 1059, 1062, 1072, 1091, 1096, 1098, 1111, 1113, 1144, 1149, 1245, 1194, 1269, 1318, 1336.
Accidents on Railways, not "Railway Accidents," 40, 107, 156, 228, 334, 392, 396, 398, 407, 429, 448, 464, 487, 489, 498, 499, 536, 537, 606, 632, 651, 672, 681, 710, 728, 740, 767, 888, 907, 928, 1023, 1055, 1091, 1139, 1144, 1168, 1203, 1204, 1217, 1243, 1265, 1294, 1318, 1337.
Accidents, Prevention of, (Professor M'Gauley's Invention) 18, 48, 95, 208, 217, 561, 573, 662, 1210. See also Signals, &c.
Accounts, Railway, 620, 654, 701, 750, 771, 779.
Adjudications, Railway, see *l. c.* under the different Companies.
America, Railways in, 545, 573, 649, 1064, 1089, 1131, 1316.
American Engines, 672, 706, 728, 730, 747, 766, 1315.
Anthracite, Use of, on Railways, 1301.
Arbroath and Forfar Railway, 218, 570, 642, 673, 799.
Ardrossan Railway, 571, 643.
Atmospheric Railway, 586.
Atmospheric Resistance on Railways, 816.
Austria, Railways in, 596.
Aylesbury Railway, 156, 381, 969, 1221.

B.

Belgium, Railways in, 22, 464, 559, 586, 982, 1192, 1216, 1240.
Beverley and East Riding Railway, 52.
Birmingham and Derby Railway, *Ed.* 935; *cor.* 994, 1292; *meet.* 40, 284, 334, 849, 910, 925; *l. c.* 29, 534.
Birmingham and Gloucester Railway, *Ed.* 110, 111, 253, 367, 429, 510; *cor.* 275, 359, 360, 441, 469, 482, 515, 530, 579, 612, 625, 650, 684, 1053, 1078, 1102, 1137, 1150, 1172, 1211, 1315; *meet.* 301, 358, 503, 898; *l. c.* 445, 575, 609, 899, 1197, 1243, 1257; *mis.* 17, 93, 105, 112, 184, 178, 233, 314, 419, 430, 481, 483, 502, 524, 528, 570, 591, 595, 609, 637, 770, 771, 822, 881, 884, 910, 976, 1004, 1048, 1191.
Bolton and Leigh Railway, 643.
Bolton and Preston Railway, 41, 123, 493, 548, 575, 814, 982, 1217.
"Booking Through," Plan for, 999.
Boundary Junction Railway, 29, 220, 464, 642, 1107, 1159, 1162.
Brazil, Proposed Railway in, 796, 994, 1049, 1065, 1114, 1145, 1162.
Breaks, Railway, Davies', 128, 321; Adams and Buchanan's, 244, 263, 411, 441; Montgomery's, 727; Flanagan's, 1050, 1075, 1102.
Bristol and Exeter Railway, *Ed.* 177, 218, 416, 487, 605; *cor.* 514, 561, 647, 800, 1026, 1041, 1097; *meet.* 274, 940; *l. c.* 352, 554; *mis.* 489, 503, 597, 632, 824, 992, 1040, 1264, 1294, 1318.
Bristol and Gloucestershire Railway, *cor.* 1131, 1155, 1301, 1324; *meet.* 325, 404; *l. c.* 91; *mis.* 112.
Brunel, Mr., and Mr. Gravatt, 942, 1026, 1040, 1041, 1097. See also Bristol and Exeter.
Buffing Apparatus, Mr. Bergin's, 46; Sir George Caley's, 72a; Mr. Ricardo's, 1302.

C.

Caley, Sir George's, Railway Improvements, 181.
Canada Proposed Railway in, 11.
Canterbury and Whitstable Railway, 971, 1288.
Canterbury and Ramsgate proposed Railway, 74, 75, 86, 1213.
Carmarthen and Swansea Railway, 993.
Carriages, Improvement of, 662.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 157. Vol. III.—No. 1.] SATURDAY, JANUARY 2, 1841. [Price 6d.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

LOCOMOTIVE ENGINES.—A perfect knowledge may be acquired from the PRACTICAL DESCRIPTION of LOCOMOTIVE ENGINES, by MESSRS. STEPHENSON, with Forty Woodcuts of details and Four beautiful Engravings of Elevations, Plan, and Sections. 4to. 21s. All persons desirous of an acquaintance with this extraordinary Machine, especially Engine-Drivers, should possess this work.

JOHN WEALE, 59, High Holborn.

GEOLOGICAL MAP OF CENTRAL AND WESTERN EUROPE.—Mr. WEALE, after a long preparation, has now completed for publication a large GEOLOGICAL MAP of England, Wales, Scotland, Ireland, France, Germany, Switzerland; portions of Italy and the Austrian and Prussian States. Corrected to the present time. By W. S. HUGHES, F.R.G.S. Finely coloured, price £1 10s.; mounted and varnished on rollers, or folded in a case, price £2 2s.

*** The Geological features of these countries offer much research to those who seek information on minerals and the precious metals.

59, High Holborn.

This day is published, in one volume, quarto, nearly 600 pages, with seventeen well executed and useful Plates, price £1 11s. 6d. Dedicated to the Railway Capitalists of the United Kingdom. Including a beautifully executed Railway Map of the United Kingdom, by Dower.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND, practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, Member of the Institution of Civil Engineers. Besides a practical, historical, and statistical account of fifty-eight of the principal Railways of the United Kingdom, including the cost, traffic, fares, revenue, &c. &c., this volume contains a detailed account of practical experiments extending over upwards of five thousand miles, showing the *every-day* working of different lines graduated with first, second, and third-class gradients, with tabulated results and illustrative diagrams. Whishaw's reciprocating system of Railways, whereby *accidents by collision* are rendered *impossible*, illustrated by plans, sections, and a diagram.—Tables of the proportions of six hundred Locomotive Engines at work on British and Foreign Railways.—The Standing Orders of the Houses of Parliament relative to Railways, and Lord Seymour's Act complete.—The plates consist of elevations, sections, and details of various Locomotive Engines, Carriages, and Waggons.—Details of different Permanent Ways, Fencing, Drainage, Signals; Blackwall Carriage Apparatus, and diagram to illustrate the mode of working that Line.—Sections of eighty four different forms of Rails; &c. &c.

London: Simpkin, Marshall, and Co., Stationers' Hall Court, and through all Booksellers in the United Kingdom.

ADAMS'S BOW-SPRINGS having been in use on various Lines of Railway upwards of Twelve Months, and having been found, in addition to their acknowledged ease, materially to diminish draught, and to increase safety and durability, they are now offered with the utmost confidence to Railway Managements. Testimonials from various Railways may be seen at the Vertebrated Carriage and Bow-Spring Manufactory of Samuel Adams, 139, Drury-lane, London.

N. B. These Springs, applied to carriage trucks prevent the damage to patent cisterns from vibration.

LONDON AND BIRMINGHAM RAILWAY.—FINAL CALL of EIGHT POUNDS on the THIRTY-TWO POUND SHARES.—The Directors of the London and Birmingham Railway Company having resolved that a Fourth or Final Instalment of Eight Pounds per Share, payable on or before the 15th of January, 1841, should be called for on the £32 Shares of this Company, the Proprietors of such Shares are hereby required to Pay, on or before the appointed day, to any one of the undermentioned Bankers, the sum of £8 on each of their respective Shares, viz.:—

London—Messrs. Glyn and Co., 67, Lombard-street; or at the Office of the Company, Euston Station.

Birmingham—Messrs. J. L. Moilliet and Son; or the Birmingham Banking Company.

Liverpool—The Bank of Liverpool.

Manchester—Messrs. B. Heywood and Co.; or the Bank of Manchester.

The Bankers have been severally instructed to charge interest, at the rate of 5 per cent. per annum (according to the provisions of the Act of Incorporation), on all sums which shall be tendered after the 15th January.

GEORGE CARR GLYN, Chairman } of the Board of
I. F. LEDSAM, Deputy-Chairman } Directors.

By order,

R. CREED, Secretary.

December 19, 1840.

LONDON AND CROYDON RAILWAY.—Notice. On and after the 25th instant (Christmas-day), THIRD CLASS OPEN CARRIAGES will run from CROYDON to NEW CROSS only, and back, stopping at the intermediate Stations, at the following Fares, viz.:—

From New-cross		From		
6d. to	Dartmouth Arms	From		
6d. „	3d.	to Sydenham	From	
6d. „	4d. „	3d.	to Anerly	From
6d. „	4d. „	4d.	„ 3d. to Jolly Sailor.	
6d. „	6d. „	6d.	„ 4d. „	3d. to Croydon

R. S. YOUNG, Secretary.

14th December, 1840.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford-on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—

From the
SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver, 10s. 6d. each pair.

Omnibuses to and from every train—Fare 6d.

NEW METALLIC ROPE—NEWALL'S PATENT.—These Ropes have been found by experience to possess very great advantages over every other kind of Rope or Chain for Mines and Railways. They are *stronger, lighter, cheaper*, and *more durable*. Arrangements are being made for adequately supplying the demand.

Parties requiring such Ropes are requested to make application to the patentees. R. S. NEWALL & CO.

Dundee, 24th August, 1840.

LARCH SLEEPERS FOR RAILWAYS ON SALE. Apply to Joseph Martin, of Blakeholm, Newby Bridge, near Ulverston, Lancashire, agent to Messrs. Wakefield, of Kendal.

SOUTH-EASTERN RAILWAY.—To CONTRACTORS FOR FENCING.—The Directors will meet at their office, No. 10, Coleman-street, London, on Tuesday, the 2nd day of February, 1841, at half-past One o'Clock in the afternoon precisely, to receive Tenders from parties willing to contract to fence off the line of Railway with Post and Rail Fencing, from the Cranbrook and Maidstone turnpike road, in the parish of Staplehurst, to Grove Bridge, on the turnpike road leading from Ashford to Hythe, in the parish of Sellinge, being a distance of 20 miles or thereabouts.

The Specification and Conditions of Contract may be seen on application to Mr. P. W. Barlow, the Resident Engineer, at the Railway Office, Tunbridge, and at the Office of Mr. Thomas Thurston, Land Surveyor, at Ashford, on and after the 1st day of January, 1841.

The Directors will not consider themselves bound to accept the lowest Tender, nor will any Tender be received after One o'Clock on the day appointed for receiving the same.

By order of the Directors,

J. S. YEATS, Secretary.

Railway Office, 10, Coleman street,
23rd Dec. 1840.

THE LONDON STOCK AND SHARE LIST, published every Saturday evening. Terms, £1 1s. per annum. Postage, 9s. extra, payable in advance.

This List contains the closing prices of each day's actual transactions upon the Stock Exchange, from Monday to Saturday inclusive. The length in miles, miles opened, number of shares, amount per share, amount paid up, last calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom. The present nominal value, and every other essential particular of the principal Insurance Companies, Joint-Stock Banks, Bridges, Docks, Institutions, Canals, Gas-Light Companies, Water Works, British and Foreign Mines, and other Miscellaneous Joint-Stock Companies, North American Securities, Government Funds, Foreign Stocks, Course of Exchange, Bank of England Averages, Private and Joint-Stock Bank Circulation, Grain Averages, Remarks upon the Money Market, &c. This List is got up in a most convenient form for binding, is peculiar for its lucid arrangement, and contains more matter than any other similar publication.

The same Proprietors also publish THE LONDON DAILY STOCK AND SHARE LIST, in which is given the ACTUAL DAILY TRANSACTIONS upon the Stock Exchange to 4 o'Clock, p. m. Published every evening. Terms, £3 3s. per Annum. Postage, 30s extra, payable in advance.

They likewise publish A DAILY LIST OF NOMINAL QUOTATIONS, containing the "Jobber's" NOMINAL PRICES of the leading Railway Shares, Consols, and Spanish, at the commencement of the day, 10 o'Clock, a. m. and at the close of the market, 4 o'Clock, p. m. Published every evening. Terms, £2 10s. per Annum. Postage, 30s. extra, payable in advance.

These Lists have been established nearly 12 months, under the patronage of the most eminent Members of the Stock Exchange, Bankers, and other Capitalists interested in Public Securities, and are attended to by parties who have access to the best information, and are practically acquainted with the markets.

Orders for the regular supply of the above Lists to be forwarded to the Proprietors, J. S. TRIPP & Co., 12, Copthall-court, London.

PATENT LEVER WATCHES.—Messrs. AVERY and Co., Watchmakers, &c., 36, Ludgate-street, St. Paul's (opposite Messrs. Everington and Co.'s) offer to their Friends and the Public, their celebrated PATENT LEVER WATCHES, capped and jewelled in four holes, double bottom silver cases, maintaining power, &c., at 6 guineas, and with 2 plates 8 guineas, of workmanship of the highest class of excellence, equal to those charged 25 per cent. higher. Gentlemen's levers, in gold cases, 14 guineas and upwards; ladies', with gold dial, at 12 guineas and 14 guineas. Good new Silver verge Watches at 52s. 6d. A warranty with every Watch for 12 months. N.B. An immense stock of Jewellery and Fancy Goods at 25 to 30 per cent. below the usual London charges.

NORTH KENT RAILWAY, Office, 42, Lombard street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

EAST-ANGLIAN RAILWAY FROM LONDON TO CAMBRIDGE, NORWICH, AND YARMOUTH.

A Meeting was held on Wednesday, at the East India and Colonial Club-rooms, in Suffolk-street, Pall-mall, for the purpose of considering the propriety of establishing a Railway to join the Northern and Eastern Railway at Bishop's Stortford, to Norwich and Yarmouth, by Cambridge, Newmarket, and Thetford.

The Meeting, which was both numerous and highly respectable was attended by the Marquis of Douro, M.P., W. L. Chute, Esq., M.P., Benjamin Smith, Esq., M.P., Mr. Alderman Farebrother, Isaac Jermy, Esq., Recorder of Norwich; Samuel Bignold, Esq., Edward Varnish, Esq., General Blachford, Major Head, Captain Kerr, Richard Broun, Esq., George Robinson, Esq., William Taylor, Esq., W. J. Taylor, Esq., J. W. Smith, Esq., Thomas Hammond, Esq., (Yarmouth), J. L. Cataude, Esq., (Yarmouth), J. Harman, Esq., Chairman of the Brighton Railway; D. M'Lean, Esq., William Drake, Esq., (East Dereham), Mr. Mann, (Norwich), William Park, Esq., (Thetford), Christopher Spanton, Esq., (Attleborough), Richerd Lloyd, Esq., A. A. H. Backwith, Esq., Governor of the Corporation of Guardians of Norwich; William Andrews, Esq., William Larton, Esq., Jas. Sowerby, Esq., Joseph Parkes, Esq., W. M. Kitton, Esq., of Norwich, with numerous other influential gentlemen.

W. L. W. CHUTE, Esq., M.P., was called to the Chair.

The MARQUIS OF DOURO, in moving the first resolution, observed, that some people objected to Railways altogether, and thought that they did not contribute much to the public convenience; but even those persons would agree that a Railway to Norwich was necessary when they were made aware of the fact, that those places which had an easy and quick communication with London by means of railway had an advantage of which Norwich and Yarmouth had hitherto been deprived, and which proved highly injurious to the commerce and agriculture of these populous and important towns.—(Hear, hear.)

This resolution, as well as the others which followed it, will be found in our advertising columns.

SAMUEL BIGNOLD, Esq., of Norwich, seconded the resolution. He felt that the railway was necessary for the welfare of the city of Norwich, which stood particularly in need of the benefits of a railway communication with the metropolis. (Hear, hear.) He had lately had an opportunity of communicating with the leading manufacturers in Norwich, and there was an universal complaint that the manufacturing interest was suffering greatly in consequence of not having the advantage of a railway. The merchants and traders of London could visit York and return to London almost in the time they could now merely go to Norwich. He was therefore prepared to support to the utmost the formation of a railway to Norwich, but he would not lend that support to any project which he was not fully satisfied was set on foot for the public good. If he could for a moment suppose there was any political object, or any other object in this project than the promotion of public interests and the welfare of his fellow-citizens, he would immediately retire from it. (Hear, hear.) Two years ago there was a talk of a railway to Norwich, but there was then an unwillingness on the part of the citizens of Norwich to put down their names for shares, because they were apprehensive that the project would terminate like the Eastern Counties' affair—that the railway would be completed for about thirty or forty miles from London, and Norwich left in the lurch. He himself stated at the time, that if they would commence the work at Norwich he would take shares to the amount of 1000*l*. He was prepared to say the same again; and if it could be shown to the citizens of Norwich that there was a *bona fide* intention of connecting Norwich with the metropolis, people of all shades of political opinion would come forward and support it. (Hear, hear.) He highly approved of the line now contemplated, and would support it by taking shares, although it would not be in his power, being a commercial man, to take any active part in the management. Mr. Bignold concluded amidst great applause, by seconding the first resolution, which was carried unanimously.

B. SMITH, Esq., M. P. for Norwich, proposed the second resolution, and expressed his opinion that the line proposed by Mr. Rastrick, the engineer, was a good line. Indeed he did not scruple to say that he had always been of opinion that a line in the direction of Cambridge would be the cheapest and most preferable.

THOMAS HAMMOND, Esq., a Magistrate of Yarmouth, and Chairman of the Fishing Merchants' Club, seconded the resolution. He was happy to say that in the town of Yarmouth all party feeling with regard to this matter was completely buried in oblivion. Every one must feel the importance of a railway not only to Yarmouth and Norwich, but to the whole county—(Hear, hear)—and he was authorised to state on behalf of the trading and fishing interests in the town of Yarmouth, that they would lend their utmost endeavours to carry the measure into full effect (Cheers.) He agreed with Mr. Bignold, that the work should be commenced simultaneously at each end, because Norwich and Yarmouth had been thrown in the background by the conduct of the Eastern Counties' Railway Company. He understood that the Members for Yarmouth were out of town, otherwise he had ascertained that they would have attended this Meeting; but he would state for the information of the gentlemen present, that a few weeks ago he had a long conversation with them upon the subject of a line of railway to Yarmouth, and they both pledged themselves to use their utmost endeavours to have it carried into operation. (Cheers.)

Mr. RASTRICK then read the following extracts from an able and elaborate Report which he had prepared:—

"The line proceeds from Bishop's Stortford to Cambridge, thence to Newmarket, Mildenhall, Thetford, Attleborough, Wymondham, and Norwich to Yarmouth.

"In carrying out the line, but little difficulty will be experienced in getting through Parliament as to the part between Bishop's Stortford and Cambridge, inasmuch as all questions with the landowners have been settled in the Act obtained by the Northern and Eastern Company, but subsequently abandoned by them for want of funds.

"The geological character of nearly the entire line is the chalk formation furnishing materials of the most favourable description, both for cuttings and embankments, and the road when once made, may be maintained at the minimum expense.

"The most expensive part of the line is between Bishop's Stortford and Cambridge, and the time required for its completion would be about three years.

"This part of the line has, however, extensive advantages, forming, as it does, the key of all railways to the metropolis coming in this direction from the north, as well as from Norwich and all other parts of Norfolk, Lincolnshire, Huntingdonshire, Cambridgeshire, Suffolk, and some portion of the county of Middlesex, thereby insuring a good dividend to the shareholders upon that portion of the capital expended in forming it.

"The obtaining the proprietorship of this part of the line is therefore most important.

"No tunnel will be required from Cambridge to Yarmouth, a distance of nearly 80 miles, and there are no extraordinary deep cuttings nor embankments, and only one viaduct, and no deep ravines or rapid rivers to cross, whilst the materials are of such an excellent quality of cuttings that they may be cut upright, and a large portion of the land is of so inferior a quality, that its purchase will form an inconsiderable item in the expenditure, and the line does not pass through or interfere with any gentleman's park or pleasure grounds, nor in any way passes in an objectionable manner through any town.

"The whole line will form an easy and expeditious means of communication from, to, and between Cambridge, Newmarket, the Swaffhams, Fordham, Soham, Mildenhall, Thetford, Brandon, Harling, the Buckenhams, Kenninghall, Attleborough, Hingham, Wymondham, Norwich and Yarmouth, affording facilities for branches from Ware, Hertford, Huntingdon, St. Neots, Ely, Bury St. Edmund's, Downham, Swaffham, Dereham, Lynn, and thence to Wisbech, Stamford, and the whole of the improving and important district of the Great Bedford Level of the Fens; and also forming the natural communication between the metropolis and the contemplated new district of the Great Level of the Wash.

"With all these populous cities, towns, and villages, there can be no doubt but that the passenger traffic along this line will be immense, and the line between Cambridge and Yarmouth can be made in the short space of two years, whilst that from Bishop's Stortford will require only one year longer—so that this entire line will be open to the public in three years.

"The cost between Cambridge and Norwich is estimated at a less sum per mile than any other railway in the kingdom of so great an extent can be made for, this part of the line extending for 63 miles.

"The cost between Norwich and Yarmouth is estimated at a still less sum per mile; this part of the line extending over about 18 miles, and giving the greatest possible facility to the fishing interest in sending off their fish to the metropolis, and the interior of the country, and forming the most advantageous and important station in the kingdom for the northern foreign mail packets."

Mr. Rastrick also produced an estimate of the expenses of the formation of the line, together with a calculation of the traffic from data carefully collected, showing a profitable return to the shareholders for the capital to be invested.

The resolution was put by the Chairman and carried unanimously.

Mr. BECKWITH then handed to the Chairman a letter from the Sheriff of Norwich, expressing his most decided approbation of the meeting, and the proposed line of railway.

Mr. Bignold proposed the third resolution, which was seconded by E. Varnish, Esq., and carried unanimously.

Mr. BIGNOLD rejoiced to learn from the Report of their talented engineer that the contemplated line of railway would not interfere at all with the parks or estates of private gentlemen, and he hoped that circumstance would conciliate many in their favour. He alluded to that statement in the Report more particularly, because a very intelligent and influential gentleman, who he believed was honoured and respected by all who knew him (Mr. Richard Gurney), had expressed, through the press, his hostility to railways, because they cut through and destroyed valuable estates, but when that gentleman ascertained that Mr. Kastrick's line would commit no such injury, he (Mr. B.) hoped that his extensive and powerful influence would be exerted in favour of an undertaking that could not fail to prove highly beneficial to his fellow-citizens. (Cheers.)

Mr. RASTRICK wished to state that there was one nobleman's park that would be affected by the line, namely, Lord Braybrooke's, but the Act obtained by the Northern and Eastern Counties' Railway Company, would obviate all difficulty in that respect.

ISAAC JERMY, Esq., Recorder of Norwich, and Chairman of the County Quarter Sessions, rose to move the next resolution. In doing so he observed, that a meeting had been advertised, to be held at Norwich next Thursday. To the requisition calling that meeting were the names of a great number of men of property and influence, and that meeting had been called for the purpose of considering, not what particular line should be adopted, but what was best to be done without regard to the interests of solicitors, agents, (engineers, or any party whatsoever. (Hear.) For himself he could conscientiously state that he discountenanced anything of the sort, but before they could expect to enlist the public in their cause, they must satisfy them that they were determined to carry on the undertaking perfectly independent of all private interests. (Hear, hear, hear.) The best way in which they could manifest such a determination, was to tender their co-operation to the meeting about to be held at Norwich, to afford them every information and explanation in their power, and to unite with them in carrying out the common object. If that meeting desired a little deviation from the proposed line, the object should be to endeavour to meet their view. So if meetings should be held in Suffolk or Cambridge, they ought to be met in the same spirit. (Hear, hear.)

J. HARMAN, Esq., Chairman of the Brighton Railway Company, seconded the resolution. He was in no way connected with the counties of Norfolk and Suffolk, but was a London man. He had, however, been engaged in a very large undertaking of the same character, and having had the plans and sections of the proposed railway to Yarmouth laid before him and explained by Mr. Rastrick, who had acted with him in carrying out the London and Brighton Railway, he had no hesitation in saying that he fully approved of the undertaking. At the same time he would state his conviction, that if they went before Parliament with any decided opposition they would find it difficult to get parties to co-operate with them, if gentlemen who were interested in the promotion of the railway did not come forward in a manner to convince the monied interest of London and other places that they were earnest in their object. There ought, therefore, to be the greatest co-operation throughout the whole of the line. He could safely say, having looked at the plans and sections, and the estimates of Mr. Rastrick, and having devoted some time to his able Report, that that gentleman had furnished them with an estimate founded on honest principles. Those who embarked in the undertaking need be under no apprehension of not receiving ample remuneration for their capital and trouble. He should be glad to render all the assistance in his power in carrying out the undertaking, but he must first of all be persuaded that the gentlemen who had projected it were in earnest, and felt the necessity of a railway.

CHRISTOPHER SPANTON, Esq., Attleborough, stated, that he had received a note from Sir Thomas Beevor, expressing his approbation of the undertaking. He had waited on Lord Albemarle, who had told him that his engagements would prevent his attending the Meeting, but that he was ready to assist the measure by all the means in his power, and his lordship had distinctly authorised him (Mr. Spanton) to state to the Meeting, that he was perfectly satisfied the railway would prove advantageous to his property and the country in general. (Hear, hear.) A letter had also been put into his hand by Mr. Cufaude, of Yarmouth, from the mayor of that borough, approving the line; and he could assure the meeting that throughout the district in which he resided (Attleborough) the landowners were unanimously in favour of the proposed railway, (Hear, hear.)

Digitized by Google

WILLIAM CLARK, Esq., Clerk of the Peace of Thetford, begged leave to state that he had been requested to attend the Meeting on the part of Thetford, and to express the concurrence of the inhabitants of that borough in the measure, and their desire to see it carried into full operation. He (as the agent of my Lord Ashburton) could also state that as the line projected by Mr. Rastrick would not interfere prejudicially with his lordship's estate, he (Lord Ashburton would support it. The intended railway would certainly pass through Lord Ashburton's property as well as his own, but he (Mr. C.) would cheerfully submit to any thing that was for the good of Thetford and the country in general. (Hear, hear.) John Deck, Esq., of Bury, had also written to say that he highly approved of Mr. Rastrick's line, and that the inhabitants of Bury were anxious to see the main trunk of the railway established, in order that a branch might be carried on to Bury, and that he was convinced the Marquis of Bristol, ever anxious to promote the interests of that borough, would give the undertaking his cordial support. (Hear, hear.)

Mr. DRAKE stated that he should not have obtruded himself upon the notice of the meeting but for the observations of Mr. Harman, the Chairman of the Brigton Railway. Having, however, been in communication with several of the noblemen and gentlemen whose names had been mentioned in the announcement of the meeting to be held in Norwich, and holding letters from Lord Sondes and others of those parties, containing assurances that they were not pledged to any particular line, he felt it due to the meeting, and particularly to those London capitalists who had honoured the meeting with their sanction and presence, to assure them that the requisitionists of the Norwich meeting would approach the discussion of the subject unfettered, and quite prepared to adopt the most practicable and least expensive line; and, indeed, had they been aware of the great sacrifice in expense and labour which had been incurred in maturing and perfecting the able plans, sections, and report, which Mr. Rastrick had this day produced, he (Mr. D.) felt assured that these gentlemen would not have felt any such meeting necessary.

Mr. DRAKE added that he was also intrusted with letters from influential inhabitants of the important town of Lynn, expressive of cordial co-operation in the object of the meeting, and begging that the extension of the line to that densely-populated and wealthy district might not be lost sight of; which letters were handed in to the Chairman.

The resolution was then put and carried.

Mr. VARNISH proposed the 5th resolution, which was seconded by D. M'LEAN, Esq., and carried unanimously.

A. A. H. BECKWITH, Esq., Governor of the Corporation of the Court of Guardians of the City of Norwich, then moved a vote of thanks to the Chairman. He observed that one advantage that would attend the railway would be the employment of a vast number of poor persons, who were at present in a state of the most abject poverty. He had been informed by several manufacturers, that the falling off in the staple trade of Norwich was mainly owing to the defect of communication between Norwich and the metropolis, as compared with the facility of communication between London and the northern counties. It was of vital importance to Norwich that the railway should be completed as soon as possible, and it would prove a great benefit not merely to commerce, but to agriculture.

R. LLOYD, Esq. seconded the vote of thanks, which was carried amidst great applause.

The CHAIRMAN returned thanks, and observed, that he had felt great pleasure in attending the meeting. As one of the representatives of the county, he considered it to be his bounden duty to do all he could to benefit it, and he thought he could not benefit it more than by assisting in the accomplishment of that great measure they had met to carry out. (Hear, hear.) He thought he might now congratulate the county on the fair prospect of attaining that desirable object, and the county of Norfolk would no longer be the only county that was not blessed with the advantage of a railway communication. Great unanimity had prevailed at that meeting, and he hoped it was an earnest of the union and good feeling that would exist throughout. If they made a strong pull they must succeed, and it was his opinion, after due consideration, that Mr. Rastrick's line was the one that ought to be adopted, going as it did near Cambridge. (Hear, hear.) No agricultural county could possibly raise money enough for the purposes of a line of this nature, and therefore they must of course look to London and other places for the principal part of their funds. There was, however, only one way of inducing the monied interest to render assistance, and that was by taking shares themselves. Let every gentleman who wished to see a railway to Norwich and Yarmouth established, just calculate upon the advantage he himself would derive from it, say fairly what he would give to see it accomplished, and then put down his name for that amount of shares. (Hear, hear.) They would then very soon derive assistance from capitalists. (Hear, hear.) In conclusion, he begged again to return his sincere thanks for the honour they had done him, and would be happy to meet any gentlemen who could conveniently attend the meeting to be held next Thursday in Norfolk.

In pursuance of the above resolutions a Company was immediately formed, and shares to a large amount taken in the room.

MANCHESTER AND BIRMINGHAM RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL General Meeting of the shareholders in the Manchester and Birmingham Railway Company was held on the 24th ult. at the York Hotel, Manchester, convened by an advertisement in the following terms:—

MANCHESTER AND BIRMINGHAM RAILWAY.—Notice is hereby given, that a special general meeting of the proprietors of the Manchester and Birmingham Railway Company will be held on Thursday, the 24th day of December instant, at twelve o'clock at noon precisely, at the York Hotel, in King-street, Manchester, in order to consider and determine upon the propriety of borrowing any sum or sums of money not exceeding the amount which the said Company are authorised to borrow on the credit of the Manchester and Birmingham Railway; and, if so decided upon, to make such order or orders as may be necessary to empower the said Company, or the Directors thereof, to mortgage, assign, and charge the property of the said undertaking, and the rates, tolls, or other sums arising or to arise by virtue of the said Act, as a security for any money so borrowed as aforesaid, with interest to or for the benefit of the party or parties, or his, her, or their trustee or trustees, who shall advance the same.

There was not a numerous attendance, about fifty gentlemen being present. THOMAS ASHTON, Esq., of Hyde, Chairman of the Board of Directors, presided.

R. C. SHARPE, Esq., one of the Directors, having read the above advertisement,

The CHAIRMAN said—You have heard the advertisement, gentlemen; if any gentleman has any observations to make, I shall be very glad to hear him.

After a short pause,

Mr. SLATER, one of the law clerks, said—It is moved by Mr. John Brown, and seconded by Mr. Leo Schuster, "That the Manchester and Birmingham Railway Company be empowered forthwith, or so soon as may appear practicable, to borrow and take up at interest, under the authority of their Act of Parliament, any sum or sums of money not exceeding 700,000*l.* on the credit of the undertaking; and that the Directors of the said Company be, and are hereby empowered, to mortgage, assign, and charge the property of the said undertaking, and the rates, tolls, or other sums arising or to arise by virtue of the said Act, as a security for any money so borrowed as aforesaid, with interest, to the benefit of the party or parties, or his, her, or their trustees, who shall advance the same."

After a pause,

The CHAIRMAN said—Gentlemen, you have heard the resolution. It is moved by Mr. Brown, and seconded by Mr. Schuster. If you wish it to pass in its present shape, you will signify it in the usual manner.

Dr. LYON—I think, Mr. Chairman, it will be surely premature to pass this resolution without any inquiry.

The CHAIRMAN—I waited in the expectation of something being said, but I have heard no inquiries.

Dr. LYON—For my own part I should be glad to see some one who holds a larger interest in the Company than I do, coming forward to make inquiries. At the last meeting it was stated that the Directors would soon be able to form a tolerably correct estimate of the total cost of the line. I think the present is a very favourable opportunity for receiving that estimate, if they are prepared to give it. If 700,000*l.* be actually necessary to bring the line to completion, it shows that the cost will be very large indeed, much beyond anything that was anticipated—it will be near three millions in all.

The CHAIRMAN—There will be another meeting for that purpose, you know; this is only a special meeting, for the purpose that has been stated.

Dr. LYON—But I think the question as to the total cost, very fairly comes before us.

R. C. SHARPE, Esq. (a Director)—I think I may call to Dr. Lyon's remembrance that the estimate he refers to was promised to be given at the next half-yearly meeting—the next general meeting. This is a special meeting, which has arisen in consequence of our application for authority to borrow money. But the Directors stated that they would be prepared with their estimate at the next general meeting of shareholders; and it was so understood.

Mr. ALBRECHT—Will you allow me to ask, what is the length of the line from Manchester to Crewe?

The CHAIRMAN—Thirty miles.

Mr. ALBRECHT—Then, if I understand right, you want to borrow 700,000*l.* to make the line to Crewe?

Mr. SLATER (Law Clerk)—"Any sum not exceeding 700,000*l.*," are the terms of the resolution.

The CHAIRMAN—Yes; that is the extent of the power we have under the Act of Parliament.

Mr. H. NEWBERY (a Director)—It is also to include the Macclesfield branch, of 10 miles. Dr. Lyon will recollect that it was stated at the last meeting what would be the probable cost of the line between Stockport and Crewe.

Dr. LYON—Yes; 23,500*l.* a mile.

Mr. NEWBERY—You have already had that estimate, the contracts for that part of the line being then all let. At present, the Directors are not in a position to say what will be the probable cost of the whole, until we have let the Macclesfield line of ten miles. At the next meeting, I expect we shall be in a position to do so. But in this, I am speaking entirely on my own authority. I don't know that it will be so.

The CHAIRMAN—And there is the station.

Mr. NEWBERY—Yes; there is the station in Store-street (Manchester), the contract for which is not let yet.

The CHAIRMAN—The Crewe line was let on very favourable terms indeed.

Mr. NEWBERY—It does not follow, because we take power to borrow 700,000*l.*, that we shall want it all. My own opinion is that we shall not want it all.

The CHAIRMAN—It is what the Act gives us power to borrow; it says any sum not exceeding that.

Mr. SHARPE (Director)—It would have been useless to come twice before the shareholders for this purpose.

Mr. G. R. CHAPPELL (a Director)—Besides, I think it is due to the public that they should know that we have authority to borrow to that amount, as a security to any who may lend us money on this undertaking. I think that the security we are now giving will be found to be as good as any in the kingdom of a like nature; because, we have the power to call up a certain sum from the shareholders, in addition to which we have the power to borrow a certain sum—all which is a security to those who may lend us. And though we take power to borrow 700,000*l.*, it does not follow that we shall want it all, and it need not be called for. This resolution is merely to show that we have that power, and to give security to the public.

Mr. NEWBERY—If any shareholder wishes to ask any other question, we are very much disposed to give all the information in our power. Would Dr. Lyon, or any other shareholder, put any question that he thinks proper? The Directors here are quite willing to give any information that the shareholders want. There is nothing we know of which we want to keep from them. The more questions they put, and the more answers we give, I am quite sure the line will be the better thought of. (Applause.)

Mr. ALBRECHT—I believe a great many of the shareholders think that it is a great deal of money which has been spent, and is to be spent. It shows

Digitized by Google

so much. The sum of 1,200,000*l.* has been called up; you have made six miles of the railway; and calling it 24 from Stockport to Crewe, and reckoning it to cost 25,000*l.* a mile, that will be only 600,000*l.* from Stockport to Crewe. Then, from Macclesfield to Crewe, we are not aware what the cost will be; very likely it may cost as much as from Stockport to Crewe. Then you will want this 700,000*l.*, or a great portion of it, to make this part of the line!

The CHAIRMAN—No, no; we don't want it all; we only take power to borrow that sum.

Mr. ALBRECHT—Well, I calculate that you will only want 500,000*l.*

The CHAIRMAN—You forget the Macclesfield branch of ten miles.

Mr. ALBRECHT—No; I supposed that a great portion of the money was wanted for that line.

Mr. JOHN BRADSHAW (a Director.)—A great portion of money has been expended for purchases of land for that line.

Mr. ALBRECHT—I understood that 1,200,000*l.* had been paid up by the shareholders.

Mr. NEWBERY (Director)—No; it is not all paid up, but we have made calls to that extent.

The CHAIRMAN — When we have called up 1,200,000*l.*, that is, four-sevenths of our whole capital, then we are entitled to borrow.

Mr. J. BRADSHAW—And that sum has been called for, but all the calls are not yet paid.

Mr. ALBRECHT—I certainly don't see that I have the right to inquire into this, but I think it would be satisfactory to the shareholders, who perhaps feel something like myself, to know how much short of the 1,200,000*l.* has been paid up.

Mr. M. LYON (a Director)—The sum paid up is from 130,000*l.* to 160,000*l.* short.

Mr. SHARPE (a Director)—There is not quite half of the entire capital which we are empowered to raise, paid up. But the arrears are daily coming in; they may be all paid up to-morrow. In round numbers there is 1,050,000*l.* pretty nearly paid up.

Mr. NEWBERY (a Director)—We have power to call up 70*l.* a share, which, upon 30,000 shares, is 2,100,000*l.* We have already called up 1,200,000*l.*, of which sum 150,000*l.* or 160,000*l.* is still unpaid. But that includes the arrears upon the whole of the calls; it includes the last call just made, which has only been made about a month. It does not follow, you know, that we must go on calling up the remaining 900,000*l.*, nor does it follow that we should borrow the whole of the 700,000*l.* We wish to ease the shareholders as much as possible; and if we can borrow the remainder of the money that will be wanted, we shall make no further calls. But it does not follow that we shall borrow 700,000*l.* because we have power to do so.

Mr. ALBRECHT—It does not follow that you will want it.

Mr. NEWBERY—Not at all.

Mr. ALBRECHT — And when the arrears of 160,000*l.* come in, then you will have occasion to borrow less.

Mr. NEWBERY—And as soon as we let the Macclesfield branch, we shall be able to state the entire cost of the whole line, the 40 miles. Perhaps it might be as well to state why we have not let this part of the line. The contracts were let, but in consequence of Mr. Winterbottom's unfortunate affair, who had the management of one part for Sir Salusbury Davenport, it has thrown it to one side, and we are now in treaty with Sir Salusbury Davenport, to remedy some defects in consequence of Winterbottom going off as he did. The very moment *that* is rectified, and as soon as we see our way clearly without burdening the shareholders too much, we shall then commence the line. I have no doubt the line will be commenced in the spring of next year, and that it will be completed as soon as the main line to Crewe.

Mr. SHARPE (a Director).—Yes, that will be the case.

Mr. NEWBERY.—I can assure you, and the Macclesfield people, that we have no intention whatever of throwing that branch overboard; many of them, I know, have thought so; but the delay is entirely owing to Winterbottom's affair.

Mr. SHARPE—Had it not been for that, the contracts would all have been let.

Mr. WINSOR—Can you inform us what the cost is likely to be?

The CHAIRMAN—I think it was estimated at 22,000*l.* a mile, by Mr. Buck, at the last meeting.

A SHAREHOLDER—Is the Company suffering any pecuniary loss by Mr. Winterbottom?

Mr. NEWBERY—I hope not; but that is really a difficult question just now. We did pay him some money; but I speak with great difficulty. All that I am afraid of is, that I should be disclosing too much of the case.

Mr. ALBRECHT—It is not of a serious nature, at all events.

Mr. NEWBERY—The amount in dispute is one thousand pounds.

Mr. ALBRECHT—Oh, that is a mere trifle.

Mr. NEWBERY—But I believe that any twelve men would say, from the documents which we have in our possession, signed by Sir Salusbury Davenport, that we never should be called upon to pay a fraction of that money over again. I believe Winterbottom had a complete authority to receive the money.

Mr. CHAPPELL—He had authority to sell the land, and to receive the money.

The CHAIRMAN (after a pause)—Is there any other question that you choose to ask?

Mr. WINSOR—I should like to ask how the arrangement with the Grand Junction Company is going on?

The CHAIRMAN—That is not the business of to-day.

Mr. WINSOR—I am aware of it: but when you asked if there were any other questions to put, I thought you put it generally, the other business being concluded.

Mr. NEWBERY—I don't exactly understand your question, Mr. Winsor.

Mr. Winsor—I meant to ask, if any arrangement had been come to between you and the Grand Junction Company?

Mr. NEWBERY—Oh yes; that was settled eighteen months ago.

Mr. WINSOR—But it has never been given to the shareholders.

Mr. NEWBERY—Exactly so; but we stated, you remember, that we had valid and sufficient reasons for not disclosing it. At present there is a Company intimately connected with this, who will be in Parliament next session, and I leave it to any gentleman to say, whether we should put ourselves in the position that we might do by disclosing this arrangement.

Mr. WINSOR—I should like to know whether this Company has any connection with the Extension Company?

Mr. NEWBERY—Upon my word, that is a very dangerous question. There is a meeting of that Company called for the 11th of next month, and those questions might be very properly put at that meeting; but I should not like us to speak so as to damage that Company.

Mr. WINSOR—But are our Company going to Parliament.

Mr. NEWBERY—Certainly not; we have nothing of the kind going on.

Mr. ALBRECHT—All you are going for is going to the public for the money.

The CHAIRMAN, having again read the resolution put it to the meeting, and it was carried unanimously.

Mr. SHARPE—As you have empowered the Directors to borrow money on behalf of the Company, of course it will be the object of all connected with it to forward the object of the meeting by obtaining loans. The Directors have drawn up a sketch of what they consider the exceedingly good security which this railway offers to those who have money to advance on loan. There are a number of them, which are very much at the disposal of gentlemen who think that they can obtain money on loan by placing them in the hands of their friends.

The following is a copy of the document referred to:—

The security for loans to the Manchester and Birmingham Railway Company is peculiarly great. By the terms of their Act of Parliament the interest of money borrowed is required to be paid half-yearly, in preference to any dividends being paid to the proprietors; and if the interest of any loan be in arrear for thirty days, a receiver of toll may, after ten days' notice, be appointed, and the money so received applied in discharge of the interest due.

The whole works of the Company with the tolls and rates payable to them, will be mortgaged to the parties advancing the money, and the usual provisions are introduced in their Act, for giving to mortgagees the means of recovering the principal money, as well as the interest, by the appointment of receivers, &c.

The Company have already called for from the proprietors	£1,200,000
They have power to call for the further amount of	900,000
Total capital, which can, if required, be called up from the proprietors	2,100,000
The Company are empowered to borrow on mortgage	700,000
Total	£2,800,000

But as the works of the Company will not cost (including all expenses) the 2,100,000*l.* which the proprietors may be required to provide, the object of taking loans on mortgage is merely with a view to relieve the proprietors from further calls. The power to make further calls, will, however, remain, and if the whole sum of 700,000*l.* be borrowed, the mortgagees would have, in the liability of the proprietors, a reserved capital more than equal to discharge the sum advanced, independently of the railway and works. This is a protection which, it is believed, no other public Company has been in a situation to offer. The line has been opened to Stockport six months, producing from this short portion of the railway (only five miles) an income of more than after the rate of 15,000*l.* per annum, and the works on the remainder of the line will be completed in 15 months.

Manchester, 4th December, 1840.

The CHAIRMAN having vacated his seat, it was taken by Mr. John Bradshaw.

Mr. WINSOR—I beg leave to move a vote of thanks to Mr. Ashton, for his able and satisfactory conduct in the chair.

Mr. EVANS—I beg to second the motion.

The motion was unanimously carried, and the meeting then broke up.

LOCOMOTIVE CARRIAGES ON PUBLIC ROADS.—A gentleman, whose public and private character entitles him to our best consideration, has communicated to us the nature of a correspondence which has taken place between Sir James Anderson and himself, relative to an experiment of his locomotive carriages on the excellent highway between Leeds and Sheffield, passing through the important towns of Wakefield and Barnsley. From the satisfactory information afforded by Sir James Anderson, as to the efficiency of his new locomotive carriage, for many reasons we shall be glad to learn that an experiment would be made on the above line of road. From the circumstances of the North Midland Railway running at a distance from these influential towns, and the loss, in consequence of the accommodation rendered to the public by the coaches which have been withdrawn from the road, we are inclined to think that Sir James Anderson's experiment, if successful, would be a subject of general congratulation, and would meet with corresponding encouragement—and we shall use every means in our power to report to the public the result of the experiment.—*Leeds Intelligencer*, Dec. 19.

BRISTOL AND EXETER RAILWAY.—On Saturday last, the main arch of the Bridge, 120 feet span, over the river Avon, near the Cattle Market, was keyed in; on which occasion the ceremony of setting the key stones was performed by Mr. W. Neale, assistant engineer. This bridge, which for magnitude and simple elegance cannot be surpassed by any in the West of England, was designed by Mr. Gravatt, the celebrated engineer, and executed by Mr. S. Bromhead, to whom for the stability and excellence of the work much praise must be justly awarded. The "Somerset Bridge," over the Parrett, near Bridgewater, 103 feet span and only 12 feet rise, is also rapidly approaching completion. It is built of lias, and will present an elegant appearance, The shareholders in this railway will receive with pleasure these evidences of advancement in the progress of their line, which, there is every reason to believe, will be opened to Bridgwater before Midsummer next.—*Bristol Journal.*

MECHANICAL ARRANGEMENTS OF RAILWAYS.

LETTER I.

To the Editor of the Railway Times.

SIR,—On referring to your back columns, I perceive that the greater part of the various subjects I have discussed have been handled in a desultory manner—a result, probably, of their being taken up occasionally controversially—a position not favourable to consecutive philosophical discussion. If your columns be not better occupied, I will now take in succession the component parts of railway machinery, and endeavour to present an analytical digest of them, as to their mechanical principles and practical illustrations; showing the departure from principles in existing applications, where such may occur, and suggesting other methods for consideration. But it is first necessary to analyse the

ROADWAY.

Whatever may be the upper structure, whether wood, metal, or stone, the under structure must be so arranged as efficiently to support it. The natural base may be moss or bog, sand, loam, gravel, clay, chalk, or rock.

Three of these—loam, gravel, and chalk—may serve to lay rails on, with little artificial preparation. Sand, if not shifting, may also serve. These four substances being porous, will drain themselves with little trouble.

The other three—moss, clay, and rock—will require artificial arrangements.

The moss is a bed of vegetable sponge saturated with water, and lying on the surface, commonly on a bed of impervious clay. To carry a road across this substance, it is necessary to cover it with a buoyant material—commonly brushwood or hurdles—of so much less specific gravity, as will float the loads which pass over it, with very trifling elastic displacement, otherwise a continuous hill will be presented in front of the wheels, requiring a great increase of draught power.

Clay is a substance which in a dry state pulverises, in a damp state becomes plastic, and subject to alter its form and position by concussion or pressure, and in any state is impervious to water, so that it requires expensive drainage. To obviate the evils arising from its plastic properties, it is essential to cover it with such a mass of gravel or other material as will prevent the surface concussion or pressure from disturbing it, care being also taken to drain away the surface water, so that the gravel may not be saturated and thus forced down into the clay.

Rock, owing to its hardness, is mischievous for a roadway, on account of the violence of the concussion. It must, therefore, be covered with such a thickness of gravel or similar material as will diminish the concussion.

For the purpose of forming a surface on which to plant the rails, it is usual on moss or soft ground to lay wooden sleepers at right angles to the length of the rails. On harder ground, or where a bedding or ballasting of gravel is used, heavy square stones are placed corner to corner lengthwise with the rails. Sometimes, instead of cross sleepers, longitudinal sleepers of wood are laid lengthwise with the rail. When stone sleepers are used, it is desirable that they be firmly bedded in the gravel ballasting to form a solid crust, the whole in a slightly arching form beneath, from side to side, and resting on a soft understratum. This is the principle of the best Macadamised roads.

When stone sleepers are used, a cast-iron chair is bedded upon curb and spiked down to wooden trenails, a fold of tarred felt being interposed between the iron and the stone, to alleviate concussion. The real use of it, however, is to ensure *a fit*, for the pressure renders it little inferior to stone in hardness. These chairs being placed at the distance of about three feet from each other, the iron rails are placed in their bearings, and keyed with wedges of iron or wood, the latter being the most durable, owing to their elastic resilience, the thrust of the wheels tending to force the rails outwards against the wedges.

This mode of laying rails is objectionable, inasmuch as there is no cross tying to prevent the rails from forcing apart from each other by the action of the wheels, which is technically called "widening the gauge." It is objectionable in a second point of view, because the rails bearing only at intervals, are in reality a species of bridges resting on piers, and therefore they are subject to deflect between these piers or supports, rendering the road uneven; and this can only be avoided by making the rails disproportionately heavy to the weight which would be required were the bearing continuous, and the strain thus rendered equal. It is objectionable in a third point, because the rail being necessarily placed above the level of the stone sleepers, there is so much additional leverage given to the wheels to act in pressing the rails outwards; the rail being higher than it is wide, rocks in its base. It is objectionable in a fourth point of view, because there is no elastic resilience downwards to alleviate the concussion of the wheels.

When cross wood sleepers are used the same kind of chairs and rails are applied, but the gauge is preserved of an equal width. Much of the concussion is also removed, but the objection to the deflection between the chairs remains nearly though not quite the same, the support under the chair being more elastic, and thus alleviating this defect. The objection to the height of the rail above the chair remains precisely the same. But the wood is subject to rot.

When longitudinal wood sleepers are used, it is customary to lay them in a bed of concrete composed of gravel and lime. In such case, iron chairs are not used, but the rails being rolled with a flat base, wider than the rail is high, they are screwed down to the sleepers with a continuous bearing through their whole length. The objection to the height of the rail is thus removed, and the objection to the unequal resistance is also removed. The rail being slightly resilient from end to end, the concussion also is removed. These longitudinal rails are sometimes fixed down by piles, and the width of gauge is preserved by cross ties of wood.

The great objections to this kind of rail are—First, the wood is sunk in the concrete bed, and exposed to the influence of moisture getting beneath it. Secondly, the rail is so fixed to the wood, that in case of accident it is a troublesome operation to replace it. Thirdly, the sleeper itself being made of soft wood, it is necessary to cover its upper surface with a plank of hard wood to prevent the rail from pressing into it alternately at either edge, thus crushing the fibres and becoming unsteady. Fourthly, the points of the rails where they abut together, offering a less resistance than at other parts they are apt to be forced down, and the level of the rail destroyed, unless in the first instance it be made disproportionately heavy. Fifthly, no provision is made for expansion and contraction by heat and cold.

Thus the rails fixed on chairs are stronger at the joints than at other parts, and the rails on continuous bearings are weaker at the joints than at other parts.

The objection to the rotting of the wood has been met by applying the Kyanising process to it. If this is effectual as an antiseptic, it must be at the cost of much of the elasticity of the timber—partly stonifying it. Timber is a compound of longitudinal fibres, held together by a species of vegetable cement. In the cement the rot takes place. The Kyanising process tans this cement much as oak bark does leather, and it acquires chemical durability by the loss of mechanical strength. It also loses resiliency and it is possible that the running of engine wheels over it for a considerable time may tend to consolidate the fibres, and ultimately to break them into minute portions. On the American railways, a common practice is to lay down longitudinal fir bearers on cross timbers or sleepers, the latter on the ground, the former in the air. Flat iron bars are nailed or screwed on the bearers for the wheels to run on. The destruction then takes place by the rust destroying the elasticity of the wood, and the subsequent crushing of the fibres under the rolling wheels.

The most eligible mode of laying down rails to obviate the defects of various kinds already pointed out, would, I judge, be as follows, so far as observations founded on experience of existing defects may be trusted:—

The road being first properly ballasted, blocks of concrete, of the size of the ordinary stone sleepers, formed of granite and bitumen, or broken stone and bitumen, should be sunk to about two-thirds of their depth in the ballast. The upper surfaces of these blocks should be moulded with a shallow channel of three inches deep, and the size of the longitudinal timber bearers, which should be from twelve to fourteen inches square, and from fifteen to twenty feet in length, the ends always abutting together on a single sleeper. The concrete blocks being thus moulded into channels, the bearers will be perfectly secure and level in them.

In order to secure a continuous bearing to the rail, and a perfect system of joints not liable to rise or fall one above the other, or to alter their positions with each other laterally, and at the same time to permit free expansion and contraction, with heat and cold, it would be necessary to adopt a rail of a form different from any yet brought into use. Till this be accomplished, the best rail is that with flat continuous bearings, similar to the Great Western, screwed to the longitudinal timbers, but the screws should be applied in long slots, and not in circular holes, in order to allow for expansion and contraction, otherwise there will be a tendency to strain and loosen the screws. The joints of the rails should of course alternate with the joints of the timber bearers, both being of the same length.

The longitudinal bearers and rails thus laid will be perfectly available and secure against vertical pressure, but it is necessary also to provide for fixture to the ground, and for preserving the width of gauge. The only mode of fixing to the ground is, by piles on the outside of the longitudinal bearers, placed at convenient distances between the concrete blocks. To these piles the bearers should be bolted, the bolt being firm in the bearer, but the hole in the pile head being a slot, so that the bearer and rail would be enabled to rise and fall on the nuts being loosened, in order to level the rails.

To preserve the gauge the simplest mode would be by cross-ties of wood from pile to pile; the best mode would be by long iron bolts with nuts and screws, which could be tightened with little difficulty as the outward pressure of the wheels might render it necessary. If these bolts were screwed up tight against cross timbers adjusted to proper lengths, it would be a still firmer method. The whole frame would thus resemble in its general appearance a large ladder pinned to the ground.

A cheaper mode than this would be to lay the longitudinal bearers on cross timbers, which would adjust the gauge, but it would not be so permanent. The concrete sleepers and cross bolts would be saved.

The great advantage in using the concrete blocks would be, that the timbers would be entirely out of the ground, and would rest on a substance free from moisture. They could easily be examined and replaced at all times.

As to the manufacture of the rails themselves, it might be found advantageous on short lines of road with constant traffic, to use steel, and more especially when stationary engines are used.

A certain amount of adhesion is requisite for the wheels of a locomotive; but as regards the wheels of the vehicles which it draws, the harder, smoother, and straighter the road is on which they run, the less will be the amount of friction and retardation. The same remarks apply to the wheels themselves. The more perfectly circular their peripheries, and the harder the metal the better, provided only that it be not brittle.

It will be evident, therefore, that two different principles are requisite for the construction of engine wheels and carriage wheels. The principle of adhesion which is valuable in the wheel of the locomotive, is the greatest source of mischief in the wheel of the train carriage.

But the object to aim at is, to destroy as much as possible the sources of adhesion between the rails and carriage wheels, because there are other means to resort to, to insure the adhesion of the locomotive wheels, which will be adverted to in the proper place.

In my next, I purpose to discuss the question of railway wheels, a subject of considerable importance, and which, I foresee, will, before many years elapse, prove a subject of dispute between railways, requiring legislative interference to settle. The old highways proportioned their tolls to the damage done to the roads by the various vehicles, and a similar principle must ultimately obtain on railways. The carriages of different lines must at times run throughout. Passengers will not like being shifted from carriage to carriage on each separate line between London and Edinburgh, and to shift goods is an expense for loading and unloading.

But careful managers of well conducted lines will not endure that ignorant or obstinate managers of other lines shall run imperfect vehicles beyond their own ground without paying a tell proportionate to the damage they do. This consideration alone must force on a series of experiments for the purpose of ascertaining the kind of vehicle which will do the least damage to the rails and road, and that will form the standard. It is most probable that these experiments will be conducted by government officers, as a question in which the public are strongly interested, for *that which is most economical to the Companies as to the saving of rails and road is synonymous with the greatest safety to the public.*

I remain, Sir, yours obediently,
WILLIAM B. ADAMS.

Porchester Terrace, December 19, 1840.

THE JOINT STATION AT LONDON BRIDGE AND ITS MANAGERS.

To the Editor of the Railway Times.

Sir,—In your valuable paper of last Saturday's date, "A Railway Shareholder" comments in no measured terms upon the conduct of the Croydon Railway Directors *especially*, for having illegally voted, or self-granted to themselves, 333*l.* 6s. 8d. as a remuneration for extra service required in the management of the London Bridge station.

This gentleman evidently lets his zeal run away with his judgment, inasmuch as he at once singles out and inflicts upon the Croydon Directors a severe castigation, when in justice they ought only to have been coupled with the Directors of the Dover and Brighton lines: he pretends not to know—at least he neglects to state the fact—that the South-Eastern Company at their last half-yearly meeting, sanctioned something of the same kind, and, moreover, it is well known that a similar resolution is agreed on at the Brighton Board, and will be brought forward for confirmation at their next meeting, which will take place in January next. At the same time I beg to thank "A Railway Shareholder" for having called my attention to the subject, and to assure him that he must not think that I approve of this self-grant, if it can with justice be so designated; on the contrary, I disapprove of it *in toto*: but at the same time, I was desirous to show him that he was wrong for singling out the Croydon Directors for his animadversions, when clearly other parties were equally guilty with themselves.

My object is not to follow "A Railway Shareholder" through the whole of his valuable (though somewhat flippant) letter, more especially because you, Mr. Editor, in your leading article in the same paper, have fully answered him, to every word of which I must completely and cordially subscribe. I am very unwilling that any of these Companies should be saddled with any additional burthens at the present time, for God knows they have, and have had, plenty to contend with already, and let me remind the Directors, that it is the last ounce that breaks the back of the camel. Moreover, I am confident that in one line (the Croydon), there is no necessity for any such addition either at present or any future period. I will tell you why; there are, I believe, eight or nine Directors of the Croydon Railway. It is well known that not more than three or four regularly attend the Board: this line is not more than nine miles long: it is finished, paid for, and in excellent condition; all are agreed that it is the most perfect and creditable piece of work of the kind in the kingdom: there are now no anxious negotiations afloat with its extensions, none, I mean, that require so many Directors at the Croydon Board. In short, there is but little to be done in comparison with lines contemplated or in making. I would, therefore, (and I throw it out for the consideration of the proprietors previous to the next half-yearly meeting, which will be held early in March), reduce the number of Directors from eight or nine, to three, and also reduce their present remuneration, which is ridiculously small when divided amongst the former number, from 500*l.* to 300*l.* or perhaps 266*l.* 13s. 4d., this would still give 500*l.* to the Directors, adding the 333*l.* 6s. 8d., lately self-voted, for their services. Then, I think, the shareholders should go one step further, and say the money shall be appropriated or divided as follows, viz. 200*l.* to the Chairman, and the remainder equally between the other two.

Now, I cannot help thinking that three Directors are amply sufficient for this short line, and that 500*l.* thus divided would be ample remuneration for their services, and make it worth their while, in addition to their own interests as shareholders in the concern, to pay every attention to the proprietors' interests and the public safety. I for one feel confident in the soundness of this opinion. It is a perfect farce to say that eight or nine Directors are necessary to manage nine miles of finished railway, and that in addition to a well paid Secretary, Lawyer, Resident Engineer, &c. &c. &c. Therefore, if "A Railway Shareholder" agrees with me in all this, and will bring forward a resolution at the next half-yearly meeting, embodying this opinion, I will venture to tell him that a vast majority of the shareholders will most gladly give him their support.

As I am interested in several railways, I cannot take leave of "A Railway Shareholder" and yourself, Mr. Editor, without once more thanking you for drawing my attention to this subject. I am confident there is something seriously wrong both in making and working of railways; let us carry out what I now recommend to the Croydon Company, and I venture to predict a rise upon all, or nearly so, of from 20 to 30 per cent. in price.

In proof of what I have here stated being consonant to reason and common sense, whilst I was writing the above, I received a letter from a clever and valued brother shareholder, which contains the following passage:—"It is important to the well being of the shareholders that there should be nothing like jobbing, and such a management cannot be required until the Brighton and Dover lines are in operation. It seems to me too, that when this management enters upon their duties, we ought to discontinue the allowance of 500*l.* a year to our Directors, for they can then have nothing more to do, than what the stake they have in the concern should prompt them to: indeed, the secretary should do the whole of the business of the railway, as the secretary of the Manchester and Bolton manages the business of that line entirely; engineering and all—the engineer, in fact, having undertaken the secretary's duties, from having so little to do on so short a line in the single office of engineer." To these very pithy and sensible remarks, I could add additional testimony from various quarters, but I fear I have already occupied too much of your space. Let me, in conclusion, entreat you to persevere in exposing all mismanagement, which is the ruin of railway shareholders, and injurious to the public at large. I am delighted to have you as a coadjutor in removing the cumbrous machinery which at present exists—and in many instances exists only for the purpose of creating confusion in the working of the lines, and ruining the proprietors.

I am, sir, your most obedient servant,
ANOTHER SHAREHOLDER.

December 22, 1840.

INVESTMENT OF RAILWAY RECEIPTS IN EXCHEQUER BILLS—THE JOINT STATION AT LONDON BRIDGE.

To a "Railway Shareholder."

Friend,—Thou hast written much with which I am well pleased, but thou hast also written that which had been better by *thee* never written. I am, as thou art, a Railway Shareholder. To do thee justice, thou labourest hard in thy vocation, and hast fine talent (of a most sarcastic character when need be), but of late thou hast written over-hastily and without thy usual judgment, as I will endeavour presently to convince thee. In thy letter published by our friend, the Editor, in his excellent paper of the 12th December, thou didst urge that railway traffic receipts should be invested in Exchequer Bills—a goodly proposal, if practicable. Suppose the Birmingham Company to adopt thy suggestion and invest their large receipts, and Exchequer Bills to fall, what then, my talented friend, becomes of thy vaunted gain? If Exchequer Bills were always of one value, thy advice would be good; but I will tell thee a tale. A gentleman within the last six months held 3000*l.* trust money, and wishing for the short period he would be required to hold it, to invest it in some Government security in preference to his bankers, he chose Exchequer Bills, and so great was the fall before the day of sale came, that he was minus 300*l.* by the transaction! Suppose the Birmingham Company in his place, the shareholders would have lost their dividend. Brokers must also be employed and paid, and might not Railway Companies be then fairly called gamblers in the funds? Thy suggestion, friend, is full of evil.

I have not done with thee. In thy letter published on the 19th, thou complainest against the new Board formed to manage the joint station at London Bridge, which, when finished, will be common to the Brighton, South-Eastern, and Croydon Railways; because, forsooth, the duties which the Managers will have to perform are those which as Directors in one Company or the other they would *virtute officii* have had to attend to, and that the 1,000*l.* allotted them is so much improvidence, and the whole arrangement needless. Hearken unto me, friend. Can'st thou not see that this Board of nine, to manage the most important business of *three* railways, is the first step towards a general reduction of the unwieldy number of their Directors—hence not to be quarrelled with—and that though the duties are those which each Board would but for the arrangement entered into have had to superintend, the responsibility and trouble in that case resting with about fifty instead of nine, it surely is better to have nine men good and true, than fifty of divided responsibility. Conceding this, why object to pay the nine responsibles, who do the labour of the fifty irresponsibles? Neither hast thou remarked, in reference to this joint station, that the expenses of *one* establishment, in clerks, &c., and *one* set of buildings instead of *three*, must be a great present and future saving.

Do, I pray thee, read, mark, learn, and inwardly digest thy thoughts before again thou puttest them on paper, or woe to thy utility in the field thou hast, with these exceptions, so well, so talentedly, so boldly, so honestly occupied. A few more such letters as thy two last, and then "an end to all thy greatness."

I am,
THY FRIEND.

Cheapside, December 30, 1840.

North Midland Railway.—We are glad to hear that the Directors of this Company have reduced the fares from Sheffield to several stations on the line. We are sure this will give much satisfaction to the public, and that the Company will find the change beneficial. They also commenced on Monday to book through from Sheffield to Wakefield, Horbury, Dewsbury, and Cooper Bridge, on the Manchester and Leeds line, the nearest points to Huddersfield and Halifax, and at reasonable fares.—*Derbyshire Chronicle.*

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY.

To the Editor of the Railway Times.

SIR,—I observe in the newspapers an advertisement from the Directors of the Manchester and Birmingham Extension Railway Company, convening a general meeting of the proprietors for the 11th January, "to consider the expediency of adopting certain resolutions in relation to a proposed variation of the original line of railway, and for the dissolution of the Company, and re-organisation thereof, or formation of a new Company for the purpose of making the proposed new line."

I confess that this rejoices me, for I had hitherto been led to apprehend, that an attempt was to have been made to proceed with another application to Parliament, without consulting the shareholders, and giving to such as might desire to do so, an opportunity of withdrawing from the concern, and receiving back what remains of their original deposit money. Such a course would have been as *ill-judged*, as it would have been *unfair*, for it is quite manifest, that a line branching out of the Grand Junction Railway at Stafford, as now proposed, cannot be the same thing as an extension of the Manchester and Birmingham Railway, to which we originally subscribed our money, nor could it have been so viewed by Parliament, and therefore the attempt to apply for a *Stafford* and *Rugby* Railway Bill, as a renewal of the application for the *Manchester and Birmingham Extension Railway* Bill, must inevitably have failed. The two projects being perfectly distinct, the Directors have taken a wise course to dissolve the old Company, and organise (if it be possible) a new one, which will enable all those who approved of the Extension project, as benefitting the Manchester and Birmingham Railway, or as affording an independent line to Manchester, but who do not approve of the Stafford and Rugby project, as not being productive of either of those advantages, to withdraw their capital from that undertaking.

It is to be hoped, however, Sir, that the Directors will be prepared at the meeting with a precise statement of the amount of money expended in the original contest for the Extension Bill, and of the balance of the original deposits which remained in their hands after that contest, for it is quite clear that the money which was subscribed towards the Extension project cannot fairly be applied to any other without the consent of the shareholders, and therefore they are entitled to a return of all that remained unexpended of their deposit money at the close of the session 1839. The sum *proved* before Parliament in that Session as having been actually *paid up* by the several shareholders amounted to no less than 100,000*l.*, and therefore it is but reasonable to suppose that there must be a very considerable balance still in the hands of the Directors to be divided among the shareholders. If any choose to re-subscribe to the new project of the Stafford and Rugby Railway they can of course leave the balance due to them in the hands of the Directors, paying up in addition what may be necessary to comply with the Standing Order of the House of Commons, which requires that before any Bill is introduced into Parliament it shall be *proved* that such shareholder has paid up 10 per cent. of the amount of his subscription.

It is most important that the absolute necessity of this deposit of 10 per cent. by each subscriber, on the amount of his subscription, prior to the introduction of the Bill, should be distinctly known to all the shareholders; for if any attempt be made to induce them to leave in the hands of the Directors what remains of their deposits, under the hope that the Standing Order requiring 10 per cent. to be actually *paid up* can be evaded, this hope will assuredly not be realised. There is no Standing Order to which the House of Commons attaches more importance, and it is not only required that prior to the introduction of the Bill, and *subsequently* to the session preceding that in which it is introduced, each subscriber shall sign a contract binding himself, his heirs, executors, administrators, and assigns, to the payment of the sums subscribed by him, but also that he shall state on the face of the deed the amount of money which he has actually *paid up*, and which is required to be one-tenth part of his whole subscription. The Standing Orders also require, that the names of every subscriber appearing in the deed, with the number of shares taken by him, and the amount actually paid up by him, shall be *printed* and circulated among the members of the House.

As a good deal of misapprehension exists on this subject, among those who are not acquainted with the forms of Parliament, and as I think that in a matter of so much importance all parties should be supplied with *accurate information*, I beg to subjoin a copy of the Standing Orders of the House of Commons on the subject:—

No. 29. "That an estimate of the expense (of the undertaking) be made and signed by the person making the same, and that a subscription be entered into under a contract made as hereinafter described to three-fourths the amount of the estimate."

No. 32. "That all subscription contracts shall contain the Christian and surnames, description, and place of abode, of every subscriber; his signature to the amount of his subscription, *with the amount which he has paid up*; and the name of the party witnessing such signature, and the date of the same respectively; and that it be proved to the satisfaction of the Committee on Petitions that a sum equal to one-tenth part of the amount subscribed has been deposited in the Court of Exchequer, and that not less than three-fourths in number of the subscribers shall have paid up their shares of such deposit."

No. 33. "That no subscription contract shall be valid, unless it be entered into subsequent to the close of the session of Parliament previous to that in which application is made for leave to bring in the Bill to which it relates, and unless the parties subscribing it bind themselves, their heirs, executors and administrators, for the payment of the money so subscribed."

No. 34. "That previous to the presentation of a petition for the Bill, copies of the subscription contract, with the names of the subscribers arranged in alphabetical order, *and the amount of deposit respectively paid up by each subscriber be printed*, at the expense of the promoters of the Bill, and be delivered at the vote-office, for the use of the members of the House."

I am, Sir, your most obedient servant,

A LOVER OF FACTS.

P.S. The advertisement convening the meeting states, that certain resolutions are to be submitted to it from the Provisional Committee; would it not be fair that these resolutions should be circulated some days previously, among the shareholders? Men do not like to commit themselves to resolutions in which their fortunes may be involved, without being allowed some time for consideration.

MANCHESTER AND BIRMINGHAM EXTENSION, *alias* STAFFORD AND RUGBY, RAILWAY.

To the Editor of the Railway Times.

SIR,—At a time when the Directors of the above are advertising a meeting of their proprietors to consider the expediency of again altering their project, it may be amusing, and perhaps not altogether useless, to trace the various proceedings of this Proteus-like Company from it origin, and the numerous shapes which it has assumed, in its struggles to become incorporated by Parliament.

So long ago as 1836, the present Manchester and Crewe line was before Parliament under the name of the Cheshire Junction Railway. It was then opposed and defeated by the promoters of the Manchester South Union Railway, who purposed carrying a line by Macclesfield and the Valley of the Churnet.

In 1837 the Manchester and Crewe line was again brought forward by the Cheshire Junction Company in the shape of a branch to another line falling into the Grand Junction Railway near Stafford, and which was especially intended to benefit the Potteries. In the same year, the Manchester South Union Company having abandoned the Churnet line in consequence of the objections of some influential landowners, promoted a new line from Manchester through the Potteries to *Stone*, and thence in the line of the late Manchester Extension Railway to Tamworth, where it was taken up by the Birmingham and Derby Railway Company, who then proposed making a line from Tamworth to Rugby, instead of their present branch to Hampton-in-Arden.

The Cheshire Junction Company (composed principally of the present promoters of the Stafford and Rugby project, and the late promoters of the Extension project) then successfully opposed the Tamworth and Rugby line, and so far succeeded against the South Union Company, as to obtain a resolution of Parliament, that the line beyond Stone in the Potteries was *wholly inexpedient*. Whereupon the two Companies were united for the purpose of jointly making the line from Manchester to Stone, under the name of the Manchester and Birmingham Railway Company.

Within one year, however, after their incorporation, we find this Company (now, as before observed, principally formed of the original promoters of the Cheshire Junction Railway, many of the South Union Directors having retired from it) all at once becoming singularly enlightened as to the propriety of taking up the old South Union and Tamworth and Rugby schemes, which they had theretofore so vigorously opposed. They had been blind, they told their shareholders in the Manchester and Birmingham Railway, not to have seen before the great advantage which it would be to Manchester to have a line to London wholly independent of the Grand Junction, and especially blind had they been to the advantage which such a line would afford to the Manchester and Birmingham Railway. They therefore proposed forthwith to bring in a Bill for making the Extension line, and as soon as it should be carried, to amalgamate that undertaking with the Manchester and Birmingham Railway, and unite the two Companies into one.

What good natured creatures shareholders are at a public meeting, and how easily they bite at any project put forward for their benefit by the Directors in whose judgment they place so much confidence! Mr. A. proposes, and Mr. B. seconds a motion, that the Extension line be promoted; deputations are appointed to wait on landowners and canvass members; meetings are held; the Pottery folks are delighted with their independent line; and the subscription deed is executed with a clause in it to the effect, that in the Bill provision is to be inserted for incorporating the Extension with the Manchester and Birmingham Company.

The Birmingham and Derby Company, in the meanwhile, looking on the Tamworth and Rugby scheme as hopeless, had begun their branch to Hampton-in-Arden, but the Director of the Extension line (liberal souls!) determined that their shareholders *should* have their Bill, so they made *satisfactory arrangements* to prevent any opposition from this Company, or their powerful friend at Tamworth, by reason of the ruin of the branch. They also, with the utmost generosity, silenced the objections of the very greediest among the landowners; and thus, with colours flying, and a case described as *irresistible*, they appeared before Parliament.

The result of the contest is known. The independent line from Manchester had it all its own way, but the shareholders were luckily saved from a victory which would have proved their ruin, by the determined opposition of landowners and of the competing Railway Companies, by which the session was exhausted before the Bill even got out of the House of Commons.

Thereupon a meeting was held; vengeance was vowed against the opponents, who were described as everything that was bad, for having had the audacity to defend their properties from invasion,

as a man would his premises against a housebreaker, and a renewed application was resolved on *nem. con.*; the merits of an independent line being so obvious, and the gaining 14 miles on the journey to London so essential, as to claim the support of every disinterested person in Manchester.

The year 1840 came, however, and no application to Parliament was made, but it began to be rumoured that the Manchester and Birmingham line to Stone wouldn't do; the Congleton viaduct would be ruinous; and then what *madness* to run a competing line to the Grand Junction all through the Potteries! Still to give up the Extension Bill, after such hopes, such exciting pleasures, such anticipations of pickings, and patronage for the future! Oh! it couldn't be! Let the amalgamation of the two Companies be given up; let the Pottery line be also given up, if it wouldn't pay; but a Bill in Parliament *always* pays—that must not be given up under *any* circumstances. To ensure its success, a bargain is made with the Grand Junction Company, under which they (poor blind creatures) all at once kindly consent to the making of a competing line to their own, on which they had expended something like 10,000*l.* in opposing in 1839, (their Chairman ought to be indicted for such a dereliction of his duty—it is really *marvellous!*) and now we are told that the Pottery line being abandoned, and it having become therefore impossible to extend it, the Extension line is also given up, and in its stead a line is to be made from Stafford to Rugby, in connection with the Grand Junction Railway, the deluded shareholders in which must necessarily be ruined by their bargain! Heaven pity them! What *was* their Chairman about? He looks like a clever fellow, and one likely in a bargain to take good care of himself and his shareholders (*ut mos est*)—and this is the character I have always heard of him, but,

"Fronti nulla fides—nimium ne crede colori!"

Thus, then, we find the original Cheshire Junction Company, who in 1837 obtained leave to make a line to Stafford, and successfully opposed the Tamworth and Rugby and Extension Railways, on the ground of their *inexpediency*, in 1839, themselves the revivers and re-promoters of those projects, on the ground of *public necessity*, and proposing to incorporate them with their own undertaking; in 1840, abandoning their own line to Stone in the Potteries, and putting up with a branch to Crewe, and in 1841 calling on the subscribers to the Extension line to abandon that also, and resubscribe to a line from Stafford to Rugby, wholly unconnected with the Manchester and Birmingham Railway, and instead of giving to the people of Manchester an independent line, saving 14 miles in the journey to London, dooming them to travel on FOUR lines, with a saving of only 8 miles in the length of the journey, and a probable loss of nearly half an hour in its duration! MONSTROUS!!!

One of the most amusing modes adopted of forcing thir new project on the shareholders, is by telling them that nearly all the money originally subscribed by them is gone, and therefore they may as well have a try for the Bill with the remainder, as it cannot cost so much as the first application, and the feeling expressed in its favour in the House of Commons in 1839 was so strong, as to ensure success in the next season! Without stopping to enquire what the shares would be worth if the Act were obtained (of which, however, the present value of shares in some favourite Manchester railways may afford a good test), it may be sufficient to say, that the *Stafford and Rugby project* has never yet been before Parliament, and therefore no opinion has yet been expressed upon it, though it may be well to remind its promoters, that they themselves in 1837 gave evidence to prove, and obtained a resolution of the House of Commons to the effect, that the making of a railway beyond Stone in the Potteries towards London, was inexpedient and uncalled for by any public necessity.

I have some reason for knowing, that many of the most influential supporters in Parliament of the Manchester Extension project are disgusted with the abandonment of the Pottery line, the advantage of *extending* which, and of forming an independent railway to Manchester, 14 miles shorter than the present lines, formed the main argument in support of the preamble of the Bill. But can the same arguments now be used, when no Pottery line exists—when 6 miles out of the 14 to be saved are given up—when the interests of the public are wantonly sacrificed for the purpose of putting money into the pockets of the shareholders—and when in lieu of an independant line to Manchester, it is now proposed that four different lines under four different managements shall be traversed in the journey to London? I know that the promoters of this new project hold out great expectations to their shareholders, from the support which Sir Robert Peel gave them on occasion of their last application, but if he sanctions such a stock-jobbing juggle as this (for it deserves no better name), he will do more to sacrifice his popularity in Staffordshire, and his character for consistency, than by any step which he has taken for many a day. Neither do I believe that he will do so. Let him inquire how many shares in the undertaking have been subscribed for by persons residing in the county, and he will probably find the return *Nil.*

It is absurd to argue, because several landowners on the line have given their consent to the measure, that therefore it is generally desired. As old Horace sang of old, and the adage has lost none of its truth by time,

"Aurum per medios ire satellites,
Et perrumpere amat saxa, potentius
Ictu fulmineo."

If the chaste Danae were not proof against the influence of the golden god, neither are landowners. But which of them have *subscribed* to the undertaking? They will readily take money from the promoters of the line, but would they *give* any to promote it *themselves?*

There are, no doubt, many honourable men in Manchester who took shares in the original Manchester and Birmingham Extension Railway project, either because they thought it would benefit the town of Manchester or the Manchester and Birmingham Railway, which it was to have extended. Let these now consider *calmly* and *dispassionately* the history which I have given them of the various proceedings of this Company, (and which cannot be controverted), let them ask themselves what are the objects for which the measure altered and crippled as it is is now promoted—are they *public* or are they *private?* Let them weigh the possible advantages of the project against its certain disadvantages and the needless injury it would inflict, and if they come to the conclusion, (which I am sure they *must* do from a calm and unprejudiced view of the case), that the whole project is the mere offspring of speculation, and uncalled for by the wants or wishes of the public. Let them, now that the opportunity is afforded them, withdraw from the concern and extinguish it for ever. They will thus save themselves from certain loss and honourably relieve those on whom the measure would inflict a wanton injury from the doubt and anxiety which its agitation during the last *four* years has occasioned them.

I remain, Sir, your most obedient servant,

AN INHABITANT OF STAFFORDSHIRE.

CARRIAGE OF GOODS ON THE GRAND JUNCTION RAILWAY.

To the Directors of the Grand Junction Railway.

GENTLEMEN,—Our attention has been called to a letter in the *Railway Times* of the 26th instant, purporting to be signed by your Treasurer, and to have been written by your authority.

It is there stated that, "It is not true that the Company have refused to allow their waggons to go forward on the London line, or to receive from the London Company theirs:—what they have done was, simply to decline furnishing Messrs. Pickford and Co. with waggons from Birmingham to London *gratis*, when these carriers had consigned and paid for their goods from Lancashire, as far as Birmingham only. The Company do not consider themselves bound to furnish carriers on another line with their waggons, without some compensation for the use of them, which Messrs. Pickford and Co. refused to give."

We are surprised that Mr. Chorley should have been the writer of that letter, because it was to that gentleman, that, on the 30th of September last, Mr. Hayward applied on behalf of this firm, and was by him distinctly informed, that your trucks would not be allowed to go on to London with any goods but those loaded by your own agents; and that the trucks of the London and Birmingham Company would not be allowed to proceed along your line.

About this information there could be no mistake, as it was intimated to Mr. Hayward by Captain Cleather in the morning, *before* the meeting of the Board; and, *after* the meeting had taken place, Mr. Hayward called, by appointment, to receive the determination of the Directors. The refusal was explicit and unconditional. Nothing was said at this time as to any *charge* for the accommodation thus afforded to the carrier and the public by this mutual interchange of trucks:—nor was it likely, since it was a matter of arrangement between the Companies themselves.

The payment to the Grand Junction Railway Company for the use of their trucks on the London and Birmingham Railway, was, the corresponding use of London trucks in ease of their own upon their line; the balance (if any) being a matter of account between the Companies. Any payment made by the carrier would in fact be a double payment; he would be paying for two trucks, and using one.

The permission which you then explicitly refused has never since been offered to this firm. It is true that you have offered to allow your trucks to proceed to London, but at a charge which you well knew to be prohibitory. You have continued to refuse permission for London trucks to pass over your line.

Mr. Chorley is well aware that from that period to the present, we have been compelled to carry on our business under the disqualifications imposed upon us by this refusal, with great additional cost, risk, and trouble.

It is with reluctance that we come forward on this occasion through the medium of the public press; but we think it necessary to correct the erroneous statements contained in Mr. Chorley's letter. If facts are to be laid before the public at all, on the authority of either party, they should at least be correctly stated. We entirely coincide in the opinion you express, that "as Messrs. Pickford and Co. have referred their difference with the Company to a legal decision, it appears to the Board that it would be indecent and improper, whether openly or anonymously, to appeal on *ex parte* statements, to another tribunal, while the matter is thus pending."

We beg to state, that neither directly nor indirectly, have we written or caused to be written, or known anything about the writing of, any anonymous communication on this subject; and we request you will abstain for the future from any such discourteous insinuations.

We have no doubt that the public at large will form their judgment upon the facts of the case, when laid before them in open court, rather than from any *ex parte* statements that may be offered, either by the carriers or the Grand Junction Railway, neither of which parties they will probably consider to be a perfectly impartial witness. It is not likely that they will omit to notice either the *reductions* or the *advances* which you may have thought fit to make in your charges for goods or passengers, nor that they will fail to connect them with the circumstances under which these changes may have respectively been made.

The accuracy of your Treasurer's figures and calculations we must be allowed to deny.

Since he has alluded to the objects and interests of the carrier, it may not be out of place that we should state them plainly for ourselves. We want a "clear stage and no favour"—*a perfect freedom of competition for all parties upon equal terms.*

We do not profess to be disinterested or unduly patriotic in this matter. It needs no deep knowledge of political economy to be aware that, when all compete on equal terms, the public servant will only prosper so far as his interests are commensurate with those of his master, the public. And for ourselves, many years' experience has taught us to be perfectly satisfied with our share of the bargain upon these terms. So you, on your part, may venture to assure yourselves that, if you can really perform for 70s. what the carriers, competing with each other, did for 100s., you will speedily get all the business, without any of these vexatious interferences, and without denying to us those advantages of mutual arrangement which the London and Birmingham Company afford equally to all parties. But if it should appear that you are adding to those of the toll owner the far greater expenses and liabilities of the carrier, without reserving to yourselves any remuneration for your risk and labour, who could avoid the conclusion that you are actuated by some motives of temporary policy, and look forward to reimburse yourselves handsomely hereafter?

We are, Gentlemen,
Your obedient servants,
PICKFORD & CO.

London, Dec. 30, 1840.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent "A Railway Traveller," asserts that my list of 117 coaches, which the opening of the Leeds line will remove from the turnpike road is incorrect, as there never were 15 coaches from Manchester to Rochdale. Now, Sir, I have again referred to the list of coaches published by authority of "Board of Stamps and Taxes," and I can assure your readers that my list is correct in every particular.

"A Traveller by Railway," who it is evident is no proprietor of railway stock, has fallen into this mistake from not knowing what is meant in railway *parlance* by so many coaches running on a given line of road. The method adopted is to ascertain the number of *trips* made per day, and multiply them by 10 or 15, to ascertain the number of passengers daily; no respect is had to the actual number of *vehicles* running. To do so would be absurd, as from London to Liverpool 15 coaches were licensed, in 1837, to perform 10 trips per day, whereas between Manchester and Rochdale some of the coaches were licensed to perform 2, and some even more than 2, trips per day. The object being to obtain the actual number of travellers, it matters not how many *vehicles* are employed. It appears I was mistaken in saying that no third class passengers had been carried on the 27½ miles recently opened. I thank "A Traveller by Railway" for his correction. Not having been down the line lately, I some months ago sent my servant to inquire at the office in Manchester what was the fare from Manchester to Leeds by the third class carriages; the reply was, "that no third class passengers could be taken (*through*, I presume,) for the present." Still this does not materially affect my argument, that in the present imperfect state of our traffic arrangements, the present receipts form no just criterion of what the result will be on the opening throughout.

In August, 1837, the London and Birmingham Company's receipts amounted per week to only 7,000*l.*; they at that time booked passengers throughout, but coached 30 miles of the distance. In August, 1840, the weekly receipts amounted to 18,000*l.*, and in one week to upwards of 19,000*l.*!!

"A Traveller by Railway" says the Leeds line *will not answer* till the branch lines are open. I agree with him so far as to grant him that these branches must be completed before the resources of our line are fully developed; but long ere then I hope to pocket a few handsome dividends. Does "A Traveller" require to be informed that our Directors are now going on rapidly with the construction of the branches to Heywood and Oldham, and that the Halifax branch will speedily be commenced?

"A Traveller" asserts that none of the Oldham and Manchester coaches have yet been removed by the opening of the railway to Mills Hill. Now, Sir, one half of the coaches discontinued running some time ago.

Having been for the last three or four years a heavy holder in the Manchester and Leeds line on investment, I have taken pains to ascertain its real merits, and have frequently travelled along the line and spent a few days in each of the various towns through which it passes. I would recommend any of your readers who are holders in this line and who feel anxious as to the result, to do as I have done. They will speedily have their doubts removed, and come to the same conclusion as I have, that the line will pay a fair dividend.

One would suppose on hearing the remarks that are made respecting the Leeds line, that such a line as the Liverpool and Manchester had no existence—that a railway in a manufacturing district was something new!—and that the Leeds line would show whether it was possible such a line could pay! And yet the Liverpool line has been dividing 9 or 10 per cent. for the last ten years.

The Leeds line has termini nearly as good as the Liverpool line; it has at least *eight times* as much local traffic (which, on the Grand Junction line, gives three-sevenths of the whole receipts); and it will derive a much larger revenue from goods.

A great deal has been said regarding the poverty of the population on the Leeds line. Never was there a greater mistake. That there exists a vast population of the working classes is true enough, but it is also true that there is a dense population of wealthy manufacturers, and landholders—a vast number of commercial gentlemen visit the district from London, Liverpool, Scotland, Ireland, and foreign parts, for the purpose of buying goods, or selling produce; and the Liverpool line has shown that a wealthy commercial population can support a railway as well as the higher circles can.

As a shareholder of long standing in the Leeds line, I only know of one objection to it, and that is the cost. It has been great—but so will our traffic receipts. At one time I counted on a dividend of 10 per cent., but with our cost per mile, we shall probably get only 6½ or 7 per cent. This, however, will well content,

Sir, yours, very respectfully,
A HOLDER OF ONE HUNDRED SHARES AND UPWARDS IN THE LEEDS LINE.

29th December, 1840.

LONDON AND SOUTH WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—About twelve months ago, a great commotion was made in the railway world by a correspondent asking the question, "*Will Railways Pay?*" On looking over my file of your valuable paper the other day, I was much pleased with your then remarks at the end of his letter, thus:—"It is probable that for some time at least, the anticipations *once* entertained of railway gains will not be realised, but *we* see nothing in the present position to justify the desponding views of our correspondent. It is not fair to judge of the ultimate success of lines still uncompleted, although even here there is every reason to be satisfied."

Being a shareholder in the South Western line, I could not but compare his desponding picture of that undertaking with the present receipts. He sets down the twelve months, when opened through, at 156,000*l.*; whereas the last six months (as per your traffic returns) have produced the astonishing sum of 143,000*l.*! which doubled will be 286,000*l.* for the year, being nearly 100 per cent. more than his statement, and that under the disadvantage of a first opening when the goods traffic cannot be fully brought into play.

It appears to me, that the South Western will be a good paying line, for as soon as the Gosport branch is complete (which I suppose it will be in three or four months), the whole of the Portsmouth, Portsea, and Chichester coaches will come upon the line, which together with the numerous vans and waggons from Portsmouth, will produce no inconsiderable revenue; to say nothing of the facility with which invalids and others can get over to Ryde and other parts of the Isle of Wight from Gosport.

The vast increase of passengers which will come upon the different lines into London during the ensuing season, from the many fresh openings in the north, will cause a mutual benefit to all; and I have every confidence, Mr. Editor, in the approach of better days and increasing dividends upon all the well-conducted lines, particularly if shareholders will attend the February meetings, not as a mere matter of form, but as meetings of business, and elect only such Directors as they think will keep down the expenses and encourage cheap travelling.

I remain, &c.,
NORTH-WESTER.

THE PROPOSED "DICTATORSHIP."

To the Editor of the Railway Times.

SIR,—Were I inclined to be sarcastic at second-hand, I should commence the answer which Captain Watts, by "irony, ridicule," and sharp comparison has provoked, in the words of a writer whose letters will be extant while the English language is read, and say to him, "I compassionate your labours." It has taken Captain Watts two months to print an amended edition to my second letter, and the air of "self-approbation" (an organ, I apprehend, which is very fully developed in his cranium) that runs through the whole of it, justifies my indulgence in the hope that he has felt relief from its issue. I congratulate him on his safe delivery, though his return to health and vigour should expose me to wit, which if it do not flash or sparkle, is alarming from its weight and quantity. Having by voluntary act launched myself on the stormy sea of public discussion, I have no room for complaint; my composition, my matter, and my motives, are at the mercy of my opponents, and I must bear with the fortitude I can summon the shafts of ridicule or contempt which may be aimed against me. In this peril I console myself with the reflection that if I have not the dexterity of my adversaries, and cannot send my bolts with their unerring direction, I yet have a bow that is still flexible, with a good dry string, and though I hit nothing but the winds, while I have an arrow I will shoot in my defence.

In sporting phrase, I thought that you and I, Mr. Editor, having each let go a barrel at him, the railway overseer had been "well killed," and I am still of that opinion, Captain Watts's asserted resuscitation of him nevertheless; for as it appears that Captain Watts's thoughts are perplexed by demonology and ghosts, it may be that the impression of his mind has been conveyed to his eye, and the unsubstantial figure of his supervisor presented in full relief to his view. Taking it, however, that Captain Watts is under no delusion—that the overseer is a reality, a proper man, a body we can touch—for that, I believe, is the test as to a ghost "and no mistake"—that the supervisor is "scotched not killed"—why we have nothing for it but to do execution upon him again, and we will perform that act of public justice in all mercy.

It is, indeed, very surprising that a man of Capt. Watts's penetration and experience should still cling to the carrying into effect this very foolish notion. Is it reasonable to think, that the public would submit to the decision of differences between them and railways, by a hired railway servant, or that the engineers, secretaries, and other officers, would be ordered about by a non-descript being, who, by no possibility, could be so competent as themselves to direct their business? And suppose—and absurd the supposition is—that the appointment *were* made, does Capt. Watts imagine that Parliament, government, railways, any one, would be mad enough to supersede the institutions of the country, in favour of a railway policeman, for at best he could

Digitized by Google

be nothing more, and permit him to punish with "certainty and severity." It will never be tried, but if it were, the public would soon settle his business for him; his first interference would inevitably show him the way to the tank and to dismissal, or I am no judge of the common sense and spirit of my countrymen. Capt. Watts, in the warmth of his friendship, began to fancy that the Midland Counties, and the Birmingham and Derby, could only settle their differences by the aid of his protege. I told him he was disturbed by a phantom,—that, like reasonable men, they would compromise, or go to Lincoln's Inn, and they have done the former; still, had the overseer taken his seat on the railway bench, I would have gone to see him—it would have been so fine a scene. We have several ex-Chancellors, and, as they must be at a discount, I hope Capt. Watts could have borrowed, or bought, an ex-wig, which would have made the thing complete in all its parts. To suppose that an inflated railway chap, strutting about with the notion that "his appearance commanded respect—his tone obedience," could be any thing, in the eyes of the public, but eminently ridiculous, one must be under an aberration of mind. Respect and obedience indeed, pooh! They would have cared no more for him than for a cock turkey with his tail spread; the only serious part of the matter would have been the paying such an animal, and that we will not do, no, not a stiver; "we wont have him at no price;" he would be another incubus, an unhealthy excrescence, a railway wen, a recipe for increasing our 45 per cent. average expense of working. In the name of my fellow shareholders, I dismiss him, to the end of the Greek kalends—for the time the boy sold his top—for ever and a day.

I have a high opinion of Capt. Watts's tact, and this I say unaffectedly and seriously. In commenting on my colleague,\" Examiner's," and my proposed alterations in management, he has shown consummate address, by using the effective method, when not discovered, of "damning with faint praise." I give him credit for masking his battery, but I am aware of his position, and have no intention of entering the defile it commands.

A RAILWAY SHAREHOLDER.

P. S.—I submit, Mr. Editor, that you have not headed the letters on this subject with your usual point; should they not be topped by "How to make a snug railway place," and "Demurrer to the fingering of 1000*l.* a year of railway money"?

RAILWAY COMMUNICATION WITH SCOTLAND.

THIRD REPORT of Lieutenant-Colonel Sir Frederick Smith, of the Royal Engineers, and Professor Barlow, to the Lords of the Treasury, in pursuance of the Addresses of the House of Commons of the 14th and 20th August, 1839.

Railway Committee Office, James-street, Buckingham-gate, 14th Nov. 1840.

SIR,—The Report which, in obedience to the instructions of the Lords Commissioners of the Treasury, dated the 26th of November, 1839, we had the honour to transmit to you on the 16th May last, respecting the competing lines for a railway communication between London and Glasgow, contains a distinct expression of our opinion, that of the three projects which had been submitted to us for that portion of the distance which extends from Lancaster to Carlisle, the preference was due to the project brought forward by Mr. Larmer, for a railway up the valley of the Lune, and by Orton and Penrith.

We, however, observed that this line would not extend to the district of Kendal the benefits of railway communication; and being aware that this thriving town would not only afford great support to any railway passing near it, but at the same time derive important advantages from such a mode of transit, we had directed the attention of the surveyors to this subject, and suggested the expediency of fresh surveys being made, in order to ascertain the practicability of uniting Mr. Larmer's project by the valley of the Lune with that of Mr. Bintley by the valley of the Kent, so as to carry the line within a short distance of the town of Kendal.

It appears that nearly at the period when our Report on these northern lines was forwarded to you, some gentlemen connected with Kendal, and who are very desirous of carrying a railway near to that town, employed Mr. Larmer to re-survey the valleys of the Lune and Kent, and to examine the ground which separates these rivers to the north of Kendal. The result is, that this gentleman has considerably modified and improved that part of Mr. Bintley's line which is to the south of Kendal; he has also made some slight alterations in that part of his own line lying between Orton and Low Borrow Bridge; and he has laid before us a plan and section for a line to be formed through the pass which intervenes between the Grayrig Fell and the Lambrig Fell, and connects the valleys of the Lune and Kent.

Mr. Larmer terms this new line the "Grayrig Junction," and, for the sake of distinction, we shall give the title of the "Grayrig Line" to the whole project on which we are now about to report, pursuant to the instructions we had the honour to receive from you, dated the 29th May last.

The two principal points which we have kept in view in this investigation are, to determine how the construction of the railway, according to this combined project, would affect the traveller between London and Carlisle; and secondly, whether it would entail an increase of expense more than commensurate with the advantages to be derived from the line passing near the town of Kendal.

In our last Report, we stated that the locomotive power requisite to work the Lune line, expressed in horizontal distance, would be 78 miles and one chain; and we find, that by the Grayrig line it would be 78 miles and 62 chains.

This increase of 61 chains is not sufficient to form an important objection to the Grayrig project, as regards the traveller between London and Carlisle.

In the appendix (A) we have given a copy of a comparative estimate, submitted to us by Mr. Larmer, of the probable cost of the Lune line, and the Grayrig line.

As we are not in possession of cross sections of the ground where the heavy cuttings and embankments would be formed, nor of borings where the former would be necessary, and as we have also not been supplied with drawings of the bridges, viaducts, &c., it is not in our power to pledge ourselves to the *positive* accuracy of these estimates; but we think the details given are sufficiently correct to test the *relative* cost of the two projects; and there does not appear to be any reason for doubting Mr. Larmer's statement, that the Grayrig project would not require a capital of more than 126,219*l.* 7*s.*, beyond what would be necessary for that of the valley of the Lune.

In our former Report on the lines between Lancaster and Carlisle, in estimating the population within ten miles of each route, the population of Kendal was considered as belonging both to the line of the Kent and to that of the Lune; and, according to this arrangement, the former was stated to be likely to afford railway accommodation to a population one-tenth larger than would derive this advantage from the latter.

The Grayrig line would accommodate a still larger number of persons than the original line of the Kent, as it would include the greater part of the population which gave the latter, under this head of comparison, the superiority over the original Lune Line, and in addition would include the inhabitants of Ravenstonedale, Kirkby Stephen, Brough and Appleby, to which the original Kendal Line had no title. Thus the Grayrig Line will have a decided superiority over the Line of the Lune on the score of population, and therefore the traffic on the former, on this account alone, might reasonably be expected to be greater than on either of the other Lines; but when it is considered that a Line to Kendal would bring the lake tourists to within eight miles of Windermere, it may be fairly presumed that the number of passengers on this line would be much greater than on its competitors.

Kendal, as a commercial and manufacturing town, is of great importance in the county of Westmoreland, and there is no doubt that on the formation of a railway by the Grayrig Line, the supply of coal for the Kendal district would be almost exclusively derived from Carlisle; indeed it has been shown to us that a revenue of 10,000*l.* a year may be expected from the carriage of coals alone.

In considering the relative merits of the three projects, we find that the Lune Line has a small advantage over the other Lines in regard to a saving of distance and economy of construction, but it has the defect of depriving the important town of Kendal of direct railway communication, and embraces a smaller population.

The great objection to Mr. Bintley's Line was a summit tunnel of an almost impracticable character.

The Line now proposed possesses the principal advantages, and is free from the chief defects of the other projects, and we *therefore recommend it in preference to either.*

We shall now proceed to give a general description of the Line which we thus recommend for adoption.

In our Report of the 16th of May, it was stated that Mr. Bintley proposed to form a junction with the Preston and Lancaster Railway, at a point about two miles and 54 chains south of the terminus at the latter place, and to pass under the town of Lancaster by a tunnel.

Mr. Larmer in commencing at the Lancaster terminus, very materially improves this line, as he thereby saves two miles and 54 chains of construction, and avoids the inconvenience and expense of a separate station; and by keeping to the East of the Line proposed by Mr. Bintley, he is enabled to dispense with the tunnel under the town of Lancaster, which was a great defect in Mr. Bintley's project.

The following table exhibits the gradients on the two Lines up to Kendal, from which it will appear that the Line as revised by Mr. Larmer is in that respect superior to the original Line of Mr. Bintley.

Mr. Bintley's Original Line.

Miles.	Ch.			
1	16½	fall	1 in 133	REMARKS.—Commencing at the distance of 2 miles and 54 chains south of the Lancaster terminus.
1	54	,,	1 in 221	
1	79½	rise	1 in 585	
1	35½	fall	1 in 263	
1	32	rise	1 in 389	
—	54	level		
—	75	fall	1 in 261	
2	17½	rise	1 in 140	
3	42	level		
—	40½	fall	1 in 206	
3	75½	rise	1 in 181	
2	72	,,	1 in 153	
22	34			

Mr. Larmer's Improvment of Mr. Bintley's Line.

Miles.	Ch.			
1	35	fall	1 in 200	REMARKS.—Commencing at the Lancaster station.
3	62	,,	1 in 660	
2	50	level		
2	7	rise	1 in 160	
4	16	level		
1	76	rise	1 in 170	
3	—	,,	1 in 160	
1	23	,,	1 in 150	
20	29			

Although the gradients are in a slight degree more favourable according to the line as altered by Mr. Larmer, yet the cost of the earthwork will be rather greater, and Mr. Larmer will require a more expensive bridge for the crossing of the Lune, for its length will be about 600 yards, and its height 60 feet; whereas the bridge proposed by Mr. Bintley would not be above one-fourth of the length and one-half of the height of Mr. Larmer's.

However, this difference will be much more than compensated by the saving of the tunnel under the town of Lancaster, and by the shortening of the line.

The deviations from Mr. Bintley's line, proposed by Mr. Larmer, are not of sufficient importance to require to be particularly mentioned here.

Digitized by Google

The direction of the line recommended is shown on the accompanying plan, by which it will be seen that it is intended to pass along the face of the high ground about a mile eastward of Kendal.

Mr. Larmer's junction line commences at a hamlet to the north of Kendal, called Scalthwaiterigg Stocks, whence it takes a north-easterly course, twice crossing the turnpike-road to the northward of Docker Garths and Mosedale Hall; it then proceeds nearly in an easterly course to the farm at Shaw-end. This point is the summit of the junction portion of the line, and is 562 feet above the level of the sea at low water at Lancaster, or 446 feet above the point of connection with the Preston and Lancaster Railway, the distance being 26¾ miles. Here a cutting will be requisite of two miles in length in gravel and rock, and of the extreme depth of 52 feet, and of the mean depth of 35. This is the heaviest piece of work on the junction line.

From Shaw End the line tends more to the northward, and curving round the foot of some high ground, approaches the banks of the Lune near Dillicar-park, and converges towards Mr. Larmer's original line, which runs almost parallel to the river, up to Low Borrow Bridge.

Although the direction of Mr. Larmer's original and improved lines is nearly the same, yet such are the abrupt and precipitous forms of the hills that a considerable difference exists in the levels and gradients.

We subjoin a Table of distances and gradients of the entire Grayrig line, and we have only further to remark, that after an examination of the ground, we have thought it proper to suggest to Mr. Larmer the expediency of occasional breaks in his long gradients, for the purpose of easing the engine on the ascending planes, and of diminishing the earthwork in construction.

Table of Gradients of Grayrig Line between Lancaster and Carlisle.

Names of Places.	Intermediate distance.		Total distance.			Feet per mile.	Ratio.
Lancaster	1	35	1	35	fall	26½	1 in 200
	3	62	5	17	fall	8	1 in 660
	2	50	7	67	level		
	2	7	9	74	rise	33	1 in 160
	4	16	14	10	level		
	1	76	16	6	rise	31	1 in 170
	3		19	6	rise	33	1 in 160
Kendal	7	45	26	51	rise	35	1 in 150
	2	65	29	6	level		
	2	74	32	30	rise	13½	1 in 400
	4	22	36	52	rise	35	1 in 150
Orton Tunnel	1	22	37	74	level		
	3	66	41	60	fall	35	1 in 150
	1	64	43	44	level		
	1	47	45	11	fall	17	1 in 310
	4	1	49	12	fall	26½	1 in 200
	1	69	51	1	fall	17	1 in 300
	1	55	52	56	rise	5	1 in 1056
Penrith	1	69	54	45	rise	3½	1 in 1650
	2	53	57	18	fall	21	1 in 251
	1	25	58	43	level		
	5	54	64	17	fall	25	1 in 210
Carlisle	6	—	70	17	fall	33	1 in 160

We do not consider it necessary to give minute details of the proposed line, as in the annexed copy of Mr. Larmer's Report all the most important features of this project are fairly shown.

The heaviest work on the whole line is the Orton tunnel, which Mr. Larmer proposes to make of the length of one mile and 22 chains; but according to the section, in the accuracy of which we have full confidence, it appears that there will be heavy cuttings at both ends of the tunnel, the greatest depth being at one end 95 and at the other 98 feet.*

Now as we doubt the expediency of making a cutting in this instance of above 70 feet in depth, we are of opinion that it would be proper to extend the length of the tunnel to a mile and a half.

Mr. Larmer acquaints us that, on a careful examination of the Orton Hill, he has every reason to believe that the tunnel would pass entirely through sandstone; and as it would only be 340 feet below the summit of the hill, we have no doubt that this work might easily be completed in three years from the time of its commencement, under the supposition that Mr. Larmer has rightly informed us as to the nature of the rock through which the tunnel is to be formed.

We have the honour to be, Sir,
Your most obedient Servants,
FREDERIC SMITH, Lieut.-Col. R.E.
PETER BARLOW, F.R.S.
HENRY AMSINCK, Lieut. R.N., Sec.

Robert Gordon, Esq., M.P.
&c. &c. &c.

* The line of the tunnel in Mr. Larmer's original project was very accurately surveyed by Lieut. H. D. Fanshawe, of the 12th Foot, who reported that the ground was fairly delineated in Mr. Larmer's section.

PROPOSED RAILWAY IN CANADA.

(From the *Globe* of Monday.)

THE *Great Western* brought little fresh intelligence from Canada. But, perhaps, the project of a new railroad, which has been urged upon the Governor-General by the inhabitants of the eastern townships of the Lower Province, as well as by other parties whose interests are much bound up with the commercial prosperity of Canada, may be accepted as a convincing proof of the opinions there entertained of the probability of continued quietness.

It is proposed that this railroad shall intersect the fine tract of country between the town of Sherbrooke and St. John's. The whole length of projected road, it is calculated, will not exceed 85 miles. Its route will start from Sherbrooke, and pass through the townships of Oxford, Ascot, Hetley, Bolton, Stukeley, Brome, and Shefford, a small portion of St. Hyacinthe, Monnai, and Renville, to St. John's, where the farmer of the townships may take his choice of the markets of Montreal, Quebec, and the United States—all of which are accessible either through the Champlain and Saint Lawrence Railroad, the Chambly Canal, or Lake Champlain.

It is proposed to carry this project into effect in three ways, or by conjoining them:—

First, as a Government undertaking, to be managed by a Board of Trustees; the funds to be raised upon the credit of the province; the interest to be paid from the receipts of the railroad, or in case of a deficiency from that source, by the public revenues, as in the case of some works of Lower Canada, and numerous public works in Upper Canada.

But as this sort of scheme offers little check upon excessive speculation, still less upon extravagant outlays of the public money, it would scarcely need the experience of the results of the public undertakings in Upper Canada, to induce the Governor-General to negative it.

The second proposition—that of a Joint-stock Company, with corporate privileges, like the Champlain and St. Lawrence, and other railroads—would be negatived by the capitalists, who would in vain look for an adequate return for capital so employed in a thinly inhabited country.

The third proposition—which, however, the projectors have, with great sagacity, urged as their dernier resort—is that of a local undertaking, for which the funds are to be raised on the credit of government, and the payment of the interest to be secured by local assessments upon the lands of residents and non-residents, something in the following manner:—The lots to be divided into three classes; the first class to include all lots lying within 10 miles of the railroad; the second class those lots lying between 10 and 20 miles; and the third class to include all lots between 20 and 30 miles of the railroad; the assessments to be graduated according to the distance which each class of lots may be situated from the railroad. That the income from the undertaking also form a sinking fund to pay up the capital and keep the road in operation, and when the capital shall have been paid, the railroad to become the property of the districts through which it may pass.

This appears to us to be the true art of honest borrowing. If the Americans had had the virtue to adopt the plan of securing the interest of money required for their local works by local assessments, their "go a-head" system would not have met with the checks which it has recently received, and the money wasted upon works begun and not completed—indeed, very often abandoned upon the payment of a high premium to the contractors—would have been spared for other undertakings. Nor is Canada itself without moral lessons of this kind.

Moreover, the capital thus raised and repaid for judicious enterprise will be advanced as readily for similar undertakings—so that the prudent course—not in appearance so rapid at starting—would enable our fellow-subjects to go a-head with even more spirit and success than their neighbours.

How much better is this than the torpid and bankrupt state into which Upper Canada has fallen by its extravagant enterprises in magnificent projects beyond its means, till it has been compelled to sue for relief to the mother country to complete its works! Yet it must be admitted that its canals are more national than local, and therefore justified the application of the public money to them, besides that while the commerce of that fertile country promised (and will fulfil its promise when the finance of the two provinces has been united in practice as well as by law) to afford an indemnification for the outlay.

PROPOSED RAILWAY THROUGH FIFE.

ON Monday a meeting of gentlemen friendly to the project of a western railway through Fife, was held in the Council Chamber, Edinburgh. It is proposed that this railway should be formed through Fife, as the great line of communication from Edinburgh to the North of Scotland—to commence at that point on the north shore of the Frith of Forth, where a suitable low-water pier may be established; and proceeding to the east end of Loch Leven, through Glenfarg, to the Tay, by the best route which may be ascertained; and from thence one branch to run to Perth, and another, after crossing the Tay by a bridge, along the Carge of Gowrie to Dundee; it being conceived by the projectors that this line would best unite the interests of the adjoining counties of Edinburgh, Fife, Forfar, Perth, and Kinross. On the motion of Mr. James Aytoun, Advocate, Captain Donaldson Boswell was called to the chair.

The CHAIRMAN having stated the object of the meeting, observed that they had already seen the success which had attended the great railways of England; and he was sure there was no want of enterprise in Scotland to follow so good an example.

Mr. MILNE then read a Report on the proposed line, describing the results of his survey, the advantages of the western line, and the nature of the operations connected with its construction. From this Report it appears that the line commences at a point on the north shore of the Frith of Forth, where a low-water pier may be erected, and after passing Kirkaldy, runs through the great coal and lime fields of Lochgelly and Auchterderran—continues by the west end of Bishop Hill, or Loch Leven flat, and crosses the Tay by a bridge six miles east from Perth, at which point a junction is formed with the line between Perth and Dundee, thus serving as a railway to both of these towns; that this line will also afford an easy and cheap communication by a junction railway to Dunfermline and the great coal fields in the west of Fife; as also a convenient communication to Auchtermuchty, Cupar, and the district called the How of Fife, by the nearly level valley of Stratheden; that the gradients are of a favourable nature; and that the length of the line across Fife from Perth to Tay, is twenty-three miles; to Perth twenty-eight, and to Dundee thirty-eight.

After some remarks from Mr. Aytoun, Mr. Ellice, jun., M.P., and others, a committee was appointed to promote the object in view.—*Edinburgh Paper.*

[We learn from other quarters that this scheme has been taken up with great spirit by many influential parties, and that upon its success will greatly depend other extensions of the railway system in Scotland. For this reason, as well as on account of its own merit, we trust it will prosper.—ED. R. T.]

NOTES.

(a) Not open long enough. (b) Exclusive of the Chester and Crewe line, which appears to be 458,333*l*. (c) This includes the Liverpool and Manchester line, from which a portion of the Grand Junction revenue is derived. (d) Maximum allowed by Act. (e) Up to July 1. (f) Including the new capital for the London-bridge station. (g) Including new capital for widening line, &c. (h) Preference shares guaranteed 5*l*. per cent. (i) Including Gosport branch. (k) This is from the main line only, and is calculated on the money actually advanced, some of the shares having been issued at 50 per cent. discount. (l) Up to July 31. (m) The expenditure mixed up with that on the canal, with which the line is connected. (n) Including harbour and docks. (o) From 14 miles only.

†† From which deduct Toll to London and Birmingham Company, 131*l*. 6s. d.—leaving a balance of 979*l*. 5s. 11d. ‡‡ Including Northern and Eastern Railway toll, &c.

§ Refused by the Directors. ‖ No portion of the traffic from the Manchester and Leeds line is included. ¶ The Liverpool and Manchester toll being deducted.

*** Exclusive of the toll and rent payable to the Eastern Counties' Company. ††† Not including traffic on Leeds and Selby line.

§§ The receipts for the week ending December 20 were—Passengers, 4,069*l*. 19s. 9d.; Merchandize, 854*l*. 2s. 10d.; Total, 4,924*l*. 2s. 7d.

¶¶ The traffic for the week ending December 24 was—Passengers, 19,217; Amount, 367*l*. 12s. 6d.

TO CORRESPONDENTS.

Veritas.—*One at a time, if you please. You will understand what we mean. Besides, we do not altogether like your tone; but nevertheless, if you wish it the letter shall appear hereafter. The other letter next week.*

A second **Veritas** *(we wish our correspondents would vary their signatures), on the Croydon line, next week also.*

Mr. W. T. Rathbone, Mr. Edward Cropper, and Mr. David Hodgson.—*R. T. F. requests we will once more repeat the question addressed by him to the first two of these gentlemen, and declared by* A Holder of Fifty Shares in the Eastern Counties' *to be equally applicable to the third. We shall do so, though it really seems hardly worth while. If these gentlemen could have "cleansed themselves from the foul aspersion," they would to a certainty have done so before now.*—"Is it true, that certain of the Directors of this Company have the privilege of travelling *free* by railway for the whole or part of the distance beween Liverpool and London, and yet draw from the funds of the Eastern Counties' Company six guineas for each trip, up and down, at a time when this unfortunate concern is on the verge of bankruptcy, and the only fund there is to pay these guineas out of is borrowed money?"

Philo-Pooh! *will be inserted as an advertisement, but not otherwise. What the* Pooh-dle *may have done for the London and Westminster Bank, and other Companies, is not the question; and even as to them we should say, "Cum grano 'pooh'-salis;" but,* how has he done for *the poor Eastern Counties' Railway?*

X. Y. *must use his own judgment. It would be a difficult and invidious task for us to say "which is the best line at present prices to hold."*

Inquisitor.—*We shall be glad to hear again from this correspondent, but his present communication contains nothing tangible.*

A Subscriber.—*The crowded state of our columns prevents us from complying with our correspondent's request.*

Carriage of Goods on the Grand Junction Railway.—*Messrs. Pickford and Co. have, it will be seen, themselves taken up the subject, and therefore* Observer *and others must excuse us for deferring their letters.*

A Railway Shareholder's *very interesting reply to* **Examiner** *is postponed till next week, solely on account of its great length.*

Erratum.—*In our last number, for "Railway* Legislation *in Norfolk," read "Railway* Agitation," *&c.*

Our correspondence increases so much, that it would be extremely inconvenient to acknowledge each particular communication, and to give our reasons for rejecting many of them. Our friends, therefore, must take it for granted, that when their favours are not inserted or acknowledged, within a few weeks from the time they are sent, they are declined. We cannot undertake to return rejected MSS.

THE RAILWAY TIMES.

SATURDAY, JANUARY 2, 1841.

In our last number we adverted briefly to a few of the leading characteristics of the year which has just closed, and although it is,—if not easier at least,—more profitable to draw lessons of wisdom from the past than to form conjectures for the future, we may be pardoned for just hinting at a probable contingency in the railway history of the year upon which we have now entered.

The contingency to which we allude, is the interference of Parliament in the future management of railways. That an attempt will be made to strike a blow at railway interests by those who have ever been ill-affected towards them, there can be but little doubt. Unfortunately there is a fair pretext for interneddling, in the late melancholy occurrences upon the several lines; and although it does not follow that any degree of interference which can possibly emanate from the legislature could infallibly prevent the recurrence of similar casualties, there is the novelty of whatever nostrum may be proposed to recommend it to some, and the feeling of hostility to which we have already alluded, to secure the support of others. We have uniformly deprecated the attempts made by injudicious friends of the system to excite an outcry against every species or degree of control which the legislature might think it necessary to exercise over railway interests. There is nothing in the nature of railway property to exempt it from the superintendence to which every other species of property is subject, while there is much in its bearings upon the interests of the public generally, to justify and call for some peculiar interference. To suppose that Parliament ought to remain mere passive spectators of the mode in which Railway Companies exercise the rights and privileges which have been conferred upon them, were to suppose that the interests of the many ought to be made subservient to the benefit of the few. Nor would a salutary control from without be at all prejudicial to railway proprietors themselves. On the contrary, it would be much for their advantage that this control, if judiciously called into action, should exist. The public are always suspicious of the exercise of whatever appears to be an irresponsible power, and what can be more so than the principle set up by some, that Parliament having once conferred certain privileges upon Railway Companies has no right to regulate their proper application? For Parliament to appear indifferent upon this subject, would be more injurious to railway interests than the judicious exercise of a superintending care.

It will not be imagined, then, that we are opposed to extraneous interference in Railway Management merely because it *is* extraneous, nor that we have so strong a dread of restrictive enactments that we should deprecate every measure with this ostensible object. The part which we took during the discussion on Lord Seymour's Act will sufficiently show that we have a regard for the interests of the public, as well as for the prosperity and just rights of the Companies, and that we conceive the two to be identical, if properly considered. What we say in behalf of railway interests, as they may be supposed to clash with the interests of the public, will probably, therefore, be looked upon as having more weight than the opinions of those who, at every hazard, would support the one at the expense of the other.

We much fear that an attempt will be made in the coming session to interfere with Railway Management to an extent which is neither required by the exigencies of the case nor justified by regard for the public interests. We need not say that we hope every such attempt will be resisted as it deserves to be, and we have no doubt that with unanimity and exertion among the Companies it will be resisted successfully. It is not because defects may be apparent in the present mode of Railway Management that it is to be entirely superseded, and a new and untried system substituted in its place. Perfection in arrangements is not to be looked for at once, and however much the theoretical fancies of railway reformers may appear to partake of this character, it will be an ominous day for railways when the slow but sure teachings of experience are put aside for the plausibilities of amateur Directors. None but those who have experienced the difficulties which have obstructed the past progress of Railway Managements, can judge adequately of their variety or extent, nor know how much has been overcame, when they see that a great deal yet remains to be achieved. If, instead of affording facilities for perfecting the present system of management, Parliament should seek to create a new mode of internal discipline, the interests of the public, not less than those of the Companies, require that the attempt be promptly and powerfully counteracted. It is such an attempt as this that we dread, and it is to forewarn those concerned in resisting it, rather than to enlarge at present upon the topic, that we now call attention to the subject.

Two things are to be equally guarded against in the position which the Companies may be called upon to assume in the coming campaign, namely, resisting *all* concession, and conceding too much. The former is the error into which they are the more likely to fall, and it may prove a fatal one. While they show that they are determined to protect their property against injustice and spoliation, they must at the same time evince a disposition to consult public feeling, should that feeling be in favour of further measures of precaution than the Companies may themselves think necessary. They must not stickle for, and stand out upon, indifferent points, but concentrate all their energies to repel aggression in matters of vital moment, should such aggression be made or meditated. Their strength is great; let it not be frittered away on trifles, much less be exerted in opposition to schemes that have even a small measure of practical utility to recommend them. Timely concession on unimportant points, oftentimes averts unjust and injurious interference in matters that are really of consequence. The Companies have, at present, a strong support in public opinion, which is, on the whole, unquestionably on their side, notwithstanding the efforts made by an interested faction to give it a contrary direction; and it is to be hoped that nothing will occur to give occasion for judging otherwise than favourably of railway arrangements generally. There is unquestionably much room for amendment in many parts, and it will be well if the several Managements set about the task of improvement, without waiting till it is forced upon them by popular clamour, or legislative enactment. Once more we would warn railway proprietors to be on their guard. If they are compelled to act upon the defensive, timely preparation may be of much service. We have no doubt that the Companies will do their duty individually, but some means ought, we think, to be adopted for enabling them to act in concert. Without at present bringing forward any scheme of our own, we shall be happy to hear what any of our numerous correspondents may have to say on this subject.

The proceedings at the recent special meeting of the Manchester and Birmingham Railway Company, of which we elsewhere give a *verbatim* report, are on many accounts deserving of particular notice. They are, indeed, of a character so enormously flagrant—so extraordinary we were about to say, but we fear the spirit which pervades them is much too common—that to pass them over without the most marked reprobation, were to do injustice to all who desire to see railway facilities extended throughout the kingdom in the only way in which they *can* be extended, namely, by affording the prospect of a reasonable return to the promoters.

We do not intend to touch at present upon the Extension scheme, with which this Com-

pany is so closely connected, although it is strongly provocative of remark to observe the cool, cavalier manner in which the Chairman took care to tell *nothing* in reference to that project, or to the memorable "arrangement" with the Grand Junction Company, in almost the same breath that one of his colleagues vehemently protested how ready the Directors were to disclose *everything* that the proprietors could possibly desire to know! What we now wish to call attention to is, the state of the parent line, and its future prospects, as bearing upon the general question of railway communication.

We do not dispute the utility of the Manchester and Birmingham line as a public work, nor have we much doubt that it would have turned out a very tolerable investment had it been carefully and economically constructed, but here comes our cause of complaint; it has *not* been economically made so far as it is yet carried; it will therefore prove a ruinous speculation to the proprietors, and consequently serve as a "heavy blow and great discouragement" to all future works of the kind. How stand the simple facts? The line, including the branch to Macclesfield, is about 40 miles in length, and the available capital of the Company, as stated by the Directors themselves, is 2,800,000*l.* The Directors are, or profess to be, of opinion that the whole of this large amount will not be required; but other parties, who are quite as good judges as the Directors can be, and much more likely to speak the *whole* truth in reference to it, believe, that instead of a surplus there will be a considerable deficiency if the present large outlay is continued; and that after every farthing of share-capital, and every shilling of borrowed money authorised by the Act have been expended, a further capital will be required to complete the work. Of this, however, hereafter. For the present we will assume the sufficiency of the existing capital, and then observe what are the prospects of the proprietors. The Manchester and Birmingham Railway will depend almost entirely upon the traffic which it can attract from the Grand Junction, and of this traffic the utmost that it can look for is generally estimated at *one-fourth* part of the whole. Now the last dividend received by the Grand Junction proprietors was at the rate of 14 per cent. per annum, *one-fourth* part of which would be just 3½ per cent. per annum to the Manchester and Birmingham proprietors, supposing the outlay upon the two lines to be precisely the same, and that the *divided* traffic could be carried at exactly the same per centage on the *united* gross receipts as it is carried for at present by the Grand Junction Company alone. But to suppose that the two lines can be worked, in opposition or even in conjunction, as cheaply as the one line now in operation, is to suppose that two expensive establishments can be kept up at the same cost as a single establishment; and mark, moreover, the relative cost of construction of the two lines. *The Grand Junction line cost on an average* 25,000*l. per mile; the Manchester and Birmingham,* ADMITTING THE PRESENT CAPITAL TO BE SUFFICIENT, *will cost just* 70,000*l. per mile, or very nearly three times as much as its established rival!* What then becomes of the 3½ per cent. above referred to? Will it prove 1 per cent.? Will it, after paying *at least* 5 per cent. to the mortgagees upon this 700,000*l.*, be ½ or ¼ per cent.? We doubt it much.

True, as we said before, the Directors appear to think that the whole of the 2,800,000*l.* will not be required, but upon what grounds does this statement rest? They pretend that they cannot furnish an estimate of the total cost of the line until the Macclesfield branch is put under contract, and yet, forsooth, they express a confident belief that there will remain a surplus! For anything that they seem to know to the contrary, there may be a large deficiency. They have already called up, they tell us, 1,200,000*l.*, and have now obtained power to borrow 700,000*l.* more; they have only completed six miles of railway; they admit that there is still *fifteen months'* work upon the main line (and we know too well that promises of railway openings are not always observed to the letter), and they state further that one-fourth part of the whole work is still unlet, namely, the branch to Macclesfield, (a branch, by the way, that will create little new traffic, although it will facilitate that which *without it* would come upon the line—a branch too undertaken, or rather *promised,* in order to prevent the inhabitants of that not very large town from patronising another project,) and yet they have the hardihood to declare their conviction that the whole of the 2,800,000*l.* will not be required!

This is but a sorry prospect for the poor proprietors (the bondholders, of course, will take care of themselves, that is, if the receipts suffice to pay common interest on the borrowed capital), and it may be asked why we thus discourage and dishearten them, seeing that the money has been subscribed for and *must* be paid—if not voluntarily, through the terrifying process of a court of law? We answer, that it is not yet too late for the Manchester and Birmingham proprietors to avert a portion of the consequences of the acts of their Directors. Let them bestir themselves and make an immediate and most searching inquiry into what has been done and what is now doing by their representatives, taking care to *insist* upon a more economical management of their funds, especially in the outlay upon "works"; let them do this, and they may yet save a wreck of their property from utter ruin. But it is less for the sake of this particular Company, that we have felt ourselves called upon to refer to the matter, than on account of the influence which an extravagant and unnecessary expenditure upon one line must exert upon similar works that may hereafter be projected. Should it turn out that the proprietors of the Manchester and Birmingham Railway will not receive 1 per cent. upon the money which they have risked (without the chance of the *smallest* return for years) upon that work, would it not be enough to disgust these parties with all future railways, and to deter others from embarking their property in such profitless undertakings? It is, we say, the *unnecessary* expenditure of capital with which we find fault. Why were not the Manchester and Birmingham Directors content with a line possessing such gradients as the Grand Junction? Why waste the money of their constituents in making a *fine* railway? What the proprietors wanted was a *profitable* line, and it will be but a poor satisfaction for them to know that, instead of receiving a snug half-yearly dividend, they are the owners of some of the most magnificent works in Europe. It is very well that a large expenditure should be incurred in improving the gradients of, and otherwise giving a highly-finished character to railways, which from their position must necessarily serve as trunks to other lines, and possess an immense traffic; but for the owners of secondary lines to follow such an example is as ridiculous and as ruinous as if a person with an income of 500*l.* a year were to vie in the splendour of his abode, and the style of his living, with his neighbour of 5,000*l.* Even in the great Companies this determination to obtain what is called a "good line," is frequently carried too far, and the ambitious feelings of engineers are, we regret to say, too often acquiesced in by proprietors, from a notion that because the traffic is likely to be large, the expenditure may be great in proportion. They forget the saying, quoted a week or two ago by one of our correspondents, that *even gold may be purchased at too high a price.* The saving which is effected in the daily working of a line, by having "good gradients" instead of "bad," exactly represents the amount which it is prudent for Railway Companies to expend in securing the improvement. All expenditure beyond this amount is as a dead loss, or rather a constant drawback to future prosperity. What, for instance, is the per centage which the most economical Management can save in the *working* of a line, compared with the per centage in interest on money squandered in the *construction?* It is not any peculiar thrift on the part of the Grand Junction Directors which enables their constituents to realise periodically so handsome a dividend; it is the comparative cheapness of the line. Much is predicted of the Great Western Railway, and the dividend to the shareholders will, we hope, be considerable; but what would it have been had the line been constructed at one-half the present cost, which many persons believe it might have been with as much advantage to the public, though possibly with less *eclat* to the engineer?

The proceedings at the Manchester and Birmingham meeting, afford a striking instance of the almost incredible apathy of railway proprietors in matters of vital moment. Here is a meeting called by repeated advertisements in metropolitan and local journals, to authorize the raising of nearly a million of money, and at which meeting it might reasonably have been presumed that some explanation would have been given of negociations and agreements which *do* affect the expenditure of nearly three millions sterling, and *may* affect the very existence of the Company, and yet only 50 persons are present out of a proprietary of more than 500—these 50 comprising, moreover, Directors, Secretaries, law-clerks, and doubtless not a few familiar friends of these functionaries; *the* resolution of the day is moved and seconded, the mover and seconder not taking the trouble, apparently, to open their lips, and after a few common-place questions, for which those who put them seem to have thought it necessary to apologize, and the most important of which the representatives—the stewards—the *servants*—of the proprietors, flatly refuse to answer; the resolution for raising 700,000*l.* is carried unanimously, a vote of thanks passed to those who had treated the *fifty* so contemptuously, and the meeting breaks up as if the parties had merely assembled to wish each other the compliments of the season! Can any one wonder that Directors should at times play fantastic tricks, when assurance on the one side, and credulity on the other, are so rampant? Is it not wonderful, rather, that they should condescend to go through the farce of asking the consent of their so-called constituents to any act, financial or other, which they may have in contemplation. Verily, it is "too bad." If shareholders *will* sleep on, so be it—it is more their concern than our's—but in, the name of consistency, and common

Digitized by Google

sense, let us hear no more complaints of the miscalculations or mistakes of Engineers, the extravagance or inexperience of Directors, or the comparative unproductiveness of railway property. *The remedy lies with the complainants; if they will not step forth to help themselves, how can they expect assistance from others?*

We recommend to the attention of our readers—the Lancashire portion of them especially—the report given in our journal of to-day of the proceedings of a meeting held in London on Wednesday last, to promote the formation of a railway from London to Cambridge, Newmarket, Norwich, and Yarmouth. Mr. Chute, one of the members for West Norfolk, presided: and among the movers of resolutions in favour of the projected line (Mr. Rastrick's) were the Marquis of Douro and Mr. Wm. Smith, the representatives of the City of Norwich; Mr. Jermy, the Recorder of Norwich; Mr. Samuel Bignold, and other gentlemen of the highest local standing and influence. A County meeting, in favour of the same project, is to be held at Norwich next Thursday, and among the signatures to the requisition for that meeting, which we published in our last number, are to be found the names of nearly all the leading noblemen and gentlemen of Norfolk. It is impossible that a plan so warmly patronized by the most influential men of all parties, and which offers the benefits of railway communication to large and important districts which are at present (as it were) isolated from the rest of the kingdom, can fail of success; nor can any one who looks either to the local or public interests involved in its accomplishment, but earnestly desire that it may "speed and prosper."

Certainly, the line chosen is not in our judgment the best that could be laid down to meet the traffic wants of the East Anglian peninsula. The line which would have effected that object better than any other, would undoubtedly have been the more central line by Chelmsford, Colchester, Ipswich, and Eye; but since that line has been taken possession of by certain parties, who, though they have abandoned all intention of ever completing it themselves, stand as insuperable obstacles in the way of its being taken up by others, Mr. Rastrick must be allowed to have chosen the next best, and one too, which though it may not serve some parts of the peninsula so well, will assuredly pay the subscribers to it much better. For, by skirting the confines of Essex and Suffolk, the East Anglian line (a very appropriate name) will serve for the counties of Cambridge, Huntingdon, and Lincoln, as well as for Suffolk and Norfolk, while Cambridge and Newmarket, one the second seat of learning in the kingdom, and the other the greatest resort of the lovers of the turf, may be regarded as more than equivalent sets off for the loss of Colchester and Ipswich.

To the Eastern Counties' Company the success of the East Anglian line will be necessarily most disastrous. But having cast off Norfolk and Suffolk, (after first grossly deceiving them, and after many warnings of the ruin they were bringing upon themselves by their conduct,) they cannot blame the people of Norfolk and Suffolk for shifting for themselves, or the friends of fair play, and the public good, for wishing well to their endeavours. On referring to the revised estimates of traffic, submitted to the special general meeting of the Eastern Counties' Company on the 29th of September last, we observe that much more than one-half of all the traffic calculated upon is from places in Norfolk and Suffolk, the business of which the East Anglian line will entirely absorb! The truth is, that it is only by *compelling* all the Suffolk and Norfolk traffic to come through Colchester, that the Eastern Counties' Company can ever hope to make a shilling of profit by stopping at that place; for the Essex traffic alone never was, and is never likely to be, sufficient to yield a remunerative return for the couple of millions which must be sunk before Colchester is reached. But such compulsion, of course, is out of the question—a thing for simpletons and dreamers only to reckon upon. The railway that is carried to the doors of the people of Suffolk and Norfolk will be that which will most assuredly engross all their traffic.

In another column will be found a Report from the Government Commissioners Lieut. Col. Sir F. Smith, and Professor Barlow, upon the competing lines towards Scotland. It will be seen that we were right last week in contradicting the rumour that the east line throughout had been sanctioned. As yet only the lines on this side of Carlisle have been finally examined, the Commissioners now giving a more decided opinion than before upon the propriety of adopting a modification of Mr. Larmer and Mr. Bentley's lines, so as to take in Kendal.

The Report, which we now print, has been made public through the exertions of Mr. C. Nicholson, a gentleman who has been laudably active in promoting the success of the Kendal line. In ordinary course the Report could not have appeared until after the meeting of Parliament, but Mr. Nicholson having memorialized the Lords of the Treasury, a copy was forwarded to him with permission to make it public.

Sir F. Smith is now in the north, examining Mr. Locke's line of railway from Carlisle to Glasgow.

We feel bound in justice to Messrs. Pickford and Co., the eminent carriers, to call the attention of our readers to the reply of these gentlemen to the letter of Mr. Chorley, which appeared in our columns last week, in reference to the carriage of goods on the Grand Junction Railway.

The New Year has been from time immemorial a season of general reckoning, when profits and losses are cast up, balances struck, and lessons deduced from past experience for future guidance. Why then should not so good a custom hold also in respect of railways? Can any class of undertakings be named in which men have had so much to learn and unlearn; where they have had to pay so dearly for their schooling, or with respect to which it is of so much importance to ascertain the amount and the value of the stock of knowledge they have acquired? But the materials for a general railway reckoning where are they? We might refer to our own volumes for a very considerable, if not complete collection; but we are spared the unpleasantness of any such egotistical recommendation by the seasonable appearance this week of a volume by Mr. Francis Whishaw, C. E., on "The Railways of Great Britain and Ireland;" in which the author has brought together nearly everything requisite for the formation of an exact railway balance sheet for the 1st January, 1841. The book is dedicated to "the Railway Capitalists of the United Kingdom," and no railway capitalist who studies his own interest will remain long without it. It is a work of immense labour and research—very clearly and methodically arranged—most exact and circumstantial in all its details—rich in original and authentic information—generally honest, impartial, and judicious in its praise and censure—embellished to profusion with splendid engravings;—and taken altogether forms a New Year's Day present, every way worthy of the cause to which it is dedicated, and honourable to its author.

The whole of the railways executed or in progress are separately described in alphabetical succession, and most of them from personal inspection by the author. The general course of each railway—the gradients—the gauge—the permanent way—the earthworks—the gradients and bridges—the tunnels (if any)—the stations—the carrying departments—the locomotive engines—the estimated and actual cost—the Management—the annual expenditure, and annual revenue—form each the subject of distinct sections.

Mr. Whishaw gives then a detailed account of a numerous series of experiments which he procured to be made, "for the express purpose of showing the *every day* work performed by different kinds of locomotive engines on level planes, and also on ascending and descending inclined planes, graduated with first, second, and third class inclinations;" and it is to this part of the work that we would particularly direct the attention of every railway capitalist, desirous of ascertaining how his profit and loss account stands at the present time, and by what means the profit side may be best made to preponderate in future.

The maximum of what Mr. Whishaw calls his first class inclinations is 16 feet, or 1 in 330; of the second $52\frac{80}{100}$, or 1 in 100; and of the third 88 feet, or 1 in 60.

The general results of his experiments on railways of those different degrees of inclination are curious and instructive.—

"From these experiments we obtain some important results as regards the laying out and first cost of railways. On some of the main lines an enormously increased expenditure has been incurred for the purpose of obtaining first class gradients throughout; yet in the *every* day working of railways, we find that as high and in some instances higher average rates of speed are maintained throughout each trip on lines having a great proportion of gradients *under* the first class.

"The London and Birmingham is a forcible example of excessive first cost, occasioned in a great degree by excluding second class gradients, yet in the thirty-two practical experiments made on that line the average speed maintained throughout was equal to only 24.69 miles an hour; whereas on the Grand Junction line, where second class gradients were introduced for the express purpose of keeping down the original cost, the average speed maintained throughout twenty-four experiments was equal to 26.20 miles an hour.

"On the Newcastle and Carlisle, North Union, and Stockton and Darlington Railways, each of which have second class gradients, and some of the highest degree, the results as to the first and second class are equally favourable, and the third nearly so.

"On the Newcastle and Carlisle Railway, which in addition to some second class gradients is made up of a series of quick curves almost from end to end, the average speed maintained throughout eleven experiments was equal to 24.41 miles an hour.

"On the North Union Railway, one-fourth of the length of which is graduated with the highest degree (1 in 100) of second class gradients, the

average speed throughout was equal to 26.20 miles an hour.

"On the Stockton and Darlington Railway, which is entirely an ascending line in one direction, and has also a great proportion of second class gradients, the average speed maintained throughout six experiments was equal to 22.38 miles an hour."

Among Mr. Whishaw's "forcible examples" of the inutility of expending large sums of money in obtaining very low gradients, we miss however the Great Western, which, we rather apprehend, is quite as forcible a one as any. The omission forms an exception to Mr. Whishaw's general impartiality, which his enthusiastic admiration of the "giant" genius (p. 142) of the Engineer of this line tends rather to aggravate than excuse. On the Great Western there is no gradient from one end to the other, (with the exception of the Wootton Basset inclined plane, 1 mile 29.09 chains, and the Box, 2 miles 30.15 chains,) steeper than 15.35 feet per mile, or 1 in 344; and yet the average velocity obtained in 25 experiments detailed by Mr. Whishaw, was but 25.475 miles an hour, being actually less than the average velocity of the North Union, where the prevailing gradients are among the very steepest known to railway practice.

It must be confessed, indeed, that neither as regards the Great Western, nor any of the other lines quoted, are the data furnished by Mr. Whishaw *all* that are requisite to justify us in coming to an absolute conclusion, as to the economy of low gradients compared with high. It is not enough that we should be told the average every-day speed realised; it is necessary that we should know also *what it has cost* to realise that speed, in expenditure of fuel, and tear and wear of engines and rails. In the next edition of Mr. Whishaw's work, or in an early supplement to the present, we shall be glad to see this very needful information supplied.

Following the Experiments to which we have just adverted, there is an account of a "Reciprocating System of Railways," proposed by the author, which we have not at present leisure to examine, but of the general advantages of which we willingly give the author's own brief summary:—

"Constructed in the most substantial way, furnished and appointed in the most complete manner, and affording all the accommodation of the best railways of the present day, the original construction and entire furnishing would be reduced to an average throughout the United Kingdom of something like 15,000*l.* per mile. By this system, too, *accidents by collision*, which of late have unfortunately been of but too frequent occurrence, are rendered next to impossible, as will appear evident to any one who will carefully read the account of this proposed mode of carrying on the traffic."

An Appendix to the work contains a set of Tables exhibiting the proportional dimensions of no less *than six hundred and thirty different locomotive engines* used on British and Foreign Railways. Could but a column be added showing the proportional *performances* of these engines—this would be a set of Tables above all price. As it is, they are of great value, and perfectly unique.

—o—

THE following sentence which appeared the other day in the *Times*, in a rambling and not very luminous article on the condition of the working classes, will probably excite some surprise among those who recollect the recent fulminations of that journal:—

"We are all aware of the commotion which has recently been excited by the occurrence of several railroad accidents. *There is no doubt, we believe, that travelling, generally, has been rendered in some degree more secure than heretofore by the adoption of railroads;* but still the public would not endure the slightest carelessness—would not tolerate the least inattention in those who had the charge of these new means of conveyance. Deodand upon deodand followed, as life after life was lost, until *it became almost an established doctrine, that a casualty on a railroad must be a punishable offence.*"

Who was it that recommended the "doctrine" of "swinging deodands?" Was it not the *Times* itself?

—o—

THE *Liverpool Courier* of Wednesday states, that since the fares were recently lowered on the Chester and Birkenhead Railway, the traffic on the line has increased nearly threefold.

—o—

THE offences in connection with railways, which we have to notice to-day, are somewhat numerous:—

Towards the close of last week, the authorities of the London and South-Western Railway Company had two men brought before the magistrates of Union Hall, for having got upon a truck attached to a fast train, in order to have a ride to Southampton *gratis*. The superientendent of the line noticed two instances of dreadful accidents which had arisen in consequence of persons attempting to get by stealth on the trucks when the trains were in motion. The first was that of a man at Weybridge, who had his thigh so desperately lacerated that it was necessary to amputate it from the hip joint. The other case was that of a boy, who, in attempting to climb up, had his foot twisted in such a manner that his leg had to be cut off under the knee. Both man and boy (he said) were now at work with their wooden legs in the Company's service. The superintendent added that the least slip in the attempt to mount a train was attended with great danger to the person who ventured while it was in motion. The magistrate, as usual, lectured the men on the enormity of their offence, and fined them 10*s.* each (10 days' imprisonment in default of payment) for the double crime of attempting to defraud the Company and perilling their own lives, besides running the risk of bringing odium on the arrangements of the Management!

The same Company have recently had a case decided upon by the Southampton magistrates. It is thus described in the *Hampshire Independent* of Saturday last:—

"On Saturday last, Stephen Hasler was brought before Joseph Lobb, Esq., the Mayor, and two other magistrates, Captain Ward and P. C. Fall, Esq., on an information which charged him with having, on the night of the 13th instant, whilst employed in the service of the London and South Western Railway Company, at the first gate beyond the terminus in this town, neglected to turn the points of that particular line of rails on which the engine goes when separated from the train of carriages on its arrival. From the evidence of Mr. William Naylor, one of the Company's servants, it appeared that as is customary with him he went at a few minutes before the mail train from London, was on that night due to ascertain whether this man with the other servants was awake and on duty. He found him absent from his post, and asleep in an adjacent watch-box, and he, Naylor, himself waited for the train, and prepared for its reception. *As it appeared, however, that even if this person had not detected the omission, no concussion would have taken place to endanger life or limb, which it became necessary to substantiate, as the information was laid under Lord Seymour's Act*, the defendant was discharged. The magistrates took occasion to admonish the gate-keepers and servants of the Company who were present, as to the necessity of exercising the utmost vigilance, and individually to express their fixed determination to inflict the highest penalty on all who might be brought before them as offenders. It need scarcely be added that Stephen Hasler has been discharged from the service of the Company."

The magistrates, of course, "took occasion to admonish," but they might, we think, have gone further. If no danger could result from the man Hasler's neglect of duty, why, pray, was he stationed at this particular spot? He must have had *something* to do, and he did not do it, for he was found "absent from his post and asleep in an adjacent watch-box." If the charge could not be substantiated under Lord Seymour's Act, surely the Company's Act provided a punishment. The man however, it appears, has been dismissed the Company's service, and we hope it will be a long time before he finds similar employment.

The next case is thus noticed by the *Manchester Chronicle*:—

"Mr. James Wright, a respectable farmer at Winwick, appeared before the magistrates at Warrington on Monday, and pleaded guilty to an information preferred against him by direction of the Grand Junction Railway Company, for neglecting to close a gate opening from his farm on to the Grand Junction Railway. Mr. Fitchett Marsh, who attended in support of the information, said that the negligence of the defendant had very nearly been the occasion of a serious accident on the line. On the 16th of December he had been engaged in the carting of manure across the line from one portion of his farm to the other; and, although cautioned by the policeman on duty near the gate, to shut the gate after the carts passed through, he left it open, and some cows strayed on the line just about the time of the twelve o'clock train coming down the Newton Incline, at the bottom of which the defendant's farm is situated. Luckily the engineer saw the cattle, and succeeded, with considerable difficulty, in stopping the train, and no accident followed. The magistrates convicted the defendant in the penalty of 2*l.* and 10*s*, costs."

The penalty was, as usual, much too small, but the Directors have done their duty in bringing the case forward. But where was the "policeman on duty near the gate," who cautioned the defendant to shut it? One would think *he* might have seen "the cattle" before the engine-driver came up. The charge against the "respectable farmer" would have been equally valid had the policeman closed the gate and kept the cows in. The safety of the public ought not to be entrusted to such parties as farmers on the line, whether "respectable" or otherwise.

On Thursday, the Directors of the Croydon Company brought one of their guards named Crossley before Mr. Maltby, the sitting magistrate at Union Hall Police Office, on a double charge of presenting himself on the platform in the usual course of his duty in a state of intoxication, and of severely assaulting a superintendent who had advised him to retire. The charge of assault was waived but Crossley was convicted of neglect of duty. The magistrate deferred judgment till it should be known whether the Directors meant to retain the offender in their service. Yesterday it was intimated to Mr. Maltby that the man had been dismissed, and the magistrate considering that this would be sufficient punishment, inflicted a fine of 10*s*. only, stating at the same time that but for the dismissal, the maximum penalty of 10*l.* would have been imposed. Crossley, it seems, has been on the whole a steady and faithful servant, and for his sake we regret the occurrence, but we cannot see what other course the Directors could have pursued, *even for a first offence*. Their duty to the public is paramount, and of all offences that of intoxication is the least to be excused in a railway servant.

The last case which we have now to notice is thus reported in the *Yorkshire Gazette*:—

"Hugh Clennell, William Howe, Edwin Clennell, and Francis Burrell, all of West Auckland, waggon-drivers, *were fined two-and-sixpence each and costs*, for bringing their waggons out of a siding to the main line of the Stockton and Darlington Railway, at the time the first class train was approaching, whereby it was detained eight minutes. The conviction took place before the Auckland magistrates."

Comment upon this were superfluous. "The Auckland magistrates" sre not to be surpassed in anxiety for the public safety! No doubt the customary "admonition" was administered! How is it that the Companies submit to such decisions?

SOME LOST CHAPTERS OF ANCIENT EASTERN HISTORY.

[*Found in exploring the Ruins of Rogulaneum.*]

Chapter the Second.

1. After these things another of the native Governors of the Iron Way, called Balklif, died, and Jesui and Malahaleel prevailed with Bozrah, so that another of their brethren, of the name of Edcrop, of the family of the Dophbrims, was elected in his stead.

2. And now Bozrah saw only with the eyes of the strangers, and did in all things only as they advised.

3. Crying aloud, nevertheless, throughout the city—'Counsel is mine! And the skilful hand is mine! For though better are the leaders, yet is it still a sorry team I have to drive!'

4. At which those who heard, would point their thumbs over their left shoulders, and pass on their way wondering.

5. For as the chariot wheel is driven by the fly that buzzeth on the top thereof, even so did Bozrah drive the team which he reviled.

6. Now Malahaleel taking Jesui and Edcrop aside whispered unto them, 'We can now do with Bozrah and his people as we list; let us therefore fill our sacks and the sacks of our brethren as fast as we can.'

7. 'It were a wise thing,' answered Jesui, 'but how may this be done?'

8. 'The way,' said Malahaleel, 'it is not very hard to find. On this side of the Ohr, which is about midway to the mouth of the Yahr, which flows into the Orient Sea, whereunto this Iron Way was designed to reach, there is a narrow strait, called the Kuhldesak, through which most of all the traffic that there is of men and of merchandise, and of cattle, throughout this land must pass, going or coming.'

9. And having thus spoken, Malahaleel paused a while, as doth the wicked when evil thoughts want utterance.

10. But resuming discourse he said, 'The fisherman looketh only to the mouth of his net.'

11. 'Truly he doth so,' said Jesui; 'what then?'

12. 'Let us too,' continued Malahaleel, 'look no further.

13. 'Let there be a strict watch set at the Kuhldesak, so that none going or coming shall pass through without paying the full tolls commanded to be levied by the King, and what need then to carry the Iron-way any further?

14. 'Let us make but *half* the way, and sack the *whole* of the tolls; and it cannot but come to pass that we shall soon grow very rich!'

15. Whereupon Jesui, turning to Edcrop, said, 'The lad speaketh shrewdly. What thinkest thou?'

16. To which Edcrop replied—'Much as thou do'st, Jesui, but what saith the edict of the King?'

17. 'The King's edict,' said Jesui, 'is peradventure, as other King's edicts are, not good for much, (for this Jesui was one of the sect called Rhads,) and may be read any way you please.'

18. 'It is even so,' replied Malahaleel, 'and is not the way to read it, that which shall serve us best?'

19. 'Thou speakest as one inspired!' exclaimed Jesui.

20. Edcrop looked doubtingly, but said nothing.

21. And so, after some further communing together, it was agreed by Jesui and Malahaleel and Edcrop, that they should strive unto the utmost that the Iron-way should be carried no further than to the strait of Kuhldesak.

22. Now when the rumour of this thing went abroad, it caused great commotion among those of the Governors who were of the tribe of Magog, which inhabiteth the parts of Kalferland, near unto and on the other side of Kuhldesak.

23. And they warned Bozrah, the chief governor, of the evil design of the strangers, but he answered only "Pooh! Pooh!"

24. And they also reproached Jesui and Malahaleel and Edcrop therewith, but they answered mockingly, 'Why talk ye of the Way on the other side Kuhldesak, while on this side ye have nearly all your work to do! Do men begin a journey at the end thereof, or build houses from the roof downwards?'

25. And at convenient season thereafter Jesui and his brethren said unto Bozrah, 'Would that these Magogs, Oh Bozrah! had understanding and knowledge of things as thou hast; but of a verity they are a useless race and a troublesome. Let us contrive, we pray thee, to put them from amongst us?'

26. And to others of the tribe of Gog they spake in like manner.

27. To Katspa, Silihud, Tufas, and Thikpol.

28. And so before long the tribe of Gog became by these means estranged from that of Magog, and the power of Jesui and his brethren increased more and more.

29. Now Bozrah dreamed; and behold he stood by the River.

30. And behold there came up out of the river nine well favoured swans, and fat fleshed, and they fed in a meadow.

31. And nine foxes came up after them, ill-favoured and lean-fleshed, and stood by the side of the nine swans upon the bank of the River.

32. And the ill-favoured and lean-fleshed foxes did gobble up the nine well-favoured and fat swans. So Bozrah awoke.

33. And in the morning Bozrah being much troubled sent for Jesui and Malahaleel and Edcrop, and told them his dream; but though they saw what it meant, and were well pleased within themselves thereat, they said it was a thing beyond their understanding.

SOUTH EASTERN RAILWAY—MR. LAWRENCE HEYWORTH.

To the Editor of the Railway Times.

SIR,—I am delighted to learn from a "South Eastern Shareholder," that I was wrong in supposing that Mr. Lawrence Heyworth is still on the Direction of that Company. We can now mutually *congratulate* each other—not forgetting, at the same time, to *condole* with other Railway Companies and shareholders less happily circumstanced. With Mr. Heyworth personally I have no fault to find; I object to him as a Director of any Railway on this side of the island, solely because should his presence be very urgently wanted at any time you must send more than two hundred miles after him. His good sense in not offering himself for re-election on the South Eastern Direction after being balloted out, I greatly admire; and only wish he would extend the same tender consideration to another metropolitan concern by which he still holds fast for no apparent purpose either of good to it or credit to himself—I mean the Eastern Counties'—by an unfortunate purchase of shares in which I have lost more than I can ever hope to recover by being

A GREAT WESTERN SHAREHOLDER.

London, Dec. 30, 1840.

THE LIVERPOOL CORPORATION—MR. T. W. RATHBONE.

To the Editor of the Railway Times.

SIR,—Your Liverpool correspondent, who ranks Mr. T. W. Rathbone amongst the decidedly rejected of the *would-be* Liverpool Town Councillors, at the late election, commits the slight mistake of putting him in the place of his brother. After all that has been said and written lately, the Deputy-Chairman of the Eastern Counties' Railway has too much discretion to expose himself to any manifestation of *popular* feeling in this quarter. Whatever people may think elsewhere of claiming to be re-imbursed, under the head of *money out of pocket*, sums of money which were *never paid at all, by anybody to anybody*, or of a man's grudging paper of his own on which to outpour the effusions of his own inordinate vanity, such things will not go down here.

I am, Sir, your constant reader,

D.

Abercromby-square, Liverpool, 29th December, 1840.

P.S.—I understand that Mr. Rathbone very solemnly denies having ever received any supply of Company *tape and wafers*, and makes quite a *boast* of this. Now, as far as my memory serves me, it was only the Company's "paper" Mr. R. was charged with using. However, it would seem very clearly to follow, from the *little* that Mr. R. denies, that he confesses *all the rest*.

LEIPSIC AND DRESDEN RAILWAY.

Traffic Returns from 1st January to 31st October in the Years 1839 and 1840.

Periods.	Year 1839. Travellers.	Year 1839. Receipts in doll.	Year 1840. Travellers.	Year 1840. Receipt in doll.
January 1 to March 31	47,604	18,472	48,503	60,442
April 1 to June 30	131,224	115,282	143,691	140,166
July 1 to Sept. 30	150,500	138,242	156,009	149,622
Month of October	45,985	49,685	48,908	56,205
Total	375,303	321,681	357,201	406,435

	Year 1839.	Year 1840.
Average travellers per day	1,251	1,191 = 183
Ditto receipts	1,073	1,354 = 208

The above account includes goods, but excludes the receipts of the portion of the Magdeburg line belonging to the Leipsic and Dresden Company.

Price of shares, 99¼ to 99½.

Leipsic, 14th December, 1840.

ACCIDENT ON THE GREAT WESTERN RAILWAY.—An accident occurred on Friday night, but not attended with any serious consequences. It appears that the mail, which left London at 9 o'clock, proceeded at an unusually slow pace in consequence of the density of the fog, and, upon its arrival at Langley Marsh, the waggon train, which started half an hour later, overtook the former train, and a concussion took place, but, owing to the relaxed speed at which both the trains were going, no injury was sustained by the passengers beyond the alarm attendant upon the casualty, and the damage done to the carriages was trifling.—*Daily Papers*, December 28.

BIRMINGHAM AND GLOUCESTER RAILWAY.—Since the opening of the entire line of railway from the Camp-hill Station, Birmingham, to Gloucester, the trains have traversed the line without the slightest accident, and with as few delays as could have been expected, those stopping at the first-class stations having performed the total distance in two hours and a half. The whole routes from the rising port of Gloucester, the key of South Wales, and from Cheltenham, are now open by uninterrupted lines of railway to Derbyshire, Staffordshire, Lancashire, and Yorkshire. We understand that very early in the new year the Company will be prepared with arrangements for the conveyance of goods, and already numerous applications have been made by carriers to put traffic on the line; it is to be hoped, therefore, that the proprietors of this spirited undertaking will speedily reap the reward of their patience and perseverance.—*Aris's Birmingham Gazette.*

PREVENTION OF RAILWAY ACCIDENTS.

To the Editor of the Railway Times.

SIR,—The facilities of immediate communication afforded by the magnetic telegraph are of so much importance that we may expect before long to see each railway thus provided. In the Evidence given on the subject of the telegraph before the House of Commons' Committee, the inventor states that he has contrived an escapement by means of which a bell may be rung at the stations calling attention to the signals. It appears to me that if each lamp on the line of railway were provided with a white and a red glass attached to a counterpoising weight, and connected with a similar escapement, it would be easy on the occurrence of an accident on any part of the line, to give at once the signal of danger from end to end. Each train would then proceed with caution to the nearest station, where the nature and locality of the accident would be ascertained, and the proper precautionary measures for the safety of the traffic be adopted.

I am, Sir, your obedient servant,

FRANCIS R. CONDER.

London, Dec. 31, 1840.

PREVENTION OF RAILWAY ACCIDENTS.

To the Editor of the Railway Times.

SIR,—When I consider the immense addition which would be made to the value of railways by the moral certainty of traversing them with safety, I feel convinced that no trouble or expense ought to be spared in promoting so desirable an object. It is allowed by all that the system is yet in its infancy, and we may conclude from the improvements which have been made in the course of time, in navigation, &c., that much will be effected as to railways. But some better means than those hitherto resorted to, are wanting to bring to the test the various expedients which may retard or stop the trains when in motion, or diminish or do away with all risk and danger in cases of collision, and also with perfect safety increase the velocity of the engine. These objects may justly be pronounced to be of national importance, for they affect most materially the safety, comfort, and convenience of the public. But it will be readily allowed that on lines in full operation there is very little opportunity of making experiments with perfect security, and in the presence of scientific men, who by such processes may judge of the value of the expedient proposed, and thus be led to suggest further improvements. The obvious plan would be to appropriate a sufficient length of rail in the neighbourhood of London, where experiments might be carried on by scientific men in the presence of the public. This would afford a theatre for the invention and display of every thing which may assist the progress of railway science. The several Companies could not be expected to lay out money for such a purpose, which could only be effected by a grant from Parliament. If the Government should patronise the measure, it might be carried into execution either by attaching the requisite length of rail to some short line, the West London, for example, or by fixing on some level spot of open ground where no expense would be required but that of laying the rails, which might be done at a comparatively trifling expense. If the experiments should not be productive of good results, it would be easy to dismantle the works and sell the materials, but if the process should add to the safety, comfort, and convenience of the public, I am certain no member of either House would think the money ill laid out. With respect to actual collisions, notwithstanding the prodigious momentum of a train, much may be done to diminish or do away all fatal results, but it appears to me that on a line in operation there can never be sufficient security for a work which ought to be carried on without the least possibility of risk or danger. On a working line accidents may easily happen by engines or trains sent on the line in the face of every precaution. Besides this, the efficacy of springs, air-tubes, &c., would be best tested and measured by acting on a fixed object.

Since my remarks respecting the Greenwich time were written, I see with pleasure that my suggestions have been anticipated by the Great Western Directors. The inconvenience which your correspondent, "A Proprietor," contemplates, may be easily obviated by stating on the time bills both the London, and local time at each station. As correctness is of the greatest importance the precise difference at each station should be carefully adjusted in the first instance by the Astronomer Royal, or some other well qualified person, for a few seconds either way may cause or prevent fatal results. Certainly no invention, however effective, will do so much to prevent accidents, as the most minute and scrupulous attention to the time of the starting of engines and trains, and their arrival at the several stations. If proper arrangements be made in the first place, the most perfect regularity may be maintained without any trouble or inconvenience to the officers of the railway.

I am, Sir, your obedient servant,

H. B.

Draycot, Chippenham, Dec. 27th, 1840.

PREVENTION OF RAILWAY ACCIDENTS.

THE following circular, issued by the Chairman of the Liverpool and Manchester Railway Company, has reference to a proposed conference of delegates from the several Companies, with a view to devise, if possible, some improved mode of working for the prevention of accidents. We purposely abstain at present from entering more fully into the subject, as we hope shortly to have it in our power to lay before our readers some important information in reference to it. It is gratifying to find that our reiterated admonitions in regard to the punishment of offending railway servants are now echoed by parties who, we have reason to know, were decidedly opposed to the clause in Lord Seymour's Act which gives the power of punishment, when that clause was first inserted at the instance of the London and Birmingham Board:—

Liverpool and Manchester Railway,
Liverpool, 14th December, 1840.

SIR,—I beg leave to hand you copy of the Report of a sub-Committee of Directors of this Company, on matters of interest in reference to the proposed railway conference. I send also a copy of the Liverpool and Manchester book of regulations; and have to only observe, that it is in the hope of narrowing the discussions at the conference, that the Directors of this Company have taken the liberty to transmit these documents for the consideration of your Board.

I am Sir, your very obedient servant,

HENRY BOOTH.

REPORT.

The London and Birmingham Company having suggested the expediency of the Liverpool and Manchester Directors preparing a draft of some general regulations to be forwarded to the different railway Companies for their consideration, prior to the conference; the Committee of the Liverpool and Manchester Board appointed for that purpose, beg leave to report—

That in considering the subject of the various accidents which have recently taken place on different railways, and the circumstances connected with each accident, it appears that they are attributable to one or more of the following causes:—

First—The want, or insufficiency of signal lights, giving warning of danger.

Second—Neglect on the part of enginemen of such signals, when given—comprehending a culpable want of care and vigilance, in not keeping a good look out; and,

Third—The difficulty of stopping a train when danger is perceived near at hand.

On the subject of signals and signal lights, your Committee are of opinion that the printed rules and regulations of this Company, which have been brought under the consideration of many other Companies, and, as your Committee believe, now constitute the basis and tenor of their respective regulations, are, on the whole, well calculated to answer the purposes intended. One modification seems desirable, namely—that the red light, or the red flag, should in all cases, and under all circumstances, be viewed as a warning against danger. On the Liverpool and Manchester line, the red light and flag are at present used at the gate houses to indicate that the Liverpool and Manchester second class trains are to stop to take up passengers; but blue lamps and flags will shortly be provided for that purpose, which will allow the red light and flag, afterwards, to be used only as a warning against danger, which your Committee think should be a universal rule.

Other lights and lamps have recently been suggested, as night signals on railways. Some experiments with the Bengal or blue lights have been made on this line; and the Eastern Counties' Railway Company have already introduced these lights, along with some portable rockets for policemen, into their code of night signals. Under strict regulations, it seems probable these lights may be used with advantage, as occasional and extraordinary signals; but the utmost care must be taken not to relax the vigilance of enginemen, by leading them to expect a glare of light sufficient to startle them into attention, before any particular caution or watchfulness on their parts is to be considered necessary; the best security in railway travelling being the unceasing vigilance and acknowledged responsibility of the man in charge of the engine.

As to negligence on the part of enginemen, and other servants on the railway, in not using due caution, and in not attending to signals when made, the Committee can only recommend great care in the selection of active, steady men in the first instance. Good wages, and a considerate regard to their comforts, so long as they do their duty; accompanied by the strictest discipline, and by uniformly putting in force the provisions of Lord Seymour's Act, in cases of any neglect of duty or disobedience of orders, hazarding the safety of life or property, although no loss of either should actually take place. Your Committee are of opinion, that bringing railway servants, in case of serious misconduct, before a county magistrate, for summary judgment under the late Act of Parliament, has a very beneficial tendency, by impressing strongly on the minds of enginemen and others, that when a transgression is committed it is an offence not merely against their employers (the Railway Company), but against the community at large, of which the laws of the country and the authorities thereof, will take prompt and severe cognizance.

And your Committee will mention in this place, the importance of an explicit understanding amongst different Companies, not to take into their employment, respectively, discharged servants from other Companies, or any servants having worked on other lines, without authentic and satisfactory testimonials from their last place.

With respect to the third point under review, the difficulty of promptly stopping trains when danger is perceived; the most efficient means hitherto employed, are immediately to reverse the engine, and put on the tender break. Great care should be taken by the engineers, that the reversing gear is of the most approved construction, not liable to get out of order, and which cannot fail to act, when the reversing lever is applied. The breaks, both of the tender and carriages, require constant attention, and they should be sufficiently powerful to enable the man who attends them, to lock without difficulty the four wheels of the carriage to which they are applied.

With regard to the numerous proposals of improvements, and schemes for the prevention of accidents by mechanical means, if that unceasing vigilance, which cannot be too strongly insisted upon, on the part of the engine-driver, should be at any time relaxed, those who have been long conversant with the practical working of a railway can hardly be aware how many of them have been long since, and under various forms, already tried, and found

to be attended with risks and inconveniences, more than compensating for any supposed advantages. Experiments of this kind, in the success of which Railway Companies are so deeply interested, are perpetually going forward, and some further improvements may, it is hoped, by degrees be generally introduced; but alterations of such vital importance in their consequences, ought never to be introduced in practice on the large scale, without considerable extent of trial and cautious experience of their practical working.

One new arrangement with a view to the safety of railway travelling, has been so publicly discussed and recommended, that your Committee cannot pass it over in silence; it is, that on each engine there should be not only the engineman and fireman to work the engine, but a conductor of a higher standing and superior acquirements, whose special business it should be to look out, and under whose orders the engineman should act.

Your Committee decidedly deprecate the idea of relieving the engineman from the responsible charge of his engine, and consequently of the train to which it is attached. But every care should be taken to get steady drivers, and more care than has, perhaps, usually been exercised in the choice of *firemen* or *stokers*. This class of servants, your Committee are of opinion, should be somewhat raised in importance in the scale of railway service. No fireman should be employed under 21 years of age, and a stricter scrutiny into respectability of character and steadiness of conduct should be instituted than they apprehend has hitherto taken place. A man of this description, after a few years service, would be prepared by ample training in the most effectual school, to take the higher place of engineman, and a steady engineman with such a fireman, your Committee are of opinion, is the proper party to have charge of the engine. It is admitted that the safety of the train depends very much on the proper conduct of the man who has the responsible charge of the engine. The question, therefore, as to the most competent conductor, should receive the fullest consideration. Your Committee, however, would apprehend the most imminent danger from any ill-advised change in the present system. What is required is constant vigilance—and there is no evidence in reference to any of the accidents which have taken place, that the exercise of this qualification on the part of the engineman, is incompatible with his other duties; no such plea has been made, and there is no reason to suppose that any such difficulty has been felt.

By introducing another man on the engine, you have another pair of eyes to *look out*; but this advantage, if it be one, might be more than countervailed by the divided authority and responsibility which must inevitably take place, for the engineman must still be responsible for the working of his engine, and cases of difficulty or danger might occur, requiring the utmost promptness of decision; as, for instance, whether to *push forward* or to *reverse* the engine; and who, in such cases, would decide? Jealousy and disunion, it is to be feared, would frequently arise. These would be destructive of confidence in their own resources, to the men themselves, and fraught with danger to the whole train. As to the necessity for superior acquirements or professional skill, there is no evidence of a single accident having occurred owing to the want of these qualifications. The desiderata are *constant vigilance* and *presence of mind in emergencies*; and your Committee are of opinion that no man, however professionally competent, ought to be trusted with the charge of an engine, till he has served an apprenticeship to the business, and has thus become familiar with the rapidity of the locomotive engine, and its consequent excitement—with its severe exposure to the weather—with the customs and practice of railway operations, and with all the contingencies of locomotive transit regarding police regulations, signals, &c.

The above observations are what have occurred to your Committee on the subject referred to their consideration. They are offered with a view to being submitted along with the printed rules of this Company to other managements, in order that the whole matter of railway regulations may undergo candid revision; and some general agreement may be afterwards come to, calculated to benefit railways, and to give increased safety and confidence to the public.

PREVENTION OF RAILWAY ACCIDENTS.

The Directors of the Manchester and Leeds Railway Company have issued their second monthly number, that for November, of a serial publication on railway accidents, addressed to their own servants in all the departments of duty on their line. It is a goodly octavo pamphlet of 42 pages, commencing with some account derived from the evidence on the inquest of the accident on the York and North Midland line, attended with the loss of two lives; and the other cases printed in the pamphlet are the committal of an engine-driver on the Liverpool and Manchester line, for a month, under Lord Seymour's act, for disobeying the regulations of the Company in reference to the locomotive engine intrusted to his care; the conviction and infliction of a penalty upon a labourer on the Manchester and Leeds line, for not removing a wheelbarrow far enough from the rails, so that the steps of a carriage upset it; the committal of a "plate-layer," on the same line, for two months to the Wakefield House of Correction, under Lord Seymour's Act, for neglect of duty in not making a signal to stop an approaching train when an obstruction had been caused by raising some rails; a caution issued by the Company to their servants referring to this case, to the effect that "in all instances where negligence or disobedience is shown to any of the rules or regulations of the Company, or any omission in the discharge of their several duties, such servants will be proceeded against with the utmost rigour; it being the full determination of the Company to use the utmost caution in order to prevent accidents, and, as far as possible, to protect the lives and property of the public travelling upon the said railway." The next case noticed is the late accident on the London and Birmingham line, where a verdict of murder was returned against the deceased engine-driver; a letter, in reference to it, reprobating the practice of employing as engineers persons who have not been properly trained to that business; and the last case noticed was the conviction of an auctioneer for having got upon an engine on the Eastern Counties' line, and turned on the steam, by which means he caused the engine to run over and dash to pieces a horse carriage and coal truck, and by this collision was himself thrown out, and narrowly escaped being killed on the spot. He was sentenced to be imprisoned for six months, and fined in the penalty of 5*l*. We understand that the Directors issue these pamphlets to their superintendents and principal servants along the line, by whom they are distributed to every individual employed under the Company, each man receiving a copy to take home for his own reading; and the material parts, either pointing out the causes of accidents, or any negligence on the part of railway company's servants, or containing useful suggestions in the way of caution or improvement, are rendered conspicuous by being printed in *italics*. Thus, these little publications must be doing great good in bringing to the knowledge of all concerned in the working of the line the danger of their negligence in reference to the lives of passengers, and the serious responsibility which devolves upon themselves, with the almost certainty of punishment for any act of gross negligence, even though it should not be attended with any serious consequences. Thus they are trained already, while the line is but partially opened, in those habits of caution and attention so desirable in, and indeed imperative upon, all persons concerned in the working of railway transit. —*Manchester Guardian.*

NORTH UNION RAILWAY—TRAFFIC RETURNS.

To Mr. Chapman, Secretary to the North Union Railway Company.

Sir,—Allow me to refer you to page 1110 of the *Railway Times*, for a brief explanation of the office and duties of secretary to a railway, and though I must dissent from many propositions urged by "Examiner," for ameliorating "Railway Management," as based on theory, I turn at once to the single extract which regards yourself, as Secretary to the North Union Board of Directors—which Company was the first to make a mystery of their traffic, thereby excluding their proprietary from that sort of information which is now published, by nearly every other Railway Company; but I must also add the Preston and Wyre, and Lancaster and Preston Railways, two tributary streams flowing into the line of which you are Secretary, or (as the writer I refer to above, designates the office) "*depository of its secrets*," have followed bad example owing to their locality, or possibly they may be under North Union influence, from using steam power of that Company, and have each refused to give their proprietary the amount of their weekly traffic.

Having, Sir, a large sum at stake in the North Union Railway, and with that anxiety every man must feel for his property, when committed to the charge of others, I am naturally desirous of having the common-place sort of weekly information, which is available to the Directors themselves; or to know what reason, if it is not caprice, causes it to be withheld.

The Spring meeting is at hand, when the proprietary will be called together to hear the Report read, and then the total traffic will be announced in one sum, extending over a period of 26 weeks, and this, in the aggregate, is all the information of receipts which will be given. True, the sources of income may be noted in four separate lines, as on the last occasion, when the figures were for

Coaching	£28,661	17	1
Coal	467	16	5
Merchandise	2,564	10	5

But is such information sufficient, when given at the tardy interval of six months to a numerous and anxious body of proprietors, who one and all are as much entitled to know the weekly traffic as the Directors themselves? Why should such information be exclusively enjoyed by those gentlemen? Why not give to the holder of a single share, the knowledge ceded to him who has his 100? How can North Union proprietors know how to value their property, unless the traffic is weekly given? It must either be detrimental to the interests of Grand Junction shareholders to have their traffic published, or highly wrong in that of the North Union being refused! I have watched the latter line from its commencement, ten years ago, and it has been more affected by the smiles and frowns of the public, than any line with which I am acquainted. In 1834-5, when 20*l*. per share had been called up, many were the parties who gave them away with that sum paid, and were heartily glad to have it in their power to say "Quits." I have known when money could be raised with facility on other bonds, but the unfortunate North Union was near being fast, at point Stand Still, as much so as another undertaking, at the present day, in the far east! And I have known North Union shares at a high premium, when they suddenly fell, without any cause then known to the uninitiated, but which I have ever supposed to arise from the close manner in which the accounts were kept, which was sufficient to alarm the public, who could not account for such secrecy.

Six weeks ago, North Union shares were at 73, and have since been sold at 83. I should like to know from what cause is this rise, and that purchasers have been so *very speculative* as to give an advance on November prices of 10*l*. per share.

Digitized by Google

Had I any doubt of the ultimate success of this railway, or rather (to write less sanguinely) of its proving *one of the few* which will not be a loss to the shareholders, I would adopt other arguments for for the object I have in view, but I can say with truth, the only reason of an advance in North Union stock, is from the private knowledge of the sum total of its traffic having oozed out somewhere.

I have been told the Secretary (!) has an objection to publish the weekly traffic ! !

I am surprised, Sir, that such should be said of you; and cannot for a moment credit that a paid officer of a Company should throw in his objections, to give that trifling information to the proprietary which is shared by the few who have a seat at the Board.

That continued weekly absence of intelligence which every shareholder has an undoubted right to possess, must be influenced by cogent and peculiar motives for concealment. If the North Union Railway has weak points, and thus is bolstered up by secrecy, a blow must come sooner or later; or if the trains run empty at certain periods, still I say, keep it not from the proprietors! But if the mere withholding the weekly traffic from publication arises from caprice, or other motives, it is most partial and unjust to proprietors generally, and gives to Directors an undue advantage, they will do well to partake of no longer.

I remain, Sir, your obedient servant,

A. B.

Liverpool, December 28, 1840.

PRESENT POSITION OF RAILWAY INTERESTS.

To the Editor of the Railway Times.

Sir,—Enclosed I beg to send you two statistical tables which I doubt not will be perused with interest by your numerous readers and correspondents.

The first is a view of the progress made towards the completion of railways in England during the present year, showing the total number of miles in operation up to the present moment.

The second shows the interest to be derived from a given amount of receipts on five of the newly finished or extended lines of railway, the amount of receipts being taken for twelve months consecutively in order to include the best and the worst season for traffic in the year.

Table showing the progress of Railways in England during the Year 1840.

	miles.
Total distance in operation at the end of 1839	682¼
Birmingham and Gloucester	52
Chester and Birkenhead	15
Chester and Crewe	18

North Midland	2,800 0 0	4 1 0	7,000 0 0	10 2 7	7 12 0

(1) This taken to be inclusive of the Manchester and Leeds toll.

The average of receipts assumed above are, I believe, likely to prove rather under than over the mark; but even taken as they are, they cannot fail in their results to prove satisfactory to the parties concerned in these undertakings, especially when due regard is had to the early stage of their operation.

I am, Sir, your obedient servant,

H.

31st December, 1840.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY.

The letters and other articles which have appeared in this journal during the last few months on the subject of the Manchester and Birmingham Extension scheme, have just been reprinted in the form of a pamphlet, and are prefaced by the following appropriate remarks :—

"The following extracts from the *Railway Times* on the subject of the *Manchester and Birmingham Extension Railway*, have been collected with a view of affording to the public—and especially to the inhabitants of Manchester—a means of forming a true judgment of the merits of that undertaking by perusal of the statements not only of its opponents, but also of competent judges, wholly uninterested in the question, in answer to the highly coloured representations of its promoters. These are not times when men should wilfully throw away their money in undertakings of doubtful public utility or individual advantage, and it cannot therefore but prove beneficial to parties who may be tempted to subscribe their money towards the Extension Railway, to have an opportunity of previously testing, by the opinions and experience of competent judges, the advantages which it holds out, both as a private speculation and as a work of general utility.

"Public necessity, it must be observed, is the only qualification which can entitle the measure to receive the Legislative sanction, and therefore in forming a judgment of the probability of its success before Parliament, it is essential to consider maturely what immediate public object is to be obtained by it, which can justify for its construction the outlay of two millions of money, and the wresting the properties of private individuals from them, against their wills, under the compulsory powers of an Act of Parliament. When the Grand Junction and London and Birmingham Railways were first projected, the public advantage which they held out was the shortening the duration of the journey between Manchester, Liverpool, Birmingham, and London by *more than one half*, and this great saving of time to the commercial and manufacturing public was considered of sufficient importance to justify the passing of the Acts relating to those undertakings. They have more than realized in their construction the expectations originally formed of them, and a journey which five years ago occupied nearly *twenty-four hours* is now reduced by their means to less than *ten*.

"The object of the Extension Railway is understood to be the shortening of the distance by railway, between London and Manchester and Liverpool, by about eight or nine miles, for which purpose it is proposed to construct a new railway running parallel to the London and Birmingham and Grand Junction Railways for a distance of more than fifty miles, without benefitting any town or district not approached by those railways. No *new* necessity has arisen for this line which did not exist ten years ago, and in order therefore to form a just estimate of the claim which it has to the sanction of the Legislature, let us ask ourselves, if it had been proposed at the same time as the Grand Junction and London and Birmingham Railways—what would have been the chance of its success, or of Parliament sanctioning all three lines at the same time? If it would have been scouted *then* as an absurdity, which no doubt it would, what *new* feature does it present which should induce Parliament to deal with it *now* as a measure of urgent public necessity?

"As a matter of *private* speculation, its promoters hold out, that because it runs parallel to the Grand Junction and London and Birmingham Railways, and will be somewhat shorter than they are, therefore it must take a large portion of their traffic from them; but it must be observed, that although that traffic may be sufficient for the support of one line, and pay a profit to the proprietors, it might not and would not suffice to return a fair profit on *two*; and moreover; it is well known that the Grand Junction Company have only consented to the formation of the Extension Line on terms which will effectually prevent it from diminishing any portion of their annual returns.

"All, therefore that the Extension Company could expect, would be a participation in the Liverpool and Manchester traffic passing on the London and Birmingham Railway from Rugby to Birmingham, a distance of about 40 miles, for which they propose to construct a railway 54 miles long, and this whilst the London and Birmingham Company,

with all their large traffic to Birmingham, Coventry, Wolverhampton, and other places in which the Extension Railway could not compete, pay a dividend of only 8 per cent!

"These *facts* (for they are incontrovertible) afford surely sufficient ground for reflection to all parties who may feel induced, from a spirit of speculation, to embark their money in the Extension Railway. The experience of the last few years has shown how little the shareholders have benefitted by the formation of even the most favourite lines which resulted from the railway mania in 1836 and 1837, albeit these enjoy a *monopoly* of the traffic of the counties through which they pass. There is hardly one, the shares in which might not have been purchased at a considerable discount before the completion of the work, and how many are there now which bear a premium or pay any dividend, although for years their proprietors have been without any return on their outlay?

"What superior hopes are there then for the Extension Railway? One-half the original deposits are known to have been expended, and the other half will surely go in a renewed Parliamentary contest, whether it be successful or not, when enormous sums must be immediately called for, to make good the bargains with landowners, which it is understood have been entered into, as the price of their neutrality. If the interests of Manchester imperatively called for the formation of the Extension Railway, there are many who might voluntarily suffer a considerable sacrifice of fortune to attain such an object, but it is plainly shown in the following letters, that Manchester would be prejudiced rather than benefitted by the Extension Railway. It is, indeed, manifest that two lines could not be maintained at the same expense, or with the same frequency of communication on each as one line; and therefore, if the Extension line were made, the public would necessarily have to pay higher fares, and would enjoy less frequent means of communication with Birmingham and with London than they do at present.

"These points are so fully explained in the following extracts, that it is needless here to dwell on them. The newspaper from which they are taken is the advocate of the railway interest throughout the kingdom, and the parties by whom it is conducted may be fairly supposed, from their general knowledge and daily avocations, to be well fitted to form a correct opinion of the advantages, both public and private, which all such projects hold out.

"The editorial remarks, therefore, are deserving of the most careful consideration; and a dispassionate perusal of them, and of the accompanying letters, will probably lead most persons to the conclusion that it would be far wiser, as regards their own interests, to keep their money in their pockets, than to throw it away in supporting another application to Parliament for the Manchester and Birmingham Extension (alias Stafford and Rugby) Railway Bill.

"As regards the interest of those families (and they are many) who have embarked their fortunes in the London and Birmingham Railway, at a high rate of premium, and who are dependent for their support on the interest which they receive on their outlay, and which they believed to have been secured to them, there can be no doubt that the sanction of a rival line, without a very overwhelming public necessity for its construction, would be an act of cruelty and injustice which there is no reason to believe that the legislature would wantonly inflict.

"If we look to the result of the only lines yet in existence, which even partially compete with each other, we find the Chester and Crewe bought up by the Grand Junction, and the fares on the latter raised! The Leeds and Selby bought up, or about to be so, by the North Midland and York and North Midland, by whom it will be all but closed! and the Birmingham and Derby and Midland Counties, after a fruitless competition of only six months, coalescing together, and making the increase of their respective fares to the public a condition of their coalition!

"Who can possibly doubt a similar result in the present instance? If two competing lines cannot co-exist with profit to each—either both must be worked inefficiently, or one must be closed—or the public must pay a higher rate for the use of each.

"With these observations the following extracts are recommended to the serious attention of all who take an interest in the subject."

OLDHAM AND MANCHESTER RAILWAY.—On Saturday last a number of the Directors of the Manchester and Leeds Railway, accompanied by their principal engineers, visited Oldham, and examined the nature of the country betwixt Oldham and the main line, for the purpose of determining the best course for the Oldham Branch Railway. It is very probable that this branch railway will not be highly remunerative should the trains have any stopping place betwixt Oldham and Manchester; should there be no stoppage whatever betwixt those two places, including the place of the junction with the main line, coach competition on the turnpike road will doubtless cease.—*Manchester Courier.*

EFFECT OF THE FROST ON RAILWAYS.—The *Alsace*, of Strasbourg, states that on the 15th instant three trains were stopped on the Alsace Railway, although there were six locomotive engines set at work. When brought out on the rails each engine became so clogged with ice that it was with difficulty it could be made to roll. This obstacle overcome, and the train set in motion, it required only a moment's suspension for the water in the supplying pumps to become frozen, and cease to fill the boilers. The oil also froze, and the friction became so violent that ignition and the total destruction of the whole material became imminent. In the night of the same day a train was compelled to stop in the forest of Lutterbach, on account of the engine becoming frozen. Another engine, sent to its assistance, was unable to move the train, and the passengers were of necessity taken on to the tender of the supplementary engine, and thus carried to Mulhausen. For this purpose it was obliged to make a second trip, and it was not till eleven at night that all the passengers with the guards and luggage arrived. One of the engine men had his feet frozen. The cold was so intense that the Directors, feeling that they ought no longer to risk the lives of passengers and their men, have determined to suspend the service till the weather changes.—*Globe.*

ANCIENT AND MODERN TRAVELLING.—To exhibit the contrast between the present mode of travelling by railway and what it was nearly 70 years ago in Bath, a gentleman now living in Widcombe states that in the month of Dec. 1772, he had occasion to go to Frome, and the only coach conveyance was what was called a machine, which left the Angel inn, on the Holloway side of the Old Bridge, at 6 o'clock in the morning for Salisbury, which it reached the same evening, he availed himself of this conveyance. They stopped to breakfast at St. Philip's Norton for about ½ of an hour, and also to rest the horses, and reached Beckington, the nearest village to Frome, at ½ past 10 o'clock, a distance of ten miles from Bath, in four hours and a half. This gentleman thinks this mode of travelling was rather too slow, and the present by railway rather too quick, and prefers the medium.—*Wiltshire Independent.* In the file of the *Cheltenham Chronicle*, bearing date November 11, 1813, appears the following announcement:—"Two Day Post Coach.—The public are respectfully informed, that the Cheltenham and London Two Day Post Coach will continue running, during the winter, from the Plough Hotel, at 10 o'clock in the morning, to the Angel Inn, Oxford, where it arrives to dinner, sleeps at Oxford all night, and proceeds the next morning, at 8 o'clock, to London, where it arrives to dinner." In the *Chronicle*, dated September 2, 1840, a coach is announced to leave the Plough Hotel, at 2 o'clock, and arrive in London the *same evening*: so that the journey, which used to be performed, in 1813, in thirty hours, is done, in 1840, in SIX!

COACH ACCIDENTS.

On Monday evening, as the *Nelson* coach, which runs between Nottingham and Manchester, was travelling between Cromford and Amber Gate, the coachman had occasion to slacken the speed of his horses, when the reins broke, and the horses started at full speed. The leader by some means or other broke away, the other two galloped forward, and ran against the side of the gate, at the Amber Gate toll bar. One of the horses was killed on the spot, the other leaped over the gate and escaped. The coachman was precipitated to the ground, and escaped with a few bruises; the passengers—a lady and a gentleman—were unhurt; the front of the coach was "stoved" in.—*Derbyshire Chronicle.*

On Wednesday evening last, as the *Greyhound* coach was passing through Bilston, drawn by six horses, as is the usual custom the week before Christmas, it was so heavily laden with game, as to break down in Oxford-street. The passengers all escaped without injury; the body of the coach was crushed down by the great weight that was upon it, and the back seat was broken off by the luggage that was behind; in fact, we never saw a coach so overloaded in our lives. It was very fortunate that none of the passengers were hurt, as we understand there was betwixt three and four tons weight on the coach. The guard had to go to Wolverhampton to get another coach and a waggon, before they could proceed.—*Staffordshire Gazette.*

On Tuesday night last, a little after 10 o'clock, as the *North Briton* coach, which runs between Carlisle and Lancaster, was coming in from the south and proceeding up English-street to the Crown and Mitre Hotel, an accident of rather an awkward nature occurred. Mr. David Baxter, the coachman, one of the steadiest "whips" which leave the city, perceived some carts coming right up the middle of the street, and he, trying to avoid them, pulled his horses to the wrong side of the road, being the side he could have passed easiest on, when the person who had charge of the carts pulled his first horse right upon the leaders of the coach. The leaders immediately sprung to one side, and crossed right upon the lamp post which stands between Dr. Elliot's and Messrs. Graham and Jefferson's, breaking the reins and traces. Mr. Baxter being at the time standing on the box so as to have his horses at command, was pitched violently on the flags, and had his arm dislocated at the shoulder, and his head seriously cut. The coach was relieved from the leaders and taken to the coach office, no other damage being done.—*Whitehaven Herald.*

The *Rockingham* coach from Leeds to London was overturned in Stamford on Thursday morning, at the angle of All Saints' church-yard, owing to the extremely slippery state of the road at that dangerous point. The guard was the only person hurt: he had his head cut, but was able to proceed inside the coach. The great load of luggage somewhat broke the fall of the passengers, of whom there were five. The coach was five hours after time.—*Cambridge Chronicle.*

The up *Paul Pry* coach, on Monday night, when passing along the road from Burford, was overturned opposite Stone Lands, in the parish of Brize Norton. There was only one passenger we believe, a professional gentleman from Cheltenham, who, as he was inside, was not materially hurt; but Andrews (the coachman), and Suckling (the guard), were both sitting on the box, and were thrown to the ground with great violence, and the latter very seriously bruised. Assistance was obtained as soon as possible, and the guard was removed in the coach to the Fleur-de-Lis Inn, Bampton, where medical aid was instantly afforded him, but it was unavailing, as the unfortunate man remained insensible nearly up to the time of his death, which took place this morning (Thursday). The deceased man (Suckling) was nearly 50 years of age, but has no wife nor family, and his connexions are scarcely known; we know this much of him, that he was a steady and very temperate man, and had been guard to this coach nine years, during which time he conducted himself with great civility to his employers, and was much respected by the coachmen and guards

on the road. We forbear mentioning any rumours as to the cause of the accident which produced his death, as, in the absence of the evidence of the coachman, nothing is known by us for certain. The Coroner will hold an inquest on the body.—*Oxford Journal.*

RAILWAYS IN BELGIUM.

The Belgium papers say, the new sections of railway to be opened next year are those from Ans to Liege, and from Liege to Chaufontaine, which will be in operation during the second quarter, and that of Tubise to Mons, which is to be opened during the last quarter. The total of railway expenditure for 1841 (including the new sections), is estimated, in round numbers, at 3,750,000 francs. The works generally already constructed pay the Belgian capitalists an interest of from four to five per cent. per annum. It was never the policy of the Government to exact extravagant fares. Passengers travelling by the second-class vehicles have, in fact, been enabled to traverse the country at a charge that would barely cover the expense, the moderate profit derivable from the undertaking being levied upon those who are in circumstances to contribute more liberally. Numerous lines have now been several years in operation, and so perfect is the management, which is that of the Government, that scarcely a single accident or mishap of any kind has occurred worth recording from first to last. The fact we are about to state will be thought almost incredible, but it is nevertheless true, that a man may go in the open carriages from one end of Belgium to the other, that is to say from Ostend to Liege, a trip of eight hours, at a charge of less than six shillings. The distance cannot, to judge from the excellent speed with which it is performed, be less than 150 English miles. The discipline maintained throughout is the admiration of all who have had an opportunity of witnessing it.—*Morning Post.*

Accident on the Hull and Selby Railway. On Wednesday last, when the railway train which leaves Leeds and York for Hull at 3 o'clock in the afternoon, had arrived within about three miles from Brough, the hinder axle of a waggon belonging to the Leeds and Selby Railway Company, containing a few goods, broke, and caused a part of the carriages following to go off the rails. The engine-driver immediately shut off the steam and reversed the engine, and gradually brought the train to a stop. Fortunately, the passengers escaped without the least injury, one excepted, who slightly bruised his shoulder in getting out of one of the carriages. The guard dislocated his shoulder, and bruised his face by leaping off the carriage on which he was riding; he is doing well. The engine proceeded to Hull to obtain assistance, and Mr. Locking, the Secretary to the Company, with other officers, immediately proceeded with some carriages to the place where the accident occurred, and brought the passengers and their luggage to Hull. The accident only delayed their arrival about an hour and a half beyond the usual time.—*Leeds Intelligencer*, December 26.

Projected Line of the Monmouthshire and Gloucester Railway.—Leaving the terminus on the eastern bank of the Usk, near Newport bridge, the line would pass by St. Julian's, the village, Great Bullmore, Kemeys Church, Llantrissant, Llanowel, to Ponty Llifon, where would be the station for Usk, within half a mile of the centre of the town. The line would follow the old turnpike road skirting Llandenny bottom, by Pergoed farm, to Llanardill, Llangwendw, to the east of the Twyn-yr-argoed, cross the turnpike road, about 1¼ mile from Ragland, following the valley of the Trothy to the south of Dingistow Court, to the north of Troy House by Gibraltar, crossing the Wye below the junction of the Monmow; the station would be about a quarter of a mile from the centre of the town. The line would then follow the bank of the Wye by Hadnock, leaving the Leys a quarter of a mile to the north, still following the river skirting the crown property of the Lady Park, passing on the west of Huntsham farm, crossing the Wye west of Huntsham ferry, west of Rocklands, tunnelling the ridge at Goodridge, north of the Priory, crossing the Wye, and passing to the west of Walford Church by Cobry, Brion Mill, south of Frogmore cottage, by Pontshill Lea, Knightshill mill, to Aston Cruze, where would be a short tunnel, then following by Kilcot Green, Conigre farm, a quarter of a mile south of Newent, on the west side of the Hereford and Gloucester canal, crossing the canal by Half-timber House, and passing south of Morels End, by Perch farm, crossing Alney Island to the terminus of the Gloucester and Birmingham Railway at Gloucester.—*Monmouth Merlin.*

Railway Communication with Ireland.—Before the expiration of January next, the Welsh mails will be transmitted by railway to Chester—thus enabling papers and letters to be delivered throughout Flintshire and part of Denbighshire several hours earlier than heretofore, and saving at least two hours in the delivery in every part of Wales that is in direct communication with old Cestria. The General Post-office authorities, though fully aware of the benefit that would result from an imperial railway between the two capitals, are determined to avail themselves immediately of the facilities afforded by the Birkenhead and Chester Railway, so as to save, if possible, at least an hour in the transmission of the London and Irish mails. As a temporary measure we can see no objection to this. The difficulties and delays attendant upon the Liverpool route would be avoided; and, until either Holyhead or Portdynllaen be made the terminus of an imperial route, we can see no reason why all minor and more immediate facilities should not be adopted.—*Carnarvon Herald.*

Theft by a Steam-engine!—A wiseacre, who had seen a paragraph going the rounds, stating that some knowing fellow had put a fourpenny on a railway, which the steam-engine had flattened out to the size of sixpence, bethought himself that he would try the experiment on a respectable scale. On Tuesday last, therefore, he spread out about the length of himself of fourpenny pieces at one of the crossings of the Glasgow and Ayrshire Railway, not very far from home, and, with his head leaning over the wall, anxiously awaited the approach of the two o'clock train that was to add a third to their value. But "the best laid schemes o' men an' mice gang aft agley." Up came the "smoky devil" with his long tail, and as the rails were *waxy* with the hoar frost, the four-penny pieces stuck fast all round the wheels, and off sped the train with the treasure, leaving the "go-ahead" coiner in a state of bewildered disappointment. He purposes selecting fine dry weather for his next experiment.—*Ayr Advertiser.*—[And we trust that on his "next experiment" he will be caught and treated as he deserves to be.—Ed. R. T.]

WANTED for the Berlin and Stettin Railway, a quantity of about 7,000 Tons of RAILS to be delivered next year, either the whole or greatest part, and the remainder in Spring, 1842. Offers will be received at our Office till 20th of January next, by letters sealed and marked "Tender for Rails."

Particulars of Contract and Drawings may be had at Messrs. N. M. Rothschild Sons, London; and Messrs. Zwilchenbart & Co., Liverpool.

The Directors of the Berlin and Stettin Railway Company.

Stettin, 10th December, 1840.

TO ARCHITECTS, BUILDERS, SURVEYORS, &c.—The Manchester and Liverpool Plate Glass Company, having made arrangements with Mr. John Scott, of Princip-street Works, to represent their interest in the sale of Plate Glass, at Birmingham and its environs, beg to assure you, that any orders forwarded by him will meet with prompt attention. Samples, and any information required may be obtained, and orders executed, by applying to their Agent, Princip-street Works, Birmingham.

IRON FENCE, HURDLES, GATES, &c., with every description of Wrought and Cast Iron Work, manufactured by J. Porter, 81 and 82, Upper Thames-street, and the Grove Iron Works, Southwark.

Specimens may be seen, fixed, at Thames-street.

Strained Wire and other Fences put up in any part of the Country. Brass and Iron Bedsteads, for private Families, Public Institutions, and for exportation. Wrought Iron Cattle Pens for the West Indies. The Trade supplied.

NATIONAL PROVIDENT INSTITUTION.

Enrolled under Acts of Parliament passed the 10th of Geo. IV., and 4th and 5th of Will. IV., relating to Friendly Societies. For Mutual Assurance of Lives, Endowments, and Annuities. 13, Nicholas-lane, King William-street, London.

DIRECTORS.

C. Pritchett Bousfield, Esq.	Thomas Hodgkin, M. D.
John Bradbury, Esq.	Robert Ingham, Esq. M.P.
William Cash, Esq.	Joseph Janson, Esq.
Thomas Castle, Esq.	Samuel Hayhurst Lucas, Esq.
James Crofts, Esq.	Chas. Lushington, Esq. M.P.
John Feltham, Esq.	John St. Barbe, Esq.
Joseph Hargrave, Esq.	Richard Shortridge.

Samuel Smith, Esq.

Medical Directors.—J. T. Conquest, M.D., F.L.S.; Thomas Bevan, Esq., F.L.S.

Solicitors.—Messrs. Hardwick and Davidson.

The distinguishing characteristic of this Institution is Entire Mutuality. The Whole Profits will be equitably apportioned amongst all the Assurers, who have the option to apply them either in reduction of the Premiums, or to increase the amounts assured.

The first division will be made in December, 1842, and subsequently at the end of every five years.

All Assurers are Members; have right to attend General Meetings, to vote on the appointment of officers, and are directly interested in all the proceedings of the Institution.

No Member can be involved in legal expense, as should any dispute arise, it must be settled by arbitrators appointed agreeably with the aforesaid Acts of Parliament.

Assurers may secure the benefit of their Policies to Nominees.

On the 15th of December, 1840, the Fifth Annual Meeting of the Members was held at the Office, and the following is extracted from the Report of the Directors, presented on that occasion.

The Directors of the National Provident Institution, in presenting their fifth Annual Report to the General Meeting of the Members, feel increased satisfaction in being enabled to announce the continued prosperity of the Institution confided to their management; and on referring to previous Reports, they are much gratified to find that every anticipation indulged in by them of its permanent success, has been more than realised.

The accounts to the 20th November last have been duly audited, and the capital stock of the Society on that day was £90,545 13s. 9d., which is invested with the Commissioners of the National Debt, and in mortgages, conformably with the Acts of Parliament, and the rules of the Institution—being an increase in the amount reported last year of £25,586 2s. 11d.

The annual income arising from premiums and interest of capital at the above date was £31,051 10s. 10d., showing an increase from the 14th December, 1839, to the 20th November, 1840, of £5,554 6s. 8d.

In the accompanying table, which shows the progressive business of the Institution, it will be observed that the number of Policies issued during the last 12 months has exceeded that of any previous year, except the first.

Years ending	No. of Policies issued.	Amount of Premiums received.						Amount of capital.		
		Periodical.			Single.					
		£	s.	d.	£	s.	d.	£	s.	d.

" 1840	494	27,236	11	3	5,230	1	6	90,545	13	9
Total	2494									

Members whose premiums become due on the 1st January next are hereby informed, that the same must be paid within 30 days from that date.

The Annual Report of the year ending November 20, 1840, is now ready, and may be had on application at the office.

JOSEPH MARSH, Secretary.

London, 28th December, 1840.

PARIS AND ROUEN RAILWAY.—CONTRACT FOR WORKS.—The Directors are now ready to receive Tenders for the Construction of the Works necessary for this Railway between the Junction with the St. Germain Railway near Courbevoie and the town of Poissy, the distance being 14,400 metres (9 miles) or thereabouts.

The Contract includes all labour and materials for the formation of the Cuttings, Embankments, Bridges, Culverts, Fencing, and other Works; also the Ballast, Sleepers, Pins, and other materials necessary for laying, for ming, and entirely finishing the permanent road. The Company will provide the land Iron Rails, Chairs, and Wooden Keys. The Contractor will be required to provide every other thing whatsoever.

The Plans, Sections, Specifications, &c. may be seen at the Company's Offices, 52, Rue basse du Rampart, Paris, and other information may be obtained from Mr. Locke, the Company's Engineer, at his Offices, 20, Adam-street, Adelphi, London.

The Directors do not bind themselves to accept the lowest Tender.

No Tender will be received after the 1st February, 1841.

By Order of the Directors,

ADOLPHE THIBAUDEAU, Secretary.

Paris, Dec. 26th, 1840.

DUBLIN AND DROGHEDA RAILWAY.—TO CONTRACTORS.—NOTICE is hereby given, that in consequence of the extension of the Malahide Contract on the above Railway, the Plans, Sections, Drawings, and Specifications thereof will be ready for inspection at the Company's Office, 19, Marlborough-street, Dublin, on the 20th January, and not on the 5th, as previously advertised.

This Lot commences in a certain field in the parish of Raheny, and townland of Mountolive, county Dublin, numbered 2, on the Parliamentary Plan, and terminates at the northern boundary of Kilcreagh, in said county, being a distance of about Six Miles and a-half. The Contractor will be required to make and maintain all the Excavations, Embankments, Archways, Culverts, Drains and Fencing; and to complete the ballasting and laying of the permanent way of the said Railway over the whole of the said distance, and to keep the whole of the said works in repair for the space of Twelve Calendar Months after completion, and to find and provide all the requisite materials according to the Plans, Sections, Drawings, and Specifications within the period, and upon the terms and conditions mentioned and contained in the Draft Contract.

The Directors of the above Railway propose to meet on Thursday, the 17th February, at their Offices, Marlborough-street, Dublin, at Twelve o'Clock, to receive Tenders for the above Contract.

Printed Forms of Tender may be had at the Company's Offices, at which place all Tenders must be lodged at or before the hour of meeting, Endorsed, "Tender for Works," and addressed to the Chairman of the Board of Directors. No Tender will be received which is not made according to the Printed Form.

The party whose Tender is accepted, will be required to enter into a bond to the amount of five per cent. upon his Contract, and to give two Sureties for the due performance of such Contract. The names of such Sureties, with their descriptions, must be set forth in the Tender.

The Directors will not consider themselves bound to accept the lowest Tender.

Parties Tendering, or persons duly authorised by them, must be in attendance at the Company's Offices at the time of meeting.

GEORGE ALEXANDER HAMILTON,
Chairman.

December 24, 1840.

FALMOUTH HARBOUR.—The Committee for the Improvement of the Inner Harbour of Falmouth are desirous of receiving proposals for raising and removing the Sub-soil thereof by Steam, Dredges, or otherwise.

Tenders, stating the lowest sum at which the work will be undertaken, and the quantity per week to be raised thereat, will be received until the 25th day of December next, by Samuel Blight, Esq., Mayor of Falmouth, who will furnish any information that may be required.

Falmouth.

TENDER FOR RAILS AND CHAIRS.—The Directors of the Northern and Eastern Railway Company, will meet on Thursday, 14th January, 1841, to receive TENDERS for the supply of One Thousand Six Hundred Tons of Wrought Iron Rails and Five Hundred Tons of Cast-iron Chairs, to be delivered in the River Thames, at the mouth of the River Lea.

Patterns of the above may be seen at the Company's Office, Railway Station, Shoreditch.

Parties tendering to specify their mode of manufacture and terms of payment. The Chairs to be run entirely from the cold blast.

WM. BOURNE, Secretary.

December 31, 1840.

This day, Saturday, January 2, is Published, Price 6d. Stamped, the First Number of

THE GARDENER'S CHRONICLE. A Weekly Newspaper of Rural Economy and General News. The Horticultural Part Edited by Professor LINDLEY.

*** A detailed Prospectus may be had on application, or by letter, at the Office, 3, Charles-street, Covent-garden, London.

†‡† Orders received by all Newsmen.

On January 1st, 1841, Price 2s. 6d. No. I. of

TO ARCHITECTS OR ENGINEERS.—AS DRAUGHTSMAN.—A Gentleman who is disengaged at the present moment, would be most happy to assist in any Office in which his services may be required.

Address, post paid, to J. H., Mr. Willkie, Baker, Aldersgate-street.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, an manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4); and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Roake and Varty, 31, Strand; W. Lund, 24, Fleet-street; T. Lund, 57, Cornhill; Jackson, 23, Cannon-street, City: in Edinburgh, by Sanderson and Son, 32, St. Andrew-square: in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street: in Birmingham, by Osborn and Sons, Bennett's-hill: in Liverpool, by T. Dismore, Bold-street: in Manchester, by Allen and Raphael, 28, Nightingale-street: and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1	0	0
A ditto in a handle for the pocket	1	5	0
A ditto with Mordan & Co.'s ever-pointed pencil	1	10	0
A ditto, ditto, with reserve of leads	1	14	0

December, 1840.

TO ENGINEERS AND MILLWRIGHTS.—To be Disposed of, by Private Contract, a limited number of Licences for erecting Messrs. WHITELAW AND STIRRAT'S PATENT WATER MILL.—A description of this Water Mill will be found in a pamphlet just published. The Mill may also be seen in operation at the Shaws Water Works, Greenock; at Mr. Stirratt's Manufactory, Paisley, and other places. From its simplicity, regularity of motion, absence of liability to wear and tear, adaptation to every kind of water-fall, however high; its giving more available power from a given quantity of water and height of fall, and the cost of erection being less than one-third the price of an overshot water-wheel, it will no doubt supersede the use of the latter altogether.

Parties taking Licences early will secure to themselves superior advantages. For further particulars and terms of licence, apply to Mr. Robertson, Mechanic's Magazine and Patent Office, 166, Fleet-street, London; Mr. Whitelaw, 4, Wellington-street, Glasgow; or, to Mr. Stirratt, 61, High-street, Paisley.

TO ENGINEERS, MILLWRIGHTS, AND OTHERS.
Just published, with five Copperplate Engravings, price One Shilling,

A DESCRIPTION of WHITELAW and STIRRAT'S PATENT WATER-MILL, with an account of the performance of one of these machines lately erected at Greenock. To which is added, a practical method of determining the power which may be obtained from any given fall of water; with directions for economising the water which runs down a fall, and of rendering available as a water-power the rain which falls on high lands. By JAMES WHITELAW, Engineer, Wellington-street, Glasgow.

Published at the Mechanics' Magazine Office, 166, Fleet-street, London; and sold by D. Robertson, 188, Trongate, Glasgow.

TO TIMBER MERCHANTS AND OTHERS.—STOCKTON AND DARLINGTON RAILWAY AND MIDDLESBROUGH DOCKS.—The above Companies are in want of 4,928 Permanent Railway Sleepers. Also, 12,000 Wood Blocks, the Sleepers to be 8 feet long, 13 inches broad, and 6 inches thick; the Blocks to be 2 feet 6 inches long, 12 inches broad, and 6 inches thick, the whole to be cut out of English Elm or Larch, and delivered at Middlesbrough on Tees in the following quantities:—half on or before the 15th of April, 1841, the remaining quantity to be completed and delivered on or before the 15th of July, 1841.

Further particulars, and a printed form of tender, may be obtained by applying to John Harris, the Companies Engineer, at Darlington; the Tenders to be forwarded to him on or before the 11th of January, 1841.

Coals and Coke of every description may be had as backloading from Middlesbrough.

Darlington, 16th December, 1840.

WATERPROOF LUGGAGE COVERS.—Manufactured by JOHN EMES, (late Milton and Co.), Cut-Side, Limehouse, London, for Railway Trucks, Waggons, Barges, &c. The great improvement in the manufacture of these Covers, which are now in use on the principal Lines, and which can be recommended with confidence to the notice of Dock and Railway Companies; Barge and Waggon Proprietors, Contractors, Builders, and others, as an article of durability, possessing all the necessary qualities—viz., that of being perfectly Waterproof, and flexible, and not subject to adhesion, a fault much complained of in tarred Cloths; and can be made of either light or heavy quality to suit the purposes required. It is also prepared for covering Roofs. Verandas Coach and Guard Aprons, Horse Cloths, &c.

A supply of Covers on hand for hire, to Builders, Executors, Bargeowners, &c., requiring temporary Coverings. Rick Cloths, Poles, Blocks, Cordage, &c.

FOR SALE, TWO SELF ACTING SLIDE-LATHES, and two Planing Machines of the best quality; also a pair of Condensing Steam Engines, with 12 inch Cylinders, and 3-feet Stroke.—Apply to A. MYLNE, Engineer, West street, Glasgow.

SPECIFICATIONS OF RECENT PATENTS, —The MECHANICS' MAGAZINE, Part CCXV., price 1s. 6d., just published, contains Abstracts of the following Patents:—Gooch's, for improvements in locomotive wheels and engines to be used on railways: Smith's, for resisting shocks to railway carriages and trains, and also in the mode of connecting and disconnecting railway carriages, also in the application of springs to carriages; Bursill's, for improvements in weighing and weighing machines; Martin's, for the manufacture of certain descriptions of cement; Roberts', for an improved mode of fastening certain kinds of horn and hoof handles to the instruments requiring the same; Shuttleworth's, for certain improvements in railway and other propulsion; Greaves's, for improvements in the manufacture of knives and forks; Bush's, for improvements in fire-arms and cartridges; Dain's, for the construction of vessels for containing or supplying ink; Montmirail's, for the manufacture of bread; Hawley's, for improvements in pianos and harps; Winkles', for the construction of paddle-wheels and water-wheels; Lance's, for a new and improved instrument or apparatus to be used in whale fishery, parts of which upon an increased scale are also applicable as a motive power for driving machinery; Coates', for propelling canal and other boats; Prosser's, for manufacturing buttons from certain materials, which improvements in manufacturing are applicable in whole or in part to the production of rings and other articles from the same materials; W. S. Stocker's, for improvements in machinery for making nails, pins, and rivets; A. S. Stocker's, for the manufacture of tubes for gas and other purposes; Nickels', for improvements in the manufacture of braids and plaits; Hampson's, for block printing on woven fabrics; Carpenter's, for the application of machinery for propelling, steering, tacking, and veering vessels. Also, illustrated descriptions of Whitelaw and Stirrat's patent water mill; Bursill's patent weighing machines; Essay on the means of promoting safety in railway carriages, by Sir George Cayley, Bart; Messrs. Gabriel and Co., Imperial saw mills; Instructions for blasting rocks; and Messrs. Mullin and M'Mahon's patent safety fuse.

As well as original communications, on a new solution of the disc problem; Improved method of adjusting sundials; On the importance of uniformity in the rates of railway clocks; On the course or path of the electric fluid; Demonstration of the theory of parallels; Comparative advantages of black and white paint; On the various systems of condensation: On the superiority of screw propellers over paddle wheels: Suggested improvements in railways and carriages; Preservative properties of sulphate of copper; A new concrete for roads and streets: Mode of estimating the power of the crank in steam-engines; Plan for working the slide valve of locomotive engines with two fixed eccentrics; Instructions for moulding and casting in plaster, &c. List of Designs registered, and Patents granted in December. Title and Index to complete the Volume, &c.

The MECHANICS' MAGAZINE, VOL. XXXIII. price 10s. boards, just published, illustrated with upwards of *two hundred engravings*, contains Abstracts of all the most interesting specifications of recent English patents, as well as complete lists of English, Irish and Scotch patents, granted during the last six months; list of Designs registered, &c. &c. &c.

NUMBER 908, published this day, price 3d., contains Abstracts of the following patents:—Edmondson's, for certain improvements in printing presses; Pontifex's, for a new mode of obtaining dye colour, tannin and acids, from vegetable substances; Prosser and Rippon's, for improvements in apparatus for heating apartments, and in apparatus for cooking. With illustrated description of Mr. S. W. Smith's recently patented improvements in apparatus for supplying and consuming gas. Avery's rotary steam-engine erected at Dunston, near Newcastle; Warne's boot and shoemakers' standing or sitting frame; Long and short connecting rods; Supply of water at fires; Screw propellers v. Paddle-wheels; Recent American patents; List of Scotch and Irish patents granted in December; Action of sea water on glass; Plaster casting, &c. &c. &c.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

THE CIVIL ENGINEER AND ARCHITECTS' JOURNAL, SCIENTIFIC, AND RAILWAY GAZETTE.—The January Number, Price 1s. 6d., contains an Engraving and Description of the Pier at the Port of St. Malo—Drawings and Description of Whitelaw and Stirratt's Water-wheel—Improvement on Eccentrics of Steam Engines—Mr. Stephenson's Report on the Supply of Water to the Metropolis—Architecture of Liverpool—Architectural Criticism by Candidus on the style of Inigo Jones—Reviews of Pambour, on the Steam Engine and other Works—Proceedings of the Institution of Civil Engineers—Institution of British Architects—British Association—Progress of Railways—Public Buildings—List of New Patents—Index and Preface to the last Volume.

H. Hooper, Pall Mall East, and R. Groombridge, Panyer-alley, Paternoster-row.

*** Volume I. II. and III. may be had Bound in Cloth, Price 1*l.* each.

TO MERCHANTS, IRONMONGERS, RAILWAY COMPANIES, &c.—JOSEPH WARDEN, Jun., Wholesale Ironmonger, respectfully informs his Friends and the Public, that he is manufacturing, at his Works, Railway, Gig, and Carriage Springs, Buffer Rods, Collinge's and Mail Axles, Patent and Improved Van Arms, Improved Screw Jacks, Wind-up Jacks, Cheese and Cider Press Screws, Pully Blocks, Anvils, Vices, Spades, Shovels, Hames, Chains, &c.

Sole Manufacturer of Chalklen and Bonham's Patent Vices. 2 & 3, St. Martin's-lane, Birmingham.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS.

The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive TENDERS for the LOAN of MONEY, in sums of not less than 300*l.* each, on interest at the rate of 5 per cent. per annum, for a term not less than three years. The Tenders are to express the sums and the term of years for which the same are proposed to be lent.

The Tenders to be addressed to the Secretary, at the Company's Office, in Waterloo-street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warnford Court, Throgmorton-street, London; or to Messrs. Laurence, Cazenove, and Pearce, Auction Mart, London.

By Order,
THOMAS KELL, Secretary.

Dated this 31st day of December, 1840.

TUCK'S HERMETIC ENVELOPES, on an entirely new plan (*Manufactured by Machinery, and registered pursuant to Act of Parliament*) offer advantages possessed by no other Letter-cover yet devised. The Postage Stamp Label is affixed to the Envelope in such a manner as to serve at once to seal and frank the Letter.

Separate Waxing or Wafering rendered unnecessary.

Time in making up and dispatching less than the before introduction of the Penny Postage system.

All envelopes hitherto made on the old plan may be easily opened without breaking the seal, their contents read or abstracted, and the envelope re-placed in its original state, so as to defy detection. But this cannot be done with the HERMETIC ENVELOPES, which renders them invaluable for the enclosure of Bills of Exchange, Remittances, Confidential Communications, Legal and Official Documents, &c.

May be had at the Office, 122, FLEET-STREET, in quantities of not less than 250 of various sizes, in neat paper boxes, from 10*s.* to 15*s.* per 1000, and of all Stationers in the kingdom.

*** Orders also received at 138, Aldersgate-street.

TO CONTRACTORS, BUILDERS, IRONMASTERS, &c.—GREAT WESTERN RAILWAY, BRISTOL DIVISION.

For Sale, the following useful Railway and other Stores, all made of the best description of materials, and in good condition:—About 70 tons of flat bottomed rails, 45 lbs. per yard; 500 tons chair rails, 30 lbs. per yard; Chairs, averaging 8 lbs. each, with a large assortment of Box Wings and Crossings; a great number of Sleepers; 250 Railway Waggons; 80 Stone Trucks, all with 30 inch wheels, and 3 inch square axles; several Strong Cranes, with wrought iron guys, and gearing complete. A 6 inch Winch, Timber Carriages, 2 Stationary, 13 Carts with 6 and 8 inch wheels, one of superior make, Horses, Smiths' Bellows, Anvils, Tongues, &c. A large quantity of Tunnel Centres and Iron Work for Tunnel purposes; Memel and Pine Timber, New Rope of various sizes; Sledges, Jumpers, and Blasting Tools, &c., &c. Two River Barges, one of twenty tons, the other of 50 tons burthen. Also, 3 Pile Engines.

The whole of the above named Materials lie on convenient Wharfs for Shipment, on the banks of the River Avon, between Bath and Bristol, from whence they can be conveyed at a cheap rate, to any part, the port of Bristol offering every advantage to Shippers.

For terms and further particulars enquire of Mr. Roberts, 7, Vernon-place, London; of Mr. Hugh Ross, Saltford, near Bath; or Mr. Charles Nixon, Keynsham near Bristol.

Saltford, 25th Nov., 1840.

This day is published,

TUCK'S ROLLER CALENDAR for the Year 1841.

—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda, indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board-Room, Counting-House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5*s.* 6*d.* In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Published at 138, Aldersgate-street, London. Sold wholesale, by Hodgkinson, Son, and Burnside, Stationers, Skinner-street; and may be obtained of any Stationer in the Kingdom.

N.B. A new Calendar can be fitted into the box at the expiration of the year.

ANDREW SMITH'S PATENT WIRE ROPE.

WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire-drawers, Birmingham.
Robertson and Co., 12, Goree Piazzas, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every expectation. It has been used in Shipping Five Years.

NORTH MIDLAND RAILWAY—ALTERATION OF TRAINS.

The Public are respectfully informed that on and after Monday, the 28th of December, 1840, the TRAINS of this Company, in connection with those of the London and Birmingham, Birmingham and Derby, Midland Counties, York and North Midland, and Hull and Selby, will START and ARRIVE according to the following tables, until further notice:—

*Trains to which third-class carriages are attached.

FARES.

London to Derby.	Sheffield	Leeds.	York.	Hull.
1st Class 1 14 0	2 5 0	2 12 0	2 15 0	2 18 0
2nd Class.... 1 3 0	1 10 0	1 15 0	1 17 6	1 19 6
3rd Class.... 0 15 0	0 18 6	1 1 0		

Third Class Passengers are not booked through to or from London.

First and Second Class Carriages are attached to all the Trains.

Third Class Passengers may be conveyed from London to Leeds in the day, by a Train leaving London at 7 a.m. and Derby at 6 p.m.; and from Leeds to London in the same time, by the 15 minutes past 7, a.m., from Leeds. Gentlemen's Carriages and Horses conveyed over the London and Birmingham Railway by these Trains, are taken at a cheaper rate.

Passengers by the half past 9 a.m., Down Train from Derby will be conveyed direct to Manchester.

Parcels, &c., are conveyed by all the Trains, and are received at all the principal coach offices in the kingdom.

Carriage Trucks and Horse Boxes are kept at all the principal stations; but to prevent disappointment, it is desirable that notice be given the day previous to their being required.

Post Horses are always in readiness on the arrival of the Trains at the Derby and Leeds stations.

Time is allowed at Derby for refreshment.

By Order, H. PATTESON, Secretary.

Office, Warnford-court, Throgmorton-street.

ROMAN CEMENT. — CONTRACTORS, BUILDERS, and others, are respectfully informed that any quantity of this article, of the best quality, may be obtained at George H. Newton's Manufactory, Wilmington Works, Groves, Hull.

G. H. N. can undertake to furnish Contractors for Public Works with a regular supply of Cement, upon the best terms, having supplied from his late Works in Derbyshire and Staffordshire, some of the heaviest Railway Contracts in the kingdom.

EAST ANGLIAN RAILWAY from LONDON to CAMBRIDGE, NEWMARKET, NORWICH and YARMOUTH.

—At a meeting held at the East India and Colonial Club Rooms, Suffolk-street, Pall Mall East, on Wednesday, the 30th December, 1840.

W. L. W. CHUTE, Esq., M.P., in the Chair.

Upon the motion of the Most Noble the Marquis of Douro, M.P., seconded by Samuel Bignold, Esq., it was unanimously resolved:—

1st. That this meeting is impressed with a strong conviction that unless the county of Norfolk, city of Norwich, and towns of Cambridge, Newmarket, Thetford, and Yarmouth, by the immediate construction of a railway to the metropolis, are placed upon an equality with other parts of the kingdom, where railroads are completed and in progress, the great agricultural and commercial interests of this important district must materially suffer in the race of competition.

Moved by Benjamin Smith, Esq., M.P., seconded by T. Hammond, Esq., of Yarmouth,

2nd. That this meeting is of opinion, that a line of railway proceeding from Yarmouth to Bishop's Stortford, by way of Norwich, Wymondham, Attleburgh, Thetford, Newmarket, and Cambridge, will afford advantages for carrying out the objects proposed, and may apparently be completed at a reasonable cost, and secure a considerable traffic, with a prospect of increase, by the junction of railways from the north, at Cambridge, and by the completion of branches from Lincolnshire, Huntingdonshire, Bury St. Edmonds, and other parts of Suffolk, and all parts of the important districts of the Bedford Level, the towns of Lynn, Swaffham, Fakenham, and Dereham, and all the western parts of Norfolk.

Moved by S. Bignold, Esq., seconded by Edward Varnish, Esq., of Bracondale.

3rd. That John Urpeth Rastrick, Esq., having produced to this meeting sections and plans extending over such line, and having made a report thereon, showing its great advantages and facilities for execution, this meeting is of opinion that a Company should be immediately formed for the completion of the same, to be styled the East Anglian Railway.

Moved by Isaac Jermy, Esq., Recorder of Norwich, seconded by J. Harman, Esq., Chairman of the London and Brighton Railway Company.

4th. That having observed with great satisfaction the announcement of a meeting of the landowners of Norfolk for the purpose of supporting a railway, this meeting requests its Chairman forthwith to put himself in communication with these gentlemen, it being the opinion of this meeting that it is essential for ensuring the success of so great an undertaking, that all interests should co-operate in one united effort to obtain its completion.

Moved by Edward Varnish, Esq., and seconded by D. M'Leay, Esq., of London.

5th. That a Committee be appointed to arrange the details of the Company, and to carry out the views of this Meeting, with power to add to their number.

W. L. W. CHUTE, Chairman.

Moved by A. A. H. Beckwith, Esq., and seconded by Richard Lloyd, Esq., of London.

6th. That the thanks of this meeting be given to W. L. W. Chute, Esq., M. P., for his able and efficient conduct in the Chair.

Just published,

THE RAILWAY CALENDAR FOR 1841,

illustrated with an elaborate and splendidly executed MAP of the RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information, which embraces, amongst a great variety of useful and interesting matter, the names of the Chairmen, Deputy-Chairmen, Engineers, and Secretaries, of every Railway in the kingdom, Transfer Agents, Bankers, and much exclusive information, besides answering every purpose of a general Almanack.

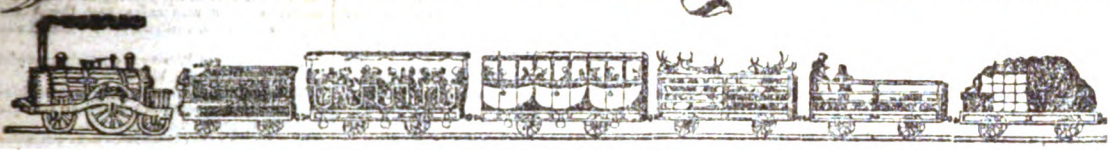
Price 1*s.* 6*d.*—In Case for the pocket, 4*s.*; mounted on canvass and rollers, 5*s.*—In neat frame, 5*s.* 6*d.*

Published at 122, Fleet-street; Groombridge, Panyer-alley; Tyas, Paternoster-row; Bell, Fleet-street; and sold by all Booksellers and Newsmen.

This day is published,

TUCK'S' MAP OF THE RAILWAYS THROUGHOUT ENGLAND AND WALES TO THE CAPITAL OF SCOTLAND,

beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.



Bound in cloth, 1*s.* 6*d.*; in paper covers, 1*s.*; mounted on canvass, in cloth case, 2*s.* 6*d.*; on rollers, 3*s.* 6*d.*

Published at the RAILWAY TIMES Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster-row; Hyde & Co., and G. Bell, Fleet-street; Mann, Cornhill; and by all Booksellers and Newsmen.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, January 2, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for me and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 158. Vol. IV.—No. 2.] SATURDAY, JANUARY 9, 1841. [Price 6d.

SOUTH EASTERN RAILWAY COMPANY.—A Special General Meeting of the Proprietors will be held at the London Tavern, Bishopsgate Street, in the city of London, on Wednesday, the 20th day of January instant, at One o'Clock in the Afternoon precisely, to take into consideration the propriety of applying to Parliament for powers to make a Branch Railway from the line of the South Eastern Railway at Ashford, to Canterbury and Ramsgate or one of them.

JOSEPH BAXENDALE,
Deputy-Chairman of the Board of Directors.
J. S. YEATS, Secretary.

Railway Office, 10, Coleman street,
5th January, 1841.

SOUTH-EASTERN RAILWAY.—To CONTRACTORS FOR FENCING.—The Directors will meet at their office, No. 10, Coleman-street, London, on Tuesday, the 2nd day of February, 1841, at half-past One o'Clock in the afternoon precisely, to receive Tenders from parties willing to contract to fence off the line of Railway with Post and Rail Fencing, from the Cranbrook and Maidstone turnpike road, in the parish of Staplehurst, to Grove Bridge, on the turnpike road leading from Ashford to Hythe, in the parish of Sellinge, being a distance of 20 miles or thereabouts.

The Specification and Conditions of Contract may be seen on application to Mr. P. W. Barlow, the Resident Engineer, at the Railway Office, Tunbridge, and at the Office of Mr. Thomas Thurston, Land Surveyor, at Ashford, on and after the 1st day of January.

The Directors will not consider themselves bound to accept the lowest Tender, nor will any Tender be received after One o'Clock on the day appointed for receiving the same.

By order of the Directors,
J. S. YEATS, Secretary.

Railway Office, 10, Coleman street,
23rd Dec. 1840.

YORK AND NORTH MIDLAND RAILWAY.—Notice is hereby given, That the January Half-Yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company, will be held, in pursuance of the provisions of the Act of Incorporation, in the Offices of the Company, in the City of York, on Friday, the 29th day of January next, at 12 o'Clock at noon precisely.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

York and North Midland Railway Office,
Tanner-row, 7th January, 1841.

BRISTOL AND GLOUCESTER RAILWAY.—CONTRACT FOR WORKS, WICKWAR TUNNEL.—Notice is hereby given, That the Directors will receive at their Offices, Exchange Buildings, Bristol, on or before 12 o'clock on Monday, February 8th, Tenders for the construction of the Wickwar Tunnel, and works connected therewith.

Drawings and Specifications of the Works will be exhibited at the Company's Offices, Exchange Buildings, Bristol, on and after Wednesday, 30th December inst.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office at One o'clock on the 8th February.

ROBERT FLETCHER, Secretary.

Bristol, December 22, 1840.

RIBBLE NAVIGATION.—Notice is hereby given, That the HALF-YEARLY GENERAL MEETING of the RIBBLE NAVIGATION COMPANY will be held at their Office, Chapel Walks, in Preston, in the county of Lancaster, on Thursday, the 21st day of January instant, at 11 o'Clock in the forenoon.

RICHARD PILKINGTON,
Secretary to the said Company.

Preston, Ribble Navigation Office,
2d January, 1841.

SURVEYING.—A Young Man wishes immediately to receive Instruction in Railway Surveying.—Address C. D., 19, Circus, Greenwich. He also desires to purchase a good Theodolite, &c., that has not been much used.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 250, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Now ready, in 1 Vol. 4to, 600 pages, 17 plates.
Price £1 11s. 6d.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated, by Francis Whishaw, Civil Engineer, M. Inst. C. E.

"The book is dedicated to the railway capitalists of the United Kingdom, and no capitalist who studies his own interests will [illegible] without it. It is a work of immense labour and research—very clearly and methodically arranged—and exact and circumstantial in all its details—rich in original and authentic information—generally honest, impartial, and judicious in its praise and censure, and embellished to profusion with splendid engravings.—*Railway Times.*

London: Simpkin, Marshall and Co., Stationers' Hall Court.

RECIPROCATING SYSTEM OF RAILWAYS.—By this system the most complete Railway, with the best appointments, including engines, carriages, &c., calculated for any amount of traffic, may be effected at from £10,000 to £16,000 per mile according to the nature of the country to be traversed, and the expected amount of traffic. By this mode *accidents* by *collision* are rendered next to *impossible*.

FRANCIS WHISHAW.

Gray's Inn, and Hampstead, Middlesex,
January, 1841.

LOCOMOTIVE ENGINES.—A perfect knowledge may be acquired from the PRACTICAL DESCRIPTION of LOCOMOTIVE ENGINES, by MESSRS STEPHENSON, with Forty Woodcuts of details and Four beautiful Engravings of Elevations, Plan, and Sections. 4to. 21s. All persons desirous of an acquaintance with this extraordinary Machine, especially Engine-Drivers, should possess this work.

JOHN WEALE, 59, High Holborn.

GEOLOGICAL MAP OF CENTRAL AND WESTERN EUROPE.—Mr. WEALE, after a long preparation, has now completed for publication a large GEOLOGICAL MAP of England, Wales, Scotland, Ireland, France, Germany, Switzerland; portions of Italy and the Austrian and Prussian States. Corrected to the present time. By W. S. HUGHES, F.R.G.S. Finely coloured, price £1 10s.; mounted and varnished on rollers, or folded in a case, price £2 2s.

*** The Geological features of these countries offer much research to those who seek information on minerals and the precious metals.

59, High Holborn.

ADAMS'S BOW-SPRINGS having been in use on various Lines of Railway upwards of Twelve Months, and having been found, in addition to their acknowledged ease, materially to diminish draught, and to increase safety and durability, they are now offered with the utmost confidence to Railway Managements. Testimonials from various Railways may be seen at the Vertebrated Carriage and Bow-Spring Manufactory of Samuel Adams, 159, Drury-lane, London.

N. B. These Springs, applied to carriage trucks prevent the damage to patent axletrees from vibration.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—New Shares.—Call of £5 per Share, in addition to the deposit of £5, making £10.

The Directors of the Birmingham and Derby Junction Railway Company having resolved that an instalment of £5, on each of the new Third Shares in this undertaking, created under the provisions of the Act relating thereto, passed in the last session of Parliament, (3 Vict., cap. 51), payable on or before the 29th day of January next, should be called for, proprietors of such new shares in this Company are hereby required to pay, on or before that day, to any of the undermentioned Bankers, the sum of £10 on each of their respective New Shares.

BANKERS.

London—Messrs. Glyn, Hallifax, Mills, and Co., Lombard street.
Birmingham—The Birmingham Banking Company.
Manchester—The Manchester and Salford Bank.
Derby—Messrs. W. and S. Evans.
Burton-upon-Trent—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield—Messrs. Parker, Shore, and Co.

The Bankers have been severally instructed to charge interest at the rate of £5 per cent. per annum, according to the provisions of the Act above referred to, from the 29th day of January next, on all sums which shall be tendered after that day.

HENRY SMITH,
Chairman of the Board of Directors.
THOS. KELL, Secretary.

Waterloo-street, Birmingham, Dec. 31, 1840.

N.B. The proprietors who have paid the deposit of £5 will have credit given them for the amount so paid, on payment of the above call, and as part thereof.

THE LONDON STOCK AND SHARE LIST, published every Saturday evening. Terms, £1 1s. per annum. Postage, 9s. extra, payable in advance.

This List contains the closing prices of each day's actual transactions upon the Stock Exchange, from Monday to Saturday inclusive. The length in miles, miles opened, number of shares, amount per share, amount paid up, last calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom. The present nominal value, and every other essential particular of the principal Insurance Companies, Joint-Stock Banks, Bridges, Docks, Institutions, Canals, Gas-Light Companies, Water Works, British and Foreign Mines, and other Miscellaneous Joint-Stock Companies, North American Securities, Government Funds, Foreign Stocks, Course of Exchange, Bank of England Averages, Private and Joint-Stock Bank Circulation, Grain Averages, Remarks upon the Money Market, &c. This List is got up in a most convenient form for binding, is peculiar for its lucid arrangement, and contains more matter than any other similar publication.

The same Proprietors also publish THE LONDON DAILY STOCK AND SHARE LIST, in which is given the ACTUAL DAILY TRANSACTIONS upon the Stock Exchange to 4 o'Clock, p. m. Published every evening. Terms, £5 5s. per Annum. Postage, 30s. extra, payable in advance.

They likewise publish A DAILY LIST OF NOMINAL QUOTATIONS, containing the "Jobber's" NOMINAL PRICES of the leading Railway Shares, Consols, and Spanish, at the commencement of the day, 10 o'Clock, a. m. and at the close of the market, 4 o'Clock, p. m. Published every evening. Terms, £2 10s. per Annum. Postage, 30s. extra, payable in advance.

These Lists have been established nearly 12 months, under the patronage of the most eminent Members of the Stock Exchange, Bankers, and other Capitalists interested in Public Securities, and are attended to by parties who have access to the best information, and are practically acquainted with the markets.

Orders for the regular supply of the above Lists to be forwarded to the Proprietors, J. S. TRIPP & Co., 12, Copthall-court, London.

TO DIRECTORS, GENTLEMEN, AND OTHERS connected with Railway Carriages.—WANTED a situation as Foreman in the Carriage Department; a person having a thorough knowledge of Railway Carriages, having been engaged for a series of years in the above line; can have an unexceptionable reference as to ability and attention. Please to direct to N. H. at Mr. Nicholls', No. 1, Ernest-street, Regent's Park.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY—GENERAL MEETING.

(From the *Greenock Advertiser*, Jan. 7.)

On Saturday, the Half-Yearly General Meeting of proprietors of the railway, was held in the Sheriff Court Hall, Greenock; Robert Dow Ker, Esq., in the Chair.

Captain Huish (the Secretary) read the advertisement calling the meeting, after which

George Blair, Esq., moved that the seal of the Company be affixed to the registry of proprietors for the last six months.

William Martin, Esq., seconded the motion, which was carried unanimously, and the seal was affixed accordingly.

Captain Huish then read the following

HALF-YEARLY REPORT.

Greenock, 2nd January, 1841.

In meeting the Proprietors on the present occasion, the Directors have to express their regret that they cannot congratulate them on the whole Line having been opened. Until recently they had reason to believe that no circumstances could have so long delayed this most desirable event. Their regret is further enhanced by the fact of the Line having been for some time finished from Glasgow to Greenock, with the exception of a short distance at the Tunnels—thus delaying the opening of the whole from the obstruction at one point, unless by a change of carriages, a proposal much discussed some months ago, but which, after many deliberations, it was not considered expedient to adopt.

The quantity of work remaining to be done is very small; and, in ordinary material, the Directors would have no hesitation in advertising a very early day for opening; but, with the experience of previous disappointments, they will not name a time which they conceive can by any contingency be exceeded.

Although deeply anxious to put the Proprietors in possession of an early return, the Directors wish to impress on them that the lapse of a few days, at this dull season of the year, cannot be placed in comparison with bringing the Line into the same perfectly finished state at the Tunnels, as it is at every other point, in order to provide for that entire safety in working it, during the spring months, which the public have a right to expect, and which it is the interest of the Railway Company to afford.

It is a feeling at the Board, deduced from recent observation, that the Railway being laid is not sufficient to warrant its instant use; and they desire to present their Line, at all its points, to the Government Commissioner who will be ordered to report on it, in the most finished state.

The following reports by Mr. Locke and Mr. Errington detail the present state of the works; and the Directors may here remark, that from the first breaking ground, 27 months ago, every suggestion that the skill and experience of Mr Locke could devise has been attended to by the contractors:—

To the Directors of the Glasgow, Paisley, and Greenock Railway Company.

Gentlemen,—I feel it my duty on this occasion of meeting the proprietors, to make a few remarks on the state of the works, and on the causes which have prevented their completion at an earlier period.

To those proprietors residing on the spot, who have had an opportunity of seeing the works at Bishopton, I feel it unnecessary to apologise for the delay which has occurred; but to those at a distance, unacquainted with the difficulties that we have had to contend with in that place, it is desirable to lay them briefly before them.

The Bishopton Ridge, which divides the low land near Paisley from the Clyde, is composed of solid whinstone rock. The railway passes through it for a distance of 2,200 yards. There are two tunnels in the middle of the ridge, having an open part 100 yards long and 70 feet deep between them.

These tunnels are 320 and 340 yards long respectively. The depth of the open cutting at the entrance to each is 70 feet, and the length from the face of the east tunnel is 748 yards, and from the face of the west tunnel 946 yards.

When the Bill was before Parliament, some question arose as to the nature of the rock in this locality; and it was stated in evidence that the engineers had been driven off the ground by the owner of the land, and that there existed a doubt as to the exact nature of the rock there. Several clauses (in my opinion oppressive and vexatious) were inserted in the Bill, requiring these tunnels to be increased in length, and giving to the landowner the right to prevent any shafts being sunk in his property so as to facilitate their execution.

The rock certainly did prove harder than was expected: application to the trustees of the landowner, then a minor, was made for permission to sink shafts to facilitate the tunnels, and although we offered to remove all the rock, and restore the land disturbed by these shafts, it was refused.

To enumerate all the objections taken to our proceedings, or the obstacles thrown in our way during the execution of this work, is not my intention; but I beg to be permitted to state that, during my practice, I never met with fewer facilities than were granted at Bishopton, and have scarcely ever known more concessions made, nor greater compensation given, than have been made by this Company to the owner of the land there.

The contractor (Mr. Mackenzie) has spared neither pains nor labour to facilitate the work intrusted to his charge. He has, under great difficulties, persevered to the end, and has expended no less than 314 tons of gunpowder in removing the rock in question.

The delay is not attributable to him, and if the explanation I have offered be considered insufficient, the blame is mine. I had hoped to obtain more facilities, but have been disappointed.

The successful working of the joint line will afford, I trust, an earnest of what will be effected when the line is opened throughout to Greenock.

I am, Gentlemen, your obedient servant,
JOSEPH LOCKE.

London, 30th December, 1840.

To R. D. Ker, Esq., Chairman of the Board of Directors.

Sir,—I beg to forward to you the half-yearly Report, for the information of the proprietors.

Both lines of road are laid throughout, with the exception of about one-third of a mile in the rock cutting and the tunnels. The station house and adjoining arches have been finished some time; and, in short, the whole works are in a more complete state than is usual at the opening of a line—the sole exception being the short distance abovementioned at Bishopton.

As the delay at this point is much greater than was expected, I trust I may be permitted to detail the precise state of the works this day, for the purpose of bringing distinctly before the proprietors the probable time of opening the line. I need hardly state to the resident proprietors, that neither exertion nor expense has been spared to open the tunnels; but the nature of the material has been so uncertain, intersected as it is with tough veins and brands, that a day's work in the tunnels, with the same number of men employed, has varied from 3 feet 6 inches to 6 inches; and many experienced miners, from all parts of the kingdom, have given up their employment rather than persevere in the work upon encountering dykes of this material.

In the tunnels and adjacent rock cuttings, the greatest number of cubic yards remaining to excavate in one mass is 6,200; and the whole, divided into four portions, is about 11,000 cubic yards. To deal with this work there are nearly 1,000 men (980 is this day's return), and three fixed engines, with four double horse runs. The same number of men at work upon any ordinary rock would clear out this quantity in a fortnight; but as we are driven closer together at the different faces, and the blasts are now very frequent, the result is uncertain, and I feel bound to state that it may be far in the month of February before the line is thoroughly finished for the traffic at this point.

The length to complete in the west tunnel is 16 yards, and in the east 26 yards, which is again a proof of the very uncertain nature of the material, for the west tunnel is 20 yards longer than the east, and was delayed by an interdict against sinking the shaft, yet it is now 10 yards a-head.

There is one other and striking fact connected with this rock excavation which deserves notice, as showing how unexpected the delay has been, and how difficult to calculate. On the 30th November, 1839, I reported two thirds of all the excavation at Bishopton as finished; this was little more than 12 months' work. Now we have been another year at work, and the remaining third is not completed, although the average number of men has been nearly doubled throughout the year.

I have much pleasure in stating that this Company's engines on the Joint line have done their work well—the carriages are easy, and have now run between 16,000 and 16,000 miles without the slightest accident. All our carriages at first ordered, and 10 engines, are on the ground.

I have taken advantage of this Company's establishment on the Joint line, to train enginemen, guards, &c., to their several duties, and I trust an equally efficient working of the whole line will result.

I am, Sir, your obedient servant,
J. E. ERRINGTON.

Glasgow, 1st January, 1841.

The following is the Report of the Joint Committee:—

The Committee have to report, that from the date on which the line was opened (the 14th July) to the 30th November inclusive, a period of 4½ months, 265,343 passengers—including 50,214 carried to or from the Ayr Railway—have been conveyed along it without the slightest accident.

The Committee having no carrying establishment, and being at the commencement of working the line called on to accommodate great masses of the people, have sometimes been unable to obtain from the Companies sufficient materiel to meet the demands upon them, but they believe this will not again occur, as they are ably supported by the respective Boards, who have given instructions to their officers to render every assistance, in carriages and engines, when called on to do so by the Committee.

Much of the Committee's time has been taken up with framing such a system of regulations and code of signals for the conduct of the traffic on the line, as, while leaving unfettered the thorough trade of the two Companies, shall effectually provide against accident or detention of one Company's business by the other's. They have, they hope, succeeded in this, and they have the satisfaction of adding, that they have been warmly supported by their own servants, and by Mr. Errington, who is still in charge of the line and its working, and by the officers of the respective Companies, in carrying into effect regulations which experience has proved to be necessary for securing the safety and confidence of the public.

The works on the line are finished, but the upholding of the road is still in the contractor's hands. It is in excellent order, smooth and safe; and the Committee anticipate being enabled to contract for its maintenance on reasonable terms.

The stations at Paisley are nearly complete, and the one at Glasgow will shortly be so.

The Committee have not yet been enabled to carry goods; but the arrangements for doing so are preparing, and they will commence early in the year.

The traffic in passengers has far exceeded previous calculation, and the Committee feel confident (from tenders already received) that they will secure a considerable portion of the carrying trade.

The balance sheet of expenditure is submitted, and a statement of expenses attendant on traffic to the 30th November.

Glasgow, 22nd December, 1840.

The Directors see good reason to expect that the same success which has attended the joint line will follow on the opening of the remaining portion of the railway, and from results already obtained, they have found it necessary to order a larger supply of materiel than had been considered requisite. This will be ready before the busy season commences. A Committee of the Board is engaged in providing for the transit of passengers from Greenock to the watering places, the Highlands, England, and Ireland, in order to secure this branch of their expected revenue. The Harbour Trustees are alive to the importance of assisting them in this particular, and additions and improvements for the convenience of the deep-sea steam-boats are under consideration.

The Directors, after due consideration, have come to the resolution of encouraging carriers to come on their line, in preference to becoming carries themselves, provided they are enabled to do this with due regard to the interests of the public.

The Board has watched with great anxiety the proceedings of Parliament with reference to the existing tax on passengers. They co-operated with the other Scotch railway Companies in the last session to obtain an amelioration of this oppressive impost. From the strong recommendations of the Committee of the House of Commons, as well as the palpable injustice of the present mode of levying the tax, the Directors have a confident hope that a change will take place in the ensuing session. The exertions of the Board will be continued until this question, so vitally connected with the system of low fares, and the interests of the public, is placed on a more equitable basis.

In the circular letter dated 16th November last, the proprietors were made aware of the cause and extent of the excess of expenditure that would arise beyond the amount authorised to be raised. These are not recapitulated here, but are added to this Report.—(See Appendix.)

The proprietors will recollect that notices have been issued of an intention to apply to Parliament for power to increase the capital of the Company; and after receiving all the practical opinions from parties most conversant with these subjects which they could obtain, the Directors have now to request your concurrence in their following up these notices by the introduction of a Bill very early in the session. Any other mode of raising money would, the Board is advised, be liable to great objection, and would occasion individual inconvenience and responsibility. In the event also of their expectation being fully realised, and the trade exceeding the estimates on the unopened portions of the line, such means might be inadequate to meet the requisite expenditure. As it is intended to confine the Bill to the raising of additional capital, no opposition can be expected, and the expense of obtaining the Act cannot be great. The proprietors will bear in mind that the loan of 1,333,333*l.*, payable at various periods, will require to be provided for, and the Directors recommend that new shares should be created, which, after allowing for the debentures as they fall due, shall leave a sufficient sum to cover the whole present and future contingent excess that is contemplated, which, it will be seen from the circular, is about 50,000*l.*, required to open the line efficiently, and 40,000*l.* for future expenditure, consequent on increase of accommodation to meet a large trade. With regard to the latter item, it would, in the opinion of the Directors, be inexpedient, while applying to Parliament, to limit the Bill to the inevitable sum required; but they beg to assure the proprietors, that no expenditure beyond what is necessary for the efficient working of the railway will be incurred until they have been consulted. The mode of creating these shares, and the terms on which they will be issued, will form a subject for discussion before a special meeting, when the Bill will be submitted for consideration and ap-

Digitized by Google

proval. Only 2*l.* per share remains to be called up on the present shares.

This Company's share of the profits on the Joint line, from 14th July to 30th November (4½ months) amounts to 2,009*l.* 17*s.* 2*d.* The interest on the loan for the six months is 2,474*l.* 9*s.* 11*d.* The Directors believe that they have consulted the wishes of the proprietors in carrying this sum of profit to the credit of the interest account on debentures, as the legitimate source from whence it ought now to be paid, leaving the balance only to be debited to capital; and they are persuaded this very flattering result, derived from a moiety only of so short a portion of the line, ought to be highly satisfactory to the shareholders.

The Directors have to request your confirmation of the forfeiture of 40 shares, numbered 2271-2280; 2816-2818; 2821-2825; 7811-7820; 2511, 2512; and 10677, 10878, all inclusive; 20 of these being forfeited to enable the parties interested more readily to complete their title to them. The former 68 forfeited shares were re-sold immediately without loss.

The following gentlemen go out of the Direction on this occasion, and the two first do not submit themselves for re-election:—W. M. Alexander, Esq., of Southbar; Capt. Houston Stewart, C.B., R.N.; and P. M. Stewart, Esq.

MARK HUISH, Secretary.

APPENDIX.

Extract from Circular Letter to the Proprietors, dated 16th November, 1840.

The whole original capital is 533,333*l.*; and it may be in your recollection that the first Report of the Directors, in 1837, exhibited an estimate of less than half a million for making the railway as then contemplated, and supplying it with a moderate amount of stock. The periodical Reports would show that the original plans have been much enlarged, especially at the termini; and experience has already demonstrated the soundness of this policy. At Glasgow, the station, in conjunction with the Ayrshire Railway Company, has been carried to the river Clyde for the purpose of meeting any opposition in the trade that may be made. In Greenock a still more important extension has been effected, namely, from Bogle street to Cathcart-street, by which passengers are brought into the centre of the town, and within one minute's walk of the quay; and the Company have power, on a small outlay, of taking the carriages alongside the steamers. The station first contemplated was at a much greater distance from the quay, and the carriages could never have been forwarded to it.

These extensions have been very costly; but when it is remembered that nearly half a million passengers annually touch at the quay en route to or from Glasgow, this expansion of the original scheme was advisable; credit was taken before Parliament for one-third of these passengers. The arrangement now making with steam boats of all classes will secure a much larger share, and, it is believed, eventually nearly the whole; and the Directors are confident that the additional revenue will be a handsome per centage on the cost of extensions.

The Joint line of railway has been fitted for a greater traffic than was at first calculated to pass over it, and the stations and approaches have been considerably extended—much of the road having been adapted for four lines of rails, and part of it being already laid in this way. Between 8,000 and 9,000 passengers have been carried along it in one day, and a great many disappointed from the limited carrying establishment. Several thousands more, must have come on it at the same time, had the line been opened to Greenock. This simple fact will show that additional accommodation was absolutely necessary.

The works have not materially exceeded estimates, and any excess has generally arisen from additional occupation bridges, drains, &c., ordered by the sheriff and awarded by arbiters, and the failure of two contractors. The engineer has endeavoured to provide in his final statement for all future contingencies, and allowing a margin for these, and including the substitution of substantial stone-walling for the ordinary post and rail fence, which will eventually be a saving, the excess in this department will be about 18 per cent. on the first estimate. The land has been very expensive, and the heavy awards of arbiters, orders of the Sheriffs, and the opposition the Company has continually met with, has caused this item to exceed the Directors' expectations. The incidental expenses are a trifle larger than anticipated, and include the expenses of the new Bill, and the interest upon loans has continued a charge upon capital. It will remain with the proprietors to decide whether any part of this should now be paid from the revenue of the Joint line. Although the expenses of conducting the traffic for so short a period cannot form certain data, yet it appears that this Company's proportion of the net profits from passengers alone, on this length of 6¾ miles, will nearly, if not quite, pay the interest on the whole of the borrowed capital.

These details will convey to you the causes of the increased expense. They fall under two heads,—1st, the certain expenditure which must be provided to complete the main line, stock, and stations, and to meet all known demands; and 2nd, the uncertain future outlay, consequent in some degree on the wants of the public, the extent of traffic, and an ample balance for depending submissions and unforseen contingencies. Looking to the great objects which have been secured, the substantial works, the enlarged accommodation, and the important extensions, the Directors conceive that an addition of 10 per cent. to the first capital, and which will open the line in an efficient manner, will be considered a very small increase, especially when it is remembered that the result of the first four months' working upon the Joint line shows an increase of nearly 40 per cent. of traffic beyond the estimates. The uncertain future demands are more difficult to ascertain, from the reasons assigned above; but the Directors are very anxious to take a wide view of them, and provide for an increase in the traffic of the whole line beyond the estimates. They conceive that, in mentioning 8 per cent. for this, they are beyond what will be required for years, unless the success of the railway should render it prudent to make extensive branches or provide a very large accommodation.

MARK HUISH, Secretary.

The CHAIRMAN then said—When the Directors had last the pleasure of meeting the shareholders, I fully expected that the Report to be presented to the present meeting would have announced the opening of the line. I need not say that it is as great a disappointment to me to mention, as it must be to you to hear, that this event is still future. In referring to the Report, it contains all the explanation which I can offer of the reason why the public expectation has not been realised as to the time of opening, arising as it does from one cause, and one only; those most formidable difficulties in the construction of the tunnels, which, I am warranted to say, make that work the most arduous of a railway kind in Europe. I admit that the time required to make these tunnels has exceeded all the calculations we ever formed on the subject; every other part of the work being finished, except such small portions as it was unnecessary to push previous to the completion of the tunnels, a partial opening being considered inexpedient and unadvisable. Baffling as this work has been, it is consolatory to think that the delay has not been lost time, inasmuch as it has served a most important purpose in training the servants, in consolidating the embankments, and bringing every other part of the road into the highest working condition, previous to the opening of the line and commencement of the traffic. Another point which it becomes me to notice is the additional capital necessary to complete the works. It would certainly have been more satisfactory had such an intimation been unnecessary; and had it been possible for the Directors to overlook the substantial welfare of the undertaking, in order to consult the easiest course for themselves, we might have limited our expenditure by the prescribed capital. But finding it inadequate to make a railway such as this ought to be, we adopted a different principle, and fearlessly measured our expenditure by the wants of the railway and the interests of the shareholders. Judged by this standard, I have no fears that our conduct will meet your approbation, and I have no doubt that the same confidence and support which have carried us through many past days of difficulty, will be continued, and evinced on the present occasion, by the adoption of such measures as will enable us to bring the works to a final, speedy, and triumphant completion. (Cheers.) It is well known, that loud and urgent expressions of the public voice have been presented to the Directors, by memorials and otherwise, against opening the railway on any part of Sunday, and it is now time for me to put the question at rest, by this public intimation

Digitized by Google

—that the railway will be closed the entire of Sunday. (Cheers.) It is some time since the Directors resolved upon this, so far as it rested with them, and I have now the pleasure to say, that the Government, much to their praise, have signified their readiness to meet the views of the Directors, in excepting the Sunday from their contract to carry the mails; that is, the mails will be carried on the railway on every other day of the week, but not on Sunday.

ANDREW ANDERSON, Esq., asked how the mails were to be conveyed on that day?

The CHAIRMAN said, the settlement of this matter lay with the Post-office, but he believed they would be carried as now.

Mr. ANDERSON said, the present mode of conveyance was a disgrace to civilisation.

The CHAIRMAN continued—The servants, and all connected with the railway, will therefore be secured in the undisturbed enjoyment of that rest which by the Sabbath (independent of its higher objects) the Almighty has wisely appointed to renew and invigorate the physical powers of man. Without taking into account the religious view of the question, the most conclusive of all, I am most decidedly of opinion that it is not only of paramount importance, but of indispensable necessity, to the safe and proper management of a railway, that the men employed should be secured inviolate in that cessation from the interminable labour and exhaustion of body and mind to which they are subject, but for the weekly rest which the Sabbath provides; and the public may rest assured that not only on that ground, but also on the higher ground of respect for the Divine command, nothing will be done on this railway to weaken that regard for the Sabbath which the Directors wish every man in their service to cherish, and which I hope will long and for ever continue to characterize the people of Scotland. (Cheers.)

The PROVOST moved the adoption of the Report. He felt they were all deeply indebted to the energy of the Directors and the skill of the Engineers for the advanced position in which the line was now placed. It was no doubt true that they had been retarded beyond the time they expected for the opening of the line, and had expended more money than was first contemplated, at which he (the Provost) was not at all surprised. On the contrary, in a work of this description it would have been wonderful had it been otherwise. The unforeseen difficulties, however, had been now got over, and he had no doubt that very shortly the line would be in successful operation, and a source of profit to the proprietors. He moved that the Report be approved of, printed, and circulated among the proprietors, and that the Directors be authorized to apply to Parliament in the ensuing session for an Act empowering them to increase the capital of the Company; and, in the meanwhile, that the works be prosecuted with unabated vigour, and that for this purpose, and to secure their due and early completion, the Directors be authorized to obtain such advances as they may find to be necessary.

A. M. BURRELL, Esq., seconded the motion, which was carried unanimously.

WILLIAM RODGER, Esq., moved that the forfeiture of the 40 shares referred to in the Report, Nos. 2,271–2,280, 2,816–2,818, 2,821–2,825, 7,811–7,830, 2,511, 2,512, and 10,877, 10,878, all inclusive, be confirmed, and sold at the discretion of the Directors.

This motion was seconded by Robert Kerr, Esq., and unanimously agreed to.

JOHN GRAY, Esq. moved that the thanks of the meeting be given to the retiring Directors; that Mr. P. M. Stewart be re-elected, and that Mr. Christopher Saltmarshe, of Grove Park, Warwick, and Mr. William Frederick Burnley, of Glasgow, be elected Directors to fill the other vacancies. It is admitted by all that the prosperity of a joint-stock company materially depends on its Directors, and hence the anxiety on the part of proprietors that suitable persons be nominated to fill the gaps which periodically occur in the Direction of a Company. This meeting may, therefore, naturally expect that I should speak in favour of the gentlemen I have now proposed. As regards Mr. Stewart, he is known to us as a tried friend of our railway; ever since it was projected he has been one of its main springs. The stirring speech he delivered at our first meeting, and which greatly contributed to the formation of the Company, is still fresh in our minds. Since then his exertions on our behalf claim our gratitude, and point to him as one whose re-election is most desirable. Mr. Burnley is also known to you as a highly respectable Glasgow merchant. He has long been one of our partners, and takes a deep interest in our line. His influence and extensive business will doubtless contribute to the prosperity of our Company. Mr. Saltmarshe is a Warwickshire capitalist, and, moreover, is one of the Directors of the London and Birmingham Railway. His intimate acquaintance with undertakings of this nature cannot fail to render his experience extremely valuable to your Directors. So long as his knowledge of our railway rested upon hearsay he viewed it with some doubt, but he came to the spot, and subjected, for days together, our line to the severe test of personal inspection. He was delighted with the execution of the works, and was so convinced that the locality rendered certain an unusually large return for money invested, that he forthwith became a very extensive proprietor of our stock. The motion with which I was entrusted conveyed thanks only to the retiring Directors, but I would also move that our cordial thanks be voted to all the Directors for their valuable services in general, and in particular for their determination that, upon the Glasgow, Paisley and Greenock Railway, the Sabbath shall be observed as a day of rest.

ANDREW LINDSAY, Esq. seconded the motion, which was agreed to unanimously.

ANDREW ANDERSON, Esq., said, that for some years past the mail between this and Glasgow had been conveyed in a manner calculated to shock humanity; and the community naturally expected, that when they were possessed of locomotive power, an end would be put to a system which was at once inefficient and cruel, and, in fact, desecrated the Sabbath far more than the running of a locomotive carriage on that day could do.

The CHAIRMAN begged to remind Mr. Anderson, that he was out of order, in so far as he was opening up a matter which had already been disposed of and settled, and the Directors' conduct approved.

SAMUEL GEMMEL, Esq., denied that the matter was settled, or that the Directors' conduct had been approved, in refusing to carry the mails on the Sabbath.

The CHAIRMAN asked if Mr. Anderson had a motion to propose?

Mr. ANDERSON said he had. He would move, that, as the Directors had refused to carry the mail on Sunday, they be requested to see that efficient means be resorted to by Government, in order to have the mail properly carried on that day.

ANDREW RAMSAY, Esq., seconded the motion.

THOMAS TURNER, Esq., moved as an amendment, that the whole matter be left to the Directors.

WILLIAM LEITCH, Esq., said the present meeting had nothing to do with the question, as to how the Government carried the mail. They could not interfere.

GEORGE BLAIR, Esq., also regarded Mr. Anderson's motion as altogether incompetent for the present meeting. They had nothing to do with the conveyance of the mail, further than to thank the Directors most cordially for exerting themselves as they had done to prevent Sabbath desecration.

The PROVOST thought Mr. Anderson should withdraw his motion. The railway Directors were not the proper body to interfere with the Government in regard to the conveyance of the mail. If interference were necessary, it should be by the community at large at a public meeting called for the purpose. He (the Provost) had no wish to obtrude his own views respecting this matter upon the meeting but it was not to be denied that a strong feeling existed throughout Scotland against Sunday traffic on railways, and that feeling was strongly participated in by the Directors, and he had no doubt by the shareholders on this line. Such being the fact, it was showing no more than a proper degree of respect to public opinion to abstain from urging Sunday traffic on the railway. It was not surprising that upon a subject of this kind a difference of opinion should exist, and both parties might be equally conscientious in holding their several views; but it too frequently happened that people set up their own standard of right and wrong, and were but too prone to measure the conduct of those who differed from them by it, without a due regard to the real state of the case.

Mr. ANDERSON withdrew his motion. His end had been served by the matter having been brought before the public. He would again repeat, that, in his opinion, the Sabbath was more profaned by the brutality attendant on the present mode of carrying the mail, than if they were to run their locomotives on that day.

P. M. STEWART, Esq. said, now that this important matter had been adjusted, he trusted they would allow him to trespass upon their attention for a very short time, while he returned thanks for his re-election. His brother had not been able to serve them here for some time past, for he was serving them elsewhere; and while Mr. Mackenzie, their spirited contractor, had been firing off 314 tons of gunpowder upon Bishopton Ridge, his brother had been firing off as much powder as he could at the walls of Acre. (Laughter and cheers.) Had his brother been at home, he was sure he would have been quite willing to continue to serve as a Director. As for his poor self, he (Mr. Stewart) would only say, that he had heard of a portrait being drawn, so that the person for whom it was meant was not able to discover any resemblance. This was the case with himself on the present occasion, for he must be allowed to say, that he could not recognise himself in the very flattering account which had been given of him by his friend Mr. Gray. The fact was that he had been so much absent from the sphere of operations that he had not been so useful as he could have wished. They had all heard of the difficulties which had been encountered at Bishopton Ridge. Now, he might say that there were difficulties abroad as well as at home. In fact, the House of Lords was a pretty stiff Bishopton Ridge, which had required a great deal of blasting, and not a little *civil* engineering, to get through. (Laughter and cheers.) He had been expecting a dividend about this time—(a laugh)—but he was happy to think that this was only postponed for a little, and not less certain than it ever was. They had only to encourage the Directors to go on, overcoming the remaining difficulties with the same indomitable resolution which had enabled them to conquer the past, and they would soon begin to reap the fruits of their enterprise. There had been a greater expenditure than they had anticipated, but even that was trifling, as compared with what had taken place on other lines. The estimated cost of the London and Birmingham Railway was 2,500,000*l.* whereas the real outlay was about 6,000,000*l.*, and yet it was one of the best paying lines in the country. The additional money sought for was in part caused by additional traffic, which would of course produce additional profit; and the extended time required for its completion would only lead to the greater durability of the works when finished. This was the last meeting they would have before dividends would be paid; and he could not allow it to close without calling attention to certain letters which had appeared in the newspapers here, under the signature of "W.," the writer of which, in his opinion, had the sole merit of suggesting the Greenock Railway. He (Mr. Stewart) had no idea who "W." was, but he thought he deserved some suitable mark of their obligations to him. In conclusion, Mr. Stewart again thanked the meeting for re-electing him; and stated that, now when the dividends were about to commence, he would be more constant in his attendance. (Cheers and laughter.)

Mr. BAIRD wished to suggest to the Directors the

Digitized by Google

propriety of publishing the Report and balance sheets ten days before the meeting of proprietors. It was impossible that in so short a period as elapsed while they were assembled any one could master the figures.

The CHAIRMAN replied that he feared Mr. Baird's wish could scarcely be complied with; the meeting followed so rapidly on the closing of the books, the Report was frequently not decided on till very shortly before the meeting, nor indeed could it be. The Secretary would explain the difficulty.

Captain HUISH said that the meeting must be aware that it took some little time, with the voluminous accounts of a railway, after the books were nominally closed, before any complete balance sheet could be presented, and great exertion was required on the part of all in the office to overtake it. Printed balance sheets were now in the hands of the shareholders in the room; and he begged to remind them that for the next 10 days the books would lie for their inspection, and that every facility should be given by himself and the clerks to any of the proprietors who would favour them with a call.

Mr. BAIRD thought that it might appear invidious if one or two shareholders only were to avail themselves of this privilege.

Captain HUISH said, on the contrary he was sure the Directors, and he could answer for himself, would feel much gratified at their doing so, and would render any assistance.

Mr. BAIRD said, he would not make any motion on the subject, but wished the Directors to consider the matter before the next meeting.

The CHAIRMAN begged to state that a train was in readiness to convey such of the shareholders as wished to make the trip to Bishopton. The Directors were going to inspect the work.

WILLIAM LEITCH, Esq., moved thanks to the Chairman, which were given by acclamation, and the meeting adjourned to the station.

THE LATE ACCIDENT ON THE BIRMINGHAM AND DERBY RAILWAY.

THE QUEEN ON THE PROSECUTION OF THE BIRMINGHAM AND DERBY JUNCTION RAILWAY COMPANY *v.* MARSON.

AN application was made on Saturday before Mr. Justice Littledale, in chambers, by Mr. Crompton, as counsel for Edward Marson, for a writ of *certiorari* to move into the Queen's Bench—(thence to be sent down to the assize for trial)—any indictment which might be found against the said Marson for having caused a wilful obstruction of the Birmingham and Derby Railway. The facts of the case are these:—On the 2d of December an accident occurred on this railway, attended with serious consequences, by the train coming in contact with a lurry on which two men were riding towards Coleshill. The men were committed for manslaughter, and were likewise committed for trial under one of the clauses of Lord Seymour's Act. Marson also, who is foreman of the contractor for the permanent way, was summarily committed for trial at the same time, the facts against him being, that in the morning (the accident having occurred at 9 o'clock in the evening), he had proceeded along the line upon this lurry, and had sent the men forward with a message from his employer, which message the men delivered, but they afterwards loitered long on their way, and though repeatedly cautioned, eventually came in contact with the train.

The application for the *certiorari* was opposed by Mr. Dawes, as counsel for the Company, the prosecutors, on the ground, firstly, that by the 17th clause the right to the *certiorari* was taken away; and, secondly, that specific grounds should be shown for the application even if it could be entertained. Mr. Justice Littledale took until Monday to consider the application, and on that day granted the writ.

Solicitor for the Company, Mr. Carter, of Birmingham; for the applicant, Mr. Willington, of Tamworth, and Mr. Wheeler, of Manchester.

The *Midland Counties' Herald* of Thursday says the *certiorari* was served upon the justices in court on Tuesday. At a late hour on the evening of that day, the bill of indictment was preferred before the grand jury [at the Warwick assizes], who, after examining all the witnesses bound over, and several others, ignored the bill.

BRANDLING JUNCTION RAILWAY.

THE progress of the Brandling Junction Railway, as exhibited by the subjoined return of traffic in passengers, coals, and goods, in corresponding months in the years 1839 and 1840, is truly astonishing, and must be a source of satisfaction to the Directors, and those engaged in the management of the Company, as it must be gratifying to the shareholders at large. It is pleasing to note the onward movement of a great commercial undertaking like the present, affecting, as it is calculated to do, the entire district through which it passes, or between which remote places it affords a quick and certain mode of communication. The return subjoined, as we have said, embraces the last three months of the year that has just closed, and the three corresponding months of the preceding year, over the revenue of which that of the former is in excess upon the grand total of nearly one hundred per cent. The total of the three items in October, November, and December, 1839, is set down at 5,250*l.* 2s. 9d., that of the same items in the corresponding period of 1840, at 9,735*l.* 19. 1d. Descending to particulars, we find that the greatest increase has occurred in the article of coal, the return for the period embraced in 1839 being 420*l.* 1s. 1d., while that for the same period of 1840 is 3,163*l.* 12s. 6d. As connected with this item, we have been furnished with some interesting facts. There were on Thursday conveyed from the Marquess of Bute's colliery at Tanfield Lea to Shields, 139 waggons of coal in two trains. The weight of the coals was 368 tons, and that of the waggons 200 tons, making together 568 tons. The time occupied in performing the journey there and back was only two hours and a quarter, the engines starting from Green's Field, in Gateshead, and returning to the same place with a like number of empty waggons. There has been an increase in the revenue from passengers of about 30 per cent., and in the item of goods of nearly 15 per cent. The following is a copy of the return referred to:—

	Passengers.			Coals.			Goods.			Total.		
1839.	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.

RAILWAY CONS.

Why is the Great Western the most intelligent Railway?—Because it goes along "Reading."

Why will one of the Glasgow Railways be a poor investment?—Because it terminates in *Air*.

RAILWAY PROPERTY.

THE following remarks are appended to a very useful table of railways and railway capital, prepared by Mr. Richard Dawson, stock-broker, of Liverpool:—

The above list of railways, now completed and progressing, is given to prove the value of this description of property, which, in a national point of view, is highly important, for in the construction of these valuable works, though involving so very extensive a capital, be it remembered, that every shilling has been expended in our own country,—First in the payment of land to the landowner,—Secondly in the wages for the production of coal and iron in the manufactory of the materials, and lastly in the wages to the workmen in every department in the execution of these gigantic undertakings, which are both useful and ornamental, and prove the great master-mind of science. The energy and exertion required in the prosecution of these works, justly entitle the Directors and the proprietors to the best thanks of the public, and I humbly hope, they and their posterity, will derive every benefit from their untiring zeal.

Of the railways now in the course of full work, of which I have been enabled to collect the following useful information—some idea may be formed of the immense revenue that will be established when the whole of the undertakings come into active operation; but, it must also be observed, that the various lines, when completed, will greatly benefit those to which I now give the last years' gross receipts:—

Liverpool and Manchester	£255,979	9	9
Grand Junction	435,684	6	6
London and Birmingham	752,592	10	2
London and South Western	227,208	2	5
Great Western	240,084	6	7
Midland Counties	83,247	2	4
Birmingham and Derby	48,013	14	9
Total	£2,013,709	12	6

Of this sum, 1,006,854*l.* is divided amongst the proprietors; but where does the remainder go? it is expended on the works, and in wages to the labourer; equally beneficial to all.

These are the views I take of the importance of railway communications, by which the public have every facility for travelling in the most comfortable, safe, and expeditious mode possible. Time is gained by the mercantile and manufacturing community, and these are further advantages which should be considered by them as an additional source of wealth, indirectly secured to them.

This newly created property, in a very great measure, arises from the overflow of wealth, and in every point in which it can by possibility be considered, must afford, to the reflecting mind, satisfaction, in the increasing prosperity of this our native land.

The employment that has been given for several years in the execution of these works—to every individual artisan throughout the kingdom, has not only been advantageous to the poor man, but has relieved the general expenditure of the country. Peace and happiness has prevailed, where misery and want might have been the attendant, had not this necessary supply of labour been afforded to them.

RAILWAY HONESTY.—A short time ago, a lady, travelling on the Manchester and Leeds Railway, had the misfortune to lose a small silk bag in which was a valuable gold watch. Next morning the bag and watch were restored to her all safe, having been picked up at the Rochdale station by one of the porters, whose name (Benjamin Robinson) ought to be made public. Had this happened on the old coach system, how long would she have been in getting her watch back again? We ought to state, that on the lady offering Robinson 10s. for finding it, he would not take the money without the consent of the superintendent at the station.—*Correspondent.*

The Earl of Fingal has quite recovered from his accident on the Eastern Counties' Railway, and is now enabled to resume his duties as Lord in Waiting on the Queen without any inconvenience.

RAILWAY MANAGEMENT.

To "Examiner."

SIR,—That which will not stand the test of examination and criticism, cannot be good for much, and it would ill become an individual who has so long, and in so many instances, relied on public opinion for support of the railway changes he contemplates, and yet hopes to see effected, not readily to admit the truth of your dictum that "canvassing the matter thoroughly in the columns of the *Railway Times*, will be the best mode of getting rid of our individual fallacies." If, in some matters of detail, we differ, it is not at this time of day, that either will be charged by the other, with preferring his own views from motives of puerile vanity, or pertinacity. It will liberally be conceded to both parties, that their whole and sole object is the efficiency of railway management, and that by whom the means of its accomplishment are suggested or improved, signifies nothing.

I join issue with you, in your definition of the word Director, but I would not assign to that officer the same duties.

Upon lines of ordinary length and amount of capital, I would have eight Directors, voting the whole of them the annual sum of 1,200*l.* I would not make it an office of profit—an office which it would pay a man to use influence in soliciting. I would give the 150*l.* a-year, that it might not be refused from its being an expense to persons taking it, to pay unavoidable expenses in going to and from the line, and so forth. These Directors should not, as you propose, undertake the actual labour of the railways—*that* should be done by managers. The Directors should be formed into various committees, each to control a particular branch;—it is easy to fix them with responsibility by their keeping minutes and signing them. I do not apprehend the mischief you fear, from two persons denying any specific misconduct, of which one of them must have been guilty; the delinquent could not stand long against circumstances, and the true man; and even if he should, our auditors would soon have him. I would not have higher paid Directors though they were fewer, because I propose paying more efficient people for their whole time under the title of managers, and we do not want two sets of highly paid officers. Directors, taken from their being the largest shareholders—living near the lines—and alphabetical rotation (and that is the only *safe* way of taking them) would not be professional, or practised in the minutiæ of the branches over which you would give them the general control, and therefore I support them by managers. I hold that having managers, highly paid Directors are not wanted; it would, in fact, be a duplication of office and of expense, without the performance of more work. I would not have highly paid Directors—because, according to your own showing, they could not be taken in virtue of their standing on the share list, but must be selected for their known, or imputed fitness; and what could happen from this, but bringing forward the influence of wealth, the strength of interest, and all the devices of electioneering policy, to secure, to the defeat of all we propose, the nomination of parties seeking through the power of connection, a handsome provision out of the railway purse, from filling situations for which they would be, most likely, wholly incompetent. A great cry is raised by parties who fatten on railway pay, and having "fleshed their teeth" are keen upon the scent to secure more of it for themselves, or their relatives, about gratuitous services being dear in the end. To be sure they think so, or at least they say so—it is their cue—it is the game they have to play; but it is a bug-bear, a delusion, a humbug—there is no truth in it. Large salaries are no surety for the efficient or the honest discharge of duty. What gave rise to sinecures but that the salaries were generally of an amount to make it worth the while of the aristocracy to secure them for cadets of their houses, who were not prepared by education or by habit for the task; and thence the necessity of second appointments to do the work the principal was paid to perform. Do you think there was less corruption or integrity in the House of Commons when members were paid than there is now? Does its being an office of heavy expense at present keep talent out of it though his election has been known to cost a candidate 100,000*l.* The American representatives are paid; do you think there is more virtue at Washington than in St. Stephen's? Lastly, and more to our purpose, do you think one in twenty, whose names may be called from the share-lists for *unpaid* Auditors or 150*l.* a year Directors, (supposing he feels himself qualified—and let the acceptor under the new arrangement who is not look out for squalls)—will he refuse the office? No such thing. Auditor and Director are posts of confidence, and of some importance, and lucky it is that most men have a pride in showing those they are associated with that a trust which it is offered to repose in them is not misplaced. I have another guarantee, apart from salary, the interest my Directors would have in the line. One of every three Directors would be at the new Boards, by being the largest holder, and is such a man likely to shirk the duty? I am aware it *may* happen that he lives at an inconvenient distance, but there are few things to which some objection does not exist, and to guard against this I propose to take my second man for his residing near his line. More I cannot do, for (taking the South-Western as an instance, one half of which is held in Manchester) it would be manifestly unjust not to give a fair representative to capital. My third nomination according to alphabetical rotation I defend upon the ground that it would effectually prevent combinations of friendship and connection, and to preserve the integrity of the Boards. To make the situation a permanent one would deeply, as it now does, injure its efficiency, it would lead to looking to the indirect profits of patronage at forming schemes of private advantage in various ways which a periodical renewal would prevent. The office would be sought after as an easy provision for old age, not as one where onerous and hard duties were to be fulfilled, it would become, as it now is, all but a sinecure, and the duty would degenerate into a checque signing, minute reading, weekly meeting. As another check to this falling off of the office, I will not abate a day of three years of ineligibility for re-election, nor shall (and this is a point I strongly insist on) any Director, with my consent, sit at two Boards. Directorships—so flagrant are present abuses—are made a regular trade of. Many, aye dozens, pop out of one Board-room into another, with the celerity of twopenny postmen, sack from each Company their two hundred a year, and are not worth to the whole of the bodies they profess to act for, two hundred farthings. To watch them for a month would make a farce, if there were not in their peregrinations so much that is financially tragic. Directors now in office spin "a long yarn" against periodical ejection, but it is necessary for railway success, however unpalatable it may be to them, that "a change should come o'er the spirit of their dream," and that they lie dead in railway practice for three years after superannuation.

You object to walking gentlemen, I, on the contrary, wish we had some more of them; the mischief is that our gentlemen do *not* walk to their railways, nor upon them. I know few things would do us more good, than for two members of each of any proposed Boards to walk once a month down their lines at twelve or fifteen miles a day, looking to the level and state of the rails, the embankments, the fencing, the bridges, the water-courses and drainage, the speed of passing trains, the order and arrangement of stations, and the conduct, the books, and the demeanor of clerks and porters, thus keeping all parties, from the engineer to the lowest labourer, upon the alert. If any well-fed citizen,—the country gentleman who shoots would do it without turning a hair,—should laugh at this, as being very well on paper, I can tell him it has been done, often and often. The Chairman of the South Western did it, and by doing it brought us through. You would do it, if I mistake not—many others would do it—even as *unpaid* auditors; and the effect of such walks would soon be seen in the amended state and conduct of the lines, the behaviour of servants, the accommodation of the public, and the diminution of per centage on traffic. In all my arrivals, never have I seen a Director, an engineer, a secretary, a clerk, or any biped having a long-tailed coat, to welcome me in; the public are shot out into the hands of cads and porters, and the disrespect so markedly shown, if having no other cause than idleness, is equally disgraceful and injurious to railway interests. It is saying to the traveller, "you paid when you got in; we want nothing more of you; get out as you can." Now if there is not more business for Directors than I apprehend, I should not want all the eight to be what is understood by *men of genius*, and if the cast of the net brought up a twaddling gentleman, to whom finance and long walks would be equally distressing, I should hail him as worthy our best attention, and say, we "could have better spared a better man;" at once I would send him for a ride down his line, calling at each station to see that things went well, or plant him on the arrival platform, as a demonstration of our respect for the public. In cases of complaint, the presence of a Director would soothe; where information was wanted, an easy reference to such a dignitary would please. Supposing his manner to be bland and insinuating, what golden opinions might we not obtain, from unprotected dowagers and ancient spinsters, repeating throughout their circles, that they had travelled by "a lovely railway," where the Directors, perfect gentlemen, waited on them themselves—and this effected how? Why by Mr. Twaddle's doing the civil, an hour a day, at the moderate cost to us of 150*l.* a year. This may appear ludicrous to some, and will be scouted by merchants holding a dozen directorships, but that will only prove that the Directors we have at present are not the people we require; the public want conciliating, and there is more in doing it, than at first meets the eye.

A long time ago, I observed to you that I thought you would find a difficulty in paying servants rateably with profits. I think it impracticable, after more consideration; the mulcting for deodands appears to me impossible so as to meet the ends of justice, or to please yourself or the suffering parties; there lies nothing between approbation and dismissal.

Nothing but confusion could result from the appointment of your fifty supernumerary Directors. Rely upon it, they would be sadly in the way, without being of the least service upon any occasion. Your Auditors are the persons more especially to afford you information, and the veto is already in the hands of special meetings, which it will be the bounden duty of those Auditors to see convened upon their detecting anything wrong.

Railway machinery will be complete without the intervention of a Government Superintendent, from whose appointment and meddling the Lord preserve us! It is not possible such an officer could do any good; but feeling that he must do something, he would be sure to do mischief, by petulant or untimely, perhaps ignorant, interference. Can you point out a single advantage that has occurred to the public, or to railways, from the Reports ordered by Government, from military Engineers, who would be the persons probably appointed? Not only has there been no advantage, but no information not at last and better had through the proper tribunals, Coroners' inquests. Of all weak propositions, pardon me for saying it, there has been but one more deserving our rejection, and that had the merit, as far as the party was concerned, of a well-considered object—the obtaining out of the railway chest (a reform with a vengeance!) a neat thousand a-year, for somebody or other. I allude to the proposal for a *Railway* appointment of a *Railway* Supervisor. In reading the numerous patriotic suggestions which have lately filled the pages of the *Railway Times*, it is pleasant to look below the surface, for the under-current which really floats and carries to her destination the railway vessel laden with public spirit. One of the

Digitized by Google

correspondents, after a laboured proem, and a lengthy dissertation upon economy in management, finished by proposing our taking the halfpay Commissariat into our service!

I like my plan for the custody and laying out of the cash balances better than yours. I wish you had said something about persons holding offices of trust giving security, and I will thank you for your opinion upon it. It works well in the public service, for Government rarely lose by breaches of trust, the sureties paying for the defaulter. You accede, I imagine, to the discontinuance of banking, but I will thank you to state specifically that our whole business ought to be done by our own establishments; it will be more convenient; it will avoid risk and loss. The accounts should be kept at the main station of each line, and the Secretary and Cashier should reside where their accounts and cash are deposited. What but expense, inaccuracy, and the constant want of arrangement upon the line, can happen from the main office of the North Midland being—where do you suppose?—in Warnford-court, Throgmorton-street, London! *It*, the Secretary, and the Chairman, might as well be at the Orcades, or at the Land's-end. Two of them, at least, must go to Derby, and the sooner the better.

The Secretary I would have, as he is now, one of the most ostensible and responsible officers on the line. I would preserve to him the whole of his consequence every way. Living at the main station he will be always at hand in moments of emergency to refer to. The whole correspondence, the office arrangement, the keeping of the books and records, the discipline of the various departments, the representation of the Company in courts of law and equity, all form part of his duty. I think these officers are too highly paid—very much so—and upon vacancies occurring I would materially cut down their salaries. Their great income makes them above their business; we should be better served by persons of humbler pretensions, but as the amount of pay has been settled, as far as present individuals are interested, I would keep faith with them, and reduce the amount only upon new nominations taking place.

Your suggestion that all the Auditors should not leave office at once is an improvement, and I adopt most cordially all that you say about them. Your proposed storekeeper may be made a valuable officer, and I am glad you thought of him; he should take an account of the weight, measure and number of all articles delivered, deliver them over for use, take an account of things worn out, and always have ready for inspection a correct statement of "the remain" in his possession, that is, on the Company's premises.

The fixing responsibility is, I think, easy enough. I would have the business of out-door management divided amongst the Managers, who should be paid for their whole time; these Managers to report to various Committees; the Committees making minutes and reporting to weekly meetings of Directors. How many divisions of labour, each headed by a Manager, would be best, experience alone can show.

Common sense admonishes us to make the best use of the materials we have without expecting in practice a degree of perfection purely ideal. We shall never reach the point at which nothing more is to be wished; let us therefore take things as we find them, and make the best adaptation of them to our purpose that we can. I propose retaining the appointment of Engineer, partly because it is necessary we should have some one possessing the knowledge of repair of earthworks, bricklaying, masonry, drainage, and all other matters pertaining to road making. I would have an Engineer who would devote his whole time to one line—to be, in fact, always on it. This, to be sure, would shut us out from the services of the more eminent members of the profession, but then, I am of opinion, that a third or fourth rate man constantly on each line would better answer our purpose, now that the roads are made, than persons of higher standing whose attention is distracted by fifty engagements at once, extending over the United Kingdom and the whole Continent of Europe. With all our officers we should stipulate for their entire time, their hourly presence. Great names have a great sound, but it is an empty sound when with it we have nothing but the name. I would, if I could find him, appoint a young man having a love for his profession, and a desire of one day becoming eminent, to each line. He should see to the road and buildings, to which he would at all events be fully competent; he should likewise have a fair knowledge of mechanical engineering, and sufficient industry to keep himself informed of engine and carriage improvements that the earliest benefit of them might be secured to his Company. Under him I would place the locomotive manager, the engine-house, the workshops and the storekeeper, he himself reporting to a Committee of Directors. If you should appoint three engineers, and a highly paid Director for the conduct of the engineering branch alone, I fear that to avoid Sylla you would strike upon Charybdis—that your attempt to reach perfection would cost you more than existing defects—that you would pay too dear for your whistle. Most engineers have tolerable mechanical knowledge as far as engines are concerned, and perhaps enough for well working—not improving—the locomotive, and this is all, I conceive, that we want of them. We do not require an engine *builder*, and he it is who is the improver; he studies construction for his own interest; if he discover an improvement he takes out a patent, and you buy his engines because they are the best. When you want engines they are not made at your workshop nor by your engineer; it suits your purpose better to get them by tender and specification from the inventor, whose sole business it is to build, and whose whole time and thoughts are given to that one subject. Regarding improvements in the form of carriages, trucks, springs, and, in short, of all contrivances for saving friction and wear and tear of rails, wheels and springs, I would advertise mechanics, that the roads under the inspection of the engineers should be open for the trial of improved construction, and this, I think, would be sufficient to secure to you the benefit of each discovery as soon as it was brought to bear.

Shareholders must now decide for themselves which of these plans of management, or how much of either, if any, they choose to adopt. I will, if called upon, give any explanation required, and any assistance in my power if more details are wanted; the rest remains with the February general meetings. We have sounded the tocsin, and have shown them how they may conquer; if they will not array themselves against the enemy, ABUSE, with them, not with us, be the dishonour. I confess my hopes of energy from them, as a body, are not more sanguine since the date of the Croydon meeting. The imbecility exhibited by two Companies lately, when they were each filched, in broad day-light, out of 333*l.* 6s. 8d. per annum, under a pretence which has no foundation in fact, is but poor earnest of vigorous conduct, at the next meetings. As the Editor has truly said—a barker, a tool, a decoy, "is planted" to propose; a confederate seconds; a third conspirator puts in a well-timed "Hear! hear!"—and the iniquity is confirmed without a moan of dissent.

All that we want to ensure economy is action, union; "a long pull, a strong pull, and a pull altogether." Let them give these, and then Huzza, for the success of our war cry of *Auditors, unpaid Auditors, in alphabetical order from the share-lists, Directors from the share-lists for largest holding, for residence near the lines, for alphabetical rotation.*

A RAILWAY SHAREHOLDER.

28th December, 1839.

THEORY AND PRACTICE—RAILWAY MANAGEMENT.

To the Editor of the Railway Times.

SIR,—The correspondent of Captain Chapman, in your last week's number, who signs himself "A. B." "dissents from many of my propositions (he says) as based on *theory*."

It is difficult to understand how this can be an objection. Every system of human action, every thing that has a plan, everything, in short, that is not mere chance-medley, must be based on theory. Theory is the soul of the body practice. That practice which has no theory attached to it is merely problematic. By its fruits shall ye know it—a body without an informing spirit. Is it so with railway practice? Answer, ye shareholders without dividends! Why are you without dividends?—Because no certain theory has been laid down, on which sound practice can be based. Theory built up from analogical inferences would have predicted undoubted failure in the majority of what are called unfortunate cases. Want of theory leads shareholders to stumble in the dark over all kinds of obstacles which clear theory would enable them to remove. The man who follows practice without understanding its theory, will work only empirically, even though his work be successful; and if any new circumstances chance to arise he will be thrown into confusion, in which he will flounder about till the force of many other circumstances has built him up a practice. He will point out the single thing that will do, by the process of trying a great number of things that will not do. This is the *empiric's* practice. The theorist—the thinker—would, on the contrary, reason by analogy, and lay down the true principle of action, indicating the scope and tenor of the practice. Newton, when a new-born infant, had no theory, but as he grew in years, and watched the processes around him, natural and artificial, he formed new theories by the power of thought, and synthesis was the result of analysis; predictions which appeared to common minds void of probability, and beyond the scope of human understanding, were verified and made demonstrable as the commonest practices of life.

"A. B." seems to think that theories can exist independent of practice. It is not so. Things must exist before the ideas of things can exist. Human actions erratic at the outset, are forced into shape by necessity, and the almost marvellous results induced through systematic organisation have their origin in the theorising minds of individuals of higher powers, who prescribe their tasks to whole hosts of empirical imitators.

Let it not be supposed that any claim is laid to merit on account of the theory of railway management I have endeavoured to indicate. I am sure that every one who takes the trouble to think, cannot avoid the same conclusions. What is a railway? A trade of carrying—a business. What is a business? "A laborious nothing," a division of labour, the only trouble of which is in the *original* division. There is not a cotton factory, an ironwork, an engineer's shop, a dock-yard, in which success or failure is not dependent on the true adjustment of the division of labour. That railways are not prosperous is chiefly owing to a failure in this. An interested railway oligarchy has proclaimed that "the career shall not be open to talent;" that there shall be no clear stage without favour; that the railways shall be managed by the irresponsible for the benefit of the few, at the cost of the many; and to keep this *statu quo*, all reformers, all proposers of new plans, are regarded as enemies, and thwarted without hearing. Some few daring spirits, with indomitable courage, force their way within the pale, by operating on the fears of the oligarchs, but it is commonly only to join the body, and become oppressors in turn. It is the system that requires changing, not the individuals. When honesty shall be made more profitable than dishonesty, jobbing will cease on railways, but not till then.

Let "A. B." examine the arrangements of a well-conducted engineer's factory, and he will find that there is a foreman of every department, responsible to the heads of the establishment for the conduct of that department. The heads of the firm, if there be more than one, take each one of the two, three, or four general branches, and do not interfere specifically with each others arrangement. But sleeping partners do not usually give directions—they merely exercise the right of a veto. The general body of Railway Directors are

Digitized by Google

practically merely sleeping partners, who exercise power without responsibility, two or three doing all the work, and doing it badly.

If "A. B." means that I have put forth an unsound theory—a new wild speculation without basis—let him show where the distinction lies between the management of a railway and the management of Pickford's or any other conveying business, as to the essential points of security to the public and profit to the capitalist. If he cannot show this, let him join the cry at the Spring meetings—"*No Railway Oligarchy, and immediate Shareholding Auditors.*"

If the Directors who may be friends of Captain Watts be the high-minded men he describes, they will eschew his defence of them. Each one will rather wish that he had "a window in his breast," that all his *sleeping* partners, the shareholders, might read therein all anent railways. Like Cæsar's wife, they should be "above suspicion," and the best course to insure that will be, to have no secrets.

Captain Watts talks of "millions of property and of lives." Does the gallant officer hold with Scrub, "Take my life and spare all I have"? Or does he travestie honest Dogberry, "Write property first, for property, defend but property, should go before lives"? I think the gallant Captain is quite right in saying that the Auditors should be paid, to make them more responsible, and I think the "Railway Shareholder" will not object to it, but the manner of the payment will require some discussion.

I remain, Sir, yours, &c.

EXAMINER.

January 4, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—The statements of population contained in my last letter being official, your correspondent "Veritas" has not attempted to controvert them, nor has he condescended to show how a population of 3,879,251, dwelling by the sides of, and at, and beyond, the terminus of the Great Western line, can produce to that concern a railway revenue at all comparable to that which a population of 14,915,182 similarly situated now yield to the London and Birmingham Company.

Perhaps he imagines that the broad gauge principle may reconcile this discrepancy as well as some others, but this I humbly submit is taking too *broad* a margin in a matter of calculation.

I observe, by the bye, that some large steamers are about to be established between Falmouth, Plymouth, and Southampton, thus rendering the travelling population of Cornwall and Devon, available to the *South*-Western line; consequently a very large deduction would require to be made from the 796,608 persons inhabiting these counties which were included in my last calculation, as among the *preserves* of the Great Western Company.

Your correspondent is, I find, singularly unfortunate in his comparison between the early traffic of the London and Birmingham line, and that of his favourite. He states, for example, that the former line was open in April, 1838, its full length of 112 miles, instead of which it was not till September of that year that it was fully opened. The triumph of his comparison, which has, however, been before adduced, is thus brought to nought. Indeed, to compare the receipts when only partially opened, of a line like the London and Birmingham, the *through* traffic of which is equal to perhaps three-fourths of the whole, with that of a line like the Great Western, where a vast preponderance of the revenue will alway be derived from the resources of its two extremities, is only calculated to mislead.

Nothing can be conceived more unlike than the two cases, for the London and Birmingham, when partially opened, led to no place of note, whereas the Great Western is already open to every town of consequence along the line, the residue unopened being merely an agricultural district.

"Veritas" indulges himself in the expression of an opinion, that my estimate in regard to the Irish population is "a monstrous violation of common sense." It is, I conceive, bad policy to become discourteous in an argument. Instead, therefore, of retorting in like language, I shall merely suppose that my opponent, knowing truth to lie at the bottom of a well, has unwittingly made himself *warm* by searching for it on the line of his favourite railway, among the *hot* springs at Bath.

In reference to the Irish population of about eight millions, my argument was as follows:—viz., that five-eighths of such of that country as travel to London do so by way of Liverpool, that one-eighth come by way of Holyhead, likewise making use of the London and Birmingham Railway, that one-eighth more come by way of Bristol, and the remaining portion of one-eighth by the steamers direct to London.

If these proportions are correct to speak of them as eighths, or as millions of population that must contribute a certain portion of railway revenue, appears to me to be of little consequence. I did not venture to calculate on any specific number of travellers for either line of railway from Ireland, and will readily admit to "Veritas" that the distance of the sister kingdom, and the roughness of the Irish Channel, will always seriously check the number of travellers from that country, as compared with a population more nearly situated, and connected with us by *terra firma*.

My calculations in reference to the Great Western Railway have, in fact, with all due deference to "Veritas," been much too favourable, having always assumed that the traffic of the midland portion of the line would equal that which it has hitherto been along the densely-peopled extremities.

To suppose that such might be the case is allowing much for the attractive power of the railway, and the future development of its resources. Indeed, every person who has travelled from London to its present terminus by this line, must have remarked how exceedingly the number of passengers diminishes in advancing westward. It has sometimes appeared to me that about one-third of the passengers left the train at, or before reaching, Slough, and about one-third of the remainder at Maidenhead and Reading, with perhaps nearly an equal proportion of the remaining number at, or before reaching, the Oxford station, while comparatively few are taken up at those places; and perhaps "Veritas" may be able to say, whether the average number of passengers travelling westward beyond Oxford is equal to one-third of the general number between London and Slough.

The excellent table communication in your paper of the 26th December, from a known correspondent, renders all calculations of dividend from the Great Western Railway quite simple, could we correctly estimate what its weekly receipts will be.

The last receipts published by you on the 19th December, amounted to about 65*l.* per mile per week, and I believe the highest returns of July and August were about 95*l.* per mile weekly, thus forming an average of 80*l.* per mile per week for the year. At this rate the whole 118 miles would produce 9,440*l.* weekly, and thus fall between the two lowest estimates of your correspondent's table, or 2*l.* 9s. 4d. per cent., on the supposition that 50 per cent. is not too much for expenses, and a suitable reserve fund on a railway, the foundation of which is pine. Wishing to return "Veritas" good for evil, I would therefore respectfully recommend the bonds of the Company to his notice in preference to the shares.

I perceive that your "known correspondent" in his table estimates the total expense of the line at six millions and a half, of which the forthcoming accounts will probably show that five millions and a half are already expended. Your correspondent states, I believe correctly, that the two first capitals of the Company, and the loans founded on them have been already exhausted, but he is probably incorrect in supposing that the Company have hitherto borrowed no portion of their *third* capital either on bonds or a mortgage of the calls. I suspect they have done so, and to some extent.

The Great Western Railway is very similar to the London and Birmingham, both in point of extent and expense, and on referring to the Report of the latter to the 30th June, 1838, I find that on the 9th of April that Company opened certain portions of their line to Denbigh Hall and Rugby, making 77 miles in all; and, on the 30th June, nearly three months after this opening, their total expenditure is given at 4,592,698*l.* This account, it is worthy of being remarked, was within two months and a half of the total opening of that line on the 17th September, yet we since find that the Company have in all expended on capital account 5,698,375*l.* Supposing, therefore, that the payments have been made on the Great Western line, in similar proportion, according to the forwardness of the works, and that the line will be fully open in July next, I would respectfully submit to your known correspondent (rather than to "Veritas,") to calculate whether the total expenditure at the end of this year, for that concern will be seven, seven and a half, or eight millions sterling. The London and Birmingham Company, is one of the very few which charges the full Parliamentary rates, and it is very generally thought that the Directors of that concern will, on the first opportunity, reduce their charge to the public rather than attempt to increase their dividend.

OBSERVER.

2nd January, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Many letters have appeared in your columns containing prognostications adverse to the Great Western Railway. The assailants, beaten from position after position, still continue their attacks. They show a bold front till they find themselves within the reach of facts, and then instantly shift their ground.

It is *in what is to happen* that they are so valiant; the *present* annihilates their predictions, and their hostility can only find refuge in the future.

Every one of the following sage prognostications have been falsified:—

1st. The Hanwell viaduct was to have fallen into the river Brent.

2nd. The Giant (Maidenhead Bridge) was to have tumbled into the Thames the moment his crutches were removed.

3rd. The Sonning cutting was to have been a work of seven years, if ever done.

4th. The Box tunnel was to have been obstructed by rock or swamped by quicksand.

5th. The heavy locomotives were to have torn up the rail—no embankments could ever support their weight.

6th. The Company were never to be able to raise the money necessary to finish the undertaking.

7th. The broad gauge was to have been a total failure.

Now after all this, it happens that the public consider the Great Western Railway the safest, the fastest, the easiest—in a word, the best—railway in the kingdom; this no one dares deny.

There are two causes that occasion the hostility evinced towards this line. The first, that Mr. Brunel's success will for ever eclipse his rivals, whose reputations are pledged to the narrow gauge, and points of support for the rail, instead of continuous bearings. Secondly, the Birmingham and Grand Junction Companies dread the desertion of their proprietary; the preposterous difference in the premiums on these lines, compared with the present premium on the Great Western (a line, to say the least, all points considered, fully equal in every respect to either) fills them with alarm.

The circulation of evil reports, I confess, Mr. Editor, did succeed for a time in giving (most unjustly) an unfavourable bias to the public mind as to the terrible events that were to have happened.

The attacks are still continued, entirely contingent, as heretofore, on the future.

The Great Western line, they say, is to cost seven millions—a million more than the last computed estimate. In reply to this random shot, the

Digitized by Google

Great Western Company, at this moment, cannot have less than 700,000*l.* left to finish their line, viz.:—

In hand and arrears of calls, about	£200,000
Call of 10*l.* per share, due the 29th instant, on 25,000 half shares	250,00
Parliamentary power remaining still to borrow (balance of 600,000*l* loan)	300,000
Total	£750,000

With this sum, the Company have now about one-tenth part of the Box tunnel to complete; less than one-sixth part of the 25 miles of earth work between Swindon and Bath to do, which will finish the earth work of the entire line; the rail to lay on this distance; a station to build at Bath and another at Chippenham; locomotive power to purchase equal to the amount now in use.

As to the Paddington station, with very small additional accommodation, it will serve for the next ten years.

Ah! but the traffic on the Bristol end of the line—this it is proclaimed will prove the weak point; here will be the terrible falling off of receipts! There are, it is asserted, no places at the west end of the line, like Windsor (with its 3*s.* fare), or like Maidenhead or Reading. Oh, no! Clifton, Bristol, Bath, Cheltenham, and Gloucester, Stroud, Chippenham, &c. &c. &c., are nothing forsooth, and the vast district westward of Bristol is held as a trifle in produce of traffic!

London, Mr. Editor, belongs to no particular portion of any line, but its attractive and repelling power belongs to the entire of every line, of which it forms a terminus; it sends its population out, and draws them back again to all places, in exact proportion to the counter-attractive and repulsive power of each place on its railway radii. This is the secret of railway traffic, and I maintain that as far as depends on *means* and *inclination*, joined with numbers, there is no travelling population in Great Britain equal to that which is found on and near the line and at the termini of the Great Western Railway.

I repeat, Sir, that the millions of weavers and spinners, and operatives, whether at Shoreditch or Manchester, or Leeds, &c., are as little productive to railway income as flocks of sheep. Men whose circumscribed means, unhappily, are barely equal to supply them with bread, can have neither money nor leisure for railway travelling.

I would have left the Great Western line to have told its own tale, but the reiterated attacks which have been made on it with little or no foundation, have rendered a reply imperative. Unanswered assertions, though incorrect, meet with too easy credence.

Previous to further assaults, let me recommend some of your correspondents to read the fable of the Viper and File.

VERITAS.

London, 29th December, 1840.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—In reply to an article in your paper of Saturday week, headed "Capital of the Great Western Railway Company," (from a known correspondent), I have to observe in the first place, that the Great Western Railway Company neither have the intention nor the power to borrow one third beyond the amount of their 20*l.* shares. Your correspondent's statement "remaining to be borrowed on the third capital (alluding to the 20*l.* shares) 250,000*l.*," is consequently incorrect."

Secondly. On what data does your correspondent assume that a further capital of 500,000*l.* will still be wanted? He neither states the present amount of the available funds of the Company, nor on the other side of the question the state of the works, locomotive power, what buildings are still to be erected, &c.; not one word of data does he offer on these subjects.

Your correspondent observes, that 368,000*l.* net receipts will pay 8*l.* 3*s.* 6*d.* per share, by which it appears he reckons upon 45,000*l.* consolidated 100*l.* shares, which, at 8*l.* 3*s.* 6*d.*, amount to about that sum. In this lies the great error of his calculation, which I will make evident.

The loans taken as per annexed statement, and on which 5 per cent. interest is chargeable, amount to 2,725,000*l.* The paid-up capital is 3,025,000*l.*; this latter sum, upon 45,000*l.* shares of 100*l.* each, if consolidated, is 67*l.* 4*s.* 6*d.* paid up per 100*l.* consolidated share.

Now, your correspondent makes his computation upon 45,000 100*l.* shares, 100*l.* paid when only 67*l.* 4*s.* 6*d.* has been paid; and this error throws his whole calculation about one-third out of the square, and makes the dividends one-third less than they should be. I believe the following statement will be found strictly correct:—

Capital of the Great Western Railway Calls.

Shares.

25,000 of 100*l.* each, 65*l.* paid is	£1,625,000
5,000 of 50*l.* each, 50*l.* paid is	1,250,000
37,000 of 20*l.* each, 4*l.* paid is	150,000
87,000* shares equal to 45,000 consolidated 100*l.* shares, on which is paid up	3,025,000

Equal to 67*l.* 4*s.* 6*d.* per share on the 45,000 shares.

* Whole, half, and fifth.

Loans.

Borrowed one-third of first capital	£		
Ditto one-third of second capital	416,666	13	4
Ditto against calls suspended of 35*l.* per share on first capital of 25,000 shares	875,000	0	0
Ditto against loan notes of 15*l.* per share on 37,000 shares (fifths), third capital	650,000	0	0
Together	£2,725,000	0	0
Calls and loans forming capital of	£5,750,000	0	0

Revenue.

Computed average gross revenue per week	Will yield annual gross income of	Deduct expenses 40 *l.* per mile per annum in 24 weeks, and leaves	Deduct Interest at 5 per cent. on loans of 2,725,000*l.* is 136,250*l.*, and leaves	Will yield per share on 5,750 shares of 100*l.* each, on which has been paid 67*l.* 4*s.* 6*d.*
£18,000	£936,000	£360,000	£563,750 net	£12 10 6
17,000	884,000	648,000	511,750	11 7 6
16,000	832,000	576,000	459,750	10 4 0
15,000	780,000	544,000	407,750	9 1 0
14,000	728,000	432,000	355,750	7 18 0
13,000	676,000	440,000	303,750	6 15 0
12,000	624,000	288,000	221,750	4 18 6

Your correspondent may add to this 67*l.* 4*s.* 6*d.* his 31*l.* 5*s.* premium and interest, and he will find the returns very well able to bear it.

I next differ with your correspondent in the expenses of maintenance of way and working the line, and I will offer, I think, sound data for my calculation.

Your correspondent gives two statements, in the first of which this charge is reckoned at 40 per cent., and in the second at 50 per cent.; the latter would be nearly 35,000*l.* per mile per annum. He computes an increase of this charge in an exact proportion with the increase of the receipts (say 40 or 50 per cent. thereon), so that receipts of 12,000*l.* per week, at 50 per cent., would entail an expense of 312,000*l.* per annum; 3,000*l.* receipts per week on the same line of 118 miles, at 50 per cent. expenses, 78,000*l.* per annum; and 24,000*l.* per week at same rate, would amount to 624,000*l.* per annum.

I put a somewhat extreme case to show more clearly how entirely fallacious such a mode of reckoning is.

Maintenance of way and expenses.

The following are the actual Great Western Railway returns of expenses for maintenance of way, locomotive power, labour, police, coke, Government duty, &c., not including interest on loans:—

1838.		Expences.
From June 4 to December 31	Open 24 miles to Maidenhead six months ..	24,550*l.* is about 2,000*l.**
1839.		
January 1 to June 30	Open 31 miles to Twyford six months	25,000*l.* is about 1,615*l.**
July 1 to December 31	Ditto six months .	32,200*l.* is about 2,000*l.**
1840.		
January 1 to June 30	36 miles to Reading till April 1840, 4 months; 57 miles to Steventon to June 1840, two months: average 50 miles..	43,749*l.* is about 1,750*l.**

*Average under 2,000*l.* per mile per annum.

On the strength of this return, as the increase in the receipts when a line opens *throughout* greatly exceeds the increase in expenses, I consider the 2,000*l.* per mile per annum on the computation just given, an ample allowance for maintenance of way and working expenses, it being founded on two years' experience.

I am, Sir, &c.,

ALPHA.

THE JOINT STATION AT LONDON BRIDGE.

To "Another Shareholder," in explanation.

Sir,—I did not know, until I was made acquainted with it by the Editor's foot note, that the South-Eastern Company was the first to confirm the grant of 333*l.* 6*s.* 8*d.*, in part of 1,000*l.* per annum, for the management of the Tooley-street station, or my observations would have been directed against the Directors of that Company, rather than of those of the Croydon; but how, by selecting the second instead of the first of the three Companies implicated—all equally guilty, and one affording as strong an example of misconduct as the others—my "judgment" is affected, or has been run away with by my "zeal," I do not see; the cases are similar—identical without difference, and the charge against one admits of no variation, in fact or in terms, when made against the others. I submit, therefore, that there is no flaw in the indictment, and that, thus far, I am perfectly in order.

May I trouble you to point out, never having been more serious than when I penned the letter upon which you animadvert, the sentence or words to which you refer, when you designate me as "flippant?" I ask the question because I think, unintentionally perhaps, you have done me an injustice, which you can only repair by stating the grounds of your opinion, and giving me the opportunity of defence.

I object to this levy of 1,000*l.* a-year upon the broad basis of *principle*. It is a double payment for a service previously satisfied. If the Directors are of opinion that they are underpaid, why did they not appeal manfully to their constituencies for an increase, instead of screwing out a further sum under the pretence of a newly occurred, or additional, duty by indirect, sidling, petty manœuvre? That such an application could not, under the circumstances of these lines stand the ordeal of straightforward proposal, was sufficient indication of the impropriety of introducing it under any other shape.

I object to it, likewise, not alone on account of this 1,000*l.* a-year, but because it may form, if not annulled, a precedent for other and perhaps greater abuses. To show that there is no colour for this imposition, and that it has no standing in reason, I will go to the point at once, and state a fact which cuts from under them all the support the Directors profess to have, in the reasons they have given for this extra burthen upon their shareholders. The Derby station is erected at the joint expense of the Midland Counties', the Birmingham and Derby and North Midland Companies. In the agreement between them, not only is it covenanted that the latter—being the longest and the trunk line, with the largest capital—shall have the sole management of the station, but it was formally insisted on by the North Midland, and is made a condition, that this preference should be given them. Did the Directors of these Companies ever pretend that the management of the station was not their duty *as Directors?* Did they resort to the giving themselves an additional title, having no duty affixed to it, but by splitting into sections the duty of Directors, for which they were already remunerated, to

Digitized by Google

vote themselves a duplicated salary? No; with a sense of equity, with better feeling, and with more charity, (if I owe a seller for a ton of coke, I will pay him as becomes an honest man, without attacking him "*ad misericordiam*,") the idea never entered into their heads; and the North Midland took charge of, and continues to conduct, the business of that establishment, as what it is—the proper—the direct—the legitimate duty of *the Directors*. So unanswerable, so conclusive, do I think this instance, that I give it as my case, and here leaving it for the consideration of the shareholders of the three lines, I shall bow with deference to their decision, whatever it may be.

A RAILWAY SHAREHOLDER.

INVESTMENT OF RAILWAY RECEIPTS IN EXCHEQUER BILLS—JOINT STATION AT LONDON BRIDGE.

To "Thy Friend," in explanation.

SIR,—I think I can give,—you will distinguish the term from one of personal exultation,—a triumphant reply to your strictures on two of my letters.

I continue to urge, not more the propriety than the necessity there is for investing current railway receipts in Exchequer Bills, if shareholders intend to protect their revenue from present and needless risk. We all know that this circulating medium is of fluctuating value, and no one denies that, by possibility, a Company might buy at a price, from July to December inclusive, which could not on the 8th February be realised; and this contingency you give as a sufficient reason for accusing me of want of judgment—of making suggestions full of peril—and of propounding that which had better not have been written. If Exchequer Bills sometimes fall, so they sometimes rise in price, and some of the inhabitants of Cheapside have a knack, or a habit, of balancing such chances in coming to a decision upon points of expediency. Against such cases of extreme loss, as was suffered by your friend, must you not, besides the set off of possible gain, place the risk of bankers' failure, which as every day's experience shows is an event that *may* happen? Who thought that Hammersley's or Wright's were insolvent houses? Yet they are gone, and with one of them some railway money. If your argument prevailed, no man would buy into the funds because it *might* happen, that he should purchase consols at 90 and sell at 60. But which does prudence call on us to do—to lay out our weekly receipts in a government security giving an interest, and a *certain* return of the capital, or to adopt one of two alternatives, namely, to keep them shut up in our chests—where I admit they would be safe—or to place them in bankers' hands who may stop payment to-morrow? For going through the simple operation of purchasing Exchequer Bills monthly, and selling them for distribution of the proceeds half-yearly, railway Companies *could not* be "fairly called gamblers in the funds," or any private gentleman selling out consols and investing his money in that security till he can pay for an estate he has purchased, is a "gambler in the funds"—and you will not go that length. By buying Exchequer Bills the principal money is at all events safe; by placing it at a banker's, it is always under risk; and supposing the uncommon case to arise, to which you refer, the Companies might if they chose postpone their dividend for a month or two, in hopes of recovering a high premium they might have paid, and in the meantime two-pence per day interest would be accruing. I now put it to you, whether my proposition has suffered the slightest injury from your comments.

In a reply I have given to "Another Shareholder," I have so nearly answered your observations relative to the Croydon station, that I have little more to say upon that subject. Facts are against you. The Derby station *is* managed by the Directors of *one* Company without their having had the ingenuity to vote themselves, a second pay and a supplementary title—by the Directors of *one* Company as part of their duty *as Directors*: and unless, therefore, you can show some distinction in the cases of the two stations, Tooley-street and Derby, I think you must admit that you are wrong. You mistake, too, in supposing that only one set of clerks will be employed. You surely must know that a Brighton clerk will not be employed to receive Croydon or South Eastern money? The management, that is, sweeping out the station (if this arrangement is not quashed), will be joint; the affairs of each Company necessarily separate.

A little better information, and a little more consideration, would have saved you the trouble of taking exceptions which must be disallowed—happily without any costs of reference.

A RAILWAY SHAREHOLDER.

CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—In your journal of the 19th instant, pages 1101 and 1102, appear some remarks of mine under the above title, in reference to the report and correspondence of the Croydon Chairman with the Greenwich Board, on the subject of *tolls and fares*. The Croydon Report assumes, that because the Greenwich Board will not *deny* that *two* ninepenny fares is better than *one* of twelve pence, every obstacle against the modification of the toll, as proposed by the Croydon Chairman, is at once removed; and the Greenwich Board is described as the most unreasonable possible, in refusing at once to adopt a principle so full of *generosity* and reciprocal benefits. The Greenwich Directors refuse this proffered modification not only on principle, but also upon the plea that they are entitled to a larger proportionate share of profits, "arising from Croydon traffic, than the Croydon Company itself: *on account of the greater cost of construction, and rates and taxes of their line.*"—*Vide* Croydon Report of the 8th instant. I regret, Sir, that the Greenwich Board did not at once refer the Croydon Chairman to their Act of Parliament now representing the original agreement for the present toll; and by that reference, close the correspondence. But since in the spirit of courtesy and conciliation, the Greenwich Board unwisely entertained the Croydon proposition, let us see what that proposition is, and whether it is relatively just or unjust to these Companies.

The proposition, if I understand it, is this—that whatever toll is fixed upon, it is to be divided, not by the comparative cost, but by the relative lengths, namely, Croydon 4-5ths, and Greenwich 1-5th; in other words the Croydon takes 12d. and the Greenwich 3d.; or according to the Croydon figures, (*vide* my letter of 19th instant, already alluded to,) when the Croydon takes 16,000*l.* the Greenwich gets 4,000*l.* This in all conscience ought to satisfy the most vulture stomach in existence! The Croydon Chairman proves by his own figures that such are the attainable results, but for the unworthy conduct of the Croydon Management, and without disturbing the present Greenwich toll. So long, however, as the Croydon proprietary will submit to a loss of 16,000*l.* annually, the Greenwich must submit to the loss of 4,000*l.*; the sole power of affecting any change being vested in the Croydon Management. To your correspondent, the "Croydon Shareholder," I may here remark, that the word *these* would no doubt have pointed more directly to July and August, but he must admit that any other comparative period would give precisely similar, but proportionate, results; the omission was purely unintentional. But I beg to ask this gentleman, is the charge of intentionally omitting to deduct the 4,000*l.* from the 16,000*l.*, not a manifest error on his part? Let him look again, and he will find that the 16,000*l.* annual loss to the Croydon, is the *net*, and not the *gross* sum. My sole object was to prove from those figures the *present* Croydon loss arising from mismanagement, and in doing so I of course admit the Croydon principle, but deny the right or justice of its application to the present Greenwich toll. How stands the fact, when the rule of equity is applied to the division of toll? It is not denied, that whilst the average cost of a mile of the Croydon line is 30,000*l.*, the mile and three-quarters of the Greenwich terminus will have cost at the rate of 300,000*l.* per mile, or in other words, the cost of 1¾ miles of the Greenwich will exceed considerably the cost of the whole Croydon line! If this be really correct, I ask in the name of common sense and honesty where is the man to be found that will assert that one-fifth of the Croydon average fare is too much for the Greenwich, and that four-fifths is not by far too much for the Croydon? Cost being the true measure of equity, if the cost be equal ought not the income to be equal also? If the original Croydon Management did but exist now, the letter and spirit of the toll agreement would be in course of fair fulfilment. The income of the Greenwich from the Croydon Company would be at least 10,000*l.* per annum, and that of the Croydon from Greenwich passengers alone 40,000*l.* Instead of 10,000*l.*, however, I find the Greenwich income from the Croydon, for 1839, 3,375*l.* 18*s.* 6*d.* only, subject to the payment thereout of that portion of the following sums that fairly appertains to the Croydon traffic on the Greenwich line, viz.:—

Rates and Taxes	£3,200 at ½	=	£1,600
Police Establishment	4,203 at ¼	=	1,050
Maintenance of way	4,085 at ⅜	=	1,561
Total		£	£4,011

proving that the Croydon income to the Greenwich line, for 1839, is inadequate to pay the annual proportionate share of expense attaching to Croydon traffic on the Greenwich line. It is also, by some imbecility or other, conceded to the Croydon Chairman that he has a right to add to the above sum the mileage duty of one-eighth of a penny per mile per Croydon passenger on the Greenwich line. I hope enough is now shown to exhibit the unfairness of the Croydon proposition or modification, and that however applicable it is to the Croydon line, consisting of 10 miles, fairly to work out the principle of the original toll agreement, there is not even the shadow of any evidence shown to justify the application of that principle to the Greenwich terminus line, consisting of 1¾ miles in length only. I ask the Croydon Chairman, if he merely held the Croydon line from Corbet-lane to the Dartmouth Arms station, and that I held the line from that station to Croydon, would that gentleman permit me the use of his part on the payment of a toll in the relative proportion of length, without reference to cost? Not he! I should be told instantly, why the line from Corbet-lane to the Dartmouth Arms cost me more money than the whole of your line of seven miles; how can you ask anything so manifestly absurd and unfair? Look at the cost of *New Cross Hill* alone! You may as well ask me to exchange a thousand feet of freehold at the foot of London Bridge for an equal quantity on Croydon Common! Unless it is really intended to restore the long by-gone *Robin Hood principle* of dealing, I trust we may not again hear of this notable proposition of the honorable Croydon Chairman.

I remain, Sir, your obedient servant,

VERITAS.

December 30th, 1840.

CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I am a frequenter of the Greenwich or Croydon Railways when holidays will permit, and Mrs. M. that-is-to-be—can accompany me. You are a most persevering and formidable opponent of every abuse in railways, but in all such that I have seen recorded in your journal no parallel exists to equal the two lines above named in their *dirty ways*. You perhaps are of those who have no right to do the tender beyond your legal limits; but I am not so happy, and am often called upon to act the amiable and find railways an excellent means to that end, especially when Mrs. M. *in futuro* can go with me. Do recommend the above two Companies to keep a clean foot-way to their railways, and if they cannot agree about the tollage each must pay towards a well swept crossing, each can have an independent line of his own, but let us have *one* at least.

Liquorpond street, Jan. 5th, 1841.

CARRIAGE OF GOODS ON THE GRAND JUNCTION RAILWAY.

The following correspondence has been sent to us by the respective parties:—

NO. I.

THE GRAND JUNCTION DIRECTORS,

To Messrs. Pickford & Co.

Gentlemen,—Your letter of the 30th ultimo, addressed to the Directors, has been laid before them.

I am instructed to state, in reply, that they do not think themselves called upon to answer mere assertions and expressions of opinion, but will confine themselves to matters of fact solely.

You dwell upon Mr. Hayward's version of his interview with the Treasurer (the accuracy of which he denies) as the only intimation of the Company's intentions which you had received; and assert that "the permission" (to take the Grand Junction waggons beyond Birmingham) "has never been offered to your firm since September 30." The Directors subjoin a copy of the letter dated October 3, 1840, which contained their official reply to Mr. Hayward's enquiry, and which you seem most singularly to have overlooked:—

"Liverpool, October 3, 1840.

"Gentlemen,—An inquiry having been made here by some parties deputed by you respecting the transmission of goods in the same waggons beyond Birmingham, when ordered for delivery by this Company at that point, I have taken the instructions of the Directors on the subject.

"I am now enabled to say that the goods which you send by this railway consigned to your agent at Birmingham, will be delivered by the Company according to the consignment; or, if you wish to take forward the waggons in which they have arrived from Liverpool or Manchester, this may be done, provided you will pay the Company a charge for the use of the waggons carried beyond their line; which charge the Directors have fixed at 2s. 6d. per waggon per day; you being responsible for any breakage which may take place while the waggons are in your charge, and paying the hire monthly at Birmingham, where the account of the waggons sent will be kept. If you are desirous of acting on this proposal, I will thank you to let me know it in order that the needful orders may be issued.

"I am, Gentlemen, your obedient servant,

"Messrs. Pickford & Co. "J. R. CHORLEY."

The Directors do not offer any comment on the fact that you avoid all notice of this official and explicit reply to Mr. Hayward's application, and insist upon verbal communications alleged to have been made, which are subject to misrepresentation.

You are aware of the reason why the waggons with your goods from London are required to be re-loaded at Birmingham, as they have been fully stated to you in several communications. It became necessary in order to ascertain the description of the goods brought, and the proper charges upon them, as the Company had reason to know that the declarations which were tendered by you could not be relied upon, and you refused to relinquish the proceedings complained of by the Directors.

In your haste to disclaim any knowledge of the "Observer's" letter in the *Railway Times*, you appear to have appropriated the charge of its authorship before any such charge was made.

As you have thought it proper to publish your letter of December 30, the same will be done with respect to this: after which the Directors think that any further discussion of the matter at issue had better be reserved for another tribunal.

I am, Gentlemen, your obedient servant,

J. R. CHORLEY.

Liverpool, January 6, 1841.

NO. II.

MESSRS. PICKFORD AND CO.,

To the Directors of the Grand Junction Railway Company.

Gentlemen,—We have to acknowledge the receipt of Mr. Chorley's letter of the 6th instant, and you will allow us to observe we think it is much to be regretted that you had not sooner come to the conclusion that the matter at issue had better be reserved for discussion before that tribunal to which we had referred it. Whether we have appropriated the charge of authorship of "Observer's" letter before any such charge was made, or whether you have dealt in insinuations which, now that their falsehood is exposed, you are anxious to disclaim, we shall not stop to consider. Upon the publication of Mr. Chorley's letter of the 22nd ult. we had no alternative but publicly to declare the fact that we were in no respect whatever privy to the writing or publishing of the letter of "Observer," or in any way connected with it.

The accuracy of Mr. Hayward's "version" of his interview with the Treasurer we have very satisfactory reasons for confiding in, notwithstanding the general parenthetical denial of it by Mr. Chorley; and we repeat that the answer—the official answer after a consultation with the Board of Directors—then given to Mr. Hayward's inquiries, was the first and only intimation we received of the Company's intentions to require the trucks upon which our goods were to be unloaded at Birmingham; and had it not been for the precautions we had taken, the goods entrusted to our care on the 1st and 2nd October must have been delayed 24 hours in consequence of it. When the Directors found that their plan was defeated, then came the specious offer contained in Mr. Chorley's letter of the 3rd October, which you now for present purposes are pleased to term the official reply to Mr. Hayward's inquiry. This reasonable proposal you will find adverted to in our letter of the 30th ult., "which Mr. Chorley seems most singularly to have overlooked." We beg to refer you to the following sentence in it:—"It is true that you have offered to allow your trucks to proceed to London, but at a charge which you well knew to be prohibitory: you have continued to refuse permission for London trucks to pass over your line." If the letter of the 3rd October is to be considered as the first official communication to us on the subject, we beg to ask whether it would not have reflected equal credit upon the Board, to have given us a reasonable notice of their intention *before* they had proceeded to carry it into execution, instead of three days *afterwards*, or whether the public are to be sacrificed that the Directors may avail themselves of an opportunity to take an undue advantage, for the purpose of injuring us with our connections, and assisting to effect the avowed intention of driving us off the railway. We firmly believe that even the unreasonable offer contained in Mr. Chorley's letter of the 3rd October would never have been made had the meditated plan succeeded, and we had been prevented by it from forwarding our goods for 24 hours after the goods of the Company, and that the offer was only made because the Board had been defeated, and to gloss over its arbitrary conduct.

You now allege that the reason why the waggons from London are required to be re-loaded at Birmingham, is in order to ascertain the description of goods brought, and the proper charges upon them, as the Company had reason to know that the declarations which were tendered by us could not be relied upon, and that we refused to relinquish the proceedings complained of by the Directors. The reason now assigned with respect to the London goods is, we assert, one of recent origin, and devised to suit the purpose of the moment. If the declarations tendered by us could not be relied upon, and that was the real motive for requiring the goods to be re-loaded at Birmingham, why not have stated the fact to Mr. Hayward, or have mentioned it in Mr. Chorley's official letter of the 3rd October, or given us the opportunity of removing the cause of complaint, if any just cause did in truth exist? If the mere checking of our declarations was the object of the Company, we should be [redacted] informed what there was to prevent [redacted] by your agents at Manchester, [redacted] goods there, and upon their delivery from the [redacted]

The carriage of the goods is not [redacted] mingham, but at Manchester.

Your own letter of [redacted] shows beyond contradiction [redacted] given is not the true one, [redacted] that the declarations tendered by us could not be relied upon, because if we had consented to pay 2s. 6d. a day for the use of your trucks, our goods upon your own admission, would not have been re-loaded at Birmingham, and then you would have been perfectly content to have passed our declaration as you had been in the habit of doing previously.

You know perfectly well that the proceedings complained of by the Directors, which we refuse to relinquish, are nothing more or less than that the Directors assert a right, which we are advised is not conferred upon them by the legislature, and further that we have invited the Directors repeatedly to enforce the right they claim, that they have declined doing so, and for the purpose of having the question determined, we have commenced an action against the Company. With these observations, we beg to close a correspondence which most reluctantly we have been compelled to enter into.

We are, &c.,

PICKFORD & Co.

City Basin, 8th January, 1841.

EASTERN COUNTIES' RAILWAY—BENEFITS OF NON-RESIDENT DIRECTION.

To the Editor of the Times.

Sir,—I beg the favour of your inserting the following in *The Times*, for the benefit of those who travel by railways:—

Having occasion yesterday to go by the Eastern Counties' line to Brentwood, and thence by coach, I arrived at the Shoreditch terminus at 20 minutes before 3 p. m. to go by the 3 o'clock train, but found *none started at that hour*, therefore, with many others, was detained at the office until a quarter past 4. Making every allowance for the badness of the roads, and for accidents which may possibly occur, it is quite impossible that persons can overlook *the cold indifference manifested on this road for the convenience of the public*. Not a single person about the establishment was at hand to explain to the waiting and anxious passengers the cause of the delay. I believe, had this been the case, even supposing an accident had occurred, that most of the passengers would have been satisfied. But instead of the manager coming forward to discharge a duty which he owes to the public, every superior officer is out of the way of inquiry, and passengers are allowed to wander up and down the office *muttering to each other their determination never to go by it again*. No one can be surprised at the state of things when they consider the painful anxiety of friends waiting their arrival, and the great losses and disappointments to coach proprietors connected with the trains. It is decidedly the duty of the Company to have an engine ready for every train at the hour specified for starting, and if such things are not thought worthy of their notice, it is to be hoped that the public will show their disapprobation in not travelling by them. In consequence of my not being able to start at the proper time, my friends had given over all hopes of my arrival. I had several miles to walk after leaving the coach, and on reaching home found them all in bed. This is not very pleasant, after being out seven hours and a half upon a journey that can be performed in five hours.

I remain, Sir, your most obedient servant,

H. N. A.

January 6.

The Versailles and St. Cloud Railway Company have just established a line of signals from Paris to St. Cloud. They are discs of about two feet diameter, placed upon moveable pivots, and at night are lighted with lanterns fixed in the centre.

TO CORRESPONDENTS.

Mr. T. W. Rathbone, Mr. Edward Cropper, and Mr. David Hodgson. — Legalis *puts the* six guinea *question in a new shape:* — "Suppose a booking office porter were to deliver a parcel, with a ticket bearing on the cover of it 'Paid, carriage of goose from Liverpool, 4s. 6d.,' and were to have that sum handed over to him, in the belief that all was right; but that it should afterwards appear that *nothing at all* had been paid for the carriage from Liverpool—would not the said person be held guilty of *obtaining money under false pretences*, and punished accordingly?"—*We should answer*, "Yes," *whether the* whole *or any* part *of the* 4*s.* 6*d.* charged *were not* really paid, *and whether the article conveyed were* goose, hawk, or vulture.

Castigator, *who brings a serious charge against the Directors of the North Midland Railway, ought at least, to give his name.*

If C. B. G. *be really a shareholder in the Birmingham Railway, he will soon have an opportunity of getting his question answered.*

T. B.—*There is a railway between Bolmin and Wadebridge, but we believe it is worked by horse power—at least, it was, till very recently. It is used principally for the conveyance of minerals, and is much inferior to more recent work.*

Our Cheltenham friend is informed, that our statement is now copied from a list published in Liverpool. We shall be most happy to hear from our correspondent on the other *subject.*

Lambda.—*Nothing more than was expended; their folly being only exceeded by their roguery. Everything stated in the letter alluded to will be made good in due time; the new mare's nest notwithstanding. Many thanks.*

Manchester and Birmingham Railway.—Candidus FOR, *and* A Practical Man AGAINST, *the Directors, shall if possible appear next week. We have given so much space to the "Extension," as to leave none for the parent scheme.*

East-Anglian Railway.—*We had hoped to be able to give to day a notice of a meeting in favour of this undertaking, held in Norwich on Thursday, but from some cause or other it had not reached us at the time of going to press.*

We are anxious to let our correspondents conduct their discussions in their own way, but we must beg of them to be as brief as possible, and not to dwell upon minor points merely to show how cunning they are of fence. The half yearly meetings are approaching when every inch of space will be precious.

Our correspondence increases so much, that it would be extremely inconvenient to acknowledge each particular communication, and to give our reasons for rejecting many of them. Our friends, therefore, must take it for granted, that when their favours are not inserted or acknowledged, within a few weeks from the time they are sent, they are declined. We cannot undertake to return rejected MSS.

*** The Volume of the *Railway Times* for 1840 is now ready. A few complete sets may also be had. As the number does not exceed *ten*, early application is necessary.

THE RAILWAY TIMES.

SATURDAY, JANUARY 9, 1841.

In adverting to what we conceive to be a very glaring defect in railway management, it is not our intention to interfere in the friendly controversy now going forward between two of our correspondents ("A Railway Shareholder" and "Examiner") upon this important topic. The ability which each party displays in supporting his own views, must be acknowledged by all; and although some may demur to the propriety and policy of undertaking essential changes in the constitution of Railway Boards at this particular crisis, there can, we should suppose, be but one opinion, that good will ultimately arise from discussing the imperfections of the existing mode, however unripe the times may be for the substitution of a better. Our object at present is of a less general character than that of our two correspondents, having reference simply to the imperfect and unsatisfactory form in which the Companies' accounts are usually presented at the half-yearly meetings; and as the Spring meetings are now approaching, a few observations may not be without effect.

The main defect in these periodical statements of account is their extreme brevity. It is true that they are put forth merely as *abstracts*, and that any proprietor has a right to consult the more detailed statements that appear in the Companies' books; but besides that such an inspection would probably be looked upon by the authorities as a most ungracious act, how few, comparatively, of the proprietors, scattered as they are over the country, have an opportunity of personally examining a mass of documents kept at the principal offices of a Company! Nor is a mere casual or cursory inspection all that is required. To be of any use the accounts must be dissected, and classified, and compared with those of other undertakings, and probably a complete copy of the books would be less serviceable in this respect to the great body of proprietors than a well-arranged digest—something between the present barren exhibition of fifty thousand pound items and such an unmanagcable mass of materials as ought to be submitted to Auditors. Let Directors abate as much as they please of their customary diffuseness in promises that are seldom kept, and anticipations still more rarely realized, and let them give, instead, "a full, true, and particular account" of *facts*, that is, of the financial condition of their several establishments—for to this class of facts all others are to be reduced. Generalities are to be avoided, as most unsatisfactory. Above all things, the odious "&c.," which now so much disfigures Directors' abstracts, is to be got rid of. What, indeed, can be more ridiculous (leaving every other consideration out of view) than the addition of this stenographic character to a long list of descriptive particulars? It may mean anything or nothing; it may comprehend an expenditure of thousands of pounds, or have reference to no more than the odd shillings or pence which complete the item. We are inclined to think, indeed, that usually it is without any definite meaning at all, for those who prepare these periodical statements are generally too much alive to the policy of making a show, to omit any important matter in their enumeration. Nevertheless, this "&c." may "cover a multitude of sins," or (which is much the same thing) lead proprietors to think so, and the sooner, therefore, that it is discarded the better.

We have frequently lamented that one uniform system of account keeping—or at any rate of account publishing—is not observed by all the Companies. The difficulty, if not impossibility, of instituting a satisfactory comparison between the expenditure of any two Companies under a given head, will readily be acknowledged by every one who has made the attempt. Much valuable information is thus rendered almost wholly useless. It is only by careful deduction from a large number of special instances, that any general principle as to the best mode of railway management can be established; but how is this desideratum to be attained so long as one particular fact is mixed up with a variety of others in a manner which sets classification at defiance? We should be sorry to do Directors an injustice, but we verily believe that variations are sometimes introduced for the express purpose of preventing comparisons which, if not odious, might at least prove little creditable to their fame as Managers. Be this as it may, there can be no question that the spirit of generous rivalry which already to some extent pervades the principal Companies, inducing the Directors to vie with their neighbours in economy of working, is greatly checked by this diversity of arrangement. We fear there is but small hope of voluntary uniformity for the inactive, the incompetent, the extravagant, dread fair comparison too much to give any facilities for effecting it; but so important do we deem this measure of reform that we should be glad to see it rendered *compulsory*.

In the meantime, Boards who have nothing to conceal, nothing to slur over, nothing to mystify, may do much towards a very general reformation in the system of account publishing. Let them only set an example, and if it be not followed they themselves will not be the less entitled to the thanks of their constituents and of the railway public at large. Railway proprietors are anything but ungrateful, and assuredly the Board which takes the first step towards a full and explicit development of its financial affairs will not be forgotten. What is it that renders the advocacy of auditors so popular—what but the meagre character of the accounts submitted at half-yearly meetings? It would be well if Railway Managements would mark the signs of the times. Surely it were much better voluntarily and cheerfully to comply with the reasonable requirements of their constituents, than to have reform thrust upon them whether they will or no!

For the present we pause, and not without hope that this brief appeal will produce some good result. We take credit to ourselves for contributing in no slight degree to bring about the printing and circulating of Directors' Reports previous to general meetings. This latter reform is even now far from being so generally or so fully carried out as we could wish, but a beginning has been made, and when the dread of innovation which is so strong in governing bodies has died away, the change will doubtless become universal. We would fain believe that the improvement now suggested of giving more ample details of matters involving the property of their co-partners is so manifest, as only to require to be suggested to the several Boards to be at once carried into effect.

A CITY correspondent, whose communication we give in another column, directs attention to the singular fatality which seems to attend those joint-stock speculations in which Manchester influence is predominant. It is indeed a most remarkable fact that although joint-stock banks have flourished almost every where else, not one of them has ever prospered in Manchester, while in two of them, capitals of 500,000*l.* and 800,000*l.* respectively, have, within a short period, been irretrievably lost! In railways the same ill success appears to follow Manchester interference. The Manchester and Birmingham shares are at 40 per cent. discount, the Manchester and Bolton at 70; and although those of the Manchester and Leeds (a line in which we have always felt a strong interest, on account of the great experiment of low fares now in progress upon it,) bear at present a small premium, there can be no doubt that the course pursued by the Management in concealing the results of the further opening of the line upon the most frivolous pretences, is working great damage to that undertaking in the estimation of the public. The

NOTES.

(*a*) Not open long enough. (*b*) Exclusive of the Chester and Crewe line, which appears to be 458,333*l*. (*c*) This includes the Liverpool and Manchester line, from which a portion of the Grand Junction revenue is derived. (*d*) Maximum allowed by Act. (*e*) Up to July 1. (*f*) Including the new capital for the London-bridge station. (*g*) Including new capital for widening line, &c. (*h*) Preference shares guaranteed 5*l*. per cent. (*i*) Including Gosport branch. (*k*) This is from the main line only, and is calculated on the money actually advanced, some of the shares having been issued at 50 per cent. discount. (*l*) Up to July 31. (*m*) The expenditure mixed up with that on the canal, with which the line is connected. (*n*) Including harbour and docks. (*o*) From 14 miles only.

†† From which deduct Toll to London and Birmingham Company, 127*l*. 19s. 6d.—leaving a balance of 932*l*. 2s. 4d. ‡‡ Including Northern and Eastern Railway toll, &c.

§ Refused by the Directors. ¶ No portion of the traffic from the Manchester and Leeds line is included. ¶ The Liverpool and Manchester toll being deducted.

*** Exclusive of the toll and rent payable to the Eastern Counties' Company. ††† Not including traffic on Leeds and Selby line

TO CORRESPONDENTS.

Mr. T. W. Rathbone, Mr. Edward Cropper, and Mr. David Hodgson.—Legalis *puts the six guinea question in a new shape:*—"Suppose a booking office porter were to deliver a parcel, with a ticket bearing on the cover of it 'Paid, carriage of goose from Liverpool, 4s 6d.,' and were to have that sum handed over to him, in the belief that all was right; but that it should afterwards appear that *nothing at all* had been paid for the carriage from Liverpool—would not the said person be held guilty of *obtaining money under false pretences*, and punished accordingly?"—*We should answer, "Yes," whether the* whole *or any* part *of the 4s 6d. charged were not* really paid, *and whether the article conveyed were* goose, hawk, or vulture.

Castigator, *who brings a serious charge against the Directors of the North Midland Railway, ought at least, to give his name.*

If C. B. C. *be really a shareholder in the Birmingham Railway, he will soon have an opportunity of getting his question answered.*

T. B.—*There is a railway between Bolsin and Wadebridge, but we believe it is worked by horse power—at least, it was, till very recently. It is used principally for the conveyance of minerals, and is much inferior to more recent works.*

Our Cheltenham friend is informed, that our statement is now copied from a list published in Liverpool. We shall be most happy to hear from our correspondent on the other *subject.*

Lambda.—*Nothing more than was expended; their folly being only exceeded by their roguery. Everything stated in the letter alluded to will be made good in due time; the new mare's nest notwithstanding. Many thanks.*

Manchester and Birmingham Railway.—Candidus FOR, *and* A Practical Man AGAINST, *the Directors, shall if possible appear next week. We have given so much space to the "Extension," as to leave none for the parent scheme.*

East-Anglian Railway.—*We had hoped to be able to give to day a notice of a meeting in favour of this undertaking, held in Norwich on Thursday, but from some cause or other it had not reached us at the time of going to press.*

We are anxious to let our correspondents conduct their discussions in their own way, but we must beg of them to be as brief as possible, and not to dwell upon minor points merely to show how cunning they are of fence. The half yearly meetings are approaching when every inch of space will be precious.

Our correspondence increases so much, that it would be extremely inconvenient to acknowledge each particular communication, and to give our reasons for rejecting many of them. Our friends, therefore, must take it for granted, that when their favours are not inserted or acknowledged, within a few weeks from the time they are sent, they are declined. We cannot undertake to return rejected MSS.

*** The Volume of the *Railway Times* for 1840 is now ready. A few complete sets may also be had. As the number does not exceed *ten*, early application is necessary.

THE RAILWAY TIMES.

SATURDAY, JANUARY 9, 1841.

IN adverting to what we conceive to be a very glaring defect in railway management, it is not our intention to interfere in the friendly controversy now going forward between two of our correspondents ("A Railway Shareholder" and "Examiner") upon this important topic. The ability which each party displays in supporting his own views, must be acknowledged by all; and although some may demur to the propriety and policy of undertaking essential changes in the constitution of Railway Boards at this particular crisis, there can, we should suppose, be but one opinion, that good will ultimately arise from discussing the imperfections of the existing mode, however unripe the times may be for the substitution of a better. Our object at present is of a less general character than that of our two correspondents, having reference simply to the imperfect and unsatisfactory form in which the Companies' accounts are usually presented at the half-yearly meetings; and as the Spring meetings are now approaching, a few observations may not be without effect.

The main defect in these periodical statements of account is their extreme brevity. It is true that they are put forth merely as *abstracts*, and that any proprietor has a right to consult the more detailed statements that appear in the Companies' books; but besides that such an inspection would probably be looked upon by the authorities as a most ungracious act, how few, comparatively, of the proprietors, scattered as they are over the country, have an opportunity of personally examining a mass of documents kept at the principal offices of a Company! Nor is a mere casual or cursory inspection all that is required. To be of any use the accounts must be dissected, and classified, and compared with those of other undertakings, and probably a complete copy of the books would be less serviceable in this respect to the great body of proprietors than a well-arranged digest—something between the present barren exhibition of fifty thousand pound items and such an unmanageable mass of materials as ought to be submitted to Auditors. Let Directors abate as much as they please of their customary diffuseness in promises that are seldom kept, and anticipations still more rarely realized, and let them give, instead, "a full, true, and particular account" of *facts*, that is, of the financial condition of their several establishments—for to this class of facts all others are to be reduced. Generalities are to be avoided, as most unsatisfactory. Above all things, the odious "&c.," which now so much disfigures Directors' abstracts, is to be got rid of. What, indeed, can be more ridiculous (leaving every other consideration out of view) than the addition of this stenographic character to a long list of descriptive particulars? It may mean anything or nothing; it may comprehend an expenditure of thousands of pounds, or have reference to no more than the odd shillings or pence which complete the item. We are inclined to think, indeed, that usually it is without any definite meaning at all, for those who prepare these periodical statements are generally too much alive to the policy of making a show, to omit any important matter in their enumeration. Nevertheless, this "&c." may "cover a multitude of sins," or (which is much the same thing) lead proprietors to think so, and the sooner, therefore, that it is discarded the better.

We have frequently lamented that one uniform system of account keeping—or at any rate of account publishing—is not observed by all the Companies. The difficulty, if not impossibility, of instituting a satisfactory comparison between the expenditure of any two Companies under a given head, will readily be acknowledged by every one who has made the attempt. Much valuable information is thus rendered almost wholly useless. It is only by careful deduction from a large number of special instances, that any general principle as to the best mode of railway management can be established; but how is this desideratum to be attained so long as one particular fact is mixed up with a variety of others in a manner which sets classification at defiance? We should be sorry to do Directors an injustice, but we verily believe that variations are sometimes introduced for the express purpose of preventing comparisons which, if not odious, might at least prove little creditable to their fame as Managers. Be this as it may, there can be no question that the spirit of generous rivalry which already to some extent pervades the principal Companies, inducing the Directors to vie with their neighbours in economy of working, is greatly checked by this diversity of arrangement. We fear there is but small hope of voluntary uniformity for the inactive, the incompetent, the extravagant, dread fair comparison too much to give any facilities for effecting it; but so important do we deem this measure of reform that we should be glad to see it rendered *compulsory*.

In the meantime, Boards who have nothing to conceal, nothing to slur over, nothing to mystify, may do much towards a very general reformation in the system of account publishing. Let them only set an example, and if it be not followed they themselves will not be the less entitled to the thanks of their constituents and of the railway public at large. Railway proprietors are anything but ungrateful, and assuredly the Board which takes the first step towards a full and explicit development of its financial affairs will not be forgotten. What is it that renders the advocacy of auditors so popular—what but the meagre character of the accounts submitted at half-yearly meetings? It would be well if Railway Managements would mark the signs of the times. Surely it were much better voluntarily and cheerfully to comply with the reasonable requirements of their constituents, than to have reform thrust upon them whether they will or no!

For the present we pause, and not without hope that this brief appeal will produce some good result. We take credit to ourselves for contributing in no slight degree to bring about the printing and circulating of Directors' Reports previous to general meetings. This latter reform is even now far from being so generally or so fully carried out as we could wish, but a beginning has been made, and when the dread of innovation which is so strong in governing bodies has died away, the change will doubtless become universal. We would fain believe that the improvement now suggested of giving more ample details of matters involving the property of their co-partners is so manifest, as only to require to be suggested to the several Boards to be at once carried into effect.

A CITY correspondent, whose communication we give in another column, directs attention to the singular fatality which seems to attend those joint-stock speculations in which Manchester influence is predominant. It is indeed a most remarkable fact that although joint-stock banks have flourished almost every where else, not one of them has ever prospered in Manchester, while in two of them, capitals of 500,000*l.* and 800,000*l.* respectively, have, within a short period, been irretrievably lost! In railways the same ill success appears to follow Manchester interference. The Manchester and Birmingham shares are at 40 per cent. discount, the Manchester and Bolton at 70; and although those of the Manchester and Leeds (a line in which we have always felt a strong interest, on account of the great experiment of low fares now in progress upon it,) bear at present a small premium, there can be no doubt that the course pursued by the Management in concealing the results of the further opening of the line upon the most frivolous pretences, is working great damage to that undertaking in the estimation of the public. The

Digitized by Google

only other lines in which there is a preponderance of Manchester Management are, we believe, the Thames Junction, and Thames Haven schemes. How these have prospered we need not further say than that the resuscitation of each of them is looked for just in proportion as Manchester influence is diminished. We admit that in regard to the two last mentioned projects, the *non-residence* of Directors and Dictators (for somehow or other non-resident Directors, especially if from Lancashire, are always Dictators when opportunity offers,) is quite sufficient to account for their present abject condition, without attributing aught to anything else; but a similar cause does not operate in the other instances, and yet the result is in most of them almost entirely the same. How is this to be explained?

Our correspondent is of opinion that the failure of Manchester Companies arises from the active management being entrusted almost exclusively to paid agents, the magnitude and multiplicity of their private business preventing the really responsible parties from giving that attention to the affairs of the co-partnery which their importance demands. This, if not the sole source of the evil, is unquestionably one of its principal causes. It is not, of course, to be expected that the details of any large undertaking are to be worked out without the assistance of paid—nay, *well paid*—subordinates, but the mischief is, that in many cases, and more especially, we believe, in those Manchester speculations, too much—in fact everything—is left to the control of the parties referred to, whose interests are seldom if ever identical with those of the proprietors or the public, and not unfrequently in direct opposition to them. Taking it for granted even, that a judicious selection of paid agents has in the first instance been made—and we fear that in two cases out of three this admission cannot with truth be made—it is not much to be wondered at that *present* advantage to *themselves*, without regard to *ultimate* results to their employers, should be the guiding-star of persons so circumstanced. Add to this the fact alluded to by our correspondent, that these paid agents—"Managing Directors" is the more sounding designation—are generally under the influence of lawyers and engineers, who have a direct interest in swelling the expenditure, and it is scarcely matter of surprise that the affairs of such Companies should be far from flourishing. The evil is increased when, as in the case of the Manchester and Birmingham Railway, to which we shall presently advert, the nominal Directors are gentlemen of high standing in the commercial world, in reliance upon whose character parties are induced to become subscribers to the several schemes. Without a careful and constant supervision of the acts of these "Managing Directors" on the part of their honorary colleagues, whose interests are presumed to be the same as those of the proprietors at large, nothing but extravagance and its inevitable consequences can be expected.

The Manchester and Birmingham Railway, particularly in connection with its so-called "Extension," is a case in point. Only think of *such* a railway originally estimated to cost 720,000*l.*, costing *nearly* 3,000,000*l.*! This is mainly to be ascribed to the circumstance that the highly respectable Chairman of the Company, and some of his colleagues, have suffered themselves to be led into an extravagance of expenditure for which there was not the smallest necessity, and all because certain parties had objects of their own to serve in rivalling the costly magnificence of other Companies. Upon this point we need only refer to our remarks of last week, which we may observe in passing, have attracted great attention among the shareholders in this undertaking, as testified to us from various quarters. We wish we could regard the Manchester and Birmingham Railway as a solitary exception to economical management, but it is far otherwise. Extravagance is the rule, economy the exception.

If such be the consequences of allowing self-interested parties to control the expenditure of Railway Companies generally, how much more fatal must be the result of giving an almost unchecked power to the paid agents—we beg their pardon, the "Managing Directors"—of a concern so peculiarly circumstanced as the far-famed "Extension"? We suspect that the position of Mr. ASHTON, and other really estimable and most respectable gentlemen, who are mixed up with this scheme, is correctly described by our correspondent, when he says, that the Chairman figures but as "the mere puppet of his paid colleagues and officials, to work out by *his* reputation *their* objects, views, and *emoluments*." The "emoluments" are the main-spring of the agitation! Cut off these, and the Stafford and Rugby project will soon sink into well-merited oblivion; continue them, and the proprietors will be gratified with a Parliamentary contest *and defeat*, so long as their patience will hold out. They may feel disappointed at the result; and murmur when the cost comes to be reckoned up, but what care the "*Managing* Directors"? Their annual allowance has been again insured, besides the very pretty pickings which a Parliamentary campaign never fails to present to parties who are not over scrupulous as to the means of securing them. The want of success in the session of 1839, was matter of serious regard to the proprietors, who had to provide the supplies; but it was cause for congratulation with those who had the good fortune to be entrusted with the disbursements. A victory in that session would have been *to them* most disastrous. They have obtained in the interim a year's pay, and have now the prospect of a renewed contest—that is, if the subscribers are infatuated enough to sanction a proceeding so ruinous to *bona fide* adventurers. We verily believe, that the "Managing Directors" would have tried to set up men of straw, if they had not been fortunate enough to meet with more substantial opponents. They have no wish to hurry matters forward; why should they? It would be more profitable by much, if they could so far gull the subscribers as to induce a *third* attempt. The proverbial luck would attend it—*to them*. We leave it to the proprietors at large to say whether such a state of things is likely to be of service to them; we beg of Mr. ASHTON, and his friends, to consider how far their well-earned reputation, as men of respectability and honour, will be promoted by even a nominal participation in a matter of so questionable a complexion.

THE views and *objects* of the prime movers in the Extension scheme—its salaried "Managers" to wit—being such as are correctly described in the preceding article, it will naturally be inferred that the means which they adopt to accomplish their ends are anything but pure. We find accordingly that, both privately, and through the medium of their partisans of the press (fit advocates of such a cause!), statements that have been a thousand times disproved are again, with the most unblushing impudence, brought forward—assertions are reiterated which are not only essentially and in every part false, but which the utterers *know* to be so—and calumnies the most base are heaped upon all who have helped to expose the plans, and defeat the machinations of these *disinterested* personages! Of late this utter disregard of truth and decency has been more than usually conspicuous; and why? A meeting of the subscribers to the project is to be held in Manchester on Monday next, for the purpose of dissolving the present, and re-organising another, "Company"—a step rendered necessary by the alterations which have been made in the scheme since its defeat in Parliament in the session of '39, and by the Standing Orders of the House. At that meeting it will (as has on former occasions been fully shown in this journal) be in the power of any one of the original subscribers to refuse to embark in the altered scheme, *and to demand back such part of the money he has advanced as the profligate expenditure during the late contest, and the handsome salaries of the "Managers" before and since, may have left on hand.* The interest of these same "Managers" is, of course, to retain the balance, and to *entrap the credulous into further liabilities*—liabilities, the extent of which it is impossible to anticipate—and hence the misstatements and misrepresentations to which we have referred. Let the "Managers" but once get their unfortunate victims *fixed*, and what matters it to them that the delusive character of their schemes should to-morrow be clearly apparent, even to the victims themselves? A Parliamentary contest with all its perquisites is certain, and certain also another year's salary to themselves!

For an exposure of some of the false pretences under which it is sought to transfer a large amount of money from the pockets of the unwary to those of the ingenious "Managers," and their friends, the lawyers, we refer to the communications of several correspondents given in another part of our present number. Were our correspondents or ourselves to notice one half the tricks of these parties, our paper would contain nothing else; and, indeed, the labour is almost superfluous, after the repeated exposures which our columns have contained of their conduct, and the unanswered, because unanswerable, proofs which have from time to time been adduced of the ruinous results of the project to all who may embark their property in it. A very few words in reference to one of the most recent fictions, may, nevertheless, be of use.

It is asserted that the London and Birmingham Company are *now* the sole opponents of the scheme. Admitting that it were so, would *that* be any argument in its favour? Would it prove the scheme to be less unjust than it was, that it is *now* unjust only to a Company who have expended millions of money in contributing to the accommodation of the public, who have secured the confidence of that public, and are themselves only beginning to reap the reward of their noble enterprise? Is it pretended that Parliament would sanction and legalize injustice, because the only parties who protest against it are the London and Birmingham Railway Company? If it be not so pretended, how can the Extension scheme be benefitted by having only one opponent? But it is *not* true that the Birmingham Company are its only adversaries. It is true that the opposition of the Grand Junction Company has been bought off upon terms which the cunning administrators of that Company's affairs know will amply compensate for any

Digitized by Google

loss contingent on carrying out the scheme; it is true, likewise, that a few landowners have been *silenced* at a cost which would render even the acquisition of their influence a very questionable gain: but what say the "Managers" to the Midland Counties' Company, the Trent and Mersey Company, and almost all the great and influential landowners on the line, including the Marquis of ANGLESEY, Lord LICHFIELD, Lord TALBOT, Lord HARROWBY, Sir GEORGE CHETWYND, General DYOTT, and others,—what say they to these? Are *they* parties and persons likely to be gained over by underhand means? We leave those who have made the attempt—for attempts *have been* made—to give a reply. Much stress is laid upon the influence of Sir ROBERT PEEL on the side of the Extension. Sir ROBERT, it is true, was formerly a supporter of the project, *and yet it failed*. Could Sir ROBERT'S influence carry it now that the small pretensions which it then had to public support have been utterly swept away by the parties themselves? But Sir ROBERT'S influence will not be exerted in its favour, nay there is strong reason to believe that it will meet with his most determined opposition; for the Right Honourable Baronet has seen through the selfish schemes of the promoters, and has, we are credibly informed, given one at least, of the "Managers" such a personal rebuff, that he will not be in a hurry to seek another interview with his presumed patron!

Much is said, too, of the offer which was made by the Directors of the Birmingham Company many months ago, to pay a sum of money on condition that the Extension project were abandoned. That offer we always thought injudicious, and expressed our disapprobation of it at the time, but we believe it was made from an anxiety to promote a friendly understanding with the town of Manchester, and because the Directors considered it more desirable to sacrifice the sum referred to in effecting an amicable arrangement than to expend even a smaller amount in an angry contest, albeit the issue of that contest was beyond a doubt. We have reason to believe, too, that *such a negociation was first* INVITED *by the Extension Company itself, or some of its members, and only rejected because the amount offered was not equal to the sum squandered by the "Managers,"* with probably the farther objection on the part of these gentlemen that *their* salaries and the friends' fees would forthwith cease. There is no fear that any similar attempt at conciliation will in future be made by the Birmingham Directors (nor from what we know, do we believe it would be sanctioned by their constituents); but what shall we say of the baseness of those who first invite a negociation, and then having frustrated its object, attempt to turn it to the disadvantage of their opponents, whose main mistake seems to have been, that they believed others to be actuated by the same honourable motives as themselves? The "Managers" would fain make the public believe, that because the Extension scheme would prove injurious to the Birmingham Company, it must *therefore* be profitable to its promoters. The Birmingham and Derby Company, in their late rivalry, did much mischief to the Midland Counties, but did they benefit *themselves*, or are the public benefitted now that the two Companies have virtually coalesced? The advantage to the Extension would not even be *in proportion* to the injury inflicted on the Birmingham; the traffic of a district which is profitably carried on by one individual might not suffice, when divided between two, to preserve either from bankruptcy.

Here for the present we must pause, having already far exceeded our limits in the exposure of this most pernicious scheme. Sick as we are of the subject, we deem it an imperative duty to persevere, diligently and constantly, in unmasking the real character of the project, and of its principal advocates and abettors; and this not merely because of its unnecessary and unwarrantable interference with existing interests—the injury it will entail on the public—and the inevitable ruin which awaits all such as become the dupes of a designing junta, whose gain is in any event *sure*—but because it involves a principle which, if generally acted upon, would inflict a deadly blow upon the railway system generally. If so uncalled for, so wanton, so shameful an interference with the moderate profits of established Companies is to be sanctioned in one case, merely because it suits the views of a handful of interested adventurers, who have been fortunate enough to secure the countenance of some really honourable and high-minded men, whose character and influence they make use of to further objects of their own, where, we would ask, is such interference to end? We leave the question to the consideration of the railway public at large. The case may some day or other be their own, for where is the established line to which an oppositition might not be got up, *if certain persons were paid for it*, on far stronger grounds of public utility and private profit than this same "Extension?"

A REPORT of the proceedings at the General Meeting of the Glasgow and Greenock Railway Company will be found in another part of our present number. It appears that the opening of the line will be delayed considerably beyond the period originally anticipated, arising principally from the extraordinary natural difficulties connected with a small portion of the work—difficulties which have been greatly increased by the perversity of one of the landowners on the line. It appears, likewise, that a renewed application to Parliament, for power to raise further capital, has become necessary—a circumstance which we regret, as we had hoped that the Greenock line would have been one of the very few on which the original capital would have sufficed. Nevertheless, there seems to be nothing in the state or prospects of the undertaking to excite alarm or despondency in the minds of the shareholders. The Directors deserve great praise for having placed this Company's share of the profits arising from the working of the Joint line to the credit of the interest-account on loans for the general purposes of the undertaking, instead of charging the interest to capital, as has been done in most other Companies, in order to swell the amount of the first dividend.

It grieves us exceedingly, to see that the Directors have so far yielded to the Sabbatical agitation now so prevalent in that part of the country, as to announce their determination to run *no* trains at all on Sunday. They state, too, that the Postmaster-General has consented to excuse them from carrying the mails on that day, and that the old mode of conveyance by coach will be kept up for Sunday duty alone. We confess we do not perceive how such an arrangement is to be effected without entailing a loss upon the Postoffice, that is, upon the country; nor can we quite understand upon what grounds the Postmaster-General has granted this indulgence to one Company, unless he is prepared to extend it to all alike. We hope this question of Sunday travelling will be finally settled in the coming session. One of the Members for that part of the kingdom likely to be benefitted by the facilities which the Greenock line will confer, has directed much of his attention to Post-office matters, and we trust that he will be able to obtain some explanation of this very strange proceeding on the part of the Postmaster-General. Seldom has the absurdity of this anti-Sunday-travelling agitation been more evident than in this case. The railway is to be shut up, that the Lord's day may not be desecrated, and immediately a coach is started to perform a certain necessary work, and calls into requisition the services of horses, coachmen, guards, stablemen, innkeepers, toll-keepers, and others, at every stage of its progress—and all to do that which an inanimate engine and a very few men would do much better in one-fourth part of the time.

IN the Dublin correspondence of the *Morning Chronicle* of Monday last, we find the following paragraph:—

"The project of establishing railways in Ireland, on the principles set forth in the able Report of the Commissioners appointed by Government, is once more to be urged upon the consideration of the executive and the legislature, during the approaching session. I have seen a requisition for a meeting of the citizens of Dublin upon the subject, addressed to the Lord Mayor, which has already received the signatures of a considerable number of the landed proprietors *of all parties*, including the Duke of Leinster, the Earl of Charlemont, and the Earl of Glengall. This meeting will take place about the 20th instant; and I understand that arrangements are in progress for convening several town and county meetings, for the promotion of this great national object. In connection with the establishment of a grand trunk railway, in accordance with the Report of the Commissioners, it is in contemplation to urge the adoption of the best and most rapid line of railway communication on the English side, in order to shorten as much as possible the journey between London and Dublin."

It will readily be conceived that such intelligence—the correctness of which is confirmed from other quarters—must be very gratifying to those who, like us, have from the first advocated this grand scheme of national improvement. We never had a doubt that truth and justice, and a sober consideration of the actual circumstances of Ireland, would sooner or later triumph over the misrepresentations of interested or factious opponents and the baseless enthusiasm of those well-intentiond allies who deprecated legislative interference in this species of public work; should the triumph be achieved in the approaching session, the people of Ireland will have especial grounds of gratulation. The subject of Irish railways will, we doubt not, be now discussed in a spirit very different from that which characterized the first mooting of the question—the result, we would fain hope, will be different likewise. To achieve this important object, the zealous co-operation of the *Railway Times* shall, as heretofore, be always relied on; for the present, we must content ourselves with sincerely wishing every success to so good a cause.

A MEETING has been held at Salisbury on the subject of the carriage of perishable goods on the London and South Western Railway. It is thus noticed in the *Salisbury Herald* of last Saturday:—

"On Tuesday last, a respectable meeting of the principal butchers, &c., of this city and neighbourhood was held at the City Arms Inn, to consider and adopt the most effectual measures to remedy the great inconvenience, and

Digitized by Google

to prevent for the future the ruinous losses daily sustained by them, in the conveyance of their goods forwarded to the London market by the South-Western Railway, on the present system; when suitable resolutions were unanimously carried, to the effect, it is said, of inviting any party to a spirited undertaking, to transmit their goods per road-carriage the whole of the way; and pledging themselves to give such a party their most strenuous support to such an undertaking. The meeting was adjourned to Tuesday next."

—o—

BIRMINGHAM AND DERBY RAILWAY.—A Special Meeting of this Company was to be held in Birmingham on the 31st ult., to authorize the raising of a farther sum of money on loan, in virtue of the Company's Act of last Session. We presume that the meeting took place at the time mentioned, but we have seen no notice of it in the local journals.

—o—

MESSRS. WRIGHT AND CO.'S FAILURE.—W are glad to observe in the list of debts proved against the estate of this firm, that the South-Western Railway Company, are creditors to the extent only of 3,583*l.* 19s. 4d. Mr. John Wright, and Mr. E. W. Jerningham, two of the partners of the Banking House, were Directors of the Railway Company.

—o—

A PLEASANT PIECE OF WORK.—In the EASTERN COUNTIES' Accident we ought not to expect any tolerable arrangements, for all persons conversant with railway matters are aware, that the Directors or at least a portion of them, have been for a long time pleasantly and profitably employed, in the amiable operation of cutting the proprietors throats—so that all the shareholders of common prudence have backed out!—*The Railroad Quarterley Journal.*

FATAL ACCIDENT ON THE LONDON AND BRIGHTON RAILWAY.

ON Monday three men lost their lives on the Brighton Railway at Folly Hill, in the parish of Keymer. Two of them were employed on an engine belonging to Mr. Thornton, the contractor, and had to pass through a "heading," in doing which it was requisite to lower the chimney of the engine. From some cause or other the chimney was not lowered sufficiently, and coming in contact with one of the crown bars of the heading, a large fall of earth took place upon the engine and tender. The consequence was the death of the two men from suffocation (so a surgeon said) in consequence of being prevented from escaping by the fall of earth. The third man was suffocated in attempting to rescue the sufferers, and several others had a narrow escape. A coroner's jury returned a verdict of "Accidental Death," with a deodand of 1s. on the chimney of the engine.

RAILWAY OFFENCES AND OFFENDERS.

ON Wednesday three young men were brought up to the Mansion-house charged by the Directors of the Blackwall Railway with refusing to quit the arrival platform, and with being exceedingly violent when the proper officers attempted to remove them. They were all intoxicated. The ringleader was fined 20s., and the two others 10s. each, which, with the addition of a night's lodging in the station-house, seems to have been a pretty fair modicum of punishment. The prisoners charged the officers of the Company with having been insolent and unnecessarily harsh, but as they brought the same accusation against the sergeant at the station-house, it seems as if very little faith were to be placed in their assertions.

It will be seen from a notice in another column, that in the case of Marson, the foreman of the contractor on the Birmingham and Derby Railway, the bill of indictment has been ignored. Marson's share in causing the late melancholy accident on the line we have already commented upon; will the poor men who were obeying his orders be equally fortunate?

The following paragraph, which we extract from the *Leicester Journal*, will show at what price drunken scoundrels may peril the lives of railway passengers. The line referred to is the Midland Counties':—

"At the County Police-office, on Wednesday last, Wm. Bertram, Henry Welstead, William Sutton, Thomas Williams, and Robert Hill, were brought before J. Hodgson, Esq., charged with obstructing the Wigston Station-master, William Foster, in the execution of his duty, and refusing to quit the line of railway after being requested to do so. William Foster, Mrs. Foster, and Jonathan Raven, (policeman) stated that about half-past nine o'clock on the night of the 24th of December, the defendants, who are in the employ of Mr. Betts, the contractor, at the Wigston Viaduct, came to the station and requested Mr. Foster to stop the train, that they might be conveyed to Leicester, when he informed them that he could not, for it was not appointed to stop there. The defendants, *who were intoxicated*, immediately commenced abusing him, Williams threatening to stop the train himself, and went to the signal-board and turned it round for that purpose. Welstead also requested Raven to show his red light, with a view to stop the train, and said that if he would not, *he (Welstead) would throw the gates across the line*, which he attempted to do; but, happily, was prevented by Mr. Foster, who threatened to take him into custody. The Station Master then ordered the defendants to go off the line immediately, but they refused to do so till the train was within 200 yards of them. The luggage train having passed the defendants, they again asked Mr. Foster to stop the passenger train, and upon his refusal, Welstead threatened to dash his brains out against the metals, and said that if he had a gun he would shoot him. Notwithstanding the entreaties of Mr. Foster, *the fellows persisted in walking down the line towards Leicester; and, on passing Knighton Viaduct, the train approached them, when Bertram, who was beastly intoxicated, turned round, stumbled, and fell across the line.* Fortunately, Mr. Foster instantly laid hold of him and dragged him out of the way, otherwise he must have been killed on the spot. Welstead, was fined 5*l.* including the costs, or two months' hard labour; Williams, 2*l.*, or six weeks' hard labour; Sutton, 1*l.*, or one month's hard labour: Bartram and Hill, 15s. each, or fourteen days' hard labour."

In reference to this very scandalous outrage we can only echo the words of our contemporary, from whom we have copied the report—"*these are cases in which the maximum of penalty should always be enforced: we think that fine* WITH *imprisonment would not have been misapplied as a warning to Messrs. Bartram, Welstead, Sutton, Williams, and Hill.*" If magistrates in petty session will not protect the public by inflicting the *highest* penalty in *every* such case, it is high time that some other tribunal were established. The truth is, that in respect of offenders Lord Seymour's Act is not nearly stringent enough [we have reason to believe that in the approaching Session an attempt will be made to remedy this defect], but if the dispensers of justice had but the inclination, they could greatly increase its efficacy.

The following paragraph is going the round of the country papers, but really the statement which it contains is of so astounding a character—the *decision* so outstrips all previous decisions of our provincial law dispensers—that we can scarcely believe it to be correct. Can any of our correspondents resolve our doubts?

"The magistrates of Rochdale, on a charge brought before them against some parties for trespassing on the Manchester and Leeds Railway, by following a pack of hounds, in pursuit of a hare, along the line in front of a train that was proceeding towards Manchester, decided that *Lord Seymour's Act was over-ruled by the Game Act, under which any party was at liberty to follow hound, wherever they led him.*"

SOME LOST CHAPTERS OF ANCIENT EASTERN HISTORY.

[*Found in exploring the Ruins of Rogulaneum.*]

Chapter the Third.

1. Now by the edict of the King for the making of the Iron-way it was commanded that once every year at the time of the Feast of Purim, the twenty and two Governors should assemble and choose by lot amongst themselves six who should put off the robes of office.

2. And the custom was to cast into an urn twenty and two balls of ivory, whereof sixteen were white and six were black, and for the Governors each to draw one.

3. And the six Governors who drew the six black balls were the six Governors who put off the robes of office.

4. But Malahaleel, and Jesui, and Edcrop, said one unto another, 'What availeth wisdom if the chance be to the wise man, the same as to the foolish?'

5. 'If this blind custom be not set aside, it may, peradventure happen that the lot shall fall upon ourselves, or on some of our friends the wise men of Gog, and so all our pains in this matter come to naught.'

6. So they considered among themselves how the custom of choosing by lot might be set aside.

7. But herein their cunning failed them, and they were sore perplexed.

8. Wherefore, they resolved to take counsel of one Derus, who was a famous magician in those days, and learned in all the arts of the Egyptians.

9. And this Derus counselled them in these words:—'Balls of ivory are smooth, and touch keener than sight. Take ye therefore an awl, and in secret scratch each of the black balls in several places. And when the time cometh that ye put your hands into the urn, choose ye such of the balls only as are all smooth to the touch, and so shall ye escape the lot that casteth out.'

10. And the counsel of Derus pleased them, and they did to the black balls even as he advised.

11. But when they repaired unto Bozrah, and hinted to him darkly the means they had found out, whereby all the black balls should at the next Feast of Purim fall to the lot of the Governors who were of the tribe of Magog, Bozrah would in no wise hearken unto them,

12. Saying vehemently, 'Rather than my right hand should do this thing, I would chop it off.'

13. For Bozrah, though a vain man, of whose vanity there came much evil, was not wicked altogether.

14. However, Jesui, and Malahaleel, and Edcrop, were not dismayed.

15. For going next unto Katspa, they praised greatly his portly bearing, and his knowledge of men, and whispered into his ear how much better a Chief Governor he would make than Bozrah.

Digitized by Google

16. And with these and other honied words they won the heart of Katspa entirely.

17. After which they revealed unto Katspa the counsel of Derus.

18. Saying, 'Way there is none else by which the Board can be purified of the foolish Magogs, and such able and wise men as thyself retained thereon.'

19. And to all they said Katspa gave ready assent.

20. And after him Silihud, and Tufas, and Thickpol, were gained over and made also privy to the counsel of Derus.

21. And the day arriving for the yearly casting of lots, and the Governors being all assembled, the eight who were of the tribe of Gog, and Jesui, and Malahaleel, and Edcrop, who filled the places of three of the early Governors of that tribe, did each put his hand into the urn, turning his head aside.

22. When lo! ten of the eleven drew white balls, and one only drew a black ball which was an honest man of the name of Oldrobius, who had not been let into the secret of the counsel of Derus.

23. And then the eleven Governors of the tribe of Magog did each put his hand into the urn.

24. When lo! five of them drew black balls, and the others white.

25. Whereat there were among all present great signs of marvelling.

26. And the more those of the tribe of Magog marvelled, the more did Katspa and Tufas, and Jesui, and the others who were in the secret of the counsel of Derus, pretend to marvel too.

27. Bozrah alone said nothing but he looked unutterable things.

28. Then Katspa arose, and spoke thus:—'Meet it is, we now fill the places of those on whom the lot this day hath fallen, with good men and true, and where shall we find better or truer than among the great Company of merchants, which hath given to us a Jesui, a Malahaleel, and an Edcrop?

29. Whereat Jesui, and Malahaleel, and Edcrop bowed their heads, and all the tribe of Gog raised a great shout.

30. And so it came to pass, that in the place of the six Governors who drew the black balls there were elected of the Company of merchants and chapmen, who came up from the banks of the Mehr—

31. Rogg, who was chief of the family of the Dedelals.

32. Demrogg twin-brother to Rogg.

33. Frererogg younger brother to Rogg and Demrogg.

34. Korasbi, Chief of the family of Karohtipol.

35. David of the house of Farizhee.

36. And Dikon the son of Hari.

37. Proclamation whereof being made, Edcrop arose and spoke thus:—

38. 'Men and brethren! it is commanded that we shall next choose from amongst us one to rule over us for the year ensuing, and who so fit to be our chief as he who hath heretofore managed the reins so well, Bozrah, the great and renowned, who danced at Auksphut before King Solomon and the Queen of Sheba, and who knoweth to drive teams so well?'

39. At which words Bozrah brightened up suddenly, as doth the morning sun emerging from the cloud of night; but Katspa was amazed and confounded, and looked very pale.

40. And as Edcrop spake, so did Tufas, Silihud, Rogg, Demrogg, and the rest.

41. And thus it came to pass that Bozrah was elected Chief Governor for the year ensuing. The which was the fourth year of Bozrah's reign.

42. And Bozrah, who swore he would rather chop off his right hand, than put it to the work of iniquity, by which the five of his early friends of the tribe of Magog, and the honest man of the tribe of Gog, whose name was Oldrobius, were cast out from the Board of Governors, stretched forth that same hand eagerly to grasp the rod of office, which the strangers who had been falsely raised unto their places, tendered unto him.

43. Yea he rejoiced thereat exceedingly, and though they were but feathers of the cuckoo and dodo, which he wore in his cap, he walked forth as proudly into the City, as if they were feathers of the roc and the eagle.

THE "RAILROAD QUARTERLY JOURNAL."—(No. 1.)

ALTHOUGH we should be untrue to ourselves were we to assent to the self-introductory and not very original sort of statement, of the editor of this new "Quarterly," that such a periodical has been "long and loudly called for"—seeing that the same "extensive field of inquiry" which the editor proposes to take under his special charge, we have ourselves laboured in for no inconsiderable period, in a manner which he himself very handsomely acknowledges (p. 86) to have been distinguished for an "able advocacy" of the "best interests" of railways; yet we can say with perfect truth, that as a fellow-labourer in that field we give him a most hearty welcome. We like exceedingly the searching, honest, and fearless spirit, with which he has entered on his task, and though it has carried him in not a few instances further than we could think of accompanying him, we cannot but anticipate from it, upon the whole much useful service to the railway cause. We gladly recognize, too, in the work a very extensive and familiar acquaintance with railway subjects, great acuteness of observation, and not unfrequently much originality of suggestion. The faults to which the editor inclines most, and which, if not speedily corrected, will tend greatly to mar his usefulness, are an all-pervading self-sufficiency, and an excessive carelessness about what he says or how he says it. He is for ever quoting a certain "Treatise on Railways," as if it contained the sum and substance of all needful knowledge on the subject—a good treatise truly, but by no means all that he supposes it to be; gives always what comes uppermost, whether it is calculated to serve a useful purpose or no; and holds all the helps which clear language and correct punctuation, can give to sound sense and pointed remark, in very considerable contempt. The subjects treated in the present number are, Railway Accidents (at great length, occupying 108 pages out of 136)—The Railway Oligarchy—The Greenwich Railway—Paying Dividends from Capital—Liabilities of Railways—Railway Bye-Laws—Rival Lines—Resident Railway Servants—and the South-Western Railway and Mr. Easthope, &c.

THE GREAT NORTH OF ENGLAND RAILWAY—PARTIAL OPENING.

THAT portion from Darlington to York of this great line of railway, was opened on Monday last the 4th inst. for traffic and merchandise only. The Bank Top station was the point from which the engines were to start.

The waggons laden with coals had been despatched down the line from the different collieries with horses, &c., a few days previously, near to Croft, where the stupendous and beautiful Skew Bridge crosses the river Tees, which divides Yorkshire from the county of Durham.

Precisely at eight o'clock, *the Pilot* engine left the coach station now being erected near Darlington, and was speedily followed by *The Wotton Castle*, conveying Edward Oxley and Nathaniel Plews, Esqrs., two of the Directors; *The Magnet*, with Captain O'Brien, the secretary, and Mr. Cockin; *The Tory* with several of the Company's officers, and several other engines with the workmen of the Company, for Croft, where the coal waggons were attached to them, and they started, majestically crossing the noble structure, the Tees Bridge, which being of considerable elevation afforded a splendid sight to those assembled to witness the proceedings of the several trains, as they arrived at the different depots of Cowton, Northallerton, Thirsk, Alne, and York, left the waggons allotted to each place, whilst the Directors proceeded to York, were they arrived without any accident worthy of notice occurring. About ten o'clock another train started with J. C. Hopkins, Esq., one of the Directors, and throughout the day several more trains were dispatched. The first trains contained between 300 and 400 waggons each, having about 53 cwt. of coal, and extending about one mile in length. The largest pieces of coal which we noticed, was one marked with white letters "Pease's St. Helen's New Winning," which contained about 44 cubic feet of coal, and weighed nearly 30 cwt.; and another piece, about 30 cubic feet, and weighed about 20 cwt.

The day was exceedingly stormy, and an immense quantity of snow fell during the morning, which prevented a larger number of persons being present than there were, although an engine, with a train of coal waggons, is no novelty to the inhabitants of this locality, and is an every-day sight, the Stockton and Darlington Railway, which has been in operation 13 or 14 years, being in the immediate neighbourhood, and adjoining the Great North of England Railway.

The trains were about seven hours in performing the journey to York, including stoppages, &c., and the Directors returned in one of the North Midland Railway coaches in about two hours and fifty minutes.

BOLTON AND PRESTON RAILWAY.—On Thursday, the 24th ult., Sir Frederick Smith, the Government Inspector, made a trip on this line as far as Rawsthorne Bridge, which is about a mile and a half from Chorley, and as far as the railway is completed, for the purpose of making the requisite inquiries, and reporting thereon, previous to the opening. He has since sent in his Report to the Directors, and approves greatly of the railway; but there being at present only one line of rails, and it being the intention of the Company to open as far as Rawsthorne Bridge in the middle of this month, he required the appointment of a number of policemen to prevent any collision. All fear, however, may be dissipated on this head, when it is known that the Company do not intend, until the railway is in a state of completion, to work more than one engine. On Saturday last, about twenty gentlemen, principally Directors, made an experimental trip on the line as far as Rawsthorne Bridge; John Hargreaves, Esq., the Chairman, and Benjamin Hick, Esq., vice-Chairman, forming part of the company. They were welcomed on the way by repeated cheers from persons assembled at the different bridges, particularly at the Adlington station, where the Blackrod band played on their approach, "See, the conquering hero comes." The extensive viaduct for carrying the railway over Cowlin Brook was an object of great attraction; and, after a minute inspection, the Directors expressed their highest satisfaction, not only with the workmanship, but also with the strength and beauty of the structure. On their return to Bolton, the party dined together at the Swan Hotel.—*Manchester Guardian.*

MANCHESTER MANAGEMENT — MANCHESTER AND BIRMINGHAM RAILWAY AND "EXTENSION."

To the Editor of the Railway Times.

SIR,—The numerous failures in joint-stock banks in Manchester, and the want of success of all of them has often induced me to reflect on the causes, for with the reputation which Manchester possesses in the industry, economy, and successful enterprise of its merchants and manufacturers, I would naturally have expected similar effects from their *joint* undertakings, whether banks or railways; but experience has shown the reverse to be almost uniformly the case in both these descriptions of enterprise.

The report given in your last journal (with the excellent and just observations upon it) of the meeting of the proprietors of the Manchester and Crewe Railway has at once, and completely, dispelled the illusion, and has made it quite evident to my mind that the Manchester merchants are too much occupied with their own business to afford the necessary attention to that of the public. They seem to think that a few paid servants or agents are competent to direct the affairs of large concerns, where millions are embarked—persons who, perhaps, never before had the disposal of thousands, and whose chief recommendation to their employments has been the *mismanagement* of their own *little affairs*, and consequent want of such situations and their emoluments! To expect success from such appointments is indeed to seek "figs from thistles;" and when we further consider that these Managing Directors are mainly influenced and directed by lawyers and engineers who have a positive interest in the extent of the capital to be raised and *expended*, ought we to be surprised that the concerns under their management are discredited and at a discount? Is it not, rather, surprising that they have any credit at all, even to the borrowing of any portion of their capital from the public at large?

A month ago I would not have believed that any set of men forming a joint-stock company could have been found in England (and least of all in Manchester) to vote away 700,000*l.* without even knowing or asking how it was to be employed—and that after an expenditure of 1,200,000*l.* on an undertaking, the entire cost of which was originally estimated at 24,000*l.* per mile, or 72,000*l.*! Such, in fact, was my belief when I became an original subscriber to the undertaking, and such was my confidence in Manchester prudence and management that I disregarded all the warnings of your various correspondents, and continued to be a proprietor till the late meeting convinced me of their truth. But I have paid for my confidence and obstinacy, by which others may, I hope, benefit; and I think I may venture to assure Mr. Ashton and his colleagues that they must look elsewhere than to the London Stock Exchange for the sale of their shares on the raising of their proposed loan. Indeed, I am much mistaken if the *exposé* of Manchester talent in Railway Management made at their especial meeting does not reduce their *joint-stock* credit lower in proportion to their high individual reputation as merchants on which I and others so confidently reposed.

Let Mr. Ashton retire to his mills and manufactures, where he is respected and respectable; in the chair of a railway meeting he figures as the mere puppet of his paid colleagues and officials, to work out by *his* reputation *their* objects, views and *emoluments*, and thereby to waste millions of the property of his (like myself) confiding friends and neighbours.

With many thanks for your valuable communications to me and other distant proprietors who could not attend the meeting,

I remain, Sir, your constant reader, but

NO LONGER A PROPRIETOR.

London, Stock Exchange, Jan. 5, 1841.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY.

To the Editor of the Railway Times.

SIR,—Since the date of my last letter to you on this subject, I have ascertained that the promoters of the measure are endeavouring to obtain support to it by the statement, that it is a *Government undertaking*, having been *recommended* by the Commissioners appointed to select and report on the best line of railway communication between London, Dublin, Edinburgh, and Glasgow.

It affords, certainly, no slight evidence of the weakness of the cause in which these gentlemen are engaged, that it should need to be propped up by unfounded representations of this nature; but it is at the same time important, that the landowners on the line, and the public, should not be deterred by such means from offering that opposition to the measure which their own opinion of its merits would otherwise induce them to do.

Be it known to them, then, (and I challenge contradiction on the point), that the Government have not now, and never have had, anything directly or indirectly to do with the project, and that it has never, in any manner whatever, been in the remotest degree recommended by the Railway Commissioners.

The statements, therefore, as to the support of Government, made no doubt with a view of deterring landowners from opposing, and obtaining subscriptions to, the measure, are totally *devoid of foundation*.

It is perfectly true that the Railway Commissioners, in their Report dated April, 1840, recommending the adoption of the Chester and Holyhead line, in preference to one by Shrewsbury, did advert to the fact, that if the then proposed Manchester and Birmingham Extension Railway should be made, the length of the journey to Chester would be eight miles less than the distance by the present lines on which they made the calculations which had induced them to recommend the adoption of that route to Holyhead, but in no respect whatever did they recommend, or even express a favourable opinion of, the Extension line.

In order that there may be no misapprehension on this point, I subjoin extracts from the Report itself, and also from a subsequent Report, dated 16th May, 1840.

16*th April*, 1840.—"In computing the distance from London to Crewe to be 165 miles 49 chains, we base our calculations on the length of the present line to Birmingham, and thence by the Grand Junction to Crewe, but if a line should be executed from Rugby to Stafford, or from Rugby to Stone, the distance would be shortened by about eight miles."

16*th May*, 1840.—"It appears, that by the London and Birmingham, the Grand Junction, and the North Union lines, the communication by Rugby is complete as far as Preston, being a distance of 218 miles 51 chains; and we find that the Lancaster and Preston Railway is in a state of great forwardness. When this last-mentioned line shall be finished, the distance by railway from London to Lancaster will be 238 miles 69 chains."

To this is appended a note, as follows:—

"*If a line should be formed from Rugby to Stafford, or from Rugby to Stone, the distance would be shortened by about eight miles.*"

The Commissioners were obliged of course in the discharge of their duty, to allude to the projected line in extension of the Manchester and Birmingham Railway, but it would have been difficult for them to have done so in fewer words, or in terms less likely to be construed as being expressive of recommendation—though obviously, if they had considered the measure deserving of such recommendation, the opportunity was very favourable for giving it a good word.

So far, however, from recommending the Stafford and Rugby Line for adoption, it will be seen from the foregoing extracts, that the Commissioners in recommending a line of railway from Chester to Holyhead as the best route to Dublin, formed all their calculations on the *existing* lines, and merely allude to the Extension project, as one known to be under discussion, and which, if *carried into effect*, would alter those calculations to the extent of eight miles. No one can of course gainsay the *fact* that eight miles in distance would be saved by the Extension line, and no one has ever attempted to do so, though whether any time would be saved by it is more than doubtful; but does this amount to a *recommendation* for such an object to outlay two millions of money, in making a new line 54 miles long parallel to, and competing with, those which already exist, and which are fully competent to the carriage of all the traffic passing on them?

From the known talent and good judgment of Sir Frederic Smith and Professor Barlow, the Commissioners by whom the Reports alluded to were prepared, and from the care with which they have on all occasions endeavoured, as appears by their Reports, to protect existing interests so far as the necessities of the public would permit, and to avoid the useless outlay of capital, I have no hesitation in stating my *conviction*, that if the question were submitted to them, whether the Stafford and Rugby Railway were a necessary or expedient measure or not, they would give their decision in the negative.

Equally convinced am I, that if it were referred to them to determine which line would be most beneficial to the country—the Stafford and Rugby, running nearly parallel to the existing lines, approaching not one single town of importance, and having for its only object the saving of eight miles in a journey of 150, or a line from Macclesfield to Derby, by the Churnet Valley, passing through several important towns and districts, now unapproached by any railway, and affording a direct communication between Manchester, Derby, Nottingham, Leicester, and the Eastern districts, they would not hesitate to decide in favor of the latter. If they *did* decide, that it was expedient to lay out two millions in order to save eight miles in the journey by the present lines, what would they say to the abandonment of the Pottery line, which would have saved six more and benefited a most important district?

So far from the measure being a Government one, or one likely to be met with much favour from the Legislature, it is well known that the Railway Committee who sat in the last and preceding sessions of Parliament, strongly reprobated the system of allowing any line of large traffic to fall into another, where it could be avoided; and in the case of the London and Croydon and London and Greenwich Railways, absolutely compelled the latter, in the last session of Parliament, to form a quadruple line of railway at an enormous expense, in order to prevent danger to travellers from the Junction between the two lines. I do not give this as a case quite parallel to that of the proposed Extension Railway falling into the London and Birmingham at Rugby, (for misrepresentation is not *my* object) but it is sufficiently in point to show the feeling of Parliament on the subject of the dangers likely to arise from the junction between two lines of great traffic; and unless an obvious public necessity could be shown for such a junction, there is not a chance that Parliament would permit it, or if they did so, it would be under such restrictions with regard to the mode of junction and the passing of trains from one line on to the other, as would more than compensate by delay for any advantage in point of distance, which the Extension line would afford.

The following extracts from the Reports of the Railway Committee on this subject, will serve still further to illustrate their sentiments, which after the laborious inquiry instituted by them into the working of railways, cannot fail to be received by all parties, whether in or out of Parliament, with the greatest consideration:—

Report of 9th August, 1839.—

"After every inquiry upon this subject, your Committee feel bound to state it as their opinion, that where the same line of rails is to receive trains arriving from two or more separate lines of com-

Digitized by Google

munication, the risk of accidents is greatly increased."

Again, in the Report of the 14th May, 1840, the Committee, after stating that experience had taught the Directors of railways, that they could not with due regard to the efficiency of their railway, and to the safety and convenience of the public, allow rival parties to place and run engines or carriages on the same lines, proceed as follows:—

"The Committee of last session directed their attention to this point, and after a careful and lengthened inquiry, they recorded their deliberate opinion, 'That it is indispensable both for the safety and convenience of passengers and the public, to prohibit as far as locomotive power is concerned, the rivalry of competing parties on the same line of railway, although such prohibition involves the continuance of a monopoly.'

"It is unnecessary to repeat the grounds on which this opinion is founded, but your Committee beg to state to the House, that they entirely agree with the conclusion come to by the Committee of last session, and that further investigation has only strengthened the reasoning and confirmed the correctness of the opinion above recorded."

The foregoing extracts are peculiarly applicable to the present case, where the London and Birmingham, and the Stafford and Rugby Companies, would be competitors for the same traffic, nor can it of course be supposed for one moment, that the former would be made to yield their convenience to the latter.

The interests of the large population to be accommodated by the London and Birmingham line, independently of their Liverpool and Manchester traffic, will always demand, that the tributary lines which fall into it shall be made subservient to the arrangement on the principal trunk line; and the result would necessarily be, that even travellers to Liverpool and Manchester would find themselves far more safely and efficiently accommodated, and more speedily conveyed by means of the present lines through Birmingham, than by leaving those lines at Stafford or Rugby, and being there subject to the delays and inconveniences inseparable from the use of different lines of railway under distinct managements. Neither can it be doubted that one line of considerable traffic can be far more efficiently and economically worked and maintained than where that traffic is divided, and this I have reason to know is the expressed opinion of the most eminent judges on railway matters, to whom Parliament, in case of an inquiry on the subject, would without doubt refer.

I feel satisfied, that an impartial and dispassionate view of the merits of this most absurd and ill-judged scheme, cannot but lead all parties to the same opinion, as to its total inutility to the public, the wanton waste of capital it would occasion, and the inevitable ruin in which it would involve its shareholders.

Nothing but misrepresentations can obtain for it support, and these I have endeavoured to dispel by *facts*.

Having already quoted so much from the printed Reports of the Railway Committee, I must trespass on your columns for one more extract in conclusion, from that of the 9th August, 1839, which is as follows:—

"In several instances, undoubtedly, plans for railways have been submitted to Parliament as *mere speculations*, by projectors totally unconnected with the district, who were little anxious for the accomplishment of the undertaking so long as they could derive a temporary profit from the preliminary business, which such works necessarily occasion."

How far this quotation may be applicable in the present instance, I will not pretend to say. The promoters of the Bill may be, for aught I know, only sanguine and not interested projectors, but I think I may venture to affirm, that the Stafford and Rugby Railway is not a measure, which has arisen out of the wants or wishes of the *public*, and that however much a spirit of speculation may induce parties to take shares in it for the purpose of mere gambling, it can never be adopted by any person in his senses, as a means of *bonâ fide* investment of capital.

I am, Sir, your most obedient servant,
AN INHABITANT OF STAFFORDSHIRE.

MANCHESTER AND BIRMINGHAM RAILWAY AND ITS *EXTENSION* (?)

To the Editor of the Railway Times.

SIR,—Why has the line of the Manchester and Birmingham Railway, through the Potteries, been given up?

In 1836, the Manchester and Birmingham Company applied to Parliament for a line only to Crewe and were defeated; and in 1837 they obtained leave to make one through the Potteries, availing themselves of the support in Parliament of that important district

In 1840 they abandon the line through the Potteries, and adopt the line to Crewe only, which Parliament in 1836 refused to sanction; yet at the late meeting of the Company, they announce that they have a large surplus capital, and hold up their undertaking as a safe investment upon mortgage on that account!

Is this fair to the inhabitants of the Potteries?

The Eastern Counties' Railway Company have incurred no little odium in stopping their line at Colchester instead of carrying it on to Norwich, not having sufficient funds to carry it further, and the Court of Queen's Bench, in giving judgment on a mandamus to compel them to complete the line to Norwich, affirmed the principle, that if they had funds in hand they were legally bound to do so, having obtained their Act on the evidence adduced of the benefits to arise from making a railway to Norwich.

How does that case differ from that of the Manchester and Birmingham Railway Company? They obtained an Act in a great measure by evidence of the advantages their railway would confer on the Potteries, and up to 1839 they delude the inhabitants of that district with the persuasion that they are going to make that line, and obtain their support to a proposed extension of this railway to Rugby, yet no sooner are they defeated in that object, than they abandon their Pottery friends altogether, and although admittedly with a surplus capital in their hands, refuse to lay out a farthing of it in making the railway through their district! Is this good faith or even common honesty?

Why is it now proposed to sever all connexion between the Manchester and Birmingham Company and the Extension Company, which were originally proposed to form one? Why, but because the Manchester and Birmingham Company dare not show their faces in Parliament under the conviction that they would be compelled to complete the Pottery line.

The Pottery people, however, if they know their *own interests*, will force the insertion of a clause in the Stafford and Rugby Bill (if ever it gets into Parliament) restoring to it its original name of the Manchester and *Birmingham Extension* Railway, and making the execution of its powers dependent on the completion of the Manchester and Birmingham Railway through the Potteries as required by Parliament.

They can never have a better opportunity for gaining their ends against the Manchester and Birmingham Company and dealing out to them a little retributive justice, than will be afforded by the introduction of the proposed Stafford and Rugby Railway Bill, revealing, as it must do, the whole history of the manner in which the intentions of the legislature with regard to a Pottery line have been evaded and set at nought, and how, for the mere purposes of private advantage, the interests of that important district have been trifled with and treacherously abandoned.

I am, Sir, your obedient servant,
A POTTERY MAN.

STAFFORD AND RUGBY RAILWAY.

To the Editor of the Railway Times.

SIR,—I am anxious, through the medium of your paper, to suggest the following questions to the Chairman of the above Company, viz:—

Is the line expected to subsist out of an independent traffic, or out of traffic derived from competition with existing Companies?

If the former, what are the towns which are to supply the traffic?

If the latter, have not the Directors agreed to such terms as will guarantee the Grand Junction Company from all loss?

Assuming such to be the case, what portion of the traffic of the London and Birmingham Railway is it expected will be diverted so as to make the Stafford and Rugby line a remunerative investment?

Is there any *written* prospectus on the subject, giving figures and calculations in lieu of vague verbal assertions?

The traffic of the London and Birmingham Railway derived in a great measure from sources in which the Stafford and Rugby line cannot participate, and affording a dividend to the proprietors, after waiting seven years, of only 8 per cent.; how much of the present traffic on that portion of the line between Rugby and Birmingham only would require to be diverted on to the Stafford and Rugby line in order to make it pay a dividend of 5 per cent. to its proprietors, after defraying all expenses of working and maintaining a line of 54 miles long, and allowing the use of it to the Grand Junction Company at the rate of only a penny per passenger per mile?

What is the precise nature of the agreement made with the Grand Junction Company, and is it such a one as Parliament will ratify to the prejudice of the London and Birmingham Company?

Why do the Manchester and Birmingham Railway Company now refuse to unite with the proposed Stafford and Rugby Company, when in 1839, they were themselves the promoters of the Extension Bill, and it formed an essential feature of their project, that the two Companies should be united into one?

Is it or is it not a fact, that many landowners on the line, who had intimated their intention of opposing the Bill, have been hushed by guarantees of large sums of money in the event of the passing of the Act?

What do the liabilities thus incurred amount to?

How much was spent in the last contest, and how much remains of the original deposits amounting to 100,000*l.*, and will the sum in hand be more than sufficient for a renewed contest?

Must not a call be made immediately on the passing of the Act (if it should be carried) in order to make good the engagements with landowners?

Have not Lords Anglesey and Lichfield both or one of them, who were originally in favour of the Extension Bill, signified their intention of opposing the Stafford and Rugby line?

How many shares have been taken by landowners or others residing on or near the line?

What terms have been made with the Birmingham and Derby Railway Company, for the ruin of their branch to Hampton in Arden?

Must not a new deed be signed, and a deposit of 10 per cent. be paid up by each shareholder on the amount of his subscription according to the Standing Orders of Parliament?

I presume it would be impertinent to inquire how many and which of the late Directors mean to sign the new deed, and to what extent; therefore, that question I will not suggest, but *explicit* replies on all the other points to which I have drawn attention, appear to me essential, in order to enable parties to form a true judgment of the position and prospects of the undertaking in which they are asked to embark their money. There are two classes of persons in every Company,—one who profit whether the concern pays or not,—and the other who pay, and run all the risk of profit or loss attending the speculation.

The former class have generally the management and promotion of the undertaking, and are prepared

Digitized by Google

at all points to combat every objection that can be raised to it, too often from their over sanguine views, drawing on the latter, or paying class, by bright visions of success *in futuro*, which may perhaps never be realized. To this latter class, however, FACTS afford the only true and substantial means of estimating the real merits of the scheme as proposed to them, and of the liabilities they incur under it, and such facts it is the obvious duty of the Directors of the scheme to supply.

I do not know whether the present Chairman of the Extension Railway Company will consent to be the Chairman of the new Stafford and Rugby Company, but if he should, I have little hesitation in believing, that he will consider it due to the proprietors as well as to his own character to afford to them the fullest and most candid information on all points affecting their interests which they may desire to have explained to them.

I remain, Sir, your obedient servant,

MERCATOR.

January 6, 1841.

THE GRAND JUNCTION AND THE STAFFORD AND RUGBY RAILWAYS.

To the Editor of the Railway Times.

SIR,—I trust, at the approaching meeting of the late Manchester and Birmingham Extension Railway Company, if there be any person present who has an interest in the Grand Junction Railway, that he will take the trouble of inquiring whether any stipulation has been made for the withdrawal of the proposed Stafford and Rugby Railway Bill, in the event of Parliament not ratifying the agreement which it is understood has been entered into with the Grand Junction Company. The projected Railway would be a directly competing line to ours, for a distance of more than 30 miles, and if report speaks true, we spent several thousand pounds, and wisely so, in opposing it in 1839. If, therefore, our Directors have now consented to its construction, no doubt the terms offered them have been such as to make it worth their while so to do, but I am credibly informed, that Parliament will not allow of bargains between two Companies, to the prejudice of a third; and this was shown in a remarkable manner in the last session, in the case of a contest between the Birmingham and Derby and Midland Counties' Railway Companies, when, it having been shown that the latter Company had made an agreement with the North Midland Railway Company, giving them certain facilities not accorded to the Birmingham and Derby Company, the House of Lords inserted a clause in the Bill before them, annulling that agreement, and imposing heavy penalties in the event of any similar one being made.

Now it is reasonable to suppose, that the London and Birmingham Railway Company, out of whose traffic alone the Stafford and Rugby Railway is to be supported, will endeavour to expose and upset the agreement made with the Grand Junction Railway.

If they succeed in so doing—*Where are we?* Shall we not run the risk of having a competing line to ourselves, sanctioned, without the advantages of our agreement? We certainly shall, unless there is a *distinct understanding*, openly and publicly avowed, that in the event of Parliament not sanctioning that agreement, the Stafford and Rugby Railway Bill shall be immediately withdrawn.

I have been told that this stipulation has been accidentally *omitted* to be insisted on, and that the promoters of the Bill congratulate themselves on the omission. However this may be, I trust some one at the meeting, to be held on Monday next, will obtain an explicit answer from the Chairman on the subject. And I am, Sir, your obedient servant,

A SHAREHOLDER IN THE GRAND JUNCTION RAILWAY.

Liverpool, Jan. 4, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—The recent accident in the summit tunnel will retard the entire opening of this railway a few weeks, and enable me to offer a few timely suggestions on the future management of the line.

So far, the opening to Littleboro' has answered extremely well; but the receipts between Hebdenbridge and Wakefield have not come up to what was expected, and no wonder, for the traffic of Halifax and Huddersfield will not show itself until the branch lines are formed; neither has the through traffic yet appeared.

The question *whether high or low fares pay the best*, is one which may be entertained by the Great Western, or the Brighton lines, but on this railway the fares MUST *be moderate*, even for *first* class, because they have *twenty miles* further to go than the stage coaches, and therefore to run them off the road, the charge ought to be calculated on *forty* not *sixty* miles to Leeds; at all events the rate per mile should not exceed the Liverpool and Manchester Company's, which is about 2½d. for first class. It is almost a pity the branch lines had not been proceeded with long ago, so that the shareholders may not be disappointed when they see the passenger traffic returns in February, which I fear they will, though I have not the slightest doubt the receipts from goods, live stock, &c.; will be enormous, and more than counterbalance the deficiency. It is expected, by some who are likely to know these matters, that the gross receipts in the goods department will reach *four thousand pounds per week*, and with such a prospect, the present price of Leeds shares must be tempting to the capitalist, without much risk of loss. One source of annoyance to the shareholders is the belief that the Liverpool and Manchester Company have *shirked* the Junction altogether, as the *canal influence* predominates in that quarter; however, the facilities offered by the Old Quay Company in deepening the river to Hunt's Bank, will operate against the Liverpool Company, as they must lose a large portion of their present traffic, which the Junction line would have been the means of retaining.

The evidence of Captain Laws, in your last number, is very valuable, and tends to show the amazing traffic destined to come upon the Manchester and Leeds Railway.

Your obedient servant,

LOCOMOTIVE.

1st January, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—I am much amused by your correspondent's ("Hundred Shares") manner of answering my last. His first letter was principally built upon there being no third class passengers. Mark how he gets out of this difficulty. Although he "travels frequently, and stops a few days at each town," he had to send his servant to inquire at the office if they took third class passengers! John must be a very useful man.

Now for his *parlance* about coaches. All that I wished to impress upon your readers was, that 15 *trips*, if he will have it so, had never been made daily between Rochdale and Manchester—and of this I am certain.

Then he says the *present* receipts form no criterion of what the result will be. But pray, Sir, what *are* the present receipts? That is what we have been wishing to know for the last three months. Let us have them, and then we can form our own opinion on the matter.

As to the branches, I distinctly assert that not one of the *Parliamentary branches* has ever been set out for letting. For an answer as to the Oldham one, I refer him to page 21 of your paper, January 2. The Heywood branch is a mere nothing in comparison with Halifax or Huddersfield. Your correspondent may say he knows of no objection but the cost; has he never heard of the gradients or curves?

In conclusion, Sir, I thank you for your kindness in inserting my former communications, and beg to say that they have done some good in protecting the third class passengers from the pigs!

Yours truly,

TRAVELLER BY RAILWAY.

MECHANICAL ARRANGEMENTS OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—I beg you will allow me, through the medium of your useful journal, to call the attention of railway proprietors to the following considerations, connected with the management of the mechanical department of many of the railway establishments of this country, being convinced that such improvements may be made as will add to the accommodation at present afforded to the public, and materially increase the profits of the proprietors.

The point first in importance as respects economy to each Company, and safety to the passengers, is the selection of the best known kind of locomotive engine; and the next is in having them all made precisely alike for each particular line, and by but one maker, and that the best that can be employed.

The engines being fac-similes of each other will enable the Company, by keeping in store an assortment of such parts as are most likely to require renewing, to replace a defective place with the least possible loss of time, which parts would, in most cases, be much better made by the engine-maker, and would be furnished to the Company at much less cost than if made by the Company themselves. In a large manufactory, one man is generally kept to the making of one article, and he is furnished with tools well adapted for that particular purpose, both of which provisions are essential to good work and despatch.

One advantage of having engines of precisely the same make will be found in the comparatively small number that will be required to work a line; for, instead of having to keep an engine in the repairing shop whilst the new part is being made, in most cases it will be required to be kept out of work only whilst the defective part is being removed, and the new part, already in store, put in its place.

The same remarks will apply to the tenders, the passengers' carriages, and the luggage waggons.

The saving of outlay in these items will be very considerable, in addition to which there will be a saving in the extent of sheds, and in buildings for workshops. Until within a recent period, all that had been done on railways ought to be looked upon as experimental. But we have now sufficient data to enable use to determine—not what is absolutely the best kind of engine, but that certain kinds are not the best at present known, and that some makers have hitherto failed to supply good and durable engines.

I presume it is now an almost general opinion among engineers and practical men conversant with railways, that the present four-wheel engine is not the best. The first engines on the Liverpool and Manchester Railway had but four wheels each, and these were found to be very destructive to the road, partly from the great weight on the driving wheels, but mainly from the pitching and sinuous motion resulting from the alternated reciprocation of the pistons, and the inequalities of the road; and the axles being necessarily placed so near to each other, in some cases not more than 5 feet 3 inches, and I believe never exceeding 6 feet from centre to centre, whilst in six-wheel engines, the distance from centre to centre of the front and the hind axles, ranges from 10 feet 6 inches to 11 feet 6 inches, being about double the distance of those in the four-wheel engines, which according to a well known law in mechanical science, will reduce the injurious effect on both the rails and the engine to one-fourth of that which is produced by the four-wheel engine.

Several witnesses who were examined on the inquest held on the bodies of the sufferers by a late accident on the Eastern Counties' Railway, gave it as their opinion, that the cause of the accident was the using of steam whilst descending the straight inclined plane. It does not appear by the evidence published that any of the witnesses were asked in what way they considered the steam to have acted so as to cause the engine to break the rail, and produce the accident. A simple increase of speed, if the road and the engine were in good order, and constructed on a right principle, would have no ten-

Digitized by Google

dency to cause the engine to fly off or break the rail. Whoever has stood on a bridge over a railway and seen a four-wheel engine at a high velocity, must have noticed a frightful sinuous motion in both engine and train. Many accidents have occurred which, in my opinion, are attributable to four-wheel engines being employed, which went off the rails, where six-wheel engines would have been quite safe. But as a Government Commission will probably be appointed to investigate this subject, I need not give instances at present in support of this opinion.

The next engine which I shall advert to, as not likely to answer the purpose of either railway proprietors or the public, is that known by the name of "the Bogy," or the American engine, of which kind there are about ten on the Birmingham and Gloucester railway, and I believe more are ordered for that line from Mr. Norris, of Philadelphia, and a few from English houses. The price of Mr. Norris's engines, if my information is correct, is enormously high compared with that of English-made engines. For instance, those which he has sent here have cylinders of the following diameters, namely, 10¼, 11¼, and 12¼ inches, and their prices are 1,500*l.*, 1,800*l.*, and 2,000*l.*, I believe, exclusive of carriage and duty. Their quality is very inferior to English-made engines, most of which have copper fire-boxes. Each copper fire-box will last on an average whilst the engine runs 60,000 miles; whereas the American engines on the Birmingham and Gloucester line have iron fire-boxes, the tube plates in which are only ⅛ of an inch thick, and in no instance, as I am informed, have they run more than 1,000 miles before they have, in the language of the men employed to repair them, been "done up in the fire-box." There are but few locomotive engines made at the present time in England with cylinders less in diameter than 14 or 13 inches, and these engines made in the most approved manner, that is to say, each with six wheels, copper fire-box, outside framing, inside cylinders, and crank axle in the driving wheels, brass dome on the steam reservoir, and the boiler and fire-box clothed, may be purchased from the best makers at from 1,300*l.* to 1,500*l.* each, which is but little more than one-half the cost of one of the American engines, including the duty and carriage across the Atlantic. The American engines have six wheels, four of them small ones under a kind of truck, which supports the front of the boiler, inside framing, iron fire-box, outside cylinders placed at an angle with the horizon, straight axle in the driving wheels, and, I believe, without a brass dome on the steam reservoir or clothing on the fire-box. Those persons who are acquainted with locomotive engines will perceive from the above brief description of two classes of engines, that the English engine will cost the manufacturer from 200*l.* to 300*l.* more to construct than the American engine. It has been asserted that these American engines are capable of drawing a greater load with a given pressure of steam than English engines are; it would be a waste of time to attempt to show the glaring fallacy of this statement.

The importance to a Railway Company of keeping the road and all the carriages and engines in good order can hardly be overrated, for on this must depend in a great measure the degree of regularity in the arrival of trains, and the safety of passengers on any railway. Upon the degree of perfection which a railway shall attain in these important points will also materially depend the comparative cost of working a line.

It must be evident that railway carriages, &c. to be kept in good repair at a light cost, must be on a good principle and be well made; and the repairing department must be superintended by a clever practical man of sound judgment and experience, who will give the most vigilant and systematic attention to the keeping of all things of which he has charge in good repair. Such men are very rarely to be met with, railways having come into existence in such rapid succession as to cause the demand for men with the requisite qualifications to be much greater than the supply, and unfortunately Directors are but seldom competent judges of a man's fitness, with reference to his mechanical knowledge, and therefore are liable to be imposed upon by the misrepresentations of other parties. That improper persons have been selected to fill many of those important situations is evident from the heavy charges exhibited in the half-yearly accounts of many of the Railway Companies for keeping the engines, tenders, carriages and waggons in repair. And yet where the cost of maintenance is highest these things are generally found in the worst condition.

This anomaly would be readily accounted for by any man of moderate mechanical knowledge, who would take the trouble to inspect the repairing shops attached to the different railways. In many of these he would find as great a number of draughtsmen and pattern-makers engaged as are employed in some of the largest engineering establishments in the kingdom, besides a large number of mechanics of various trades, nearly all of whom are paid by the day instead of by the piece. From a want of proper management on some of the lines, many of the mechanics are employed almost constantly during the night, at 50 per cent., and sometimes 100 per cent., extra wages.

Many of the Resident Engineers, as they are termed, when first appointed know nothing either of the theory or the practice of mechanics, notwithstanding which they have scarcely obtained a slight knowledge of the separate uses of the different parts of an engine, before they begin to imagine themselves great mechanical geniuses, and forthwith employ draughtsmen to make improvements, as they term them, but which would be better called childish and injurious alterations. Did they not throw away the money of the proprietors, and endanger the safety of the public, by having their whims put into operation, it would be amusing to see the airs of superiority which these persons assume, and with what contempt they treat the experienced and generally intelligent coach and engine makers. Large sums have been expended on at least two railways in making improved buffing apparatus, neither of which improvements is half as good as that in common use, and would not have been continued for a moment by any ordinary practical man of common sense. Other amateurs having imbibed the fallacious notion entertained by one of our Engineers that the smaller the bearing surface of an axle the less will be the friction on that axle, have caused the axles of carriages and luggage waggons to be made too weak for the load they were intended to bear; the consequence has been, in addition to alarm and injury to passengers, numerous broken axles, destruction of carriages and other property, and material interruption to the working of the lines.

Whilst it is fully admitted that every improvement in the machinery of a railway is a national benefit, it is contended that railway proprietors and the public would be much better served by the resident Engineer taking care that those things of which he has charge be kept in good order rather than that he should attempt to improve machines of which he can have but an inferior knowledge. If any such resident Engineer should believe that he has discovered some decided improvement, the same means will be open to him at his own expense, as are resorted to by others, to put his contrivance to the test of experiment. It may then be truly said, that every railway Directory ought strictly to prohibit the making of experiments in any of their work-shops; for as it is notorious that not more than one inventor in a hundred is successful in his inventions, it is an injustice to the shareholders to permit the expenditure of their money merely to convince the Engineer of his folly.

Several railways might be mentioned on which the blundering and lavish expenditure by the Engineer-in-Chief has been so great, that no amount of traffic which can reasonably be expected will yield a fair return on the capital. There are four lines of railway in which the mechanical department has been more grossly mismanaged, than any man unacquainted with those cases could well conceive to be possible. A partial reform was effected in two of those lines at the beginning of the year 1840, but very much still remains to be done. I perceive by a puff which appeared recently in several periodicals, that one of the engineers removed from a reformed repairing shop, who is patentee of various improvements on locomotive engines, is now carrying on his operations under another Company, whose engines and carriages he may, if not interrupted, soon improve, until the Company has not one fit to run on the railway. These remarks are made without any bad feeling towards the individual, who might in his proper place become a useful man, but for the illusion under which he labours, that he is a genius: they are made in the hope that Railway Directors may be induced to give more attention than they have hitherto done to the manner in which their workshops are conducted.

Without due attention on the part of the Directors they may also be greatly deceived by the Resident Engineer, with reference to the relative efficiency of the engines built by the respective makers, and may be thus induced to order engines from inferior makers, thereby increasing the liability to accident, and consequent annoyance and injury to the passengers, and subjecting the Company to great ultimate pecuniary loss: for bad engines are liable to be frequently out of order, and thus to cause delays, which delays will in addition to the annoyance and disappointment that may be occasioned to passengers, interrupt the regular working of the line as respects other engines. With bad engines a greater number of pilot engines will be also required to be kept with the steam constantly up, than with good ones; thus entailing a heavy expense in enginemen and in fuel, in addition to the extra quantity of fuel that each bad train-engine will consume. If bad, instead of good, engines be used, a much greater number will be required to work a railway. This may be ascertained from experience, by referring to any of the several railways on which engines made by different makers are employed.

On some of these railways the difference in the quality of the engines is so great, that whilst three out of every four of those made by one house may be kept in work, not more than one in four of those made by another house can under similar circumstances be kept in efficient operation; from which it will appear that, on a line requiring only six engines to be in constant work, a stock of 10 or 12 of the one make would be sufficient, whilst of the other, from 24 to 30 would be required, independently of extra pilot engines. In these cases, the cost of repairs would differ as 4 to 1 at least, and where more numerous repairs are required, larger workshops and sheds will be needed, in which to store the engines, and a greater number of labourers to keep them clean; to which may be added that the boiler and some other parts suffer more from oxidation when out of, than when in, use. Another evil is, that any Company having bad engines, cannot obtain good enginemen or good mechanics, whilst the Railway Company which shall have the best engines may have its choice of such men.

As Directors may not be aware of the tricks that may be resorted to by any unprincipled engineer to induce them to order engines from the maker whom he may improperly choose to recommend, it may be well to mention some of those tricks which are known to have been practised.

In some cases, with the view, no doubt, of making it appear that the engines of a favourite maker were the best, the time, or part of it, employed by the workmen in repairing them, has been set down to other engines; this practice has also been resorted to lest the engineer's miscalled improvements should appear to have cost too much. Another expedient has been this,—on an engine by the favourite maker, or one with the engineer's improvement, arriving at the station, to take a number of men from other engines to examine and adjust it, and in case of repair being required by the favoured engine, to set down the material and time to some other work. Another practice has been to put new tubes and brasses in engines, not in favour, before the old ones were one-half, and in some cases even a quarter

Digitized by Google

worn out, by which such engine would appear in the *books* to be more costly to keep in repair than those of some other maker.

I would also call attention to the neglected state of the carriages on many railways. I believe on all, along which I have travelled, one of these defects being a great nuisance to passengers is easily detected, namely, a bad wheel tire, which strikes the rail with a palpable blow at every revolution, and produces an unpleasant effect on the feelings of the passengers. I have in most instances, when annoyed by a thumping of the carriage, got out at some stopping place and looked for the defective wheel, which in many cases I have found to be much indented on the rolling surface, and this must injure the rail or carriage more or less, whereas the tire if re-turned or skimmed, as it is sometimes called, soon after it became indented, would probably last some years, whilst if it be continued in work, it will soon be battered too much to admit of repair.

Another point much neglected is the state of the bearing springs; this neglect is unpardonable, as a glance at a line of empty carriages is all that is necessary to show whether the springs are adjusted so that the buffers at both ends are of the same height, and by the simple application of a gauge it would be seen whether the buffers were of the same height in all the carriages.

The only other points which it may be requisite at present to notice are the want of proper care that both wheels, on any one axle, shall be of equal diameter, and that the axles are rectangular with the line of traction, and the faces of the wheels on each side are in the same plane.

Inspection of the wheels has often convinced me that a defect in one or more of these particulars has existed, for it has happened that the flanche of one wheel of a pair has been worn much by rubbing again the rail, whilst the flanche of the other wheel has shown little or no wear. These defects cause increased friction, and involve great danger of getting off the rails.

I am of opinion that much greater attention would be paid by some makers of locomotive engines, and railway wheels and axles, to the proper construction of these articles, if immediately after an accident occurring from defective construction the Directors of the railway would cause an account of the accident, with the name of the maker of the defective article, to be published in the *Railway Times*.* Something of this kind is much needed, and would, if it had been adopted some years back, in all probability have induced certain parties to pay more attention to the strength of waggon and passenger-carriage axles; and the attention of other parties would have been directed to the efficient staying of the fire-boxes in their engines, for the want of which several limbs have been broken, and lives lost—and, in two of the cases alluded to, if the Coroners had inquired into the construction of the engine, it would have been next to an impossibility that any verdict short of manslaughter could have been recorded, and that most likely would have been against the engine-makers. In one case it ought to have included the person who repaired the engine.

Whilst it is admitted to be impossible in every case effectually to guard against the use of defective materials, it is contended that with due care such a thing as the breaking of an axle would be a rare occurrence, and the bursting of a boiler would never be heard of.

I am, Sir, your obedient servant,
SCRUTATOR.

January 4, 1841.

PREVENTION OF RAILWAY ACCIDENTS.

To the Editor of the Railway Times.

SIR,—Would not it be an improvement to the railways to have the rails at the stations (say for 50 yards in length, or as long as is sufficient to accommodate the *longest* trains) raised very considerably, and the approach to the station made by *very* steep gradients both ways? The advantages of this formation, I conceive, would be that, *in arriving*, the engineer need not relax his speed so early as he is now compelled to do, and the steep ascent would very much retard his arrival, and make the use of the breaks (the noise of which is very offensive to passengers) less necessary. Indeed, it seems possible to me to have the ascent so steep as *almost* to render needless *any precaution* for stopping. The advantage in *departure* would be, that in descending the incline the train would be *immediately* in full speed, and it would relieve the engine of the great strain which is required to set a train in motion.

I am, Sir, yours, &c.
W. J.

MR. BERGIN'S BUFFING APPARATUS.

[From the *Railroad Quarterly Journal, January*, 1841.]

FROM numerous experiments, and after much deliberation, we are of opinion that the buffing apparatus is incompetent for the part it has to perform. It is upon a wrong mechanical principle, and that of Mr. Bergin ought to have a more extended trial. The two are described with drawings in the "Treatise on Railways," and their difference is shortly as follows:—By the present mode, the first carriage receives the worst shock of all when the train runs against any obstacle; the second receives a less shock, and so on, decreasing to the last; and when an engine runs into the rear of a train the order is reversed. Mr. Bergin's apparatus distributes the shock equally throughout, and it has the additional advantage of always having the buffers of one height, which is not the case in the present ones. Experience has largely shown that with the present buffers it is the foremost carriages which are in general smashed to pieces when the trains run against any thing, and the after ones when the train is struck behind. In each case the buffer springs, for want of strength, are pushed home, and then comes the crash, while it has happened in more than one case that passengers at the other extreme end of the train have hardly felt any thing, and in some instances have not known that a collision has taken place. The risk is therefore totally unequal, while with Mr. Bergin's plan all have the same chance. On many railways, second and third class coaches have nothing but a leather buffer stuffed, without rods and springs, and some merely a block of wood. This requires alteration. No carriage whatever should be allowed to go in a passenger train without these appendages, until, at any rate, railways are so improved in their management and mechanical arrangements, that there may be a rational hope of their running without collision, which is most certainly not the case at present.

RAILWAY MEN'S CHRISTMAS FESTIVAL.—On Christmas evening, one hundred men were assembled by the Rev. W. C. Osborn, at Batheaston, to partake of beef, coffee, &c., provided for them at the expense of those friends who desire their temporal and spiritual good. They afterwards attended Divine Service in the Railway Episcopal Chapel. The Christmas evening was chosen by the Chaplain to entice the men from the beer-houses in the village, and in order that he might have the opportunity of impressing on them the vitally important considerations connected with the season.—*Bath Paper.*

LONDON and BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-Yearly Meeting of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, on Wednesday, January 27, 1841, at the London Tavern, Bishopsgate-street, at 1 o'clock precisely, when five members of the present Direction will go out of office, and who being duly qualified, will offer themselves for re-election, and at which meeting certain shares upon which the 7th Call has not been paid, and have been in consequence thereof declared forfeited, under minute of the Board of Directors of the 19th of June last, will be submitted for confirmation of such forfeiture; and at which meeting there will be laid before the Proprietors certain articles of agreement entered into between this Company and the London and Croydon, and the South-Eastern Railway Companies, relative to the joint purchase, enlargement, alteration, and proprietorship, use, and management of a station for the said three Companies near London-bridge, in the parish of St. Olave, Southwark, in pursuance of the Resolution of the General Meeting held on the 30th of January, 1840.

The transfer books of this Company will be closed on the 16th instant, and remain shut until after the meeting.

Under provision of the Act of Parliament, no person can vote at this meeting who shall not have paid all calls due.

JOHN HARMAN, Chairman.
THOMAS WOOD, Secretary.

London and Brighton Railway Office, 10, Angel-court, Throgmorton-street, Jan. 6, 1841.

SPECIFICATIONS OF RECENT PATENTS, —The MECHANICS' MAGAZINE, Part CCXV., price 1s. 6d., just published, contains Abstracts of the following Patents:—Gooch's, for improvements in locomotive wheels and engines to be used on railways; Smith's, for resisting shocks to railway carriages and trains, and also in the mode of connecting and disconnecting railway carriages, also in the application of springs to carriages; Bursill's, for improvements in weighing and weighing machines; Martin's for the manufacture of certain descriptions of cement; Roberts', for an improved mode of fastening certain kinds of horn and hoof handles to the instruments requiring the same; Shuttleworth's, for certain improvements in railway and other propulsion: Greaves's, for improvements in the manufacture of knives and forks; Bush's, for improvements in fire-arms and cartridges; Dain's, for the construction of vessels for containing or supplying ink; Montmirail's, for the manufacture of bread; Hawley's, for improvements in pianos and harps; Winkles', for the construction of paddle-wheels and water-wheels; Lance's, for a new and improved instrument or apparatus to be used in whale fishery, parts of which upon an increased scale are also applicable as a motive power for driving machinery; Coates', for propelling canal and other boats; Prosser's, for manufacturing buttons from certain materials, which improvements in manufacturing are applicable in whole or in part to the production of rings and other articles from the same materials; W. S. Stocker's, for improvements in machinery for making nails, pins, and rivets; A. S. Stocker's, for the manufacture of tubes for gas and other purposes; Nickels', for improvements in the manufacture of braids and plaits; Hampson's, for block printing on woven fabrics; Carpenter's, for the application of machinery for propelling, steering, tacking, and veering vessels. Also, illustrated descriptions of Whitelaw and Stirrat's patent water mill; Bursill's patent weighing machines; Essay on the means of promoting safety in railway carriages, by Sir George Cayley, Bart.; Messrs. Gabriel and Co., Imperial saw mills; Instructions for blasting rocks; and Messrs. Mullin and M'Mahon's patent safety fuse.

As well as original communications, on a new solution of the disc problem; Improved method of adjusting sundials; On the importance of uniformity in the rates of railway clocks; On the course or path of the electric fluid; Demonstration of the theory of parallels; Comparative advantages of black and white paint; On the various systems of condensation; On the superiority of screw propellers over paddle-wheels; Suggested improvements in railways and carriages; Preservative properties of sulphate of copper; A new concrete for roads and streets; Mode of estimating the power of the crank in steam-engines; Plan for working the slide valve of locomotive engines with two fixed eccentrics; Instructions for moulding and casting in plaster, &c. List of designs registered, and Patents granted in December. Title and Index to complete the Volume, &c.

The MECHANICS' MAGAZINE, Vol. XXXIII., price 10s. boards, just published, illustrated with upwards of *two hundred engravings*, contains Abstracts of all the most interesting specifications of recent English patents, as well as complete lists of English, Irish and Scotch patents, granted during the last six months; list of Designs registered, &c. &c. &c.

THE MECHANICS' MAGAZINE, No. 909, published this day, price 3d., contains, Description of the patent Vesta stove (with six illustrative engravings); Improvement in Messrs. Whitelaw and and Stirrat's patent water mill, (with an engraving); Geometrical demonstration of the unequal decrease of the degrees of longitude in equal differences of latitude, (with engraving); Table of the outward and homeward voyages of the Atlantic steamers in 1840; Remarks on the present state of the locomotive engine on railways, exhibiting its defects, and showing in what particulars it may be improved; Biographical notice of the late Mr. William Hazledine, iron founder; as well as original communications on various interesting and important subjects.

Published at the Mechanics' Magazine and Patent Office 166, Fleet-street, and sold by all Booksellers and Newsmen,

* The following from the Belgian papers of a recent date may be interesting.—ED. R. T.

Department of Public Works.

STEAM ENGINES.—The 31st article of the Royal decree of 24th June, 1819, contains the following directions:—

"Our Minister of Public Works shall publish every year in the *Moniteur* an account of all the accidents which shall have happened in the preceding year to steam engines of every description. *This account shall mention the name of the manufacturer of the boiler, and that of the owner of the engine; the effects produced by the accident, and the recognised or supposed causes to which they are attributed.*" In conformity with this direction, the Minister of Public Works announces, that it appears from the reports which have been transmitted to him, that during the year 1840 no accident has occurred.

These reports include both the stationary engines (the number of which in the kingdom is about 1,160), and those of the steam-boats *and the locomotives.*

(Signed) CH. ROGIER,
The Minister of Public Works.

Brussels, Jan. 3, 1841.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill, is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, and manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4:) and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Rouke and Varty, 31, Strand; W. Lund, 24, Fleet-street; T. Lund, 57, Cornhill; Jackson, 23, Cannon-street, City: in Edinburgh, by Sanderson and Son, 32, St. Andrew-square: in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street: in Birmingham, by Osborn and Sons, Bennett's-hill: in Liverpool, by T. Dismore, Bold-street: in Manchester, by Allen and Raphael, 28, Nightingale-street: and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1	0	0
A ditto in a handle for the pocket	1	5	0
A ditto with Mordan & Co.'s ever-pointed pencil	1	10	0
A ditto, ditto, with reserve of leads	1	14	0

December, 1840.

TO ENGINEERS AND MILLWRIGHTS.—To be Disposed of, by Private Contract, a limited number of Licences for erecting Messrs. WHITELAW AND STIRRAT'S PATENT WATER MILL.—A description of this Water Mill will be found in a pamphlet just published. The Mill may also be seen in operation at the Shaws Water Works, Greenock; at Mr. Stirratt's Manufactory, Paisley, and other places. From its simplicity, regularity of motion, absence of liability to wear and tear, adaptation to every kind of water-fall, however high; its giving more available power from a given quantity of water and height of fall, and the cost of erection being less than one-third the price of an overshot water-wheel, it will no doubt supersede the use of the latter altogether.

Parties taking Licences early will secure to themselves superior advantages. For further particulars and terms of license, apply to Mr. Robertson, Mechanic's Magazine and Patent Office, 166, Fleet-street, London; Mr Whitelaw, 4, Wellington-street, Glasgow; or, to Mr. Stirratt, 61, High-street, Paisley.

TO ENGINEERS, MILLWRIGHTS, AND OTHERS.

Just published, with five Copperplate Engravings, price One Shilling.

A DESCRIPTION of WHITELAW and STIRRAT'S PATENT WATER-MILL, with an account of the performance of one of these machines lately erected at Greenock. To which is added, a practical method of determining the power which may be obtained from any given fall of water; with directions for economising the water which runs down a fall, and of rendering available as a water-power the rain which falls on high lands. By JAMES WHITELAW, Engineer, Wellington street, Glasgow.

Published at the Mechanics' Magazine Office, 166, Fleet-street, London; and sold by D. Robertson, 135, Trongate, Glasgow.

TO TIMBER MERCHANTS AND OTHERS.—STOCKTON AND DARLINGTON RAILWAY AND MIDDLESBROUGH DOCKS.—The above Companies are in want of 4,228 Permanent Railway Sleepers. Also, 12,000 Wood Blocks, the Sleepers to be 8 feet long, 15 inches broad, and 6 inches thick; the Blocks to be 2 feet 6 inches long, 12 inches broad, and 9 inches thick, the whole to be cut out of English Elm or Larch, and delivered at Middlesbrough on Tees in the following quantities:—half on or before the 15th of April, 1841, the remaining quantity to be completed and delivered on or before the 15th of July, 1841.

Further particulars, and a printed form of tender, may be obtained by applying to John Harris, the Companies Engineer, at Darlington; the Tenders to be forwarded to him on or before the 11th of January, 1841.

Coals and Coke of every description may be had as back-loading from Mr. Pestreovich.

Darlington, 16th December, 1840.

WATERPROOF LUGGAGE COVERS.—Manufactured by JOHN EVES, late Milton and Co., Cut Side, Limehouse, London, for Railway Trucks, Waggons, Barges, &c. The great improvement in the manufacture of these Covers, which are now in use on the principal Lines, and which can be recommended with confidence to the notice of Dock and Railway Companies, Barge and Waggon Proprietors, Contractors, Builders, and others, as an article of durability, possessing all the necessary qualities—viz., that of being perfectly Waterproof, and flexible, and not subject to adhesion, a fault much complained of in tarred Cotton, and can be made of either light or heavy quality to suit the purposes required. It is also prepared for Covering Roofs, Verandas Couch and Guard Aprons, Horse Cloths, &c.

A supply of Covers on hand for Hire, to Builders, Excavators, Bargeowners, &c., requiring temporary Coverings, Rick Cloths, Poles, Blocks, Cordage, &c.

NORTH KENT RAILWAY, Office, 42, Lombard-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

NATIONAL PROVIDENT INSTITUTION. Enrolled under Acts of Parliament passed the 10th of Geo. IV., and 4th and 5th of Will. IV., relating to Friendly Societies. For Mutual Assurance of Lives, Endowments, and Annuities. 15, Nicholas-lane, King William-street, London.

DIRECTORS.

C. Pritchett Pousfield, Esq.	Thomas Hodgkin, M. D.
John Bradbury, Esq.	Robert Incham, Esq. M.P.
William Cash, Esq.	Joseph Jackson, Esq.
Thomas Castle, Esq.	Samuel Hayhurst Lucas, Esq.
James Crotts, Esq.	Chas. Lushington, Esq. M.P.
John Feltham, Esq.	John St. Barbe, Esq.
Joseph Hargrave, Esq.	Richard Shortridge, Esq.
Samuel Smith, Esq.	

Medical Directors.—J. T. Conquest, M.D., F.L.S.; Thomas Bevan, Esq., F.L.S.

Solicitors.—Messrs. Hardwick and Davidson.

The distinguishing characteristic of this Institution is Entire Mutuality. The Whole Profits will be equitably apportioned amongst all the Assurers, who have the option to apply them either in reduction of the Premiums, or to increase the amounts assured.

The first division will be made in December, 1842, and subsequently at the end of every five years.

All Assurers are Members; have right to attend General Meetings, to vote on the appointment of officers, and are directly interested in all the proceedings of the Institution.

No Member can be involved in legal expense, as should any dispute arise, it must be settled by arbitrators appointed agreeably with the aforesaid Acts of Parliament.

Assurers may secure the benefit of their Policies to Nominees.

On the 15th of December, 1830, the Fifth Annual Meeting of the Members was held at the Office, and the following is extracted from the Report of the Directors, presented on that occasion.

The Directors of the NATIONAL PROVIDENT INSTITUTION, in presenting their fifth Annual Report to the General Meeting of the Members, feel increased satisfaction in being enabled to announce the continued prosperity of the Institution confided to their management; and on referring to previous Reports, they are much gratified to find that every anticipation indulged in by them of its permanent success, has been more than realised.

The accounts to the 20th November last have been duly audited, and the capital stock of the Society on that day was £30,545 13s. 9d., which is invested with the Commissioners of the National Debt, and in mortgages, conformably with the Acts of Parliament, and the rules of the Institution—being an increase in the amount reported last year of £5,586 2s. 11d.

The annual income arising from premiums and interest of capital at the above date was £3,051 10s. 10d., showing an increase from the 15th December, 1838, to the 20th November, 1840, of £5,544 6s. 8d.

In the accompanying table, which shows the progressive business of the Institution, it will be observed that the number of Policies issued during the last 12 months has exceeded that of any previous year, except the first.

Years ending	No. of Policies Issued	Amount of Premiums received. Periodical. £	s.	d.	Single. £	s.	d.	Amount of capital. £	s.	d.
Nov. 20, 1836	616	8,021	12	2	4,466	14	7	10,736	3	0
" 1837	465	12,270	8	11	4,344	17	3	31,592	10	5
" 1838	409	17,417	13	11	4,028	1	8	36,856	0	10
" 1839	490	22,987	9	0	4,691	1	11	43,959	10	10
" 1840	454	27,256	11	5	5,230	1	6	50,545	13	9
Total	2,904									

Members whose premiums become due on the 1st January next are hereby informed, that the same must be paid within 30 days from that date.

The Annual Report of the year ending November 20, 1840, is now ready, and may be had on application at the office.

JOSEPH MARSH, Secretary.

London, 28th December, 1840.

PARIS AND ROUEN RAILWAY.—CONTRACT FOR WORKS.—The Directors are now ready to receive Tenders for the Construction of the Works necessary for this Railway between the Junction with the St. Germain Railway near Combevoie and the town of Poissy, the distance being 14,300 metres 9 miles, or thereabouts.

The Contract includes all labour and materials for the formation of the Cuttings, Embankments, Bridges, Culverts, Fencing, and other Works; also the Ballast, Sleepers, Pins, and other materials necessary for laying, forming, and entirely finishing the permanent road. The Company will provide the land Iron Rails, Chairs, and Wooden Keys. The Contractor will be required to provide every other thing whatsoever.

The Plans, Sections, Specifications, &c. may be seen at the Company's Offices, 52, Rue basse du Rampart, Paris, and other information may be obtained from Mr. Locke, the Company's Engineer, at his Offices, 20, Adam-street, Adelphi, London.

The Directors do not bind themselves to accept the lowest Tender.

No Tender will be received after the 1st February, 1841.

By Order of the Directors,

ADOLPHE THIBAUDEAU, Secretary.

Paris, December 26th, 1840.

TO CONTRACTORS, BUILDERS, IRON-MASTERS, &c.—GREAT WESTERN RAILWAY, BRISTOL DIVISION.—For Sale, the following useful Railway and other Stores, all made of the best description of materials, and in good condition:—About 70 tons of flat bottomed rails, 45 lbs. per yard; 500 tons chair rails, 30 lbs. per yard; Chairs, averaging 8 lbs. each, with a large assortment of Box Wings and Crossings; a great number of Sleepers; 250 Railway Waggons; 50 Stone Trucks, all with 30 inch wheels, and 3 inch square axles; several Strong Cranes with wrought iron guys, and gearing complete. A 6 inch Wheel, Timber, Carriage, 2 Waggons, 13 Carts with 6 and 8 inch wheels; also 6 superior Cart Horses, Smiths' Bellows, Anvils, Troughs, &c. A large quantity of Tunnel Centres and Iron Work for Tunnel purposes: Memel and Pine Timber; Crow Bars of various sizes: Sledges, Jumpers, and Blasting Tools, &c., &c. Two River Barges, one of twenty tons, the other of 50 tons burthen. Also, 3 Pile Engines.

The whole of the above named Materials lie on convenient Wharfs for Shipment, on the banks of the River Avon, between Bath and Bristol, from whence they can be conveyed at a cheap rate, to any part, the port of Bristol offering every advantage to Shippers.

For terms and further particulars enquire of Mr. Roberts, 7, Vernon place, London; of Mr. Hugh Ross, Saltford, near Bath; or Mr. Charles Nixon, Keynsham near Bristol.

Saltford, 25th Nov., 1840.

THE HULL ADVERTISER.—Established half a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England; while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser	78,000
Hull Packet	16,000
Hull Times	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.

The HULL ADVERTISER is published every Friday morning, in time for post, at the office, 26, Lowgate.

ANDREW SMITH'S PATENT WIRE ROPE. WILLIAM FOX and CO. having obtained the exclusive license for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire drawers, Birmingham.
Robertson and Co., 12, Gorce Piazzas, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Pothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every expectation. It has been used Five Years.

THE CIVIL ENGINEER AND ARCHITECTS' JOURNAL, SCIENTIFIC, AND RAILWAY GAZETTE.—The January Number, Price 1s. 6d., contains an Engraving and Description of the Pier at the Port of St. Malo—Drawings and Description of Whitelaw and Stirratt's Water-wheel—Improvement on Eccentrics of Steam Engines—Mr. Stephenson's Report on the Supply of Water to the Metropolis—Architecture of Liverpool—Architectural Criticism by Candidus on the style of Inigo Jones—Reviews of Pambour, on the Steam Engine and other Works—Proceedings of the Institution of Civil Engineers—Institution of British Architects—British Association—Progress of Railways—Public Buildings—List of New Patents—Index and Preface to the last Volume.

H. Hooper, Pall Mall East, and R. Groombridge, Panyer-alley, Paternoster row.

*** Volume I. II. and III. may be had Bound in Cloth, Price 1l. each.

VAN BUTCHELL ON FISTULA, &c.

Fourth Edition, just published, in 8vo., cloth boards, price 7s. 6d., enlarged,

FACTS and OBSERVATIONS relative to the successful Mode of Treating Piles, Fistula, Hemorrhoidal Excrescences, Tumours, and Strictures, without cutting or confinement; illustrated with numerous cases; being a familiar exposition of the Practice of S. J. VAN BUTCHELL, Surgeon and Accoucheur.

Published by H. Renshaw, No 356, Strand; sold also by the author, No. 16, Percy-street, Bedford-square.

"This volume presents to us a number of illustrations of his singular success under circumstances that would have induced despair in any professor of less mastery, or less accustomed to accomplish cures where cures seem impossible. The statements here made are most convincing, and place beyond doubt the superiority of the treatment to which he refers."—*Court Journal.*

LONDON AND BIRMINGHAM RAILWAY.—FINAL CALL of EIGHT POUNDS on the THIRTY-TWO POUND SHARES.—The Directors of the London and Birmingham Railway Company having resolved that a Fourth or Final Instalment of Eight Pounds per Share, payable on or before the 15th of January, 1841, should be called for on the £32 Shares of this Company, the Proprietors of such Shares are hereby required to Pay, on or before the appointed day, to any one of the undermentioned Bankers, the sum of £8 on each of their respective Shares, viz.:—

London—Messrs. Glyn and Co., 67, Lombard-street; or at the Office of the Company, Euston Station.

Birmingham—Messrs. J. L. Moilliet and Son; or the Birmingham Banking Company.

Liverpool—The Bank of Liverpool.

Manchester—Messrs. B. Heywood and Co.; or the Bank of Manchester.

The Bankers have been severally instructed to charge interest, at the rate of 5 per cent. per annum (according to the provisions of the Act of Incorporation), on all sums which shall be tendered after the 15th January.

GEORGE CARR GLYN, Chairman } of the Board of
I. F. LEDSAM, Deputy-Chairman } Directors.

By order,

R. CREED, Secretary.

December 19, 1840.

SOUTHAMPTON DOCKS.—NOTICE is hereby given, That the HALF-YEARLY INTEREST, computed to the 31st ultimo, at the rate of £4 per cent. per annum, on the capital of the Company actually paid up, will (pursuant to the Act of Incorporation, be PAID to the Proprietors, at this office, on and after Monday next, the 11th instant, between the hours of 11 and 3 o'clock.

The Directors take this opportunity to acquaint those of the proprietors who cannot conveniently inform themselves by personal inspection of the works at Southampton, or inquiry at the office in London, as to the actual progress of the undertaking, that the construction of the first, the great tidal dock, of 16 acres area, proceeds with unremitting vigour and success. The contractors have from 400 to 700 men, according to the weather, besides a large force both of steam and horse power, at work on it day and night, and the Directors have perfect confidence that they shall redeem their pledge to one of the large transmarine steam mail packet companies to be ready for the reception and despatch of the fleet of steam ships, eight in number, by the 1st of September of the present year. Three other Steam Navigation Companies, on the largest scale, are at the present moment in actual negotiation for the adoption of Southampton as their port of arrival and departure. The second, or close dock, of 14 acres area, for the reception of merchant vessels, is already in so forward a state that there exists no reasonable doubt that it will be in active and profitable operation before the close of next year. By order of the Court of Directors.

GEO. SAINTSBURY, Secretary.

Southampton Dock Office, 19, Bishopsgate Within, London, January 4, 1841.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—

From the

SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver, 10*s.* 6*d.* each pair.

Omnibuses to and from every train—Fare 6*d.*

Just published,

THE RAILWAY CALENDAR FOR 1841, illustrated with an elaborate and splendidly executed MAP of the RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information, which embraces, amongst a great variety of useful and interesting matter, the names of the Chairman, Deputy-Chairman, Engineers, and Secretaries, of every Railway in the kingdom, Transfer Agents, Bankers, and much exclusive information; besides answering every purpose of a general Almanack.

Price 1*s.* 6*d.*—In Case for the pocket, 4*s.*; mounted on canvas and rollers, 5*s.*—In neat frame, 5*s.* 6*d.*

Published at 122, Fleet-street; Groombridge, Panyer-alley; Tyas, Paternoster-row; Bell, Fleet-street; and sold by all Booksellers and Newsmen.

NORTH MIDLAND RAILWAY—ALTERATION OF TRAINS.—The Public are respectfully informed that on and after Monday, the 28th of December, 1840, the TRAINS of this Company, in connection with those of the London and Birmingham, Birmingham and Derby, Midland Counties, York and North Midland, and Hull and Selby, will START and ARRIVE according to the following tables, until further notice:—

DEPARTURE and ARRIVAL of TRAINS between Hull, York, Leeds, Sheffield, Derby, Birmingham, and London.

*Trains to which third-class carriages are attached.

FARES.

	London to Derby.	Sheffield	Leeds.	York.	Hull.
1st Class	1 14 0	2 5 0	2 12 0	2 15 0	2 18 0
2nd Class	1 3 0	1 10 0	1 15 0	1 17 6	1 19 6
3rd Class	0 15 0	0 18 6	1 1 0		

Third Class Passengers are not booked through to or from London.

First and Second Class Carriages are attached to all the Trains.

Third Class Passengers may be conveyed from London to Leeds in the day, by a Train leaving London at 7 a. m., and Derby at 6 p.m.; and from Leeds to London in the same time, by the 15 minutes past 7, a.m., from Leeds. Gentlemen's Carriages and Horses conveyed over the London and Birmingham Railway by these Trains, are taken at a cheaper rate.

Passengers by the half past 9 a.m., Down Train from Derby will be conveyed direct to Manchester.

Parcels, &c., are conveyed by all the Trains, and are received at all the principal coach offices in the kingdom.

Carriage Trucks and Horse Boxes are kept at all the principal stations; but to prevent disappointment, it is desirable that notice be given the day previous to their being required.

Post Horses are always in readiness on the arrival of the Trains at the Derby and Leeds stations.

Time is allowed at Derby for refreshment.

By Order, H. PATTESON, Secretary.

Office, Warnford-court, Throgmorton-street.

TO ARCHITECTS, BUILDERS, SURVEYORS, &c.—The Manchester and Liverpool Plate Glass Company, having made arrangements with Mr. JOHN SCOTT, of Princip-street Works, to represent their interest in the sale of Plate Glass, at Birmingham and its environs, beg to assure you, that any orders forwarded by him will meet with prompt attention. Samples, and any information required may be obtained, and orders executed, by applying to their Agent, Princip-street Works, Birmingham.

WANTED for the Berlin and Stettin Railway, a quantity of about 7,000 Tons of RAILS to be delivered next year, either the whole or greatest part, and the remainder in Spring, 1842. Offers will be received at our Office till 20th of January next, by letters sealed and marked "Tender for Rails."

Particulars of Contract and Drawings may be had at Messrs. N. M. Rothschild Sons, London; and Messrs. Zwilchenbart & Co., Liverpool.

The Directors of the Berlin and Stettin Railway Company.

Stettin, 10th December, 1840.

TUCK'S HERMETIC ENVELOPES, on an entirely new plan (*Manufactured by Machinery, and registered pursuant to Act of Parliament*) offer advantages possessed by no other Letter-cover yet devised. The Postage Stamp Label is affixed to the Envelope in such a manner as to serve at once to seal and frank the Letter.

Separate Waxing or Wafering rendered unnecessary.

Time in making up and dispatching less than before introduction of the Penny Postage system.

All envelopes hitherto made on the old plan may be easily opened without breaking the seal, their contents read or abstracted, and the envelope re-placed in its original state, so as to defy detection. But this cannot be done with the HERMETIC ENVELOPES, which renders them invaluable for the enclosure of Bills of Exchange, Remittances, Confidential Communications, Legal and Official Documents, &c.

May be had at the Office, 122, FLEET-STREET, in quantities of not less than 250 of various sizes, in neat paper boxes, from 10*s.* to 15*s.* per 1000, and of all Stationers in the kingdom.

*** Orders also received at 138, Aldersgate-street.

This day is published,

TUCK'S ROLLER CALENDAR for the Year 1841.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda, indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board-Room, Counting-House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5*s.* 6*d.* In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Published at 138, Aldersgate-street, London. Sold wholesale, by Hodgkinson, Son, and Burnside, Stationers, Skinner-street; and may be obtained of any Stationer in the Kingdom.

N.B. A new Calendar can be fitted into the box at the expiration of the year.

This day is published,

TUCK'S MAP OF THE RAILWAYS THROUGHOUT ENGLAND AND WALES TO THE CAPITAL OF SCOTLAND, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1*s.* 6*d.*; in paper covers, 1*s.*; mounted on canvass, in cloth case, 2*s.* 6*d.*; on rollers, 3*s.* 6*d.*

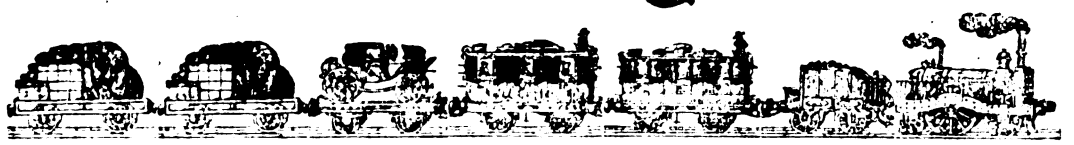
Published at the RAILWAY TIMES Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster-row; Hyde & Co., and G. Bell, Fleet-street; Mann, Cornhill; and by all Booksellers and Newsmen.

Published weekly, price 6d.,

THE MINING JOURNAL, RAILWAY and COMMERCIAL GAZETTE, forming a complete record of the proceedings of all Public Companies

The MINING JOURNAL is the only newspaper devoted to Geology, Mineralogy and Metallurgy; combining therewith *Reports of the proceedings of Public Companies, Correspondence from the English and Foreign Mining Districts, Sales and Purchases of Ores, prices of Metals and Materials*, prices of English and Foreign Funds, Shares in Mines, Railways, Joint-Stock Banks, Canals, &c., with much original and interesting Scientific Intelligence, &c., forming an invaluable record of every occurrence relating to

MINES, RAILWAYS, JOINT-STOCK BANKS, &c.



The Mining Journal is published at 2 o'Clock every Saturday afternoon, at the Office, No. 37, New Broad-street, City, price Sixpence, and may be had of all Booksellers and Newsvenders in town and country.

*** The Advertisements inserted being confined to prospectuses of new Companies, Notices of Meetings, Calls, and Dividends, or other matters intimately connected with the Capitalist, as also sales of mineral property, form an interesting feature in this publication.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 38, Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, January 9, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 154. Vol. IV.—No. 3.] SATURDAY, JANUARY 16, 1841. [Price 6d.

EAST ANGLIAN RAILWAY COMPANY.—At a meeting of the Inhabitants of Thetford, held at the Town Hall of that Borough, on Tuesday, the 5th day of January, 1841;

JAMES FYSON, Esq., Mayor, in the Chair.

Upon the motion of the Right Honourable the Earl of Euston, M. P. for Thetford, seconded by Mr. H. Browne, it was unanimously resolved,—

1st. That this meeting is impressed with the strong conviction that the Borough of Thetford and the surrounding district will be benefited by the construction of a railway, passing through or near it to the Metropolis, as it will thereby be placed upon an equality with other parts of the kingdom where railroads are completed and in progress, especially from its situation on the river Ouze, which, communicating with Lynn, would facilitate the transit of farming and other produce (should such a railway be completed) to a station to be formed at Thetford.

Moved by C. Fyson, Esq., seconded by — Clay, Esq.—

2nd. That this meeting is of opinion that the line of railroad most advantageous to this town, as well as to the counties of Norfolk and Suffolk, is that projected by John Unparth Rastrick, Esq., proceeding from Yarmouth to Bishop's Stortford, by way of Norwich, Wymondham, Attleborough, Thetford, Newmarket, and Cambridge; and this meeting having also observed the announcement of the formation of the East Anglian Railway Company, for the purpose of carrying out such line, do pledge themselves to afford their cordial co-operation with such Company.

JAMES FYSON, Mayor, Chairman.

Moved by John Deck, Esq., seconded by Mr. Bradford,—That the thanks of this Meeting be given to the Chairman.

RAILWAY FROM NORWICH TO LONDON.—At a meeting of the Landowners of the County of Norfolk, held at the Swan Inn, Norwich, on Thursday, the 7th day of January, 1841;

The Lord SONDES, in the Chair;

It was unanimously resolved,—

1st. That this meeting is of opinion that it is desirable for securing the prosperity of the agricultural and commercial interests of Norfolk, that the county should possess, with the least possible delay, the advantages of a railway communicating to the metropolis.

2dly. It was also resolved, that a committee be appointed to consider of the best means of carrying into effect the preceding resolution; to consist of

The Lord Berners.	W. Birch, Esq.
The Lord Sondes.	William Gurdon, Esq.
Sir Jacob Astley, Bart.	The Mayor of Norwich.
Sir T. B. Beevor, Bart.	Isaac Jermy, Esq., Recorder of Norwich.
Sir E. M. K. Lacon, Bart.	
Sir Wm. Foster, Bart.	The Mayor of Yarmouth.
Edmd. Wodehouse, Esq., M.P.	The Mayor of Thetford.
W. L. W. Chute, Esq., M. P.	Charles Evans, Esq.

On the motion of the Dean of Norwich, seconded by W. Birch, Esq., it was resolved,—

That the thanks of this meeting be given to the Lord Sondes, for his able and impartial conduct in the chair.

SONDES, Chairman.

Notice is hereby given, That the Committee will meet on Thursday, 21st January instant, at twelve o'clock in the forenoon, at the office of Messrs. Foster and Unthank, Norwich, when all persons desirous of making any communications to the Committee, may do so by addressing the same to Lord Sondes, the Chairman of the above Committee, at the above-mentioned office, on or before Saturday, the 16th instant.

BRISTOL AND GLOUCESTER RAILWAY.—CONTRACT FOR WORKS, WICKWAR TUNNEL.—Notice is hereby given, That the Directors will receive at their Offices, Exchange Buildings, Bristol, on or before 12 o'clock on Monday, February 8th, Tenders for the construction of the Wickwar Tunnel, and works connected therewith.

Drawings and Specifications of the Works will be exhibited at the Company's Offices, Exchange Buildings, Bristol, on and after Wednesday, 30th December inst.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office at One o'clock on the 8th February.

ROBERT FLETCHER, Secretary.

Bristol, December 22, 1840.

RIBBLE NAVIGATION.—Notice is hereby given, That the HALF-YEARLY GENERAL MEETING of the RIBBLE NAVIGATION COMPANY will be held at their Office, Chapel Walks, in Preston, in the county of Lancaster, on Thursday, the 21st day of January instant, at 11 o'Clock in the forenoon.

RICHARD FILKINGTON,
Secretary to the said Company.

Preston, Ribble Navigation Office, 2d January, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Now ready, in 1 Vol. 4to, 600 pages, 17 plates,
Price £1 11s. 6d.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated, by Francis Whishaw, Civil Engineer, M. Inst. C. E.

"The book is dedicated to the railway capitalists of the United Kingdom, and no capitalist who studies his own interest will remain long without it. It is a work of immense labour and research—very clearly and methodically arranged—most exact and circumstantial in all its details—rich in original and authentic information—generally honest, impartial, and judicious in its praise and censure, and embellished to profusion with splendid engravings."—*Railway Times.*

London: Simpkin, Marshall and Co., Stationers' Hall Court.

RECIPROCATING SYSTEM OF RAILWAYS.—By this system the most complete Railway, with the best appointments, including engines, carriages, &c., calculated for any amount of traffic, may be effected at from £10,000 to £16,000 per mile according to the nature of the country to be traversed, and the expected amount of traffic. By this mode *accidents* by *collision* are rendered next to *impossible*.

FRANCIS WHISHAW.

Gray's Inn, and Hampstead, Middlesex, January, 1841.

GEOLOGICAL MAP OF CENTRAL AND WESTERN EUROPE.—Mr. WEALE, after a long preparation, has now completed for publication a large GEOLOGICAL MAP of England, Wales, Scotland, Ireland, France, Germany, Switzerland; portions of Italy and the Austrian and Prussian States. Corrected to the present time. By W. S. HUGHES, F.R.G.S. Finely coloured, price £1 10s.; mounted and varnished on rollers, or folded in a case, price £2 2s.

*** The Geological features of these countries offer much research to those who seek information on minerals and the precious metals.

59, High Holborn.

ADAMS'S BOW-SPRINGS having been in use on various Lines of Railway upwards of Twelve Months, and having been found, in addition to their acknowledged ease, materially to diminish draught, and to increase safety and durability, they are now offered with the utmost confidence to Railway Managements. Testimonials from various Railways may be seen at the Vertebrated Carriage and Bow-Spring Manufactory of Samuel Adams, 159, Drury-lane, London.

N. B. These Springs, applied to carriage trucks prevent the damage to paint axletrees from vibration.

SOUTH EASTERN RAILWAY COMPANY.—A Special General Meeting of the Proprietors will be held at the London Tavern, Bishopsgate Street, in the city of London, on Wednesday, the 20th day of January instant, at One o'Clock in the Afternoon precisely, to take into consideration the propriety of applying to Parliament for powers to make a Branch Railway from the line of the South Eastern Railway at Ashford, to Canterbury and Ramsgate or one of them.

JOSEPH BAXENDALE,
Deputy-Chairman of the Board of Directors.
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street, 5th January, 1841.

SOUTH-EASTERN RAILWAY.—To CONTRACTORS FOR FENCING.—The Directors will meet at their office, No. 10, Coleman-street, London, on Tuesday, the 2nd day of February, 1841, at half-past One o'Clock in the afternoon precisely, to receive Tenders from parties willing to contract to fence off the line of Railway with Post and Rail Fencing, from the Cranbrook and Maidstone turnpike road, in the parish of Staplehurst, to Grove Bridge, on the turnpike road leading from Ashford to Hythe, in the parish of Sellinge, being a distance of 20 miles or thereabouts.

The Specification and Conditions of Contract may be seen on application to Mr. P. W. Barlow, the Resident Engineer, at the Railway Office, Tunbridge, and at the Office of Mr. Thomas Thurston, Land Surveyor, at Ashford, on and after the 1st day of January, 1841.

The Directors will not consider themselves bound to accept the lowest Tender, nor will any Tender be received after One o'Clock on the day appointed for receiving the same.

By order of the Directors,
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street, 23rd Dec. 1840.

THE LONDON STOCK AND SHARE LIST, published every Saturday evening. Terms, £1 1s. per annum. Postage, 9s. extra, payable in advance.

This List contains the closing prices of each day's actual transactions upon the Stock Exchange, from Monday to Saturday inclusive. The length in miles, miles opened, number of shares, amount per share, amount paid up, last calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom. The present nominal value, and every other essential particular of the principal Insurance Companies, Joint-Stock Banks, Bridges, Docks, Institutions, Canals, Gas-Light Companies, Water Works, British and Foreign Mines, and other Miscellaneous Joint-Stock Companies, North American Securities, Government Funds, Foreign Stocks, Course of Exchange, Bank of England Averages, Private and Joint-Stock Bank Circulation, Grain Averages, Remarks upon the Money Market, &c. This List is got up in a most convenient form for binding, is peculiar for its lucid arrangement, and contains more matter than any other similar publication.

The same Proprietors also publish THE LONDON DAILY STOCK AND SHARE LIST, in which is given the ACTUAL DAILY TRANSACTIONS upon the Stock Exchange to 4 o'Clock, p. m. Published every evening. Terms, £5 5s. per Annum. Postage, 30s. extra, payable in advance.

They likewise publish A DAILY LIST OF NOMINAL QUOTATIONS, containing the "Jobber's" NOMINAL PRICES of the leading Railway Shares, Consols, and Spanish, at the commencement of the day, 10 o'Clock, a. m. and at the close of the market, 4 o'Clock, p. m. Published every evening. Terms, £2 10s. per Annum. Postage, 30s. extra, payable in advance.

These Lists have been established nearly 12 months, under the patronage of the most eminent Members of the Stock Exchange, Bankers, and other Capitalists interested in Public Securities, and are attended to by parties who have access to the best information, and are practically acquainted with the markets.

Orders for the regular supply of the above Lists to be forwarded to the Proprietors, J. S. TRIPP & Co., 12, Copthall-court, London.

FOR SALE, TWO SELF ACTING SLIDE-LATHES, and two Planing Machines of the best quality; also a pair of Condensing Steam Engines, with 12 inch Cylinders, and 3 feet Stroke.—Apply to A. MYLNE, Engineer, West-street, Glasgow.

EAST ANGLIAN RAILWAY.

NORFOLK COUNTY MEETING.

(From the *Norfolk Chronicle.*)

On Thursday the 7th instant, in pursuance of advertisement, a very numerous meeting of landowners of the county favourable to the construction of a railway from Norwich to London, was held in Norwich.

Amongst the noblemen and gentlemen present on this occasion were—

Lord Sondes, Lord Berners, Hon. W. R. Rous, Hon. and Rev. the Dean of Norwich, Hon. Ridley Colborne, Sir Jacob Astley, Bart., Sir Jacob Preston, Bart., Sir Thomas Beevor, Bart., Sir William Beauchamp, Bart., Sir E. K. Lacon, Bart., Sir Wm. Foster, Bart., Edmond Wodehouse, Esq., M. P., H. N. Burroughes, Esq., M.P., W. L. W. Chute, Esq., M.P., Edward Fellowes, Esq., M.P., John Lacon, Esq., N. Micklethwait, Esq., R. Marsham, Esq., Rev. Canon Surtees, Rev. P. Gurdon, W. H. Windham, Esq. W. E. L. Bulwer, Esq., Major Blomfield, Major Loftus, John Longe, Esq., H. D. Hemsworth, Esq., Wyrley Birch, Esq., J. Wright, Esq., H. S. Partridge, Esq., J. T. Mott, Esq., Wm. Gurdon, Esq., Captain Cubitt, Captain Ives, Captain Blakiston, K. Harvey, Esq., Joseph Scott, Esq., Rev. C. Penrice, Rev. J. Holmes, Rev. T. P. Slapp, Rev. A. Keppel, Rev. S. Colby, Samuel Bignold, Esq., Isaac Jermy, Esq. (Recorder of Norwich), E. Willett, Esq. (Mayor of Norwich), R. Crawley, Esq., Dr. Locke, H. S. Patteson, Esq., Alex. Campbell, Esq., Captain Money, Charles Evans, Esq., N. Palmer, Esq., Wm. Repton, Esq., John Blake, Esq., W. Mitchell, Esq., F. R. Reynolds, Esq., C. J. Palmer, Esq., and a large number of persons both of the county and city interested in the measure.

Lord Sondes, having been requested to take the chair, observed that the object of the present meeting being very well known, it was unnecessary for him to take up their time further than to remark that this was a meeting of landowners to consider the most feasible plan by which a railway communication could be obtained between the metropolis and this county. He now called upon any gentlemen who had resolutions to propose on this subject.

W. L. W. Chute, Esq. M.P., said, as he walked into this room a resolution had been placed in his hands, which he had much pleasure in moving—namely, "That this meeting considers that a railway from London to Norwich and Yarmouth is essential to the agricultural and commercial prosperity of the county." He supposed that few would doubt that it was essentially necessary to all persons in this county to have a railway. Whether it was advisable, at first, to have such a mode of communication at all, might be doubted of by many; but it must be borne in mind that in some counties railways were already completed, and in others they were in progress; it was out of the question, therefore, for the county of Norfolk to stand still, unless they desired to be left behind, and divided and shut out, as it were, from the rest of England. It was not his intention to enter upon the merits of this or that particular line, he merely urged upon this meeting the importance of such a mode of communication being obtained by this county, in order that goods might be conveyed speedily to the metropolis. It would be most advantageous to the landowner and the yeoman to be able to send his cattle to the London market with as little expense as possible, and that all parties should be able to transact business expeditiously, and with ease to themselves. Having, therefore, no doubt in his own mind of the advantage and importance of a railway through this county, he most readily moved this resolution.

Wm. Gurdon, Esq., said he had much pleasure in seconding the resolution; and perhaps after the part he had taken with the view of securing the construction of a railway from Norwich to London, he should be excused for thus coming forward. From a correspondence with the Lord Lieutenant he learnt that some gentlemen had been labouring in the same course, but what was the extent of those labours and how far they had proceeded he had been unconscious. But it was represented to him by the Lord Lieutenant that those gentlemen were anxious to submit their plans to the present meeting. Now, if a railroad was to be established he was quite of opinion that it was only to be done by the unanimous support of all persons, and that it must be carried on with spirit, but also with prudence. A railroad of this extent required a large sum to be expended. Having a portion of his property invested in railway shares, he perhaps, knew a little more of this subject than many present. He knew how difficult it was to set a work of this kind going, and that it required the cordial co-operation not only of the landed proprietors, but of the commercial interest, and that they should all try to unite in one feasible plan. If they could do so he was ready to bear his share; but he would not lend his support, or encourage others to do so, unless he saw a fair prospect before them of a commercial speculation. To attempt to raise one or two millions they must have something more than mere prospectuses. This might appear cautious language from one who avowed he took great interest in having a railway; but he should consider that he was liable to censure if he endeavoured by any proceeding to induce others to embark in a cause in which he was not prepared himself to embark also. If there were parties who wished to lay their plans before this meeting, he saw no reason why they should not be heard, and they should be able to judge, perhaps, as to its merits. There could, he thought, be but one desire upon the subject, namely, to adopt whatever plan was the most feasible. (Hear, hear.)

Mr. Palmer, the barrister, said he had hoped that the mover of his honourable friend who seconded the resolution would have favoured the meeting with some exposition to show the advantages of a railway. To say that it is essential to the prosperity of agriculture appeared to him to be placing the landowners in a ridiculous position. Why, the want of a railway would never obscure the sun, it would not prevent the trees from growing, or the cattle from fattening; but in declaring it to be essential to the prosperity of agriculture they should be stultifying themselves. He should, as an amendment to the resolution, move, "That it is advisable that a Committee be appointed to consider the best means of obtaining a railway." Because, after passing the resolution which had been proposed, if they did not go on, where would they be? If they did not carry out the resolution, they would have the county gentlemen saying, if there was agricultural distress, Oh! our prosperity is gone because we have no railway. When they looked at the private interests placed in jeopardy—although he allowed generally that private interests were not to be placed in opposition to the public good — yet, considering the private interests placed in jeopardy, before they agitated a measure of this kind, they ought to act, not merely with common prudence, but with an extreme degree of caution, because they would have to deal with individuals who cannot be represented. Mr. Palmer proceeded to contend that the resolution should be modified, and that a Committee should be appointed to investigate the subject.

Mr. Chute said that the meeting, by adopting the resolution, was not pledged to any particular line; it merely said that a railway is essentially necessary. It is necessary, in order to place Norfolk on a level with other counties.

Mr. W. Gurdon quite agreed that it was desirable to form a Committee, and that any plan adopted should be in the hands of men of business, and men of character. He did not consider the resolution pledged the meeting in any way. Twelve months ago and a majority might have been found to say, no railway. The resolution merely expressed an opinion in favour of a railway, but not that a railway was to be made at all hazards.

The Noble Chairman having inquired whether any one seconded the amendment,

Captain Money said he would second it, merely to give the meeting an opportunity of deciding upon the question. He considered that extreme caution should be used before persons were called upon to advance their money, and that large sums should not be spent without a fair prospect of remuneration for the capital advanced. There was also plenty of time for a searching Committee to be appointed, as they could not go to Parliament before 1842.

Mr. Chute—Notices must be given in February, in order to get it into Parliament in 1842.

Mr. Recorder Jermy said this meeting had been called together to take into consideration if it be desirable and feasible to have a railroad, and the call made on the county had been responded to most fully this day. The first step then it appeared to him for this meeting to take was to say is it desirable or is it not? Mr. Palmer's amendment at that moment appeared to him to be idle. The first object should be to take in some general way the sense of the county on this important subject. Mr. Jermy proceeded to observe that with regard to time there was none to lose, as the application for an Act of Parliament would occupy two Sessions. Another reason also why some steps should be taken as soon as possible was, that many railroads were near completion, and it was probable those best accustomed to railroad labour would be disengaged for any plan that might be adopted for this county. If the first resolution was passed, it was expedient that a Committee should be appointed, as the county of Norfolk would be desirous that any plan should get into hands that could be trusted; and for himself, he had already avowed at the meeting in London that he would for one prevent, as far as laid in his power, any thing like *jobbing*, either on the part of lawyers, contractors, engineers, or any other persons whatever. He thought a Committee would be desirable, to acquaint themselves well with the subject, and to make a report to a future meeting. Although not so well conditioned as many counties in point of raising capital, they possessed, for a railway to London, a line of country more favourable and less expensive than any other part of the kingdom. If, then, they affirmed the first proposition, that a railroad was desirable, he trusted the county of Norfolk would look to the project not only as a commercial speculation, but regard it on higher grounds, that it would be especially beneficial to the community. Let those who could not take a large number of shares take their two or three. And when it should be seen that the county of Norfolk itself was in earnest, that they had appointed a Committee who had reported upon what they considered the most feasible plan; and when it shall be shown that that plan was supported by shares taken by men who can pay and not men of straw; for himself he believed that such encouragement would be given to capitalists at a distance, that it would not be difficult to raise a million or a million and a half for such an undertaking. And he had no doubt in his own mind that the plan of a railroad would be carried out ultimately.

Sir. Thos. Beevor said he wished to put a question to Mr. Gurdon, as he thought there was a little ambiguity of language in the circular for calling this meeting. In the terms of the circular the meeting was to consider the best means to be adopted for securing the construction of a railway, either by co-operating with any responsible body of persons who may have already associated for the same purpose, or by such other means as shall be considered expedient. The "such other means" might allude to some embryo project. Now, there was a body of men, most respectable, and he said so guardedly and advisedly, who had already taken steps on the subject of a railway from Norwich to London. The question which he wished to put to Mr. Gurdon was, whether there is any other project in contemplation, or is it intended by any other party to bring forward a plan?

Mr. Gurdon said I am much obliged to the Hon. Baronet for putting the question. As far as I am concerned I have no project whatever, and let me say that I want no place and that I have no

places to give away, which may be an answer to some persons who have applied to me as if I had. All that I have done in this matter is with the view, if possible, of securing a railroad to this part of the kingdom. I have no other object in view. When I am shown a plan that I think feasible, not only will I assist personally but with my purse.—Mr. Gurdon went on to say, that since the notice for this meeting, he, with Sir Jacob Astley, had thought it desirable to see the Directors of the Northern and Eastern line as they appeared to possess a terminus that would be exceedingly desirable, and they had had an interview with the Chairman, Mr. Crawshay, and had conversed freely upon the subject.

The Mayor of Norwich (E. Willett, Esq.) said, as the amendment had been proposed by two gentlemen connected with the city, although perhaps he had no business to address the meeting, which was one of landowners, he begged to be allowed to say that he was decidedly opposed to that amendment, (hear, hear), and he confessed he was astonished at the course pursued by his two friends. He was most anxious to affirm the proposition that the establishment of a railway was essential to the prosperity of the city of Norwich and county of Norfolk.

J. Wright, Esq., of Kilverstone—I ask you, landowners, before you vote, each to consider how he would like his land to be cut up by a railway.

Lord Berners—I answer, I should like to have a railway come through my property very much indeed. (Loud cheers.)

John Lacon, Esq., said, with respect to Yarmouth he was sure he spoke the sentiments of all parties there, in declaring that they were extremely anxious for a railway to Norwich and London, and would be most willing to take shares, and ready to assist in every way in their power.

Samuel Bignold, Esq., said, having taken a part at the London meeting in favour of a railway, he wished shortly to state, that the proceedings of this day had now arrived at that point, which, in his judgment, it was the aim of that meeting they should be brought to, viz., affirming the proposition to have a railway which should connect the county of Norfolk with the metropolis; and referring to an impartial committee, the line chosen by Mr. Rastrick for its approval or rejection. He knew that he spoke the sentiments of the noble marquis the member for Norwich, (who moved the first resolution passed at the London meeting) in declaring, that his (Lord Douro's object was to see *that* project adopted, which should most cordially unite in its support the city and the county, free from all selfish or private views.

The resolution expressive of its being desirable to have a railway, was then put and carried unanimously.

Mr. Recorder Jermy said, as the meeting had affirmed the proposition for a railway, and some labour and expense had already been incurred in making the survey of one line, he would ask whether it was the pleasure of the meeting to hear Mr. Rastrick? In doing so it should be understood that they in no way tied themselves down to that line, but they would have the opportunity of knowing what had been done. For himself, he conceived that all private interests should be considered as far as practicable. He moved that Mr. Rastrick be called in.

Mr. Gurdon said, as to this meeting looking into sections or plans it is impossible, but it may be desirable to hear an outline of Mr. Rastrick's plan.

Sir Wm. Foster seconded Mr. Palmer's motion for a Committee.

The following were named:—Lord Sondes, Lord Berners, Sir Jacob Astley, Sir Thomas Beevor, Sir E. K. Lacon, Sir Wm. Foster, E. Wodehouse, Esq., M.P., W. Birch, Esq., Mr. Recorder Jermy, W. Gurdon, Esq., C. Evans, Esq., the Mayor of Norwich, the Mayor of Yarmouth, and the Mayor of Thetford.

Mr. Chute said, although he had presided at the meeting in London, he was not pledged to the line.

Sir Thomas Beevor said he considered it fair to state that he was in favour of the line laid down by Mr. Rastrick; he was so from selfish motives, because it came across his property, and he thought it would do him greater benefit than any other line.

Mr. Gurdon said he could not approve of Mr. Rastrick's plan to the full extent. It appeared that the gentlemen who had started the plan had not put themselves in communication with the Northern and Eastern line. In his (Mr. G.'s) conversation with Mr. Crawshay, that gentleman said the Northern and Eastern line would be at Bishops Stortford in the course of next summer, but they would not stir an inch further till the Norfolk people came towards them. If the men of Norfolk would make 22 miles below Cambridge, they of the Northern and Eastern line would make the 22 miles to Cambridge.

Mr. Lacon said, the best paying part of the line would be from Norwich to Yarmouth.

Mr. Rastrick was then called and said, that having been required to make a survey of what he considered to be the best line he had done so, and was ready to lay his plans, sections, and estimates before the Committee, and to give any explanations respecting them. Reference had been made to that part of the line between Bishops Stortford and Cambridge—the Act for that part was originally obtained by the Northern and Eastern Company, but they have lately declared their inability to complete it, and therefore by Act of Parliament have abandoned that portion of the line. If he (Mr. R.) had not taken that part, the Northern and Eastern would not now have talked of coming forward. But what a predicament would the projectors of a line from Norwich to London be in if in lodging their plans they left a gap, and trusted to the tender mercies of the Northern and Eastern Company. He considered, therefore, that it would be much better that the whole of the plans, without any gap, should be lodged. There were no less than 18 plans to be made, and in order to go to Parliament in 1842, there was no time to lose. He should be happy to attend the Committee and give every information in his power.

The Dean of Norwich moved the thanks of the meeting to the Noble Lord for the ability, patience, and firmness evinced by him in presiding over this meeting.

Wyrley Birch, Esq., seconded the motion, which was carried by acclamation.

Lord Sondes in expressing his acknowledgments for the compliment, said—I am one of those who were very much prejudiced against railways, but I have seen the advantage of them in various other counties, and I consider not only that it is desirable but approaching to necessity that we should have one for Norfolk.

The meeting then broke up, but the Committee appointed immediately proceeded to business.

MEETING AT THETFORD.

A numerous and respectable meeting of the Inhabitants of the town of Thetford was held at the Town Hall, in that Borough, on Tuesday, the 5th instant, for the purpose of promoting the above undertaking.

Amongst those present were, the Earl of Euston, M.P. for Thetford, James Fyson, Esq., Mayor, C. Fyson, Esq., G. Gill, Esq., F. K. Eagle, Esq., of Bury, Mr. F. Gayford, Mr. Clay, Mr. H. Browne, H. Holmes, Esq., John Deck, Esq., Mr. R. E. Clarke, C. Spanton, Esq., of Attleborough, with many other influential and respectable gentlemen.

On the motion of the Earl of Euston, seconded by Mr. G. Green,

The Mayor (James Fyson, Esq.) took the Chair, and briefly stated the objects of the meeting—that of considering the importance of a railway communication from Thetford to the metropolis, and other parts of the kingdom. The subject he had no doubt was well understood by those present. All must feel that a railway passing through Thetford would be of great benefit to the town and neighbourhood.

The Earl of Euston, in moving the first resolution, stated, that he had carefully watched the progress railways had made. The great improvements that were daily making in their construction and management, would, he had no doubt, remove those inconveniences which had hitherto attended them. He had four or five years since advocated the principles of railways, and the one now proposed would have all the advantages of late improvements both as regards cheapness of construction and security. His lordship concluded by saying—a line of railway would, he was satisfied, greatly benefit Thetford and this part of the country; he should, therefore, give it his support, and had pleasure in moving the resolution, for which see advertisement.

Mr. Browne said, he was considered railways were generally beneficial to those districts through which they passed; he had therefore great pleasure in seconding the resolution moved by the Noble Lord.

The resolution was then put from the chair, and carried unanimously.

Mr. Fyson moved the second resolution; he was happy to do so, because a railway was most desirable, and the proposed station at Thetford would be of great advantage to the town and surrounding country.

Mr. Clay seconded the resolution just moved by Mr. Fyson, and observed, that as railways were in progress in all parts of the kingdom, that there would be one sooner or later in these counties; he therefore supported this line as proposed by Mr. Rastrick, as the one best adapted, to advance the interests of this town and neighbourhood.

Lord Euston having made a few remarks as to whether this line of railway would be the best that could be selected, and whether it would, if carried out, be constructed on the cheapest and most improved principles,

Mr. Spanton, in reply to what had fallen from the Noble Lord as to the selection of the line, stated that it had several years since been selected and approved by the late Mr. Hollis, afterwards by Mr. Cundy, and revised by Mr. Walker, and other Engineers, as the one best adapted for the Eastern Counties. It had since been carefully examined by Mr. Rastrick, the eminent and successful Engineer of the Brighton Railway. From Cambridge to Norwich and Yarmouth no tunnel would be required, and the materials throughout the line offered every advantage for the security of the cuttings and embankments. By the improvements in the power of the engines, great saving would accrue in the construction of this line, by adopting different gradients to those formerly required. He was convinced this was the best line that could be selected for the counties of Norfolk and Suffolk; it had stood the test of Parliamentary inquiries. The interest of this line had been kept alive by the frequent deposits of the surveys and plans, which had been made and revised at a heavy expense, which would prove of great advantage, and facilitate the success of the present undertaking, and save a year in obtaining the Act.

The resolution was then put from the chair, and carried unanimously.

John Deck, Esq., of Bury, in moving the thanks of this meeting to the Mayor, remarked, that he attended there because as connected with, although not a resident of, Thetford, he was anxious to see this town enjoy the advantage of a railway, and he was sure the town of Bury would cordially unite with the promoters of this line in carrying it forward. It was of the greatest importance to have the railway through Cambridge, which would offer a ready access to the north. He had great pleasure, from the great respect he had for the worthy Mayor, in moving the thanks of the meeting to him for his kindness in taking the chair.

Mr. Brandford seconded the motion of thanks to the Chairman, which was carried unanimously.

The Mayor returned thanks and said, he was at all times ready to promote the interests of the borough; he himself, as a merchant, was also particularly interested in the success of this railway, and he would do all he could to support it.

EAST ANGLIAN RAILWAY.

It is with the liveliest satisfaction that we call the attention of our readers to the proceedings of a public meeting held within our own walls, on Thursday last, on a subject of no less importance to this locality than that of establishing a communication by railway between Norwich and London. We have always zealously advocated the cause of public spirited improvements in general; and to the best of our abilities assisted to give encouragement and support to such plans in particular, as have for their object to place this city and county on a footing of advantageous equality with the neighbouring districts, so far as relates to increased facility of personal and commercial access to the great metropolis of the empire. On the score of sincerity, therefore, the expression of our sentiments in reference to the present occasion, will not be doubted, when we congratulate our fellow-citizens and our brethren of East Anglia, on the auspicious and highly promising circumstances under which the question was discussed, and the preliminary resolutions were agreed to. When, indeed, we look to the fulness and quality of that meeting—when we see with what unprecedented amplitude and fidelity, it embraced a virtual representation of the landed interest, as well as of the commercial and manufacturing branches of capitalists—when we recognize, as we could not fail to do, in the respective persons of those who attended it, an overwhelming preponderance of all that is dignified by rank influential from wealth, and entitled to consideration for enterprise and intelligence, it would be injustice to those feelings with which such an array of consequence and respectability has inspired us, were we to hesitate in declaring our confident belief that the great *desideratum* will now be supplied—that we too of Norfolk shall have our railroad. Another subject for equal congratulation arises out of the fact which the meeting of Thursday attested—we allude to the perfect unanimity which, in a large body of individuals assembled from both sides of the political question, so strikingly prevailed in favour of the general principle, and the total absence of any remark responsive to the only instance of apparent hostility evinced towards the precise object in view.

Fresh opportunities will necessarily arise of which we shall not omit to avail ourselves for recurring to this gratifying subject of public import. But we cannot conclude our present brief allusion to the meeting without observing that it originated, as we believe, in an advertisment, inserted in the local papers by W. Gurdon, Esq., which we have been informed was most efficiently supported with circulars issued by the highly respectable member for West Norfolk, W. L. W. Chute, Esq. Certainly great praise is due to them both, as well as to Lord Douro and the gentlemen who met in London on the 30th ult. for so efficiently exciting the attention of the Norfolk landowners to the project. We trust that these embarked in it, will not be induced, by the advocacy of any partial interest, to depart from the plan of having the whole line from Yarmouth to Bishop's Stortford carried through under one entire management; as it is evident that if the line be divided into separate portions, and the management of the concern placed in different hands, the expenses to the public must be increased, and the carrying out of the entire design endangered. Let them all however go on amicably, and they will doubtless go on prosperously. Our best wishes are for the success of their laudable endeavours.—*Norfolk Chronicle.*

EASTERN COUNTIES' DEMONSTRATION AGAINST THE EAST ANGLIAN RAILWAY.

A PRINTED paper, of which the following is a copy, was on the morning of the county meeting, addressed to most of the noblemen and gentlemen, who were expected to take a part at the meeting [illegible] without any heading—without any signature, [illegible] printer's name even; but [illegible] of so much mystery could be, it is [illegible]d, for it has its Shoreditch parentage so palpably marked on the face of it, that no one can have any doubt about it."—*Norwich Correspondent.*"]

Norfolk and Suffolk are entitled to the benefit of a railway communication with the metropolis. This is indisputable. Who will make it?—The capitalists?—On what grounds?—Not for amusement certainly, nor because Norfolk and Suffolk may utter the deepest groans at suffering the deprivation of the railway system. These reasons will operate as nothing on capitalists, be they resident in London, in Liverpool, or in Norwich. A complete railway from London to Norwich and Yarmouth will be made only when capitalists can see with reasonable certainty that a traffic exists and will come on the line they may make, sufficient to produce a proper return on the capital to be invested. Pounds, shillings, and pence, will be the constructors of the railway, and after their experience in like undertakings, they will maintain their repose in the recesses of that snug place called an Englishman's breeches pocket, until they are assured that by emerging into active life they will produce abundant fruit in the shape of net profits and good dividends. The struggle of Norfolk and Suffolk at the present time must not then be merely to try and get the voices of some local landowners and others to join in one cry of "let a railway be made from Norwich, by Thetford, to Cambridge and London," because in this cry it is perhaps impossible to get capitalists to concur. Without determining, however, whether capitalists will or will not concur in it, nothing can be clearer than that there is a previous question to be answered,—which is, what line to the impartial and deliberate judge is the best line of railway to serve the general interests, not only of Norfolk but of Suffolk also, and what line has the most population on it, and is the most likely to make a profitable return to the capitalist?

Now any impartial judge will say, that a line by Thetford to Cambridge will serve Suffolk very little; and as regards Norfolk, will pass through a very thinly populated portion of that country, utterly insufficient to support a railway. An impartial judge will equally say, that the Eastern Counties' line, as originally laid down, was too exclusively a coast line, and did not serve sufficiently the general interests of either Suffolk or Norfolk, although it was, as regards the capitalist, based upon the best principle, which is, that of so joining town after town, at short distances from each other, that the intermediate traffic between these, independently of the long traffic, should secure good returns on the capital invested.

Such impartial judge would also determine, that the line which ought to be made for the interests of Suffolk and Norfolk, should, after giving to their neighbour Essex the benefit of going to its county town, then so proceed into the east as to be of more general use than the coast line of the Eastern Counties' can be.

Indeed, although the administration of the Eastern Counties' Railway Company has been much blamed for apparently stopping short with their line at Colchester, merely for their own profitable purposes, yet it is well known to those who have taken the trouble to learn the real facts, that want of capital alone obliged the Company to carry the line no farther than Colchester; but if they had as much capital again, they would pause in continuing the line by the coast until they had ascertained the sense of the counties and towns in the east as to the true line for general interests, which should be carried forward from Chelmsford.

It is true that a numerous committee of members of the House of Commons, chiefly consisting of the county members of Essex, Suffolk, and Norfolk, reported unanimously to the House, that "the Eastern Counties' Railway between the termini would traverse the most populous and cultivated parts of the counties through which it is carried," and this is strictly and entirely correct, and alone sufficient to make the population of the counties listen to the opinion of their own representatives before they rashly spend a shilling on the Thetford line, or its plans. But without annulling in the least degr e the soundness of the opinion expressed in this report, further consideration of the true interests of Suffolk and Norfolk clearly demonstrates that the proper line of railway communication for the east, is one, that leaving the Eastern Counties' line at Kelvedon, shall thence proceed through Coggeshall, Halstead, Sudbury, Melford, and Lavenham to Bury St. Edmund's, and thence proceed by Stowmarket, Eye, and Scole, along the old Eastern Counties' line to Norwich and Yarmouth; and a branch should be made connecting Bury with Ipswich: thus communicating that important town with the metropolis, and also opening it up to the interior as a shipping port for grain, &c., while it formed the place of import for timber, coals, and other articles largely consumed within the adjoining counties. From Bury St. Edmund's a branch may be carried hereafter to Thetford, from which place the line may probably be extended to Wisbeach and Lynn.

It is a matter of fact, to be ascertained, by inquiry, that the Eastern Counties' Railway Company, although charged with deserting Norfolk and Suffolk, are on the contrary, deeply consulting the true interests of those counties; and with this view have already surveyed the line from Kelvedon as far as Bury St. Edmund's, and will promote an application to Parliament, for power to capitalists to make this new line. This will be followed by the promotion of prudent extensions to Norwich and Yarmouth, which would be paying lines to independent Companies, and if these latter were at once formed, they would find a powerful auxiliary in the Eastern Counties' Railway Company. These great measures can only be carried into effect by slow degrees. Pretensions to rapidity of execution would be false and deceitful.

These views are presented to the landowners of Norfolk and Suffolk by one who believes that he understands their interests, and who feels satisfied that if the line by Thetford should not be at once rejected as a chimera, all parties interested in a railway communication should at least pause, until three or four impartial persons from each important town in the east should, as deputations, meet together, and confer upon the course to be pursued most promotive of the general interests of those Counties, and of the public at large; and bearing in mind, that they can do nothing without capitalists, and will fail in drawing out their funds, unless the line to be made shall be the best selected for collecting and engrossing traffic.

BEVERLEY AND EAST RIDING RAILWAY.—On Thursday evening week, a meeting of the subscribers and others favourable to this project, was held in the Assembly Rooms, Beverley, when Mr. J. Oldham's Report and plan were laid before the meeting. Mr. O. stated that the proposed railway may be constructed for considerably less than any similar undertaking, there being neither natural or artificial obstructions, nor any engineering difficulties to contend with; the whole line is nearly a dead level, every house is escaped, there are no woods to pass through, and in every case ordinary compensation will suffice. By the plan it appears the road will commence at the Paragon Inn, Hull, proceeding thence west of the icehouse and waterworks, onward to the north side of Cottingham, where it will cross the town street, and then run to Mr. Bell's farm, in the Parks; afterwards it will proceed by the side of Long-lane, and terminate at St. John-street, Beverley; the whole distance being seven miles and three-quarters, and the estimated cost is 55,116*l.* 17*s.* If it should be thought desirable to extend the line from St. John-street to the piece of garden ground in Well-lane, belonging to T. Sandwith, Esq.—a distance of 374 yards—an additional expense of 3,676*l.* 8*s.* will be incurred. Mr. Oldham also stated, that a branch road from the Paragon to the Hull and Selby—in length about three quarters of a mile, and the carriages to be drawn by horses, would cost 13,335*l.* 15*s.*, making a total of 74,129*l.*—*Hull Advertiser*, Dec. 25.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY.

[From the *Manchester Guardian* of Wednesday.]

A GENERAL Meeting of the Shareholders in this Company, who had signed the original deed, was held in the Company's Offices, Bond-street, on Monday last, convened by advertisements in Manchester and London papers, of which the following is a copy :—

"Manchester and Birmingham Extension Railway Company.—A General Meeting of the Shareholders of the Manchester and Birmingham Extension Railway Company is hereby convened by the Provisional Directors, and will be held at the Company's offices, Bond-street, Manchester, on Monday, the 11th day of January, 1841, to consider the expediency of adopting certain resolutions to be submitted to such meeting, in relation to a proposed variation of the original line of railway of the said Company, and for the dissolution of the said Company and the re-constitution thereof; or the formation of a new or substituted Company, for constructing the said varied line. And such resolutions are intended to comprise certain other objects relating to the affairs of the Company. The chair will be taken at twelve o'clock at noon precisely.

"Manchester, Dec. 17, 1840. "THOMAS WHEELER."

About a quarter past twelve o'clock, there were not thirty proprietors present; but subsequently the room became filled, and there could not be fewer than sixty shareholders at the meeting. Twenty-two minutes after twelve, Mr. James Burt proposed that Mr. Thomas Ashton, of Hyde, should take the chair. The motion was seconded by Mr. Alderman Brooks, and passed unanimously.

Mr. ASHTON took the Chair, and called on Mr. T. Wheeler, the law-clerk of the Company, to read the advertisement (above given) convening the meeting; having done which Mr. Wheeler said—This meeting is convened by the Directory under the clause in the subscribers' agreement, which is the deed constituting the Company, which I will read :—

"That if at any time it shall appear that the Board of Directors have expended the full sum of three pounds ten shillings per share of the subscribed capital of the said Company in the necessary application or applications to Parliament for the proposed Act or Acts incorporating the said Company, but without obtaining the same, then, and in that case, it shall not be lawful for the said Board of Directors to proceed to make any further application to Parliament for any such Act or Acts, if the subscribers to the said Company or undertaking shall consider it advisable to abandon the said projected undertaking, and to dissolve the said Company; and that in the case aforesaid, it shall be lawful for the said Board of Directors, or for any twenty of the subscribers to the said Company or undertaking, to call by public advertisement, to be inserted in three Manchester and three London newspapers, a general meeting of the subscribers to the said Company or undertaking (of which said general meeting, and also of the object thereof, twenty-one clear days' notice shall be given by the said advertisement), and the majority of the persons present at such general meeting (such general meeting, nevertheless, to consist of not less than forty persons, holding in the aggregate one thousand six hundred shares in the said Company or undertaking) shall have full power to determine whether and in what manner the said projected undertaking shall be further proceeded with, or whether and upon what terms and conditions the said undertaking shall be abandoned, and the said Company dissolved, and the affairs thereof finally wound up."

The advertisement has been inserted 21 days before this meeting, in three Manchester and three London papers.

The CHAIRMAN then called on Mr. Wheeler to read the Report, and Mr. Wheeler said that printed copies of it for the proprietors would shortly arrive from the printers.

Mr. THOMAS OLLIVANT said, that before the Report was read, he thought it would be desirable to take the sense of the meeting as to the propriety of whether the holders of scrip should not be present.

Mr. T. WHEELER—That is a question which the deed determines, Mr. Ollivant. The object of the meeting being to dissolve the Company, the meeting must be held in strict conformity with the provision of the deed which has just been read to the meeting.

Mr. OLLIVANT—I did not understand there was any thing in that to exclude the scrip-holders.

Mr. WHEELER—Oh certainly; their names are not to the deed. Any gentleman whose name is to the deed is admissable here, and the gentlemen who have put their names to the deed are now in the room; but, of course, those who have not done so, and thereby have not converted themselves into shareholders, are not present; and for this reason, that if any resolution were passed by a majority, consisting partly of scripholders and partly of shareholders, it would be illegal, and the Company could not act upon it.

Mr. OLLIVANT—Then a person whose name is to the deed, but who has sold his shares, has a right to attend this meeting?

Mr. WHEELER—Certainly; because, though he may have sold his shares, he does not get rid of his liability to the Company, and therefore he has a right to attend. But the scripholders have no such right; otherwise it would be possible for a gentleman signing the deed for a hundred shares, and who by virtue of them would have only one vote, to subdivide those hundred shares amongst a hundred people, who might come here, and swamp this meeting by voting in a particular mode.

Mr. OLLIVANT—My object is only to be satisfied as to whether the scripholders are or are not entitled to be present.

Mr. G. R. CHAPPELL—I do not attribute to Mr. Ollivant the slightest participation in the document which I am going to read to the meeting; but I think, when it has been read, you will be perfectly satisfied of the justice of the reason given, as well as the legality of the thing—the deed not authorising scripholders to be present. I have had a great number of papers and documents sent to me gratuitously, but all unfortunately of one sort. I say so, because, so far from operating on my mind to give me any dislike to the undertaking, the reverse has been the case. I believe that those who have taken so much pains, and been at so much expense, to convince me that the undertaking is a bad one, and of no value, are sure that it is valuable, or they would not have taken the pains and trouble to labour to convince others to the contrary. But I will give you the document. [Mr. Chappell then read a lithographed form, in the following terms :—]

"Sir,—In consideration of your paying me £ for five shares in the Manchester Extension Railway, I hereby engage not to sign any new Parliamentary deed in respect of the said shares; and, if required, I further engage to sign a petition against any application to Parliament to carry out the undertaking under the powers of the old deed, and to do nothing which shall deprive you of the full benefit of the proportion of any balance that may now remain in the hands of the Company, attached to such five shares.—I am, sir, your obedient servant,"

Gentlemen, I'll name the party from whom this came. It was Mr. Edward Ashworth, who is the agent for the London and Birmingham Company, and the Midland Counties' Company.* (Hear.) Now, gentlemen, are undertakings like ours to be swamped in so disgraceful, mean, and contemptible a manner, as for the agents of other railway Companies to go in the dark, and buy our shares, and then get people to come here, and overturn all you have done to advantage a line which was started for, and I believe will be for, the benefit of Manchester! I call these means despicable. A fair, manly, honourable opposition we had reason to expect; but we had no reason to expect, from Companies like these, such an opposition as this document makes known to the public. The intention is evident—and they even went so far as to tell a broker, "A man with a wooden leg will do"—it was done in the expectation of parties buying the shares being admitted here to vote and swamp you.

Mr. T. OLLIVANT—I presume it is almost unnecessary for me to deny all participation in that document.

Mr. CHAPPELL repeated, that he distinctly disclaimed any intention to impute such a thing to Mr. Ollivant.

The CHAIRMAN said, that Mr. Ashworth, the very person who had signed that document, had applied to him, to be present at this meeting; and Mr. Baxter, who was engaged for the opposition, had also applied.

Mr. WM. RAWSON—Might not a middle course be taken? I have never seen anything in the public press of this kingdom, like the steps they have had recourse to against this undertaking; but I must say that I should like to hear if our opponents, or enemies, I will call them, have anything to communicate, to put us in possession of facts that we ought to hear. He might be admitted and allowed to state anything he had to say, but not to vote.

The CHAIRMAN—You have heard our law-clerk say it would be illegal to admit parties not shareholders.

Mr. WHEELER—To vote, Mr. Rawson is not aware, I think, that the purpose of this meeting is merely to dissolve this Company. It is not intended to bind the shareholders, or any shareholder, to any future course, by the proceedings of this meeting. Any shareholder will be at liberty either to prosecute the new undertaking, or to take back his balance; whichever he may please.

Mr. RAWSON said, if the Company were to be dissolved, he should not like to be hurried into the dissolution at once. If after inquiry he was not inclined to go on, he had not the least doubt that he and every shareholder wishing to retire might get out without losing a farthing. Therefore, he thought it absolutely necessary, that the shareholders should have a little time to consider whether such a mode might not be adopted of dissolving the Company as would get them out without any loss whatever.

Mr. WHEELER said, the shareholders would have time to consider as to their future course, whether they thought fit to pursue the undertaking or not; and when they had made up their minds, they would then be in the position of either becoming members of the new Company, or of withdrawing altogether, and receiving back their balances.

Mr. ALBRECHT asked some question relative to the alteration in the line, which he did not clearly understand.

The CHAIRMAN thought it would be more regular to read the Report.

Mr. Alderman BROOKS said, that Mr. Ashworth, the agent for the London and Birmingham, and also for the Midland Counties' lines, had a different interest to the shareholders in this Company; an interest in cutting it down, and destroying it; and that was the reason they had taken such trouble in going round to purchase shares, in order to destroy this line. It might be that our Directors had managed badly; but it was clearly the interest of those lines to do all they could to damage this, and therefore it was a fortunate circumstance that the law existed to prevent scripholders from coming and voting at this meeting.

Mr. H. NEWBERY said, that Mr. Houldsworth, M.P., he presumed, had also applied for admission; but the Directors had dealt out equal justice to him and to others; telling him that no scripholder could attend this meeting for the reasons assigned.

Mr. WHEELER then read the following

Report intended to be submitted to a Meeting of Shareholders, this 11th day of January, 1841.

"The advertisement which convenes this meeting explains its object. That such object may be better understood, it will be useful to review briefly the proceedings of the Company.

"It was formed in the year 1838, with the design of shortening the communication with London, by the construction of a railway through the valley of the Trent—a district which is known to possess almost unequalled facilities for the purpose; and your Directors, under the subscribers' agreement constituting the Company, are empowered, in their discretion, to select, and from time to time vary, the point of commencement or of termination of the course of the railway. The line as originally laid down joined the Manchester and Birmingham Railway near Stone, in Staffordshire, and passing through or near the towns of Rugeley, Lichfield, Tamworth, Atherstone, and Nuneaton, terminated at Rugby, upon the London and Birmingham Railway. There was no provision, under the then arrangements, for the transfer of traffic from the Grand Junction to the proposed line, nor was any junction between the lines in immediate contemplation, and hence the town of Liverpool, and the large population whose route to and from London is by way of Liverpool, may be said to have been practically excluded from the benefits of the new communication.

"An application was made to Parliament in the session of 1839, for the necessary powers to construct the railway; but the application did not result in the passing of an Act. The Parliamentary Committee, however, to whom the Bill was referred, encouraged the Company to renew their application, by appending to their Report the very unusual, if not altogether unprecedented, recommendation that "every facility of which the rules of the House would admit, should be afforded to the promoters in a future session." Assured by this recommendation, and by the unanimous sanction of their shareholders, conveyed by resolutions of a meeting held in September, 1839, your Directors prepared for the session of 1840, and perfected their arrangements for a second application.

"Pending the Parliamentary preparations for that application, the line of the Chester and Crewe Railway, was purchased by the Grand Junction Company, who then sought, as the shareholders are already aware, and accomplished, an arrangement with this Company, under which it is provided, that the whole traffic between Liverpool and London, which comprises much of that from Ireland and Scotland, shall traverse the Trent line.

"The railway which the Company had then in view, contemplating only the traffic between Manchester and London, and between Manchester and the eastern counties of England was, as has been explained, unadapted to the extended prospects thus opened to it; and the Directors, therefore, deemed it advisable to postpone for a year their application to the legislature, in order that, in the interval, the railway might be so varied as to meet the Company's altered circumstances. But before such postponement was determined upon, the shareholders were called together, and their opinion was requested on the subject. The Directors further took occasion to submit, for adoption or rejection, a proposition which had been made to them by the London and Birmingham Company, to the effect that the latter Company would pay to this Company 20,000*l.* if the project were abandoned, and a majority of your Directors would pledge themselves not to be parties to its renewal. This proposition you unanimously rejected; the proceedings of your Directors you as unanimously approved; and acting under the sanction then obtained, plans were deposited, in pursuance of the Standing Orders of Parliament, as the basis of an application to the now ensuing session, for one of two lines, namely, a line from Stone to Rugby, with two branches, or a line from Stafford to Rugby, with one branch—both of which lines are calculated to form a junction with the Grand Junction Railway, and are therefore adapted to the Company's new arrangements.

* We have authority for distinctly denying any participation by the London and Birmingham or Midland Counties' Company in the document referred to.—ED. R. T.

"The choice of line was left open for future inquiry, and agreement; and the Directors have decided, after mature deliberation, to adopt, and apply to Parliament for its sanction to the latter line.

"The preparations connected with the deposits and notices are all completed; and although, under the subscribers' agreement already executed, the Directors deem themselves empowered to pursue the projected measure, yet, as it comprises deviations from the original line of some extent, they are unwilling to proceed further in the exercise of the powers so conferred upon them, without giving any proprietor whose judgment may differ from their own an opportunity of recording such opinion, by withdrawing from the Company.

"The Directors, therefore, have now to suggest, that for this purpose the Company originally constituted under the title of 'The Manchester and Birmingham Extension Company,' be formally dissolved, with a view to the organization of a substituted Company, to carry out the objects specified in this Report.

"It will, of course, follow, as part of this arrangement, that the accounts of your Directors (who are the sole creditors of the Company, no portion of the deposits already paid having been expended or appropriated) should be audited, and the sum ascertained, to which, after contributing their quota to the expenses incurred, the several retiring shareholders, if such there be, will be entitled."

Mr. JOHN BRADSHAW, before he moved the adoption of the Report, would make one or two observations. He had given the undertaking a great deal of attention, and was satisfied of the soundness of it; and if he had wanted any thing to confirm that opinion, it would only be necessary for him to look to the great activity and the consideration its opponents had given to it, to satisfy him that this undertaking was sound. He begged to move, that the Report be received and printed for distribution, under the direction of the provisional Directors.

Mr. GASKELL, of Warrington, asked if passing the Report pledged the shareholders present to the dissolution of the Company.

Mr. WHEELER—It does not. There is a subsequent resolution. The Company can only be dissolved by a formal resolution.

Mr. CHADWICK seconded the motion.

Mr. RAWSON said it do not follow, because the proprietors of other railways did not wish the Extension line to go on, that it was a profitable undertaking. It might be injurious to other lines, and yet not a beneficial one to the shareholders. He wished it to be understood, that no man had a higher opinion of the integrity and honour of the Directors of this Company than he had; but he liked to know something about a concern in which he had a heavy stake. He did not know what this railway was to cost, and he would like to know about it before the Company either went on or dissolved; and those gentlemen who pledged themselves to a dissolution without consideration, would of course lose part of their money.

Mr. G. R. CHAPPELL said he had from the first held 200 shares in the undertaking, and had given it as much attention as any other gentleman in the Directory; and if the shareholders looked at the attendances of the Directors, though gratuitous, they would find them regular and uniform. He had neither added to nor diminished the number of shares he originally held; and if this Company were dissolved to-morrow, and any other gentleman would take it up, he would take 200 shares in the new Company. He did not want Mr. Rawson to pin his faith on him; but that was his own individual opinion, and the unhandsome conduct of their opponents would induce him to go on to the uttermost extent.

Mr. H. NEWBERY thought Mr. Rawson's proposition a good one, with this difference, that a Committee might be appointed to consider; and those who chose to go on might do so, after the opportunity of full inquiry, and then no gentleman would commit himself without knowing the facts of the case. But he thought Mr. Tootal was able to explain to the meeting the position in which the Company now stood, and give some insight into its affairs. It had been done before, but it could be done again now.

Mr. RAWSON wished to say to the shareholders who, if the Company were dissolved this day, did not wish to join the new Company, they might get out by losing half their money. If they would not agree to dissolve without full inquiry, then they might expect, he would not say they might be fully certain, to get out without a farthing loss.

Mr. JAMES BURT thought, before entering into discussions of this kind, they ought to attend to the business of the day. They had, in the first place, to determine whether the Company should be dissolved or not; and then to express the sense of the meeting about going on with the undertaking by a new Company. He did not think that procrastination was beneficial; but rather that the shareholders ought to show their opponents, that they were unanimous in carrying on the new concern.

Mr. BRIGHT, of Rochdale, said, it would be well if the shareholders knew what the state of the funds was.

Mr. WRATISLAW, of Rugby, asked what the expense would be of the variation.

Mr. EDWARD TOOTAL said—On the occasion of our last meeting, I went at some length into the estimated cost of the concern. I can only reiterate the statements which I then made, having carefully looked at them, not only before I made them but afterwards, and frequently since; and I have the satisfaction of knowing, that I need neither retract nor qualify one single remark which I then offered to the shareholders. I have given myself considerable trouble to converse to some extent with the engineers of various railways; and I have put to them, in the course of the last year, hundreds of questions, with a view to elicit the truth with respect to the probable cost of this line. From all the inquiries I have made, I see no reason to vary the opinion I then gave with respect to the cost of the line for which you have already applied to Parliament. Perhaps it would be just as well to allude to that cost again, and then to the probable additional cost of the varied line. The application you made to Parliament, in 1839, was most severely contested, as most gentlemen here are pretty well aware. Mr. Bidder was examined on behalf of this Company, and cross-examined, for about three days, and his estimate impugned, as far as possible, by the evidence of Mr. Vignoles, Mr. Rastrick, and Mr. Locke. The estimate of our own engineer for the construction of the line was 18,538*l.* per mile. Mr. Vignoles went over the same details as to land, earthwork, masonry, permanent way, and contingencies, as Mr. Bidder; he (Mr. Vignoles) being then the engineer of the Midland Counties' Railway, and of course having an interest, from his position, to go as far as he could. I'll just read you the different items, showing the variance between the estimate of Mr. Bidder and that of Mr. Vignoles. Land, estimated by each at 170,000*l.* Earthwork, Mr. Bidder made 282,368*l.*; Mr. Vignoles, 310,624*l.* Masonry, Mr. Bidder, 241,210*l.*; Mr. Vignoles the same. Permanent way, Mr. Bidder, 375,225*l.*; Mr. Vignoles the same. Contingencies, the same by both. Mr. Vignoles made the cost of the line per mile, 18,990*l.*, being 440*l.* per mile more than Mr. Bidder's estimate. Next as to Mr. Locke, whose character as an engineer stands very high, and who was particularly celebrated for making the lines entrusted to his charge at a low rate of cost—whose ability I don't call in question, for he is a very able, and I believe conscientious, man. I have had considerable conversation with Mr. Locke on this very estimate. I will give his estimate, and then I will repeat a remark which he made to me at an interview I had with him. Mr. Locke is the engineer of the Grand Junction Railway Company; they were at that time opposed to this Company, and Mr. Locke's evidence was looked upon as the most powerful against us, inasmuch as his experience was great and his reputation high. His estimate for land was 200,000*l.*, being 30,000*l.* more than the other estimates; for earthwork 20,000*l.* more than Mr. Bidder; masonry the same as Mr. Bidder; permanent way the same; and contingencies 4,000*l.* more. The result amounts to this—that the estimated cost of the line would then be 19,700*l.* per mile. It is fair to suppose that Mr. Locke did his utmost for his then employers, no doubt of it; and he was perfectly right in so doing, and I think it is perhaps the highest compliment to our Engineer, and to his estimate for the Extension line, that the greatest difference in the paper estimates is only about 1,200*l.* per mile. Mr. Locke added a considerable sum per mile on account of 40 bridges which will not be required. The private conversation I had with Mr. Locke, of course I cannot repeat here; but I may state this. I remarked to Mr. Locke that I might probably be called upon to state to the shareholders of the Company what the probable cost of this line would be; and at length I said, "Mr. Locke, if I state to the shareholders that the Extension Railway, including carriages, engines, waggons, stations, sheets, cordage, &c., and contingencies, will be completed for a sum total of 25,000*l.* per mile, shall I be right?" Because I have made up my mind never to state a less sum than I conscientiously believe will really be required." I told him I might probably state it to the shareholders at 24,000*l.* or 25,000*l.* His reply was, "If you do that, Mr. Tootal, you will have the pleasing satisfaction, year after year, to state to your shareholders that you are glad to find that the cost will be less."

A SHAREHOLDER—Does that refer to the Stafford and Rugby line?

Mr. E. TOOTAL—To the Stafford and Rugby line—that varied line of the Company which is under discussion this day. Since then I have had other opinions. I had a letter only the other day, dated the 15th January, from an engineer whose eminence no one would call in question. I had asked him to be good enough to revise our estimate, as a personal friend, and he writes as follows:—"When the line was in Parliament last time, and during the struggle on the question of the estimates, I looked carefully into the items, and then satisfied myself that the estimate was abundant. Indeed, it differs from ordinary estimates, in being formed, not upon opinion or speculation, but upon the actual cost of works of an exactly similar character. This class of estimation clearly renders the chance of error the least possible, and on the character of the works on the Midland Counties' Railway, the estimate is as nearly certain as it is susceptible of being made. I make these few remarks for the purpose of redeeming a promise." This has reference to the Stone and Rugby line; and this differs from that only in the distance north of Rugeley. From Rugby to Rugeley, a distance of 40 miles, the lines are the same; the difference is that the former line passed to Rugeley by way of Stone, whilst the present passes thither by way of Stafford. There is a difference in the cost of the works on those two portions of the line; but from Stafford to Rugeley the varied distance is 8¼ miles, and that 8¼ miles out of 56½ is the only variation. The only portion of the line which has not been inquired into already before Parliament, and sifted to the very bottom, is this portion of 8¼ miles, and therefore that is the only portion of the line upon which any doubt can be thrown.

A SHAREHOLDER asked if the varied line would be longer or shorter.

Mr. TOOTAL was understood to say, shorter; he then continued:—With respect to the new line, the Government Commissioners have required from our Engineers a detailed estimate of the cost, which is now before the Commissioners; and therefore I am sure you will think it right that it should not at present be made a public document, being in their possession for them to analyse. In the Report on the Stafford and Rugby line, which will in a few weeks be made, the whole of these details will be furnished; and the Government Commissioners will, no doubt, direct attention to the advantages in length, as well as other qualities in the proposed line. But I think it quite right to give the particulars of the estimates of this varied line, from one end to the other, as submitted to the Commissioners. They are—Earthwork, 281,000*l.*; masonry and tunnelling (there being a short tunnel required) 272,000*l.*; permanent way, 340,000*l.*; contingencies, 8,700*l.*; making a total of 980,000*l.*, or 17,500*l.* per mile, to which is to be added cost of land and stations. On the former occasion Mr. Bidder and Mr. Vignoles agreed precisely as to the land, and Mr. Locke added 30,000*l.* to their estimates; therefore, we may say, that the value of the land has been pretty well sifted already. The amount of costs for stations on the line was put down at 46,000*l.* on the last occasion; but I apprehend that it will be under 30,000*l.*; because the stations on the Stafford and Rugby line will be just like the ordinary stations on the Grand Junction and the London and Birmingham lines, the ordinary roadside stations, the traffic not being collected at them, but at Manchester, Birmingham or London; therefore the stations would be wholly of an economical nature. I don't think that I need say more with respect to the probable cost of this line. I think that no shareholders ever before had the same opportunity of judging of the probable cost of their line before the Act of Parliament for it was obtained. (Applause.)

Dr. LYON—Allow me to ask, whether the land between Stafford and Rugeley will not cost more than that from Stone to Rugeley.

Mr. EDWARD TOOTAL—Some portion will, but some portion will not cost more than other portions of the line, on the estimate given in for the land on a former occasion; and that includes all the "ornamental property," which you have heard mentioned that was upon the old line. If any gentleman wishes to have further information with respect to the cost of the line, or anything else, I shall be happy to give it. Then as to the cost of the permanent way; but if we look to the South-Western Railway, their permanent way is taken at 5,500*l.* per mile, yours is put down at 6,000*l.*

A SHAREHOLDER—What is the cost of permanent way on the Manchester and Birmingham line?

Mr. TOOTAL—The Manchester and Birmingham, I believe, is 6,500*l.*; but they had adopted longitudinal timbers on account of their viaducts. Does it occur to any gentleman to ask any other question?

A SHAREHOLDER, who had misunderstood a former statement, asked as to it; and

Mr. TOOTAL said, that the last estimate given embraced the whole line.

Mr. BRIGHT said, that a printed paper had been distributed at the door of the Company's offices pretty freely [signed "Thomas Landor, agent to the Marquis of Anglesey"], which stated the names of some landowners on the varied line.* Had they any greater interest in opposing it than the old line? Did the old line cut through any of this ornamental property, which was so sacred?

Mr. E. TOOTAL—I trust you will bear with me. I am sure shareholders will not intentionally put such questions as would be likely to damage the undertaking. With respect to the Marquis of Anglesey, I have before me a document, when an application was made for this bill last year, in which the name of the noble marquis appears as the first assenting nobleman. The fact was, that the varied line would pass through a farm of his, about four miles from Beaudesert, and he was now to be found amongst the dissentients; but any gentleman who has been connected with railways for some years will be aware, that the less that is said about this the better. I don't wish to say any thing unpleasant to the noble marquis, or to any one; but gentlemen know, that there have been opponents to railways before; but they do not always continue opponents. I may just say, that the marquis is not unfriendly to the railway; he has at all times been friendly to the undertaking; but he does not like its present route, as regards its passing through this farm. It is possible, that an alteration might be made, whether without great difficulty I do not know, but it is possible; and I repeat, that the marquis is not unfriendly to the line, but only to this particular portion. His son is member for Lichfield; this line is vitally important to Lichfield; and I have no doubt, that Lord Alfred Paget might be induced to use his influence with his father to withdraw his opposition, and thus let Lichfield have the benefit of the position in which he is placed.

Mr. WRATISLAW said he had looked at the list of the other names advertised as dissentient landowners and occupiers;† and he would say, that it was a very different list of opponents from the former one. (Hear.)

A SHAREHOLDER—What advantages do you propose by substituting the new for the old line?

Mr. E. TOOTAL—They are fully explained in the Report which has been read; but the principal feature is, that, so far as has been shown, the new line will embrace the entire traffic from Liverpool, Chester, North Wales, Ireland, and Scotland; while, on the last occasion we did not take credit for a single shilling for this traffic. (Hear.)

Mr. BRIGHT—May the shareholders be informed what agreements have been made with the various railway Companies? There is some agreement with the Grand Junction Company. Are they to have any extra profit from this line? There is a branch to the Birmingham and Derby line, and there will doubtless be some arrangement made there; and I think there is one if not two more Companies with which this Company are to make some arrangements. Now, if these or four slices are to go out to obtain the consent of these Companies, it appears to me, that the money which the shareholders are sinking will be given to the public without any return to themselves.

Mr. E. TOOTAL—We know nothing with respect to any contemplated arrangement with any other Company; and, as to this Company being connected with other railways by short lines, I think we must reverse the position of Mr. Bright, and say, that, instead of their being suckers from this line, they are feeders. We present the shortest line to the east, and the line becomes a feeder, and draws the whole traffic into it.

Mr. BRIGHT—But don't you purchase some part from the other Company?

Mr. TOOTAL—Certainly not.

Mr. WHEELER—And the opposition of the Midland Counties' Company is based on the very principle, that we give to the Birmingham and Derby line an advantage which it does not now possess, and that we thus enable the Birmingham and Derby Company to compete with the Midland Counties' Company, by giving the former the advantage of bringing their traffic upon our line, and so make the route much shorter than it is at present.

Mr. RAWSON—If I understand Mr. Bright's question, it is in substance—Have you not enabled the Grand Junction Company to go over the Extension line at a less rate than otherwise they could do according to the Parliamentary rate?

Mr. TOOTAL—No Company in the kingdom does, I believe, charge the Parliamentary rate. The Grand Junction Company run over the Liverpool and Manchester line; many railway Companies run to a great extent over other lines; but none of them charge the Parliamentary rates.

Mr. JAMES BURT—And we run over the Grand Junction line, too.

Mr. JOSHUA P. WESTHEAD—There seems to be a great deal of misconception about this line, and the rates to other Companies. I can only say, that if our line, or that applied for in 1839, had been secured, and we were now ready for operation; and if the Grand Junction Company were at this time to make an offer exactly similar to that which is contained in the arrangement to which reference had been made, I, as a proprietor of this Company, would jump at it.

The CHAIRMAN and Mr. CHAPPELL expressed their concurrence with this statement.

A SHAREHOLDER—But we don't read in the Report what that arrangement is, and we are not told about it.

Mr. CHAPPELL—Why put a sword into your enemy's hand to cut your own throat?

Mr. BRIGHT said, he had attended a meeting here twelve months ago, at which he did not speak or take any part; but he was then excessively annoyed at what appeared to be the desire of the Directors to keep every thing quiet. He did not want them to tell anything injurious to the Company; but everything else he was quite sure they ought to make known to the shareholders.

Mr. H. NEWBERY begged to say, that the Directors were quite ready and willing to tell any thing and every thing that would not be likely to injure the interests of the shareholders generally; but no man in his senses would expect them to tell many things which they could do, provided they had obtained their act, when they had so many opponents arrayed against them in so deadly an opposition, and ready to take advantage of every thing and any thing that occurred. The shareholders all knew, that, with the Committees and the Standing Orders of the House of Commons, they could not make known many things which they should otherwise do, merely because of technical objections; not, certainly, because of any thing of vital importance, but simply because of these legal difficulties; and he was sure, when the shareholders read the publications constantly appearing against the Company, they must be aware that it had the most active and determined opponents that any Company ever had, and that therefore it behoved them to be cautious; but if any gentleman, a *bona fide* shareholder, wanted information, which the Directors could disclose without detriment to the interests of the Company generally, they would be most ready and willing to do so. (Applause.) He was sure there was not any thing that they wished to withhold from the shareholders; but this was a very different thing from giving information generally to the shareholders and the public, and so telling too much of your case, in order to let your opponents get the upper hand of you.

Mr. TOOTAL said, that the Manchester and Birmingham Company had an agreement to travel over the Grand Junction line. Some said it was a good thing, and some that it was a very bad thing. Be that as it might, this Extension Company had granted the use of its line to the said Grand Junction Company at a higher rate by 30 per cent. (Hear, hear.)

Mr. RAWSON was very glad of it. That was one of the things he wanted to hear. He stood there a little in awe of the Directors; but not a man present was in better temper with the Directors than himself. He would trust them with untold gold, but he never liked to trust to the judgment of others when he could form one for himself. He believed that he should assent to the new line, if the Company were dissolved; but yet he thought it but fair to let all the shareholders have fair play; and if this Company were dissolved to-day, those parties who did not wish to go on, would not be so well dealt by.

Mr. TOOTAL said, gentlemen were aware that Parliament met on the 26th of this month, and that the petition for this act must be presented within a fortnight after the meeting of Parliament; and, if this were not done, all the previous outlay, time, and labour, would be worth nothing, and would go for nothing. The Company was now in a fit state to apply to Parliament in all respects. The preliminary proceedings had been taken with the utmost possible care that men could give to them, and with a due regard to economy; and he felt satisfied, that, should Parliament inquire into the preparations for this application for an act, the facts would be very satisfactory to those out of whose pockets the expenses came.

The CHAIRMAN asked if there was any other question which any gentleman present wished to ask of Mr. Tootal.

Mr. WRATISLAW thought he understood the position of the shareholders by this alteration to be this,—That, according to the line that went by Stone, we had the Manchester traffic brought upon our line. In the varied line, in addition to that we have the prospect of all the Liverpool, North Wales, and Irish traffic.

Mr. TOOTAL—Distinctly so.

Mr. BRIGHT—And yet you lose a great many arguments that you had when you went to Parliament last time.

Mr. NEWBERY—I beg your pardon; but is it desirable that we should put arguments in our enemies' mouths?

Mr. BRIGHT—But these are so palpable, that even a child might perceive them.

Mr. NEWBERY—Then it is surely not worth while to occupy the time of this meeting with them. If it only rested with the shareholders, it would be different; but we shall never pass Parliament, if we thus give every advantage to our opponents as to any weak point we may have. I think this is the common-sense view of the case.

Mr. RAWSON—Well, whether we are wrong or not, they certainly are in the wrong.

A SHAREHOLDER said, he did not see why the meeting could not have some statement of the accounts and the funds of the Company.

Mr. WHEELER—The accounts are to be audited before they can be laid before the shareholders; and at present the Directors are the sole creditors of the Company, having found all the money hitherto required. There is a resolution for the appointment of auditors, to be passed by this meeting. [Mr. Wheeler read it.] So that in fact the state of the accounts is required to be ascertained by auditors to be appointed by this meeting.

Mr. BRIGHT—Is it not of some consequence, that any person who votes for the dissolution of this Company, without intending to become a shareholder in the new concern, should know how much the balance would be that will come to his share?

Mr. TOOTAL—The probable balance will be somewhere about 3*l*. I don't apprehend there will be less than 3*l*.; but of course, in an affair of this sort, it could not be brought into view all at once, for I may mention that the last preparation for Parliament was only made on the 5th of this month.

Mr. WRATISLAW—Then I understand that the deposit was made to go to Parliament for the former line, and the present line being six miles shorter, would not require so much capital by 110,000*l*., and, therefore, there is money enough to complete the line.

Mr. TOOTAL—The varied line is six miles shorter; but some portion of the works from Stafford to Rugby would be more expensive.

Mr. WRATISLAW—I only want to understand it,—whether the last estimate is sufficient to complete the line.

The CHAIRMAN and Mr. TOTAL—Oh, certainly; quite sufficient.

The resolution for the reception of the Report was then put from the chair, and passed *nem dis.*

Mr G. R. CHAPPELL then moved the second resolution, declaring the Company dissolved. He said—I do not move this from choice, or from my own disposition to dissolve the Company, but from the necessity which exists at the present moment; that every shareholder may have his choice, either of retiring from the undertaking or continuing to be a shareholder in it. I have given you my opinion as an individual before; and, if a Company be established from this or any other meeting, to carry on the concern, I shall feel happy to become a shareholder in any new Company. It would grieve me exceedingly that an undertaking like this, designed to benefit Manchester, and belonging to Manchester especially, should be given up, because of the opposition of other Companies, who are not taking the right or the best way to oppose it. The pecuniary proposition made twelve months ago, only provoked our contempt. If that Company (the London and Birmingham) had wisely considered their interest, they would have offered a sum that might have been an inducement to the postponement of this undertaking for three or four years to come. But they have now sent a letter which betrays itself to be of so thoughtless, imbecile, and childish a character, that we must be pretty idiots to regard it. They say they don't mean to make us the pecuniary offer they made twelve months ago. Why we never asked them.

The CHAIRMAN—That letter should be read.

Mr. CHAPPELL—Yes, certainly; I beg that it may be read.

The CHAIRMAN—This is a letter I received on Saturday last, addressed to me, by favour of Mr. T. Cooke, and accompanied with a request that it might be read to the meeting:—

---

* This document will be found in our advertising columns.—ED. R. T.

† See our advertising columns.—ED. R. T.

London and Birm. Railway, Euston Station, Jan. 7, 1841.

My Dear Sir,—In consequence of observations which have reached me, leading to the inference that, in the event of the re-constitution of the Extension Company, the subscribers to that projected undertaking might expect a renewal of the pecuniary offer made last year to that body by the London and Birmingham and Midland Counties' Companies, will you allow me to take the opportunity, through the medium of our mutual friend, Mr. Cooke, of removing any such impression, by stating most explicitly, that no such intention exists on the part of those Companies.

I will not take up your time and attention by recapitulating the reasons which, under the instructions of the proprietors, have determined the Directors of the London and Birmingham Company in continuing to give their most strenuous opposition to the Extension line. At the same time, let me assure you, and the Directors of the Manchester and Crewe line, of the earnest desire of the Board to place at your disposal every facility at the stations, both in London and Birmingham, for carrying on the traffic of Manchester upon a footing entirely independent of any other business, and to renew the offer of entering into any arrangements for the working of the line, which may be deemed conducive to the convenience, and advantageous to the trade, of that town.—Believe me to remain, my dear Sir, yours very favourably, GEO. CARR GLYN.

Thomas Ashton, Esq., &c. &c.

Mr. CHAPPELL said, that gentlemen might charge their memory with the statements made by the London and Birmingham Company twelve months back, and the reasons they assigned why it would be ruinous to this company to pursue the undertaking. They then argued, that a continuance in the undertaking would be ruinous to us all; and then they said:—"We will give you 20,000*l.* to drop it." What could be more ridiculous than to offer us 20,000*l.* to drop a concern that they believed would be ruinous to a rival company? Then here comes a letter—there not having been the slightest insinuation, as he believed, that any renewal of the offer was expected—just as if some overtures had been made by us to them, to settle this business before going to Parliament! Why, realy, it is children's play. We are not intending to take any such offer, if it were made. If it pleased the shareholders to re-elect the Directors, he for one (though he had no disposition to increase his business) would serve the company faithfully and gratuitously; or, if they thought fit to reject him, he would willingly retire, but continue to be a shareholder.

Mr. Alderman BROOKS seconded the resolution, and said, that, from the opposition manifested, and the quarter it came from, he was satisfied that this was a very good line, particularly looking to the papers and publications circulated against it, and to the fact, that Mr. Ashworth, the agent for two other lines, was active against it. As to the letter from the London and Birmingham Company, it looked as if they wanted to make a bargain with us, and, as we did not move, they did. (Hear.) They thought it was their turn to move, and so down came this letter, but from the proceedings of this meeting, they would find that we were not to be tickled in that way.

Mr. H. NEWBERY said, that another letter had been lately sent from Mr. Burke, the parliamentary agent to the London and Birmingham Railway Company, which he should have liked to read to the meeting, but could not without Mr. Burke's permission, and that not having been obtained, the shareholders were not in full possession of the case; but he did hope that the London and Birmingham Company would see it just to themselves and us to publish that letter which Mr. Burke had addressed to the Manchester and Birmingham Company.

Mr. ESKRIGGE said, it would appear, if this Company were now dissolved, that merely the balance now in hand, after paying all expenses, would be divided amongst the shareholders *pro rata* per share. But the new Company would derive all the benefit of the expenditure hitherto made, which was already large; and they would go to Parliament upon a much better footing of advantage than those who dissented, left the concern, and lost their money. Was it proposed that the new Company should give to the old Company any part of the money expended, say 1*l.* or 2*l.* per share over and above what appeared to be their due?

Mr. NEWBERY—Certainly not.

Mr. JAMES BURT—It appears to me a most extraordinary thing to suppose, that a Company about to be formed to carry on an undertaking should give a bonus to those who refuse to join it.

Mr. ESKRIGGE said, that all the money that the retiring shareholders would lose had been expended in surveying, making plans and estimates, and in contesting the line; for a great deal of opposition had been bought off by the money of the old shareholders.

Several DIRECTORS—"No, no."

Mr. ESKRIGGE—Well, the opposition had been overcome at any rate, and the money had been spent in overcoming it.

The CHAIRMAN—But the Company being dissolved does not deprive the holder of any shares of his option. He has a choice in it, either to go out or to join the new Company. If he can make anything of his shares, he can either hold them or sell them.

Mr. ESKRIGGE—But will not the new Company derive great advantage from the money already expended?

Mr. TOOTAL—Let me state distinctly and explicitly that no money has been paid for any such purpose as buying off opposition.

Mr. ESKRIGGE—Very probably, money has not been paid, but some of our opponents have had money's worth.

Mr. TOOTAL—Certainly not.

Mr. Alderman BROOKS—Perhaps we may have agreed to give something, but nothing has been given.

Mr. TOOTAL—No, nor promised.

Mr. T. OLIVANT—The question is, whether the new Company are going to give the old Company any thing for those advantages which they will derive from the money already expended.

Mr. TOOTAL—Certainly not. The meeting must be quite aware, that every step that has been taken by the Directors has been taken not only with the sanction, but it may be said, by the orders of the shareholders. They have expressed their wishes; the Directors have only been the instruments, the tools, by which the thing was worked. Every step, from first to last, has been taken with the knowledge, consent, and sanction of the shareholders.

Mr. KNIGHT—I don't make any complaint as to the expenditure of the money.

Mr. TOOTAL—So cautious were your Directors, that neither verbally nor in print did they say one word to influence a single shareholder with respect to the offer of the London and Birmingham Company. This is shown by the Report of the proceedings of the meeting at which that offer was laid before the shareholders.

Mr. Tootal then read the following extract from the Report of proceedings at a meeting of the Company held on the 3rd February, 1840.

"The Chairman said, that, with respect to the offer of the London and Birmingham Railway Company, perhaps the most convenient mode of bringing it fully before the meeting would be for some shareholder to move the adoption or rejection of the offer.

"—— Rawson, Esq., wished to know whether there would be anything objectionable in the Directors giving the meeting a more full reason for their not going to Parliament this session. Of course he did not require any further explanation, unless the Directors felt that there would be no impropriety in giving it.

"The Chairman said, he thought that all the facts material to be known at that meeting were embodied in the Report.

"Joseph Birley, Esq., said he would beg to move, that the offer of the London and Birmingham Company be declined, and that would perhaps raise a discussion on the subject.

"The motion having been seconded,

"Mr. Rawson repeated his question. He had a good opinion of the line, and he should like the application to Parliament to be prosecuted with all possible dispatch. But no doubt the Directors had good reason for advising delay. He should at all events like to know whether the Directors were of opinion that the offer of the London and Birmingham Company should be rejected; because, otherwise, the shareholders would be acting in the dark as to the sentiments of the Directors.

"Mr. J. Birley begged to ask whether it occurred to any one present to move the acceptance of the offer. (Hear.)

"The Chairman, after a pause, said, that having been called upon on behalf of the Directors, he begged to state, that they had, without the slightest hesitation, come to the unanimous resolution that the offer ought to be declined. (Loud cheers.)"

So that, until the word was wrung from the Directors, not an opinion did they express, so desirous were they that the shareholders should decide, from the opportunities which they had for judging (as much as others had) as to the course to be pursued. And from first to last the Directors had carefully abstained from leading the shareholders; leaving them to decide according to their own judgment. In accordance with the resolutions of the meeting of shareholders in February last, the Directors had carried out all the necessary preparations for Parliament, by the order of the shareholders, and of course at their expense; yet now one or two gentlemen complained of the hardship to parties wishing to retire from the Company, and receiving their rateable proportion of the moneys left. Pray, would it not be very hard on those who remained, if one-third or one-half the shareholders left? The other half would be a useless body; in position something like the Leeds and Liverpool Railway Companies, with reference to their junction line. The two Companies went for a mile each; each without the other was comparatively valueless; but the two acting together would make probably an extremely desirable and valuable arrangement. If such a proposition were to go out, the Company and the undertaking would die a natural death, and, after paying a bonus to the retiring shareholders, the hardship would be on those who wished to go on, who got no bonus, and lost all their money. They had all embarked together, and he hoped most of them would remain together. He certainly held a considerable number of shares in this undertaking; he had done from the first, and should do to the last; and his object now was, to show the hardship to be rather on those who wish to go on, if a considerable number of shareholders went out; for, by so doing, they would annihilate the undertaking, and leave the remaining shareholders with a quantity of blank paper totally useless; whereas, if they went on with it together, they would make the preparations already completed of considerable value and importance.

Mr. ESKRIGGE said, he was not one of those who wished to retire from the Company, but rather to go on; but he thought, that in justice to those who went out, something should be paid to them. The shareholders had paid for all the estimates, the expense of going to Parliament, and depositing the plans, &c. Those who remained would derive all the benefit, and he thought in fairness they should give a part to those who retired.

Mr. Alderman BROOKS—But suppose we are upset in Parliament again, how would it be then?

Mr. BRIGHT asked if the law-clerk had not read that the Company should not have power to go to Parliament again, if 3*l.* 10*s.* per share should have been expended, without calling the proprietors together to decide the question they were now met to decide. If, on winding up the accounts, only 50*s.* per share were left, then the Company were bound in honour to pay all those who retired the 3*l.* 10*s.* which that clause guaranteed should not be spent before that step was taken.

Mr. WHEELER having again read the clause (given above), said, that any twenty "subscribers to the undertaking" might have taken this step long since, if they had thought fit; but they did not think fit, and it was not incumbent on the Directors to do so if they did not. The Directors might have proceeded, without asking any further sanction from the proprietors; but they had come here to-day, and devised this mode of enabling those proprietors who were dissatisfied to withdraw from the Company. If it were not for this object, the Directors might have called upon the shareholders to execute an undertaking for the coming session; and if they had refused to do this, their interest would have been forfeitable by the Directors. The Directors had ample powers with respect to the variation of the line, the powers usually given.

Mr. WRATISLAW dissented from the opinion of Mr. Bright. If any gentleman wished to retire, he did not see that he could fairly ask for any bonus, because everything that had taken place was with the sanction and by the direction of the shareholders.

Mr. BRIGHT—But you dissolve the Company by a majority.

Mr. WRATISLAW—And a majority in every case must bind.

Mr. BRIGHT—We are a Railway Company in this room; and just imagine for a moment that there is another Railway Company on the other side of the wall, going to take up the line if we dissolve. If it is decided by a majority to dissolve, I see no propriety in withholding from those who retire a portion of the money that has been expended, in order to make a present of the advantage to a new Company. It is not any interest of mine; I shall not get a farthing either way, nor any one connected with me. Still I think it but fair to give at least half of what has been paid up to those parties who dissent.

Mr. Alderman BROOKS—Do you mean that we should pay them money out of funds that do not exist? We have fought one battle, and got beaten; we are going to fight another, and are we to give a bonus of 3*l.* 10*s.* per share to those that dare not join us? It is perfectly optional to any shareholder to stay or go; and he cannot complain if he has his choice. Besides, if, as Mr. Bright says, there is one Company here, and another Company on the other side the wall, any shareholder may say, "I'll get this bonus of 3*l.* 10*s.* and go out; but I'll go the day after and buy shares in the market at less price."

Mr. CHAPPELL—Will Mr. Bright look at it in this point of view? Suppose a number of gentlemen intend to retire, but that Mr. Bright and many others hold to the new Company, how would he like to give part of his money as a bonus to those who might be induced by this very sum to retire? It is buying a man's retirement when he has a choice either to remain or go out; and so long as every shareholder has a choice, there is no injustice done. Suppose we pay

[redacted] and we go to Parliament again, who is there [redacted] gentleman is of opinion [redacted] to retire then remain, he has [redacted] going to remain, and I hope [redacted] remain, that we may perse-

Mr. [redacted]WORTH—Are we not wasting our time? We have paid our money on certain terms, and unless there is a clause in the deed directing that parties may pay their money unequally, I, for one, should think it exceedingly unjust to pay anything beyond their equal share of the funds in hand to those who go out, and any objection alone would be sufficient to prevent the Directors having the power to do it.

Mr. BRIGHT said a majority could sell their right as a Company.

Mr. WHEELER said, a majority could bind the Company within the two deeds, and no further and no otherwise, and it was clearly not lawful for any majority, however great, even supposing there were only [redacted] in the Company, to bind the Company to [redacted] beyond the scope of the deeds; and he [redacted], therefore, that any such payment would [redacted] it would be for the London and Birmingham [redacted] and Counties' Companies to have paid this Company the 20,000*l.* they offered last year—a [redacted] which, if it had been made, might have been [redacted] in the hands of the parties receiving it, supposing it to be dissented from by any one shareholder [redacted] either of those Companies.

A SHAREHOLDER said, that in breaking up a Company which held considerable property, it was the duty of the Directors to sell it, as it belonged to this Company, and the new Company ought to pay for it.

Mr. WHEELER said, as to the property in surveys, plans, &c., it was quite competent to anybody, if the Extension line were abandoned, to form a new Company, and take advantage of the plans which this Company had deposited. Those plans, &c., were notices to the public, and any portion of the public would have a right, within the purposes of the Standing Orders of [redacted] of Commons, to use those plans and notices if [redacted] thought fit. Therefore, in fact, the shareholders [redacted] to sell.

A [redacted]HOLDER—Oh yes, the estimates.

Mr. WHEELER—Why, they are all published, and anybody may have them for the cost of paper and printing, by going to Hansard's, the Parliamentary printers.

Mr. RAWSON dissented from the law-clerk as to its being illegal; at least he was sure that it came within the scope of equity to give to dissentient shareholders a portion of the money already expended. We as a Company determine to form a new one, and go on (for he believed he should go on); and if we refused to give dissentients any thing beyond their proportion of the funds in hand, he was certain the Lord Chancellor would set any such decision aside. The Directors ought to stand as arbitrators between the assentient and dissentient shareholders, and say what is due to those who go out; and, if they did so, he was satisfied that some money, beyond what was due in law, would come to the parties going out.

Mr. BURT thought gentlemen were wasting a vast deal of time. The Company came to a resolution last year, that certain steps and measures should be adopted, and it was understood that every shareholder should pay his fair proportion to the expenses. That proportion had been paid; but it appeared to him quite ridiculous because some now chose to say, "We will not go on with the new concern," that they can have any claim to have a portion of what had been expended returned to them. Those who decided to go on might justly say to them, "All the money that has been expended has been by your own authority and desire; we will give you a fair share of what is left, if you choose to retire; and if you choose to remain, you will participate in any advantages that may arise from the undertaking." [redacted], these in neither equity, honour, or justice in the demand of persons who have once given their assent to proceeding with the undertaking. They [redacted] of hardship.

[redacted] he had only come home on Saturday, and he should like to have time to see a

[redacted] of Bristol, said, that when [redacted] Company, had made a [redacted] to a new Com-

[redacted] do it legally.

[redacted] to the Di-

[redacted]SMITH—He had [redacted] amendment which he had no [redacted] a statement in [redacted]; he had [redacted] to say yes to that re-port it, and he would move,—That the Directors be and are hereby empowered to open communications with the London and Birmingham, and other Companies whose interests will be affected by this railway, with a view to its abandonment; and as soon as proposals have been received, with a view to to enable the Directors to ascertain what opinions the shareholders may entertain, a meeting shall be convened to take the same into consideration." He (Mr. Smith) was a proprietor of 200 shares in this undertaking, which cost him, with interest, 1,100*l.*, and he was quite aware, notwithstanding the letter from the London and Birmingham Company, that an arrangement might be made by which the shareholders of this Company might receive from them 3*l.* 10*s.* per share.

The CHAIRMAN—No; they say they will give us nothing.

Mr. WHEELER—He had no interest in any adverse line, and had no railway property except in the two lines emanating from that office (the Extension and the Manchester and Birmingham lines).

Mr. RAWSON said, if he were to second the amendment, it would be with a little addition. Those who intended to go on with the undertaking would not be acting in a straight-forward way if they did not give a little time to make inquiry. He really felt quite uncomfortable about another concern he was in, and would not name. He need not reiterate the expression of the high estimation in which he held the Directors as upright men; but he should like to know a little more before he agreed to a dissolution, and he did not feel prepared to join the new Company till he had had time to inquire. He would propose to add to the amendment, that a Committee should be appointed to inquire and report to a meeting of shareholders in two or three days.

A SHAREHOLDER—Is there time for any delay?

The CHAIRMAN—Certainly not.

Mr. RAWSON—Then I withdraw from seconding the amendment.

The CHAIRMAN—Will any one second the amendment; we must dispose of it.

A SHAREHOLDER (we think Mr. R. C. Sharp)—It appears to me that the proprietor has forgotten the letter written by Mr. Glyn.

Mr. WRATISLAW—At any rate he has forgotten the resolution we came to twelve months ago.

Mr. G. SMITH—No; but we are in a different position now to what we were then.

Mr. E. TOOTAL—We are in exactly the same position.

The CHAIRMAN said, there being no seconder to the amendment, it fell to the ground. He was about to put the original motion of Mr. Chappell, for the dissolution of the Company, when

Mr. OLLIVANT asked if it would not be as well if the substance of the resolution were put into two separate resolutions—the first being that the old Company should be dissolved; and the second should go to the point of forming a new Company.

Mr. WHEELER—It is not intended to form a new Company at this meeting at all.

Mr. OLLIVANT repeated it would be more regular to have a resolution simply declaring the Company dissolved, and then another, expressing the opinion of the meeting as to a new Company being formed.

Mr. WHEELER said, if the resolution were simply a declaration that the Company was dissolved, then the proceedings of this meeting would appear to have no reference to the variation in this line, it would be in fact a defunct concern. But now, upon the face of the resolution, the object is stated to be to form a new Company. We could not legally form a new Company at this meeting; therefore, we merely say it is intended to do so, and as that is intended, we resolve that the present Company be dissolved.

Mr. OLLIVANT thought the notice convening the meeting stated it was for the purpose of dissolving this Company, and forming a new one.

Mr. WHEELER read the advertisement (given above), and said, that of course the advertisement was worded as widely as possible, because the Directors did not know what course this meeting would like to take. If the meeting had taken a particular turn, it would have become illegal, and then it would have been necessary to adjourn for 21 days, and call another meeting.

Dr. LYON asked if the new Company would have any difficulty in commencing the undertaking where the old Company left off, in Parliament or elsewhere.

Mr. WHEELER—None, sir.

A SHAREHOLDER—Will the new Company have as available the valuable arrangement made with the Grand Junction Company?

Mr. WHEELER—Most certainly.

Mr. BRIGHT—Was this step determined upon at the last meeting?

Mr. WHEELER—Certainly; and I have the Report here which shows it.

The CHAIRMAN then put the motion for the dissolution of the Company, which passed with three dissentients.

The CHAIRMAN declared that to be the number; and,

Mr. RAWSON said—Oh, there's many more.

Mr. CHAPPELL—Then count them.

Another show of hands were taken, and there were found to be first four, and subsequently five, dissentients, whose names were taken down by Mr. Wheeler as follows:—Mr. George Smith, Mr. Wm. Rawson, Mr. Pierpoint, Mr. Shepherd, and the Rev. R. Durnford, rector of Middleton. (Immediately afterwards, it was intimated that Mr. Shepherd wished to withdraw his assent, leaving *four* dissentients.

Mr. LEO SCHUSTER moved the third resolution, appointing Mr. Higgins and Mr. Henry Chadwick Auditors of the accounts.

Mr. WHEELER said, that the object of this resolution was, that a resolution having been now come to, by which the Company is dissolved, of course unless the powers of the Provisional Directors were continued for the purpose of winding up the affairs of the Company, they would be from this moment *functi officio*, and unable to wind up its affairs.

Mr. JOSHUA P. WESTHEAD had no objection to second the motion. He supposed both those gentlemen were large shareholders.

Mr. TOOTAL—Certainly; they are considerable shareholders.

Mr. BRIGHT—Should there be some time fixed when the shareholders shall be called together to receive their balances?

Mr. TOOTAL—A circular will be sent to each shareholder, with the Report of the auditors, as early as possible.

Mr. BRIGHT—What means will you take to collect the dissentients?

Mr. TOOTAL—A circular will be sent to each shareholder, with a request that he will communicate to the Directors what his desire or intention is. If to take shares in the new Company, he will apply for them—if to retire, he will say so. A blank form for each decision will be sent, to be filled up. It is very desirable for the interests of the Company, that both those who retire, and those who go on, should give their answers as early as possible.

Mr. WRATISLAW thought it very desirable the shareholders should hold together as much as possible, in order that they might again be entitled to that feeling in Parliament, which was before manifested in their favour. The House of Commons had passed a resolution, stating that the Company was exceedingly ill treated the last time; and he thought on this account it was important that as many shareholders as possible should enter the new Company.

Mr. OLLIVANT—Of course, in going to Parliament a second time, the shareholders will have to sign a new deed.

Mr. TOOTAL—Of course.

Mr. OLLIVANT—And I think it was then stated, that the probable amount deposited might be very likely 3*l.* 10*s.* per share. In going to Parliament again, we should have to say that we had paid 10 per cent. upon our deposits. Of course, then, there would be 4*l.* 10*s.* more to pay per share before we could go to Parliament. It was always desirable that these things should meet with candid explanation, and that there should be no misunderstanding. He did not ask this in any hostility, but in consequence of a circular which he had received.

Mr. NEWBERY—From one of our opponents, no doubt.

Mr. OLLIVANT—Very likely. At the same time, we should know what we are doing, and when you touch our pockets.

Mr. TOOTAL—It is not intended to touch your pockets.

Mr. OLLIVANT—But how will you get over it?

Mr. TOOTAL—Where would you like to have that question answered?

Mr. OLLIVANT—It must be answered, or it will not be satisfactory to the shareholders.

Mr. TOOTAL—It shall be, most distinctly; but don't ask me to cut your throat and my own.

Mr. BRIGHT having handed the circular alluded to by him to Mr. Newbery, that gentleman asked if any man put his name to it; and it was intimated that it was anonymous.

Mr. OLLIVANT—Then, of course, I understand we shall not have to pay any more before we go to Parliament!

Digitized by Google

Mr. WHEELER—Mr. Ollivant is perfectly right as to the operation of the standing orders. But the Directors' Report has already stated that the existing deposit has not been appropriated in any way; and they hope to provide a course, which it is not expedient to state here, by which any further payment by the shareholders will be obviated.

Mr. OLLIVANT—That makes a great difference, and it is perfectly satisfactory. I like to understand the thing when it is thrown in my face that I shall have to pay 4*l.* or 4*l.* 10*s.* per share, before we can go again to Parliament.

Mr. WHEELER read the concluding paragraph of the Directors' Report as follows:—

"It will, of course, follow, as part of this arrangement, that the accounts of your Directors (who are the sole creditors of the Company, no portion of the deposits already paid having been expended or appropriated) should be audited, and the sum ascertained, to which, after contributing their quota to the expenses incurred, the several retiring shareholders, if such there be, will been entitled."

These deposits are still intact; and the particular mode by which it is intended that they shall still remain intact, I am sure, Mr. Ollivant will not call upon the Directors to state here; but it is intended that they shall remain intact till the end ofthe next session of Parliament.

Mr. OLLIVANT—Well, mind you don't get thrown overboard by your opponents.

Mr. TOOTAL—Oh, they attacked us before.

Mr. Alderman BROOKS—Mr. Ollivant is quite right in asking the question.

Mr. OLLIVANT—It is a very important matter, and will weigh considerably with all parties in signing the new deed.

The CHAIRMAN said, he would put the resolution for the appointment of auditors.

Mr. G. SMITH—Who are the auditors?

Mr. NEWBERY—Two of the very heaviest proprietors.

The motion then passed *nem. dis.*

The CHAIRMAN said, he believed there was no other business.

Mr. CHAPPELL said, it was desirable that the returns should be made to the circulars as early as possible, and Mr. Wheeler was requested to state the wish of the Directors to that effect in the circulars.

Mr. TOOTAL said, that probably in the course of the next day (Tuesday) circulars would be sent to every registered shareholder in the Company, every gentleman who had signed the deed.

A SHAREHOLDER asked how it would be with those who merely held scrip.

Mr. TOOTAL—There will be an advertisement to them, and they will be good enough to call at this office, where every information will be given them. Of course we don't know who are scripholders, unless they call at the office with their scrip.

Mr T. Ashton having left the chair, Mr. H. Chadwick was called thereto; and

Mr. WRATISLAW said, he thought it would be highly improper for the meeting to separate without a vote of thanks to Mr. Ashton, for his conduct in presiding over it. He (Mr. Wratislaw) had certainly never attended a public meeting in his life where the Chairman seemed so disposed to hear everybody and everything. Every satisfaction had been given by him; and therefore he begged to propose that the cordial thanks of this meeting be given to Mr. Ashton for his conduct in the chair.

Dr. LYON had great pleasure in seconding the motion.

It passed unanimously, and the meeting then terminated, about a quarter-past two o'clock, having occupied upwards of two hours and a half.

RAILWAY ADJUDICATIONS.

ROACH, ASSIGNEE OF PAXTON AND HORTON, *v.* THE DIRECTORS OF THE GREAT WESTERN RAILWAY COMPANY.

Court of Queen's Bench, Jan. 12.—Lord DENMAN delivered judgment in this case. This was an action of trover against the defendants, for certain materials used in the construction of a tunnel, and alleged to be the property of the plaintiff. It appeared that the bankrupts had entered into a contract with the defendants to construct the tunnel at Boxhill on the line of the railroad, and that the contract contained a stipulation that if there should be any delay in the performance of the works the defendants were at liberty to give Paxton and Horton notice to proceed; and if within a limited time afterwards that notice was not complied with, the defendants were to be authorised to take the works into their own hands, and to possess themselves of the machinery, materials, &c., and complete the work; and that the money before then paid to the contractor was to be deemed sufficient payment for what was due up to the time of the defendants so taking the works into their own hands. A delay of the sort provided against had occurred; the notice had been given, and the defendants had taken possession of the machinery and the materials. A commission was issued against Paxton and Horton after the motion, but before the defendants took possession of the works. It was argued on the one side that the notice itself vested under the terms of the agreement all the property in the defendants, and on the other that that vesting only took place on the expiration of the period for which the notice was given, and that consequently the commission which issued before that time vested the property in the machinery, &c., in the assignees. The Court was of that opinion, and therefore confirmed the verdict given for the plaintiff, and directed that the rule for a nonsuit should be discharged.

THE SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY COMPANY *v.* WOODCOCK.

Court of Exchequer, Jan. 13.—This was an action for calls which was tried before Mr. Baron ROLFE, at the last Liverpool assizes, when a verdict was found for the plaintiff. A rule was obtained, on the part of the defendant, for setting the verdict aside, on the ground that no evidence was given of any resolutions of the Directors fixing the time and place where the calls were to be paid, and that they were made *in futuro*; that no evidence was offered that the person signing the notices of the calls was Chairman of the Court.

Mr. WIGHTMAN now showed cause against the rule, and contended that, according to the Act constituting the Court, the Directors were not bound to prove any resolution for a call; they had given the proper notice in the newspapers, and in that they had fixed both time and place where the calls were to be paid, and that he contended was enough. As to the other objection, there was a resolution entered into on the 13th March, that a call should be made on the 30th March, to be payable in the following May; he contended that the call was good enough, it having been really made on the 13th, all the words respecting the 30th was mere surplusage. The notice of the call was in effect the call, and that did not appear till April. By the Act that public notice was all that the Directors were obliged to do, and the public and the shareholders were not entitled to know anything of the resolutions of the Directors.

Mr. CRESSWELL, for the defendant, contended that the call was perfected by the resolution of the Directors, and if so, then they were invalid, because the resolutions making these two calls made no mention of either time or place for the payment of the money. The second objection applied to only one call, but he apprehended it was fatal so far as that call was concerned. It was resolved on the 13th March that a call should be made on the 30th. Now, if the Directors could make any call *in futuro*, what was to prevent those who went out by rotation making a call which would bind their successors? He obtained his rule upon another ground, to which his learned friend had not adverted. He contended that the Directors had not been legally elected.

Mr. WIGHTMAN hoped the Court would hear him upon that new point, for he had clearly understood that it had been overruled when the motion was made. According to the 140th section, the Directors named in the Act of Parliament were to remain in office till others were duly elected, and the calls in question were signed by a full quorum of the Directors so named in the Act. Their powers were legal.

Mr. CRESSWELL argued that the Act required the Company should duly elect Directors at the first general meeting of registered proprietors. At the time these gentlemen were elected there was no sealed registry, and it had been held that the registry was no registry until it was sealed.

Mr. Dundas, Mr. Crumpton, and Mr. Cowling, followed on the same side.

The COURT took time to consider their judgment.

THE DIRECTORS OF THE BIRMINGHAM, BRISTOL, AND THAMES JUNCTION (NOW WEST LONDON) RAILWAY COMPANY *v.* LOCKE.

Court of Queen's Bench, Jan. 13.—This was a case in which the Court had taken time to consider its decision.

Lord DENMAN now delivered judgment. This was an action brought by the plaintiffs to recover from the defendant the amount of certain calls on shares which he had taken in the Company. The verdict passed for the plaintiffs, and a rule *nisi* for a new trial was subsequently obtained. The proof of defendant being a member of the Company, liable to this action, was disputed. It was contended that the manner in which the registry-book of the Company, where the names of the members were entered, was kept, was irregular. That objection had just been disposed of in a judgment delivered a short time since in the Exchequer Chamber, in a case where a similar point arose, the case of the London Grand Junction Railway Company *v.* Freeman, where the registry-book, though irregularly kept, was held to be *prima facie* evidence of a party's liability. That case, too, decided another point—namely, that the holders of scrip certificates were decided to be proprietors, although they had not signed the Parliamentary contract. In the present case there was another point. The Directors had declared in the usual manner that the shares of the plaintiff were forfeited. It was contended that after such declaration an action like the present could not be maintained. The answer to that objection was, that such declaration of forfeiture did not take full effect until it had been reported at, and had received the sanction of, a general meeting, and such had not been the case in the present instance: and in the Court of Exchequer Chamber it had also been held that a mere notice of forfeiture did not exempt a party from liability to calls. On all these grounds, therefore, this Court was of opinion that the present rule for setting aside the verdict must be discharged.

Rule discharged.

THE GRAND JUNCTION RAILWAY COMPANY *v.* GRAHAM—SAME *v.* GUNSTON.

Lord DENMAN said, that in these cases, in which similar questions were raised, the rules must also be discharged.

THE QUEEN *v.* THE YORK AND NORTH MIDLAND RAILWAY COMPANY.

Court of Queen's Bench, Jan. 14.—Mr. ADDISON moved for a rule to show cause why the Coroner's inquisition should not be set aside, on the ground of irregularity. The affidavit on which he applied stated, that after the verdict had been given and been recorded, and two days after the jury had been discharged, the Coroner re-assembled the jury for the purpose of inserting in the inquisition the value of the instrument moving to the death. There were many authorities which showed that such a proceeding was altogether irregular. He had other objections to the inquisition.

The Court granted the rule, and directed that the other objections should be stated fully to the Coroner.

LIVERPOOL DIRECTORS, AND THEIR TRAVELLING, LODGING, AND FEEDING EXPENSES.

To the Editor of the Railway Times.

Raymond Buildings, 11th Jan. 1841.

SIR,—The charge brought against Mr. T. W. Rathbone and Mr. Edward Cropper of being in the practice of sending in to the Eastern Counties' Railway Company bills for travelling charges never incurred, or at least not incurred to the amount *claimed and drawn for*, has been now often enough repeated, and remained long enough unanswered, to justify me in at last concluding (which I do with great reluctance) that it is well founded.

I have now, therefore, only to ask my brother shareholders if such an appropriation of the funds of the Company under its existing circumstances of

Digitized by Google

financial distress, or, indeed, under any circumstances whatever, is not most scandalous? And whether means ought not to be immediately taken to compel the retirement of these very *chargeable* gentlemen from the Direction of our cruelly mismanaged affairs.

I am, Sir, your obedient servant,

R. T. F.

P. S. I observe that Mr. David Hodgson is stated to be in the same category. If so, then, my questions are to be considered as referring equally to him as to his two colleagues.

To the Editor of the Railway Times.

Leicester, 9th Jan. 1841.

MR. EDITOR,—You are in but half the secret as to the *six-guinea* trick of the Liverpool Directors. The actual practice, I am told, is this, *to pay the fare up and down*, so as to enable them to say that they do not literally travel *free*, but to charge *the whole expense, to each and every one* of the Companies at whose head quarters they can manage to call on the occasion of each trip. Thus, supposing a person to be, as Mr. Rathbone is, a Director of the Birmingham, the Midland Counties', and the Eastern Counties', he charges each Company 6*l.* 6*s.* for his travelling charges, up and down, or 18*l.* 18*s.* in all, and having but to pay the 6*l.* 6*s.* once, *makes a clear gain of twelve guineas every excursion!* Then there is to be added to this the savings on the 25*s.* a day charged to each Company, for lodging and subsistence money, that is, two breakfasts, two dinners, two teas, and two beds, out of every three charged, for ubiquitous cormorants as they are, none of them, I fancy, can manage to sleep in more than one bed, or to use more than one knife and fork, at a time. At the Railway Hotel, Euston-square, I heard two of these worthies one day bantered by a townsman of theirs—whose "*lines*" had not, I suppose, fallen "in such pleasant places"—about *the fine thing they made of it*, when the sum of 16*l.* was mentioned as about their average gain every trip; and that I should think very near the mark.

I am, Mr. Editor, your constant reader,

A MIDLAND COUNTIES' SHAREHOLDER.

CARRIAGE OF GOODS ON THE GRAND JUNCTION RAILWAY.

WE have much pleasure in publishing the following letters as supplementary to those which have recently appeared in this journal. The subject is briefly alluded to in our leading columns:—

MESSRS. PICKFORD AND CO.,

To the Directors of the Grand Junction Railway Company.

GENTLEMEN,—We beg to forward to you the enclosed correspondence between ourselves and the Secretary of the London and Birmingham Railway Company, in the matters referred to in our correspondence with yourselves, published in the *Railway Times*, and are,

Gentlemen, your obedient servants,

PICKFORD & CO.

London, January 14, 1841.

NO. I.

MESSRS. PICKFORD AND CO.,

To R. Creed, Esq., Secretary to the London and Birmingham Railway Company.

SIR,—A letter appeared in the *Railway Times* of the 26th December ult., purporting to be signed by the Treasurer of the Grand Junction Railway, and to have been written by the authority of the Board.

It was there stated—

"It is not true that the Company have refused to allow their waggons to go forward on the London line; *or to receive from the London Company theirs*," &c.

We thought it necessary to reply to this letter, and (not willing to employ a stronger word) we described this statement of Mr. Chorley's as *erroneous*.

A further correspondence between the Grand Junction Railway and this firm, which appeared in the same journal of Saturday last, renders it necessary for us to make it plain to the public, that the departures from truth which have been exhibited in this controversy, are not to be found in that portion of it which has proceeded from ourselves.

We have to request that you will be so good as to give us the benefit of your testimony upon this point:—Whether London trucks were, from the 30th September to the 22nd December last, (the date of Mr. Chorley's letter,) permitted by the Grand Junction Company to pass along their line?

Or, whether this permission was refused by the Grand Junction Railway Company?

And whether that prohibition was actually subsisting and in force on the 22nd December last?

We trust that in affording us the information we desire on this subject, you will not consider that you are doing more than an act of justice to

Your obedient servants,

PICKFORD & CO.

London, 12th January, 1841.

NO. II.

MR. CREED,

To Messrs. Pickford and Co.

SIRS,—Referring to your letter of the 12th inst., I send the annexed statement of the Grand Junction waggons used on the London and Birmingham Railway, and of London and Birmingham waggons used on the Grand Junction Railway, in the months of October, November, and December.

There is no general prohibition on the Grand Junction line, of London and Birmingham waggons; but Messrs. Pickford and Co. being the only carriers between London and Lancashire, and waggons in charge of their goods on arrival at Birmingham being prohibited from passing on to the Grand Junction line, the practical effect is the same as a prohibition.

I am, Sirs, your obedient servant,

R. CREED, Secretary.

London and Birmingham Railway Company's Office, Euston Station, 13 January, 1841.

Statement above referred to.

1840.	Grand Junction waggons used on the L. & B. line.	L. and B. waggons used on the Grand Junction line.
October.....	256	141
November.....	229	None.
December.....	285	1

MR. HAYWARD, (MESSRS. PICKFORD'S AGENT.)

To J. R. Chorley, Esq., Treasurer of the Grand Junction Railway Company.

SIR,—I observed in your letter published in the *Railway Times* of the 9th inst. the following words:—

"You dwell upon Mr. Hayward's version of his interview with the Treasurer, the accuracy of which he denies."

And again,

"Verbal communications *alleged to have been made*, which are subject to misrepresentation."

When you wrote that letter you had before you in print (in the *Railway Times* of the preceding week,) my version, as you are pleased to call it, of my interview with you on the 30th September last.

You have thought fit to question my veracity; I call upon you to place your own character for truthfulness fairly in the scales with mine, by giving in detail (as I have given) your "version" of what took place on that occasion. You have no right to impugn my veracity in such a matter, while you shelter your own character under a vague parenthetical denial.

I call upon you, therefore, to come forward before the public with your own statement; and I pledge myself to substantiate the accuracy of that which has already been given to the public on my authority, and to show, that if you have given to your employers any different report, the "*misrepresentation*" does not lie with,

Sir, your obedient servant,

J. HAYWARD.

London, 14th January, 1841.

ACCIDENT ON THE MANCHESTER AND LEEDS RAILWAY.

A COLLISION unfortunately took place near the Cooper-bridge station on the Manchester and Leeds Railway last Wednesday evening, under the following circumstances. A cattle train of nearly 20 waggons, with sheep, &c., left Wakefield a little before four o'clock in the afternoon, and got on very well until after they passed the Dewsbury station, when the engine began to show signs of weariness. Before they could reach the Cooper-bridge station the water was exhausted; the engine was then detached and proceeded to the Brighouse station for a supply of water. In the interval the next train, which leaves Wakefield at half-past four, came up, and owing to the dense fog which prevailed, the engineer was unable to see the former train until he arrived within a short distance from it. The engine was immediately reversed, and the breaks applied to the wheels, which greatly decreased the force of the shock which took place. Two of the carriages were broken, and the engine partially thrown off the rails, but none of the passengers were injured beyond a severe shake from the concussion, and the sheep also in the first train escaped without harm. An inquiry was set on foot the same evening by several of the Engineers and Directors, and after a most rigid investigation the servants of the Company were fully acquitted of all blame. The engine of the cattle train, the *Leeds*, is considered to be inferior to others on the line.—*Halifax Guardian.*

A correspondent of the *Times* relates, that as he was travelling from London to Liverpool on the night of the 30th ultimo, he was alarmed by a violent jerking of the carriage, which threw him against its ceiling with considerable force. The train stopped for a moment at Blisworth, and he called to a porter; who found out what was the matter just as the train started, but was unable to make the attendants hear, that they might stop it. The jerking motion resumed, and was continued for fifteen miles, until they reached Weedon; it was then found that the break lay across the rail, and had been dragged along in that most dangerous position. The carriage, he says, was shattered to a degree that rendered it useless for further travelling. [The carriage belonged, we believe, to the Grand Junction Company.—ED. R. T.]

On Tuesday last, an accident of a very serious nature, and one which might have been attended with the most fatal consequences, occurred on the Slamannan and Glasgow Railway; as it was, several of the passengers were severely injured, and all of them were thrown into a state of the utmost consternation and alarm. When the evening train, with about from 50 to 60 passengers, was within a few miles of Glasgow, the engine, then going at a very rapid rate, in order it is said to make up lost time on the road, was suddenly thrown off the rails, and the second and first-class carriages were in consequence overturned with extreme violence, on opposite sides of the road. Providentially no lives were lost, and it is only proper to say, that the utmost attention was paid to the sufferers by the officers of the Company, and also by those inhabitants of the neighbourhood who were drawn to the spot immediately on the occurrence of the accident.—*Edinburgh Courant.*

One of the clerks on the Blackwall Railway, named Bowles, was knocked down by a train on Wednesday evening, while walking along the line, and seriously, if not mortally, injured. Mr. Bowles, it appears, is afflicted with deafness. He surely ought to have known better than to venture to walk along the line.

GREAT NORTH OF ENGLAND RAILWAY.—The Board of Directors having heard that *Sunday working* has been continued on a part of the line, notwithstanding the positive orders given to the contrary, the sub-engineers have been expressly informed that such Sunday working is not to be repeated.—*Sheffield Patriot.*

TO CORRESPONDENTS.

Sunday Travelling on Railways.—*A correspondent* (C.) *appears to differ entirely from our views in reference to a recent resolution of the Greenock Railway Directors. He says*—"I was so much pleased with the resolution of the Directors not to run *any* trains on the Lord's day, that I immediately sat down and wrote a congratulatory letter to that body, addressed to the Chairman, offering on all occasions to stand by them in the maintenance of their principles. If you continue [*he adds*] to write as you have done, in favour of lowering our moral standard, which I boldly maintain every writer in favour of the desecration of the Lord's day does, I shall seek through another channel for my railway intelligence." *We shall of course regret to lose the support of our correspondent, but our duty to the public is paramount. We need not argue the question which our correspondent so "boldly" begs, as to the alleged "desecration of the Lord's day."*

Mr. W. T. Rathbone, Mr. Edward Cropper, and Mr. David Hodgson.—*A Sufferer will find the* six guinea job *treated of under a separate head. The more it is inquired into, the blacker it appears.*

Syntax *is informed, that we do endeavour to make our traffic returns as complete as we can, but if the officers of the Companies will not take a little trouble, all our efforts are vain. He will find his question as to the Great North of England Railway answered elsewhere. We believe the branch line which he names will* NOT *be taken up by an independent Company, but more of this next week. We are sorry to differ with him as to the "hieroglyphics," but are happy to find that in the Manchester and Birmingham case, we have been of service to him.*

If the patronage of J. A. B. *is to be contingent on the insertion of his letters, we must even bear the loss of it with as much patience as we can.*

A Subscriber *(Gloucester).—We cannot insert his letter, unless we have his name and address. We have good reason to know that one of his "assertions" as to the shares is unfounded, and we must have the authority of a name before we can give publicity to the rest.*

An Inquirer after Facts.—*We beg our correspondent to accept our thanks. One of his suggestions has been, as he will see, attended to. We should be glad to obtain any further information as to the rating of railways. We give everything of the kind that falls under our notice.*

Bodmin and Wadebridge Railway.—*We find we were in error last week, in stating our belief that this railway is worked by horse power. It has always been worked by two locomotive engines, called the* Camel *and* Elephant. *We are indebted for this correction to Mr. John Day. A detailed account of the line is given in Mr. Whishaw's "Railways of Great Britain and Ireland."*

Croydon and Greenwich Railway.—*We cannot allow a discussion to be protracted upon points of so little general importance as are embraced in the letter of a* Croydon Proprietor. *The same answer to a* By-Stander, *and others.*

Observer *(on the Grand Junction question) will see the necessity of waiting for a short time.*

Index *should write direct to the Editor of the* Railroad Quarterly Journal; *we have nothing to do with his facts, or motives. If he will look again at our notice, he will see that our commendation of the work was not unqualified.*

North Union Railway.—*Enough as been said at present in reference to the non-publication of the traffic returns. It is to be hoped that further consideration will induce the parties concerned to follow the course which there can be no doubt the great body of the proprietors are anxious to see adopted. This to* A. B., A Shareholder, *and others.*

Economy *makes an appeal to his "brother shareholders," but does not once mention the name of the railway to which he adverts. From one expression in his communication we conjecture that the Liverpool and Manchester is the line referred to. The matter, however, is not so pressing as many others which we are compelled to defer.*

A Railway Shareholder, Thesis, *and a great number of other letters are in type, and are postponed solely in consequence of the length of the meetings. For the same reason the two letters (of* Candidus *and* A Practical Man) *on the Manchester and Birmingham Railway must again be deferred. They shall all appear next week.*

Our correspondence increases so much, that it would be extremely inconvenient to acknowledge each particular communication, and to give our reasons for rejecting many of them. Our friends, therefore, must take it for granted, that when their favours are not inserted or acknowledged, within a few weeks from the time they are sent, they are declined. We cannot undertake to return rejected MSS.

*** The Volume of the *Railway Times* for 1840 is now ready. A few complete sets may also be had. As the number does not exceed *ten*, early application is necessary.

THE RAILWAY TIMES.

SATURDAY, JANUARY 16, 1841.

A VERY large portion of our space to-day is devoted to a report of the proceedings at the Manchester and Birmingham Extension Meeting, to which we referred last week. We have thought it desirable to give this report unabridged (to the exclusion of Editorial comments), as we are sure that a careful consideration of what transpired cannot fail to exhibit the hollowness of the project in a much stronger light than any further observations which we could make upon it. Some of the statements put forth on this occasion by the Directors and their paid friends, the "Manager" and Solicitor, are indeed so utterly fallacious that we shall take an early opportunity of *once more* exposing them; but in the meantime we would just call the attention of the public, and especially of such of the subscribers to the now defunct scheme as may be in doubt as to the new "Company," to these three points:—

1. The meeting on Monday was a partial and packed one. The whole body of scripholders, that is, the whole of those who have *purchased* shares on the faith of the many misrepresentations, put forth by the "Managers" were totally excluded from a voice in the disposal of their property. Their places were supplied—by whom does the reader think?—Mr. Wheeler, the legal adviser of the Company, will supply an answer:—

"Mr. OLLIVANT.—I did not understand there was anything in the deed to exclude the scripholders.

"Mr. WHEELER.—Oh, certainly; their names are not to the deed. * * * *

"Mr. OLLIVANT.—*Then a person whose name is to the deed, but who has sold his shares, has a right to attend this meeting?*

"Mr. WHEELER.—CERTAINLY!"

And of this class, doubtless, were not a few of the "sixty share-*holders*" who, according to the report, were present!

2. At a meeting called for the purpose of deciding upon the propriety of embarking further capital in a desperate speculation, not a single item of account was brought forward, although it is pretty generally known that not a less sum than from *sixty to seventy thousand pounds* has been swallowed up in Managers' salaries and Parliamentary expenses! Would the share-*holders* (the excluded, we mean) have submitted to this?

3. Not a syllable of explanation is given as to the "arrangement" with the Grand Junction Company, which it is morally certain is *not* for the benefit of the Extension subscribers! Were ever people so patient as the "sixty shareholders" who composed this memorable meeting?

We leave these points to the calm judgment of the parties concerned, reminding them that the question now is, *not* whether they will risk the balance of their original deposits in a renewed contest, but whether *they will render themselves liable, by signing the new deed, to any future expenditure of money which the Directors may think proper to incur.*

It would seem as if some trick were about to be tried in respect of the Standing Order of the House of Commons which requires that a certain per centage of the capital shall be deposited prior to an application for an Act. For particulars we refer to the concluding portion of the report, where, in answer to Mr. OLLIVANT (who with every wish to befriend the Directors, appears to have put some awkward questions), it was hinted that the deposit of 1839, of which it is admitted that nearly two-thirds has already been expended, would be made to do duty in 1841—that is, if Parliament will be parties to so palpable an evasion of their own regulations. Mr. OLLIVANT'S notions of what is "perfectly satisfactory" must, by the way, be somewhat unique, as if it mattered to those who may subscribe the new deed whether they have to pay for their folly *before* their defeat or *after* it.

The delusion which it is sought to practise upon the subscribers in regard to the new deed, is really of so monstrous a character, that to pass it by unnoticed and uncondemned, even for a single week, were to be parties to the imposition, of which it is attempted to make these individuals the victims. Mr. EDWARD TOOTAL has the hardihood to assert, that the signing of the new deed will not "touch the pockets" of the subscribers! Never was a more impudent or more absurd misstatement put forth. MR. EDWARD TOOTAL need not be informed (for *he* knows it well) but it is right that others should know likewise, that it is in the power of the opponents of the measure (should the lawyers and managers succeed in raising the means, real or fictitious, of getting before the House of Commons,) to call before the Parliamentary Committee on the Bill, all, or any, of the parties who may subscribe the deed, and if it should appear, that any one has not *bonâ fide* paid up his due proportion of the deposit, to have his name erased, *or to compel the promoters of the Bill to proceed against him for payment!* What would be the situation then, of any one who had placed the smallest reliance upon Mr. E. TOOTAL'S assurance of no "touching his pockets?" Why, Mr. WHEELER' the solicitor, would serve him with a writ, "touching his pockets" somewhat disagreeably, and being by that time fast bound not merely for this 10 per cent., but for the remaining 90 per cent. of his subscription, Messrs. TOOTAL, WHEELER, and Co. would probably laugh in his face at his credulity. Can any one be foolish enough to imagine that the Standing Orders of Parliament are to be evaded by getting a banker or bankers to deposit *pro tem.*, on the security of a few scheming adventurers, a sum of money not the property of the subscribers? Well might Mr. TOOTAL, in answer to the very natural question how this trick of not "touching the pockets" was to be effected, intimate that to give a reply would be to "cut the proprietors' throats and his own." This question, however, and many others of equal importance, MUST be answered—aye, and *on oath*—before Parliament, should the project proceed much further. It may pass very well in a hole-and-corner meeting to beg of the shareholders, as Mr. TOOTAL did, not to "put such questions as would be likely to damage the undertaking," but before a Parliamentary Committee no plea of this kind will avail. An investigation, the most strict that unremitting vigilance can devise, will *there* be gone into; and *there* Mr. TOOTAL and his colleagues MUST answer, whether to the "damage of the undertaking" or not. Let those who are importuned to subscribe the new deed think of these things *in time*. Let them reflect upon their own untenable position, the utter inutility of the scheme to the public, the gross delusions by which it is attempted to keep it alive, and the phalanx of powerful opponents against whom

it has to contend (on which last point we would call attention to the long list in our advertising columns, of influential names that appear as its determined foes), and then say what hope—what possible chance—they can have of success—even if success, instead of being the greatest curse that could befal them, were to present twenty times the amount of prospective benefit, which the promoters venture to hold forth? When they have well considered these points, and other points which we have on former occasions discussed, they will, it is to be hoped for their own sakes, come to the conclusion that it is far better—far more prudent—to submit to a first loss of 3*l.* or 4*l.* per share, and thus get rid of an originally unwise engagement, than to incur further liabilities, with the moral certainty of having that loss doubled, or possibly, increased *ten-fold*.

The game, we suspect, is nearly up, notwithstanding all the efforts of the disinterested Mr. TOOTAL, who receives 1,500*l.* a year, or *nearly five pounds a day* (exclusive of any little perquisites that may turn up) for his valuable services—to say nothing of *other* paid co-adjutors in this promising scheme. We have the best means of knowing that many of the most influential of the original subscribers have retired from the concern in disgust and despair; and it is even now very doubtful whether the promoters, notwithstanding all their vapouring, will venture to face Parliament in the approaching session. If, indeed, the application could be put off for another session—the five pounds per day being pocketted in the interim—the arrangement would not, we presume, be *very* objectionable to those who are so deeply *interested* in the scheme as Messrs. TOOTAL and friends.

A BAD practice is gaining ground in reference to the re-election of Directors retiring periodically from Boards of Management. Formerly it was the general custom to set forth in the advertisement calling each half-yearly meeting, the names of the gentlemen who had been balloted out, or whose term of service had expired, with an intimation that they would or would not offer themselves for re-election. We are sorry to find, however, that this particularity of detail is giving place to the vague announcement of the number of Directors whose official existence is about to terminate. Thus in the notice of the approaching Brighton meeting, we are told that it will be held on a certain day at the London Tavern, "when five members of the present Direction will go out of office, and who, being duly qualified, will offer themselves for re-election." *Who* the "five" are is not stated, nor have the proprietors at large any means of ascertaining. They may comprehend the most active and useful members of the Board, or they may be mere ciphers—men who do nothing but sign the attendance-book, and pocket their customary allowance. They may be "duly qualified," and anxious to "offer themselves for re-election," but how can the proprietors know if this qualification extends beyond the minimum number of shares, required by the Act, or whether they are so qualified by talent and habits of business, that it would be for the benefit of the undertaking that none of them should be superseded by others? It is impossible that they can tell whether the chance of the lot has fallen upon their excellent and indefatigable Chairman, or upon the merest fribble who covets official honours—and official pay. The names ought certainly to be given, and then the proprietors could judge for themselves as to the due qualifications possessed by the several candidates. We need scarcely say that we mean nothing personal to any of the gentlemen now retiring from the Brighton Direction, whose names, indeed, are totally unknown to us; we take their case simply as being at present before us.*

While on this subject we would just hint that these periodical elections might be greatly simplified—we mean such of them as are not *intended* to be mere make-believes. The tedious process of taking votes, examining proxies, and complying with other forms, is sufficient to terrify the most patient, especially after an hour or two spent in dilating on the merits of the several aspirants to office. We believe it is essential in some Companies that the names of all candidates shall be transmitted to the Board within a certain period from the day of meeting. Might not this plan be extended, and the names of the candidates, having been duly published at least ten days before the date of election, proxies be sent in and properly classified prior to the meeting? There would then remain to be polled those only who were present in person, and this might easily be so arranged as not to occupy more than a quarter of an hour or twenty minutes instead of some two or three hours as at present. We do not say that obstructions are purposely offered by Directors in cases of this kind, but really the mode of conducting business on such occasions is generally of a character to weary and disgust the proprietors at large, and accordingly we find that few elections are contested, unless the feelings of a considerable proportion of the proprietors be greatly excited. Directors are often re-elected not so much because the proprietors believe that they are the most "fit and proper persons" that might be chosen, but because it would entail great trouble to break up the close boroughs of the Board-rooms. In this the proprietors are unquestionably very much to blame, but if Directors wish to hold office on the only tenure on which it is worth holding—the confidence of their constituents—they should afford facilities for the free expression of opinion, not throw impediments in its way. It may be worthy of consideration whether the proxy system ought not to be altogether abolished; but while it continues, the arrangements for carrying it out ought not to be allowed to operate prejudicially towards those who attend the meetings in person—which all arrangements certainly do that needlessly occupy the time of those to whom time is as valuable as money.

WE give elsewhere at very considerable length reports of the proceedings at public meetings, held in Norfolk, to promote the formation of a line of railway from Norwich to Yarmouth, *distinct from and independent of the Eastern Counties'*. At the Thetford meeting, the Marquis of EUSTON in the chair, the resolutions passed, recommend the adoption of the same line which had previously received the sanction of the numerous and highly-respectable meeting held in London, at which Mr. CHUTE, M. P., presided, namely, that called the EAST ANGLIAN, of which Mr. RASTRICK is the Engineer, which takes advantage of the Northern and Eastern line as far as Bishop's Stortford, and thence proceeds by way of Cambridge, Newmarket, Thetford, and Norwich to Yarmouth. But the Norfolk county meeting abstained from expressing any opinion in favour of the East Anglian, or any other particular line—contenting themselves with passing resolutions strongly declaratory of the necessity of establishing a direct and complete railway communication between that county and the metropolis, and appointing a Committee to enquire into the merits of Mr. RASTRICK'S and any other plans which may be submitted to them for the purpose. It is remarkable, however, and full of significancy, that at none of the meetings to which we have alluded, was there any proposition or suggestion thrown out by any one, *to form a junction with the Eastern Counties'; that* seems to have been regarded on all hands as a thing utterly out of the question. How much the county has been duped by the Eastern Counties' Company, every person present at these meetings could not fail to have in lively and painful remembrance; but it seems to have been universally felt, that with the power of righting itself possessed by the county, the wrong was of a nature, and the wrong doers of a description, best visited with silent contempt.

We recommended to the Eastern Counties' Directors to send a deputation to the Norfolk County Meeting, to justify before it, if they could, what all the world besides regards as very perfidious and dishonest conduct—namely, the stopping short at Colchester of that great integral line which they contracted with the public to carry from London to Norwich and Yarmouth, and but for which contract to carry it the whole way, they would never have obtained power to make a single yard; and this would have been no more than a manly, straightforward, and business-like course of proceeding. Nay, we hold that it was their bounden duty, as the official guardians of the interests of their constituents, to attend the meeting, personally or by deputation, and use their best exertions to avert the ruin which the objects aimed at by its promoters threaten to bring on the Company. For, be the reasons for stopping at Colchester what they may (of no value, as we think they are—or as cogent as the Directors pretend) this at least is undeniable, that it is only by bringing the great bulk of the traffic of Suffolk and Norfolk upon the Eastern Counties' line at Colchester, or Chelmsford, that a line as far as Colchester only, will ever yield a remunerative return for the capital invested in it. To secure no more than the amount of traffic proper to the country between London and Colchester, or even as far as Ipswich, is but to render themselves the duped instead of the dupers; and to ensure for them in the former capacity a more than ample portion of public derision.

But Eastern Counties' Director or officer there was none present—not a person to say a word in their behalf, or to offer a single reason against the impending diversion of more than one-half of all the Company's resources into another channel. Admirable protectors these, of the interests entrusted to their charge!

Although, however, the Company's Executive slunk with pusillanimous unanimity from showing their faces on the occasion, it cannot be said that they made *no sign*. For *sign* they did make, not only that they are become fully alive to the danger which threatens the Company, but that so far as underhand trickery, sinister manœuvre, and hollow pretence, can contribute to save it from perdition, their constituents may fully rely on their best endeavours. Following our reports of the meetings will be found a copy of a "Printed Paper," which our Norwich correspondent states was extensively circulated in Norwich on the morn-

* This article was in type on Thursday, and it was only at a late hour last night that we discovered that the names are *now* published (see advertisement). By referring to our last number it will be seen that they were not *then* given.

Digitized by Google

ing of the day on which the county met, and which, though "without any heading, without any signature, and without any printer's name even," "has its *Shoreditch* parentage so palpably marked on the face of it that no one can have any doubt about it." We make no doubt of *Shoreditch* being the parish on which the bantling must be affiliated, but if we may form a judgment from the style of the thing—its vulgar insolence—its unblushing effrontery—its miserable reasoning—and its bad English, we should say that the author of it can be no other than a certain occasional visitor there from the other side of the island, of whose scribbling *cacoethes* all the world has heard, and whose botching hand has been of late so discernible in all the official productions of this Company.

"It is *a matter of fact*," say the Directors, or says the author of this paper for them, "that the Eastern Counties' Railway Company, although charged with deserting Norfolk and Suffolk, are, on the contrary, *deeply consulting the true interests of those counties!*" We think we hear all Norfolk and Suffolk exclaiming, 'Who would have thought it?' True, they have been accused of stopping short at Colchester, which is a long way from either county, "merely for their own *profitable purposes*," but this, we are assured, is all a mistake; it being "well known to those who have taken the trouble to learn the real facts, that *want of capital alone* obliged the Company to carry the line no further than Colchester." We think we know all about "the real facts of the case" as correctly as any person, and we have no hesitation in giving this assertion the most flat contradiction. The stop-short scheme did originate in "profitable" considerations alone, and none other, and was hatched long before it was known that the capital would carry the line no further than Colchester, or suspected by any one to be so much deficient as it has proved to be. Besides, want of capital is no excuse—no more an excuse in the case of the Eastern Counties' Company than it would have been in the cases of the Birmingham and Great Western, had the one thought of stopping at Tring, or the other at Reading. The Company could easily have obtained power to double its capital if necessary, and would then have been in no worse situation than most of the other Railway Companies throughout the kingdom. But the truth is, they *desired* to have no increase to their capital, and never were so delighted as when they found out, that with little more than the neglect of economy common to such undertakings, the capital provided would just last out to carry them to that point, by stopping short at which they supposed (most fallaciously as it turns out) that the greatest possible profit was to be realized.

But in what then consists "the *deep* consulting the true interests of these counties," for which the Company so gravely take credit? Did it consist in throwing their interests altogether overboard? In deliberately breaking every promise made to them? In meditating to exclude them from all admission to the general circle of railway intercommunication, except through that narrow tollgate which the Eastern Counties' jobbers fondly hoped to be able to set up at Colchester, and make the counties pay most dearly for? "Deep," "deep," indeed, must be "the consulting the true interests of these counties," which lies hid under such everlastingly damning facts as these. Let us, however, see what these gentlemen themselves pretend to have dragged to the light from this "dark profound."

"If they had as much capital again they would pause in continuing the line by the coast, until they had ascertained the sense of the counties and towns in the east as to the true line for general interests which should be carried forward from Chelmsford."

"The sense of the counties and towns in the east" indeed! Are all the resolutions then of the numerous public meetings which were held throughout Norfolk and Suffolk in 1836, at the instance of this very Company, which affirmed that the Eastern Counties' and none other, was "the true line for general interests" to go for nothing? And is the Report made in the same year by the Committee of the House of Commons, after a very full inquiry into the subject, which declared that "the Eastern Counties' Railway between the termini, would traverse the most populous and cultivated parts of the counties through which it is carried,"—is that also to go for nothing? "Oh no," say the Directors, with admirable consistency, and in most choice language, "all that is strictly and entirely correct—but without *annulling* in the least degree the soundness of the opinion expressed in the Report, *further* consideration of the true interests of Suffolk and Norfolk demonstrates"—what? That the Committee were right? That all Norfolk and Suffolk were right in 1836?—No, but that they were all wrong? It "demonstrates," they say, that "the proper line of railway communication for the East is one that, leaving the Eastern Counties' line at Kelvedon, shall thence proceed through Coggeshall, Halstead, Sudbury, Melford and Lavenham, to Bury St. Edmund's, and thence proceed by Stowmarket, Eye and Seale, along the old Eastern Counties' line to Norwich and Yarmouth."

Really! So "*further* consideration *demonstrates*" this—does it? "Further consideration" by *whom* pray? By the very same parties who in the very same breath tell us that the Report of the Commons Committee, in favour of *quite a different line* is "strictly and entirely correct," and of "soundness" unimpeachable, or as we ought rather perhaps to say, in conformity with their own delectable phraseology, *unannullable!* And *when*, may we ask, did this "further consideration" take place—this new light break in upon the long-benighted orbs of these singularly considerate and consistent gentlemen? Does it date further back than a month ago—nay, a week—a day—an hour—beyond the time when the county of Norfolk seemed to be rising as one man to redress the great wrong done to it, by the Eastern Counties' Company—to be of one mind as to the propriety of abandoning all connection with them? Any thing to divert the people of Norfolk from the prosecution of the righteous, spirited, and judicious course they are pursuing—that is the true history of the affair. A line by Lavenham—a line by Orfordness—a line above ground, or a line below—a line in any direction—so that it is not a line which shall divert the traffic of Norfolk from passing through the Colchester toll-gate of the Eastern Counties' jobbers! What do we see in all this but the desperate workings of a set of men caught in their own trap—struggling now at this corner now at that, to escape from the meshes in which a vile and crooked policy has enveloped them?

The fact that this Kelvedon and Lavenham line comes *recommended* by the Eastern Counties' Directors ought to be sufficient with the people of Norfolk and Suffolk to induce them to dismiss it at once from their thoughts; but were it worth while, it would be easy to show that it is one which if not absolutely interdicted by the difficult nature of the country through which it is proposed to carry it, amounts at least to an engineering absurdity.

Nor ought it, we submit, to make any change in the existing dispositions of the Norfolk people that the recommendation of it is bolstered up by such preposterous promises and assurances as the following:—

"The Eastern Counties' Company will *promote* an application to Parliament for power to capitalists to make this new line. This will be followed by the *promotion* of *prudent* extensions to Norwich and Yarmouth, *which would be paying lines to independent Companies*, and if these latter were *at once* formed, they would find *a powerful auxiliary* in the Eastern Counties' Railway Company. These *great* measures are only to be carried into effect by *slow* degrees. Pretensions to rapidity of execution would be false and deceitful."

Of all the lying and stupid pieces of nonsense we ever read, this assuredly is the most transparent. No doubt the Eastern Counties' Company would *promote* any new line whatever which would bring any traffic, however small, through their toll-gate; for could they but once enact the fable of the fox and the calf, and get out of the pit on the calf's shoulders, it would be pleasant sport afterwards to go through the kindred parts of the cat and monkey, and feast at other people's risk and cost; but if the lines—the "*prudent* extensions" here spoken of, would be "paying lines to independent Companies," still more would they be paying lines to the Eastern Counties' Company, if undertaken by them—since all railway experience has established nothing so certainly as that the more Companies a long line of railway conveyance is divided amongst, the more expensive is the management, and the less the profit. Why, then, don't the Eastern Counties' Company undertake these "*prudent*," these "*paying*," extensions, themselves? Why so anxious to use other people's paws to get out the chesnuts? Is not the real truth the very opposite of what is here asserted? Is it not undeniably this—that though *one* integral line from London by Colchester to Norwich and Yarmouth, under *one* Management, would have paid well—taking the paying parts with the non-paying—the rough with the smooth,—yet the same line if parcelled out among several "independent Companies,"—giving to one or two the best bits, and turning over to others the worst, could be profitable only to the favoured few? Mark further, the terms on which the Eastern Counties' Company promise to *promote* these "independent Companies." "If *at once* formed they would find a powerful auxiliary in the Eastern Counties' Railway Company." Yet in the very next sentence we are told that such "great (!!!) measures are only to be carried into effect by *slow* degrees." So that unless formed "*at once*," they are *not* to have the Company for their "powerful auxiliary;" and yet that they cannot be formed at once, the Company protest is as certain as any proposition in Euclid! Was there ever such absurdity? The men in their extreme confusion and perplexity have lost their senses. They know not what they say; and would say or do anything to get out of the scrape into which they have got.

We still abide by the opinion which we have so often expressed, that the best line for the counties of Essex, Suffolk, and Norfolk, is that for which the Act of Parliament was obtained—the line "from London, by Chelmsford, Colchester, and Ipswich, to Norwich and Yarmouth"—the line once called appropriately

Digitized by Google

enough the "Eastern Counties," but to which name now that it has been cut down to the stump by the cupidity of a set of unprincipled jobbers, it has no longer any pretensions—that line which the Commons' Committee reported to embrace the largest amount of population and traffic, and which report the Eastern Counties' Directors themselves admit to be "strictly and entirely correct," and of *unannullable* "soundness." However the people of Norfolk and Suffolk, and the public at large, must now see from the views developed by the Eastern Counties' Directors in this last precious production of theirs, that hope of their ever carrying out that line in its original integrity, there is none; and being thus cut in twain as it is for the benefit (no matter how imaginary) of one set of capitalists, it is not to be supposed that any other set will be found to take up the part which has been so deliberately cast off, and by that circumstance damaged, irretrievably perhaps, in public estimation.

What then remains for the people of Norfolk and Suffolk but to choose the next best line which is open to them? And what better line can be pointed out than that which, under the name of the EAST ANGLIAN, now claims, and we trust will obtain, their united and hearty support. The Eastern Counties' Directors are careful to point out that it will pass "through a very thinly-populated portion" of Norfolk, but they as carefully omit all mention of the important fact that, in consequence of its approximating so closely to the confines of that county, nearly the whole traffic of the adjacent large and fertile county of Lincoln must pour itself into it. Suffolk, they say, will be served by it "very little," at such a distance does it pass from the capital of that county—Ipswich; but their own pet Kelvedon and Lavenham line, would not come nearer Ipswich than Bury St. Edmonds, and the East Anglian will pass within half a dozen miles of that place. A branch from Ipswich to Newmarket would be just as easy, and is just as likely to be made, as one from Ipswich to Bury. Among other notable things too, which the Eastern Counties' Directors, with the same remarkable regard for truth and candour, omit all mention of, is *the opening through Cambridge to the midland and northern counties of England*, which the EAST ANGLIAN line will afford to Norfolk and Suffolk, and which no plan of theirs pretends to offer. Indeed when we consider the many external sources of traffic which the EAST ANGLIAN Railway will possess, which would have been quite without the reach of the Eastern Counties' line as originally projected, we feel well satisfied that they will far more than counterbalance the loss of all the traffic which can possibly fall to the share of the stop-short gentry who now rejoice in the exclusive possession of those great seats of population, industry, wealth and learning—Romford, Chelmsford, Colchester, and eke Kelvedon!

We pity most sincerely the many innocent parties who will be sufferers by the success of the EAST ANGLIAN line, and the now (to all appearance) inevitable ruin of the Eastern Counties', but having from an early period, earnestly and unceasingly warned the Eastern Counties' shareholders of the perilous game their Directors were playing—pointed out as well its wickedness as its folly—and the shareholders having, nevertheless, persisted in leaving them invested with the authority which has worked all this mischief—we have nothing to reproach ourselves with. We have but done our duty in the matter; and to whatever extent they may suffer, it will only be from their having failed to do theirs.

WE regret to have again to record the occurrence of several railway accidents, one of them terminating fatally; and this regret is increased from the circumstance that with proper precaution almost all of them might have been prevented. The two principal mishaps occurred on the Midland Counties' line, one of them near the Rugby junction, and the other at a short distance from Derby. As the circumstances connected with the former are still under investigation by the Boards whose servants are implicated in the charge of carelessness which must attach *somewhere*, we shall confine ourselves for the present to the occurrence which resulted in the death of two unfortunate individuals.

Full particulars of the accident, as elicited before a Coroner's jury, will be found in another part of our paper; the facts are briefly these:—One of the engines of a luggage train having become disabled through the frost, a considerable delay took place; and as the mail train was expected, two men, namely Wale, the breaksman, and Singleton, the guard, of the luggage train, were sent down the line with the proper signal, as a warning to the coming train. When the luggage train had again been got in motion, the driver sounded his whistle as a further warning to the mail train, in case it should be at hand, which signal Wale and Singleton mistook for a call to join their own train, and returned up the line. Almost immediately the mail train came up and ran into the luggage train, causing the death of the driver and stoker of the former. The Coroner's jury returned a verdict of "Accidental Death, with a deodand of 300*l.* on the engine."

The defects in the Company's arrangements which strike us in reading the evidence as being the most serious, are the apparent absence of policemen on the line, and the neglect at the Derby station. The luggage train came to a stand at the distance of a mile from the station, and remained there a sufficient time to allow of the engines going forward to that station—one of them returning for one-half of the train—again reaching the station—and again returning for the remainder of the waggons; and yet during the whole of this interval we hear of no policemen or other persons unconnected with the luggage train being sent down the line, with a signal to the approaching train. Surely some person ought to have been dispatched on that duty *from the station*. It was very natural for Wale and Singleton to suppose that they were not to separate themselves from their own train, and this will account for neither of them going a sufficient distance down the line. Upon this point there is a remarkable discrepancy in the evidence. Singleton says, he and Wale went back about 400 yards; Wale says, it was from 600 to 700. Either distance was insufficient, considering that the rails were in a very slippery state and the night exceedingly foggy. The great mistake, however, was in not remaining at the spot for a sufficient length of time. There can be little doubt that had a policeman been stationed there, the driver of the mail train would have seen the light, supposing him to have been attending to his duty. We cannot help thinking that great blame attaches to the persons at the Derby station, who ought not to have confided so important a matter to any one connected with the luggage train, more especially to one who, like Wale, had only had a fortnight's experience on the road.

There is another point in which the Company's arrangements seem to be very defective. It was given in evidence, that there is no stated time for the starting of goods' trains. "We have no regular time," says one of the engine-drivers; "it is sufficient if we keep clear of the mail train"—so that the driver of the mail train has no means of knowing at what distance the luggage train is in front off him; nor can the driver of the luggage train be quite sure how far another train may be behind or before him! This is unquestionably a most improper arrangement. It is a pity, too, that luggage trains should be sent on of so great a weight as to require *two* engines. Why not divide a heavy train into two trains? It was the circumstance of there being *two* engines to a luggage train which in some degree led to the late calamity at Harrow.

Altogether, we must dissent from the dictum of the Coroner (as reported) that, "the catastrophe was owing to circumstances which could not be foreseen or controlled." It might easily have been "foreseen," that unless duly warned, the mail train, which was nearly due, would run into that which was stationary, and equally easy would it have been to take effectual means to guard against such an event. We have reason to know that a simple mechanical contrivance will shortly be made public which will give effectual warning in such cases as the lamentable one now noticed, even should the signal light not be seen owing to fog or any other cause. At the same time no contrivance can dispense with the personal vigilance of properly qualified policemen along the several lines, and had there been but one such near the spot where this accident occurred, it appears almost impossible that any collision could have taken place.

On the whole we are of opinion that the deodand was justly inflicted. We have not heard whether the Company mean to resist it, as it will be seen from a notice elsewhere seems to be the intention of the York and North Midland Company, in an almost similar case.

"WHEREAS" (we quote from an Act of Parliament obtained in 1834 by the Grand Junction Railway Company) "it would tend much to the *convenience of the public*, if Railway Companies were empowered to enter into mutual arrangements so as to avoid the necessity of a change of carriages and other delays arising from a diversity of interest; be it therefore enacted,—" and then follow powers conferred upon the Company enabling them by agreement with other railways to transmit their trucks without the necessity of a change at the points of junction.

This is a very smooth preamble, and its concoctors seem apparently to have been very regardful of the interests of the public—that convenient stalking-horse for filling private pockets. It has been remarked, that when a man begins to talk of justice to his family, it is ten to one but he is excusing some shabby or hard-hearted conduct, and most people will be apt to think that whenever a trading company is inordinately solicitous for the convenience of the public, some motive of selfish interest requires to be carefully concealed.

That the Grand Junction Railway Board [illegible] quite clear of this charge will, we apprehend, be the opinion of the great majority of those who have perused the correspondence which has recently appeared in our columns and the supplementary letters which we publish to-day. It has become the sub-

ject of serious complaint, that the rapidly increasing traffic upon the leading railways has rendered it difficult to supply trucks and waggons with the requisite dispatch; and this inconvenience is naturally most felt where the increase of traffic has been greatest, viz. in the two lines which connect Lancashire with London. What shall we say, then, of the impediments thrown by the Grand Junction Directors in the way of an interchange of trucks with the London and Birmingham Company at Birmingham, according to the powers obtained by themselves with the ostentatious preamble we have cited? We understand that this inconvenience has been felt with increased severity during the present week, and it is high time that public attention should be drawn to this most important subject—important because anything, arising from whatever cause, which interferes with the internal traffic of the country upon the leading lines of railway is but too well calculated to favour the prejudices entertained in certain quarters against railways generally.

A CORRESPONDENT says, he hears that it is intended to propose as a Standing Order of the House of Commons upon its assembling, "That the promoters of every railway, or similar private Bill, shall publish a list of all persons who have applied for shares, and afterwards refused to take them when allotted, setting forth their names and addresses." This measure will, he is of opinion, do more to prevent fraud, than any which the wisdom of Parliament has yet devised. It is well known that there are a large number of persons not only in London, but in most of the large towns in the country, who apply for shares in almost every new Company, and sign an undertaking to take the shares that may be allotted to them, and to pay the deposit, without the remotest intention of fulfilling their agreement in the slightest respect. The proposed Standing Order would enable new Companies to be on their guard against these modern levanters.

—o—

LIEUT. COL. SIR FREDERICK SMITH has returned to town, having completed his inspection of the Nithsdale and Clydesdale projected lines of railway between Carlisle and Glasgow. His colleague, Professor Barlow, is expected to return to day from his examination of Mr. Gibbs's line by Cambridge and Lincoln to York, and also of a proposed line through Morpeth, competing with Mr. George Stephenson's line from Newcastle to Alnwick, in the East-coast route to Edinburgh.

—o—

A VERY dangerous practice prevails on the Monkland and Kirkintilloch Railway, which has recently terminated in the death of one of the Company's servants.

It appears, that on that line there is an inclined plane of 1 in 60, worked by locomotive power, both for passengers and goods. The coal trains have only the engine-driver and fireman, the latter acting also in the capacity of breaksman. On reaching the top of the plane, the firemen of the coal trains proceeding towards Glasgow descend, from the tender, while the train is moving at the rate of about five miles an hour (as *they* say, but it is to be presumed at a much more rapid rate), and lets down the lever break as each waggon passes him. He then gets on the hinder waggon, and rides down upon it to the foot of the plane, where it is not unfrequent for the fireman to take off the breaks while the train is *in motion*, and to resume his place on the tender. It is quite wonderful that since Lord Seymour's Act only one fireman has been killed; how many may have previously been the victims of this unwise regulation, we have not the means of ascertaining.

—o—

WE have of late heard very little of the ingenious promoters of the London and Manchester Direct project, and in truth, they do well to keep themselves as quiet as possible, or they may obtain a fame which will be more marked than pleasant. We have, we flatter ourselves, put a stop to the public "demonstrations" in its favour, in such *influential* towns as Bedford; but it would appear from the following paragraph, in their organ, the *Mercury* of that place, that the scheme is not yet finally given up:—

"LONDON AND MANCHESTER RAILWAY.—A meeting of the Bedfordshire Committee took place in this town yesterday. The statement of details laid before the meeting was highly satisfactory. A deputation from Luton attended; *all part as were disposed to pull together*, and there is every prospect of a successful issue to the undertaking."

So that we were right in regard to the division which had taken place in the camp! Probably it is not deemed most prudent "to pull together," in order to "pull" as many deposits as possible out of the pockets of the public.

—o—

WE briefly adverted last week to a statement made at the Greenock Railway meeting, to the effect that the Postmaster-General had expressed his readiness to excuse the Railway Company from carrying the mails on Sunday. We doubted very much the power of the Postmaster-General to grant any such partial indulgence, and such would seem to be the opinion of that functionary himself, if we may put any confidence in a report of the proceedings at a recent meeting of the "Presbytery of Glasgow," at which this subject was brought forward. The following is an extract from the *Scottish Guardian* (published in Glasgow), which is the avowed organ of the anti-Sunday-travelling party:—

"Mr. FOWLER, as Convener of the Committee on Sabbath Observance, said they had no farther report to make on this subject: but he might mention that a report had appeared in the *Greenock Advertiser* of a meeting of the Directors of the Glasgow and Greenock Railway, from which it appeared that Government had yielded to the Company's refusal to carry the mail on Sabbath, at the same time that they had accepted the contract for doing so every other day of the week. This he considered a very gratifying and promising circumstance.

"Mr. LORIMER having read the report from the *Greenock Advertiser*, said it was most encouraging, as showing what the Government would do when the proprietors of railways expressed their wish to be relieved of the obligation of carrying the mails on Sabbath.

"Dr. BLACK read a letter from the Marquis of Normanby simply acknowledging the receipt of the Presbytery's memorial; and another from the Postmaster-General, *stating that with every disposition to forward the views of the Presbytery, he had no power to interfere with the carrying on of the public business in Scotland.*"

How does this tally with his "interference" in the Greenock case, supposing the statement made by the Directors to be correct? The report thus proceeds:—

"Mr. FOWLER said, it was also gratifying to find that the same feeling which existed in Scotland against railway travelling on Sabbath was beginning to show itself in England; and *the Directors of one English railway had sent a letter of congratulation to a Scottish Railway Company, encouraging them to persevere in refusing to run the mails on Sabbath.* (Hear, hear.)"

We should be glad to know the name of the "one English railway" the Directors of which have, as alleged, encouraged others to do that which they *dare* not do themselves.

RAILWAY OFFENCES AND OFFENDERS.

ON Wednesday, a man named William Hattersley was brought before the sitting magistrate at Union Hall Police Office, charged with being drunk, and insulting females in the street. The case was fully proved. The fellow described himself as employed in the workshops of the London and South-Western Railway Company, and as occasionally engaged in driving the trains. The magistrate (Mr. Maltby) after fining him 10s., very properly expressed his determination to report the man's conduct to the Directors of the Company, conceiving that a drunken person was very unfit to be employed in a railway establishment.

Yesterday week, as we learn from the *Bristol Journal*, a policeman stationed in one of the tunnels on the Great Western Railway, between Bath and Bristol, having been found asleep on his post (with his light so placed as to act as a signal), was taken before the local magistrates, and committed to Shepton Mallet gaol for one month, *with hard labour*.

On Saturday last, a blacksmith named Willey was fined 1*l.* with 15s. costs, by the Rugby magistrates, at the instance of the Midland Counties' Company, for trespassing on their line. The man was foolhardy enough to allow a train to come within 150 yards of him before he stepped off the track. He pleaded that he had been working for one of the contractors, and was going to fetch his apron. The magistrates expressed their determination to inflict the maximum penalty in every future case.

A man named Callaghan was a few days ago fined 10s. for attempting to defraud the Manchester and Leeds Railway Company of sixpence. He had gone on further than the place he had booked himself for. He pleaded intoxication as an excuse.

The "Managing Director" of the same Company, Mr. Robert Gill, appears to have figured in no very enviable position at the West Riding Sessions. The case is thus given in the *Leeds Journal* of Wednesday last:—

"REGINA *v.* ROBERT GILL.

"This was an indictment for an assault, which was preferred at the last Leeds sessions by Mr. John Marsden, of Wakefield, solicitor, against the defendant.

"Messrs. Taylor and Westmorland, solicitors, conducted the prosecution; and Mr. Brackenbury, the Solicitor to the Manchester and Leeds Railway Company, the defence.

"The Hon. James Stuart Wortley called witnesses on behalf of the prosecution, who proved that on the 2nd October last the defendant committed the alleged assault—that irritating language had previously passed between the parties, which gave rise to the assault in question. It appeared from the evidence that after the assault had been committed by the defendant upon the prosecutor, the latter apologised for any hasty expression he might have used, but on Mr. Gill being requested to apologise for the assault, he not only refused, but made use of coarse and abusive language. Under these circumstances, Mr. Marsden was advised to prefer the present indictment.

"Mr. Baines, for the defence, called no witnesses, but argued that as the room where the assault was committed was Mr. Gill's, and as Mr. Marsden had made use of abusive language, the defendant had a right to turn him out, for which purpose Mr. Gill had not used more violence than was necessary.

"J. B. Greenwood, Esq., the learned Chairman, summed up the evidence to the Jury, and observed that the question for their consideration was, whether the assault was justified or not? The learned Chairman stated that if a person were in his room, and he requested that person to go away, and he refused, then such person might be removed. But this must be done quietly, and without excess. The question was, whether Mr. Gill on that occasion used an excess of violence? Did Mr. Gill conduct himself in the calm and temperate manner he ought to have done? The learned Chairman stated that, in his opinion, if the evidence was correct, Mr. Gill used more violence than was justified.

"The Jury returned a verdict of Guilty.

"The Learned Chairman called up the defendant for judgment, and then delivered the sentence of the Court as follows:—'Robert Gill, one cannot help feeling considerable pain in witnessing two gentlemen in such situations as the prosecutor and yourself—he a highly respectable solicitor, and an officer of this Court, and you who move in a respectable sphere of life, but who, as the evidence has shown, have given way to your temper in such an unfortunate degree as to subject yourself to the penalties incident to an indictment for personal violence. It cannot for an instant be denied that the prosecutor had gone to the inn where the assault took place with exceedingly judicious intentions. He was in fact in the discharge of a

Digitized by Google

very proper duty, as the subject of the erection of furnaces on Sir George Armytage's estate, upon which you were treating with one of his tenants, was a matter upon which Mr. Marsden as Sir George's agent ought to consult with and obtain the sanction of his principal before allowing the tenant to enter into the contract which you wished him to sign. That there was much bad language used on the occasion was greatly to be regretted; but I, as Chairman, am bound to say that in my view of the case, Mr. Marsden has done all that, under the circumstances, he was called upon to do. For whether right or wrong in the language he had adopted, he offered an ample apology. It is a matter not more of surprise than regret that you did not follow the same laudable course. Indeed, I cannot help saying that had I been placed under similar circumstances, I certainly should not have considered it a breach of my character if I had offered to an opponent an apology as ample and as freely. No doubt, both parties were out of temper, and let words escape which in cooler moments would not have been used. That Mr. Marsden recovered his temper, and displayed a pacific feeling, was highly to his credit. This is not merely my feeling, but the unanimous opinion of the Court; and this opinion is linked with regret that you are still unwilling to apologise. The decision which the Court has come to is, that you pay to the Queen a fine of 30*l.*, and enter into your own recognizance to keep the peace for six months.'"

Surely a person placed in so responsible an office ought to have a greater control over his temper.

The bills against the two men named Baker and King, implicated, in conjunction with Edward Marson, in the late accident on the Birmingham and Derby Railway, were ignored by the Grand Jury at the Warwick assizes. The men were subsequently to be tried for Manslaughter under the finding of the Coroner's jury; but as the assizes have terminated, and we see no notice of the case in the local journals, we presume they were acquitted.

GREAT NORTH OF ENGLAND RAILWAY.

We noticed in our last number the opening of the portion of this railway between York and Darlington for the transport of coal on Monday, the 4th instant. We are informed that 205 waggons, each containing nearly four tons of coals, were on that day brought from the Auckland Valley in the county of Durham, to the city of York, and that the intermediate towns of Easingwold, Thirsk, and Northallerton were each supplied with still larger quantities, which were rapidly sold. Indeed, in the three last-named towns, the competition to obtain the coal was so great that on the evening of the second day, after the sales commenced, many buyers were still unserved.

This is the only main trunk railway which has been opened in the first instance for any except passenger traffic, and we are decidedly of opinion that in adopting this course, the Directors have acted like prudent men. Public attention has been especially drawn to railway accidents, and there can be little doubt that if few of these accidents have arisen from a premature opening of the lines, many of them have originated in the carelessness always consequent upon the incapacity of individuals who are new to their business, ignorance and foolhardiness invariably going together on the part of railway servants. By thus opening the Great North of England line, for the coal traffic only, in which a high rate of speed is not requisite, the way will be firmly settled down, the engine-drivers "*learn the road and the engine*," and the several individuals employed be trained in their respective situations, before the great stream of passengers is turned upon the line.

We are not aware that any day has been fixed for opening for passenger traffic, but it is probable it will not be deferred beyond the 1st of March at furthest.

George Stephenson, Esq., announced at a recent meeting at Blackburn his intention of shortly retiring from the profession of civil engineering.

SOME LOST CHAPTERS OF ANCIENT EASTERN HISTORY.

[*Found in exploring the Ruins of Rogulaneum.*]

Chapter the Fourth.

1. Now all power and dominion over the Iron-way was in the hands of the nine Governors, who were of the Company of Merchants and Chapmen, which came up from the banks of the Mehr.

2. And there was none of the tribes of Gog and Magog left who could do battle for the public right.

3. And as the conqueror in the field hasteneth to divide the spoils thereof, even so did they.

4. To Jesui for his reward they gave a curiously wrought chair of state, made from the wood of Shelphim, the seat whereof was so high, that sitting thereon he could neither hear nor be heard.

5. However, by this time, Jesui's brethren had become tired of him, and they desired no more of his counsel.

6. To Malahaleel, for his reward, they gave the office of Comptroller of the Iron-way, with an order on the Treasury thereof for the yearly sum of one thousand talents.

7. Which office was a new office created for Malahaleeel's profit alone.

8. And in the place of Malahaleel, there was elected to be Governor, one Constant, who was a Captain of the King's Guards, who had found favour in the sight of Edcrop and his brethren.

9. And to Edcrop, for his reward, they gave an ancient scroll richly emblazoned, on which was written this prophecy of Agur, the son of Jakeh, "A generation shall arise. Oh, how lofty their eyes! And their eyelids how lifted up! Sweet to their mouths the bread of cunning and deceit—yet at the last shall their mouths be filled with gravel!"

10. But when Rogg and Demrogg, and Frerogg and Korasbi, and David and Dikon, who had been raised into office by help of the counsel of Derus, clamoured each for his reward, there arose great disputes.

11. Forasmuch as there was paid yearly out of the Treasury of the Iron-way, unto the twenty and two Governors thereof, twenty and four hundred talents, to be divided among them, each according to his service rendered.

12. But David, who was of the house of Farizhee, cried out aloud, that each should have his equal share of the twenty and four hundred talents, whether he rendered any service or no.

13. Whether he dwelt in the land of the Iron-way or no.

14. And whether he put his hand to the plough or no.

15. At which one of the tribe of Gog, whose name was Wali, waxed very wroth.

16. For this Wali had been reared in the far north, where the plack is to him that can earn it.

17. And he missed not himself being present at every meeting of the Board of Governors.

18. Wherefore he did stoutly oppose the saying of David of the house of Farizhee.

19. And unto him there cleaved in regard to this thing, Katspa and Tufas, and others of the tribes of Gog and Magog.

20. But Rogg and Demrogg, and Frerogg and Korasbi, and Dikon sided with David.

21. And Demrogg wrote long epistles to the Gogs and Magogs showing forth the beauty of reaping the fruits of other men's labours.

22. Yea, he taunted them, saying, 'Better are the written words of one wise man absent, than the presence of a multitude of fools.'

23. And Bozrah the weak and the vain, exhorted the men of Gog and Magog to grant the desire of David and his brethren.

24. And of the men of Gog and Magog there assented unto the exhortation of Bozrah,

25. Sillihud;

26. Gibeon, of the family of Solmgahnder;

27. And Sirbub, of the family of Silhibub.

28. So David and those who sided with him, being greater in number than Wali and those who cleaved unto him, the former prevailed.

29. And it was decreed that every one of the Governors, whether present or absent, whether he did any thing or nothing, should be henceforth paid alike!

30. After which it ceased to be said, as of old, that the Board of Governors was composed of one half Gogs and the other Magogs, and it became known among men as divided into two parties, one whereof was called the Gogs and Magogs, and the other the Roggs and Demroggs.

EASTERN COUNTIES' RAILWAY.

HOW RESIDENT SERVANTS OF NON-RESIDENT MASTERS CONDUCT THEMSELVES.

(From the *Times*.)

We have received a letter, from which we make the following extract, relative to the conduct of one of the clerks on this railway. The writer has given us his name:—

"I went on Wednesday, the 13th ult., by the railroad to Romford; I asked on my arrival there what time the afternoon train would start from Romford for London, and was told at a quarter past 4. I accordingly was at the Romford station ten minutes before that time, and went into the office, where about 12 or 14 persons were assembled. Some one asked the clerk what time the train would start, and his answer very shortly was, 'he knew nothing about it.' I then said, 'Will you inform me what time the train is likely to start?' and he rudely replied, 'I shall answer no questions.' I waited about ten minutes, and then asked the same question again, and he answered as rudely as before, 'I know nothing about it.' Some persons expressed the disappointment which they felt, and he told them that if they made a noise there, he should order the policemen to turn them out, and a policeman actually laid his hand on one of the persons to eject him, although he had paid for his ticket. This was half-past four. I then addressed myself to the clerk, and said I had never, in the whole course of my life, witnessed such ungentlemanly conduct. I told him that he was a servant of the public, that he was bound to treat every person with civility, and to answer their questions. The policeman, No. 4, was then ordered to turn me out, and came up to me for that purpose. I asked him what I had done to be expelled the room, and he said, 'I talked too much.' I then desired him at his peril to lay his hands on me, and assured him that I would make both his conduct and that of the clerk publicly known through the press. This seemed to have the desired effect. I then left the office, and met an inspector, who was extremely civil, and he told me that the down train was delayed by some cause which he did not comprehend, and had only just gone through. It, therefore, could not start from Brentwood until the down train got there, which would be at least half an hour. I then returned to the office, and told the clerk that if he had done his duty he would have informed the persons waiting of these facts, and it would then have been at their option to have returned to Romford or to have waited."

Hull and Selby Railway.—On Monday, owing to the frost, the train on this railway was two hours in running two miles!—*Sheffield Patriot.*

FATAL ACCIDENT ON THE MIDLAND COUNTIES' RAILWAY.

(*From the Derby Reporter of Thursday.*)

On Saturday last an inquest was held at the Town Hall, Derby, before Mr. Balguy, Coroner, and a respectable jury, on the bodies of Thomas Taylor and Richard Livesey, the driver and fireman of the mail train from Rugby to Derby, who were killed by an unfortunate collision with the lugagge train, on Friday morning last, between Spondon and Derby.

The severity of the weather had frozen the pipes of the two engines attached to the luggage down train between Rugby and Leicester. At the latter place they were thawed, and the train came on to Borrowash, where one of the engines became useless, there being no water in the boiler, occasioned by the pipes freezing by which it was fed, and in consequence the driver let down the fire to prevent the boiler burning. The other engine brought forward the train till it was half way between Derby and Borrowash, when, in consequence of its slow motion occasioned by its heavy load, the pipes of this engine were stopped also by the intensity of the frost, the thermometer being down as low as within 5 degrees of Zero. The *live* engine took the other in tow and proceeded to Derby. Its rapid progress got up its steam again, and the driver returned to bring up the luggage train to the station; but the power of the engine, in the then state of the weather, was inadequate to bring the whole train, and only half of it was brought forward to the bridge near the Derby station. The waggons were pushed in by the pilot engine, which had been got ready as quickly as possible to render assistance? and the engine returned for the remainder of the waggons. The drivers had sent out the guard of the luggage train, who was accompanied by Messrs. Pickford's guard, to exhibit the red light as a warning to the mail train, which was about that time (nearly three o'clock,) momentarily expected, not to run in upon the luggge train. When the engine came up to the waggons they were put in motion, and the whistle sounded as a warning to the mail train, if it were within hearing, which Wale and Singleton, the two men who had gone out on the line towards Leicester, with the red light, mistook for a call to them to join the train. Pickford's guard ran first, and came up with the train as it was going on, and while it was proceeding at about the rate of eight miles an hour, got upon the step of one of the waggons to mount, but he had no sooner done so than he heard Wale shout "the mail train *is coming*." Wale at this time was within four or five carriages length of the train which he was endeavouring to overtake. Singleton jumped off and rolled over the railway embankment, by which he probably saved his life, for the mail train immediately came into collision with the luggage train. The concussion threw the driver and fireman of the latter into the tender—both were hurt, but not seriously; the driver and fireman of the mail train were so dreadfully injured that they both died soon after the accident, and the guard was so seriously injured that he was confined to his bed in a state of delirium when the inquest was held, and could not appear. There were twelve or fourteen passengers in the mail train, but none of them were injured. The particulars of this catastrophe will be more fully explained in the evidence below given at the inquest.

After the jury had viewed the bodies, which lay at the Infirmary, whither they had been conveyed after the accident, they returned to the Town Hall.

Mr. Macaulay rose and addressed the jury. He attended there as the Solicitor of the Midland Counties' Railway Company, on account of the melancholy occurrence which they were assembled to deliberate upon. He could assure them that the Directors of the Company were most anxious—no one could be more so—that every circumstance connected with it should be thoroughly investigated, and if blame attached to any servants of the Company that they should not be spared, but meet with such punishment as the law would award them. He could assure them that the Company would do nothing to conceal anything that had occurred; their officers were all present to give every information in their power; and they wished every individual to be examined who could throw the least light upon the melancholy occurrence which had taken place. If, after such examination, it should be proved that any one had been guilty of culpable negligence, he hoped the jury would give the Company credit for the desire that such person should be punished as he deserved. It was not only contrary to their wish that he should escape, but they themselves would be the prosecutors to bring the offender to justice. He hoped, however, it would turn out that no one was to blame; but that it was one of those cases, arising from an unfortunate combination of circumstances, which no foresight or diligence could prevent, owing principally to the state of the weather. He hoped the case would so turn out, but if it should be otherwise, while on the one hand he said he wished every one that was proved culpable to be punished, on the other hand he hoped the jury would not be led away by the feeling, which had been produced by accidents on railways. He hoped they would view this as an isolated case, weigh it on its own merits, and looking upon it impartially, and independently of any other catastrophe which had happened elsewhere, judge of it on its own peculiar circumstances. Having said this, he begged to assure them that every person who could throw the least light upon this fatal accident should be called before them.

Joseph Taylor, the brother of the deceased, examined.—I am in the service of the Midland Counties' Railway Company; have been in their employ since April last; I fill the situation of engine-driver. I was one of the drivers of the engines the night before last between Rugby and Derby. We left Leicester 20 minutes before one; the usual time is about half-past ten from Leicester; the time of starting depends on the time the goods come down from London. We had two engines, 13 inch cylinders each; both were powerful engines. John Bonham drove the leading engine; I the second. There were 28 waggons in the train. We went near to Borrowash before I perceived anything the matter; went at the rate of 20 miles and upwards an hour lest the pumps should freeze. Near Borrowash I could not get the pumps to work; they had failed a little before in consequence of the frost. I dropped my fire to keep the fire from burning the engine. The boiler would have been injured had not the fire been dropped. The engines continued their speed till we got past Spondon; they then stopped about a mile from Derby. Bonham's could not bring forward the train not having sufficient power. Bonham proposed to go to Derby because his pumps would not work by reason of the frost, to pump some water into his boiler. He had plenty of water, but the pumps would not work, the pipes being frozen up. Bonham took both engines to the Derby station at my request, as my engine would have added to the weight of the train. We left the two breaksmen and my fireman, William Brown, with the train. Thomas Wale was one of the breaksmen; he is employed by the Company. The name of the other I don't know; he is Pickford's guard. I gave orders to all three to go far enough back with the red lights, in case the mail train should come up before the luggage train was out of the way. It wanted then three quarters of an hour of the time the mail train was due. I expected the order would be attended to by my fireman and Pickford's man. I said to my fireman when I left, get off and see that they go far enough back with the red light. I knew the deceased was following me as driver of the mail train. I saw my brother at Rugby, and we compared watches, I having purchased a new one; there was only two minutes and a half difference betwixt them. I have seen my brother's watch since; the case is a little crushed and the glass broken; it stopped exactly at a quarter past three. I left at the time I gave the order to my fireman. I staid with my own engine at Derby. I could not have got back in less than two hours to the luggage train; could not have got the fire lighted and the steam up in less time. The bars were pulled out of the fire box to let out the fire. Bonham went back immediately after he had unhooked. Bonham was obliged to run about to get water into his boiler by the action of the engine coming along. If he had not got water by this means he would have got it at Derby. He knocked some fire into his ashes box. I assisted in getting the *Pilot* engine off the wheels; she is expected to be ready when the mail train is due; the mail train was not then due. We got the *Pilot* engine ready as soon as we could. The *Pilot* engine is appointed to look out for the mail train; it has nothing to do with us, except an accident occur. When Bonham got back, with 15 waggons, it was twenty minutes past two by the Company's clock. It was not the regular time for the *Pilot* engine to be ready when we got to Derby. The mail train was due at Derby nine minutes after three o'clock. I did not take any notice of the time Bonham was away. It was the business of the breaksman to go back with the red light, it was not the business of my fireman. This was the coldest night that I have been out. It was impossible to prevent the pumps from freezing, and if they had been thawed they would have frozen again in a minute or two. [Several questions were, at this stage of the inquiry, asked this witness by jurymen, but nothing was elicited that affected his evidence.] I provided myself with a watch because I understood the Company's agent wished it. I could not stop to thaw the pipes without putting out the fire. The night was very foggy; the light could be seen but a very short distance; not ten yards I'm sure. The object of the red light is to give notice of an obstruction. With not more than four carriages the driver of the mail train might have pulled up in 150 yards. I did not tell Wale how far to go back, but desired him to go far enough to stop the mail train. I think Wale has been on duty about a fortnight, or a day or two more.

John Bonham examined.—I am in the employ of the Midland Counties' Railway Company. I drove the leading engine of the luggage train from London to Derby, on the night of the 7th of January. It was a very cold night, I don't think I have felt one so cold this winter. My engine froze between Rugby and Leicester; it was down hill, and it did not stop the engine. At Leicester I got it thawed. I came on to Spondon, and passed it. About half way to Derby, the train became so heavy I could not go fast enough to keep the pumps going. The fire was out of the other engine, and it did no work. I blowed the whistle loud eight or nine times to alarm them at Derby. I stopped the train, and got down, and said, "Joe, I must unhook, for I have no water in my boiler." He asked me to take him with me. I unhooked the waggon, and run into Derby with his engine and my own. We stopped on the bridge at the Derby station. I found that going fast had got the water into the boiler; I left Joe's engine and then returned to the waggons as hard as I could go. We left the Company's breaksman, Taylor's fireman, and Pickford's guard. I told Pickford's guard to tell the Company's breaksman to take the red light on to warn the mail train; I told him whatever he did to tell him to go far enough. I heard Taylor tell his fireman to go, and tell the breaksman to go down the line. The Company's breaksman carries the signal lamp. When I got back to the waggons I found Pickford's guard and Taylor's fireman. I did not see Wale. I think it wanted about a quarter to three o'clock. From the time I left the luggage train till I returned was about 10 minutes. I tried to take the whole train. I had plenty of steam, but the engine would not move the train. I then took a part of it. When I started I told Pickford's man to go and tell the other man to go down the line far enough to warn the mail train. Pickford's man replied he is down a long way. I started then for Derby as hard as I could go. I stopped on the bridge, unhooked the waggons, and returned as quick as possible. When I got there, I hooked the waggons and started immediately. I felt quite se-

cure, and that my orders had been attended to. When I started I blowed my whistle as hard as I could, to warn the other train if it was near: I went on about 200 yards, and was going about as fast as a man could run, when I perceived a blow which knocked me back from the engine into the tender; I could not tell what it was. At first I thought it was our engine which had dropped off the road. I got up as quick as possible, and got on the foot plate. My engine was going, and, I then said to my fireman—"I am afraid that is the other train." I stopped as quick as possible, and got down. I ran back with my fireman as fast as I could. The first man I met was Pickford's guard. I said to him —"Is there anybody killed or hurt;" he said "Tom's fireman is killed, and we can't find Tom nowhere." The fireman and I went to Tom's fireman and found him lying on the side of the mail train carriages on the up road. We went to look for Tom, and found him lying betwixt the bank and the tender off the road. I laid hold of him and said to my fireman, he is dead. I said "Tom," and he groaned a little. We lifted him up; the fireman said to me we had better go and see for a doctor. As I was turning away from him I saw the Company's breaksman, and said "go see to Tom and don't leave him." Then I ran to my own engine and drove to Derby as hard as I could drive for assistance. I got off at the bridge, and went to the shed and told them to go for a doctor. I told the Pilot engineman to take some carriages down as quick as possible.

By Mr. Hackett.—It could not be more than ten minutes from the time I started till I saw the man dead, and Wale was present. I ran back, half a mile, and Wale would have as much time to get up as I had, if he were a proper distance on the road to warn the mail train. It took some time to stop my engine. As I turned away from Taylor, I saw Wale.

By Mr. German.—The engines, if not frozen, were perfectly master of the train; they would have been master of 40 waggons. On Tuesday or Wednesday night we brought 43 waggons.

By Mr. Mackenzie.—I did not ask the breaksman any question; I was too much occupied. We have no regular time. It is sufficient if we keep clear of the mail train.

By Mr. Bennett.—The mail train with four or five carriages could not stop in less than a quarter of a mile, but such a night as this, in consequence of the frost and the wheels being slippy, the carriages would run half a mile. It was a very foggy night, I dare say the light could not be seen more than 30 or 40 yards.

Francis Cholerton examined.—I am employed at the Infirmary, the heating of which is under my direction. The thermometer by which I am guided is hung about 50 yards from the hospital. At seven o'clock on Thursday it was seven degrees above zero, yesterday morning it was a little above four, not quite five, degrees above zero. This morning at the same hour it was about three.

William Brown examined.—I was fireman of the engine driven by Joseph Taylor on Thursday night. Before we got to Borrowash the engine became useless from the frost, and Taylor let the fire out. When we got between Spondon and Derby the other engine could not draw it, and the train stopped. Bonham and Taylor told me to go back, and tell the breaksman to show his light. I went and told Wale to take the red light, and go back on the line to warn the mail train if it should come up lest it should run in upon us. I told him to go a long way up the line. I fetched the red light from the carriage, and gave it to him; we keep three lights for signals, red, white, and green. He said nothing, but I am sure he heard me. I stayed with the train till the engine returned; when I told Wale this, the engines were starting for Derby. I left the tail of the train and came up to the head, so that I had no means of seeing whether Wale obeyed the direction I gave him or not. Pickford's guard was ten or twelve yards off. The engine was a very little while before it returned; a few minutes. We hooked on the whole train, but it would not draw; we then hooked on a part of the train, with which I went to Derby. Bonham's fireman went with us. I stopped at Derby to look to my engine which was frozen up. There is always a red light kept behind the train; the signal lights are kept by the breaksman to show when wanted. I turned the red light on for him, when I gave it to him.

By Mr. Shepherd.—The engine-men have books of instruction from the Company; the fireman are under their direction.

George Wilson examined.—I was fireman of the first engine of the luggage train driven by Bonham on Thursday night. I was with Bonham when the train stopped between Spondon and Derby, and went with the engines into Derby. Brown and Pickford's guard and the breaksman were left with the train. I heard no instructions given, being on my own engine. We left Taylor with his engine at Derby. I returned and found Brown with the train, but saw no one else. We divided the train into two parts. Bonham and I went with part of it. We then came back for the remainder of the train; on reaching it I got off and hooked the waggons on. I saw Pickford's guard get on to the step of the break waggon; and the breaksman with the red light in his hand at the tail of the train. This was as the train was moving. Bonham had just given over whistling; he opened the whistle several times. Not more than two minutes elapsed from sounding the whistle first till I saw a man about 10 yards beyond the tail with the red light. He might have run a long way in two minutes. We were a long time in starting. The red light was towards me, or I could not have seen it. The mail train could not have been stopped in time had it then come up, as the breaksman could not have been far enough to prevent a collision. After I saw Wale I turned round to my regular position; we were travelling on at a slow rate, and had gone about 200 yards when I felt the shock. Bonham tumbled over and was thrown into the tender; I also was thrown upon him. He hurt his shoulder. Bonham got up and stopped the train. We both jumped off, when he said to me, "Let us go back; the mail train has run into us." We met Pickford's guard, who said, "Oh dear! what must we do, Dick's killed." I asked where Taylor was, and he said, "We have not found him." I saw Livesey first in the middle of the road; we removed him to between the two lines. I found Taylor between the tender and the engine, and, with the assistance of Bonham and the mail guard, removed him. Both spoke to me. I believe there were four carriages attached to the mail train. I stopped with the deceased men till they died.

By Mr. Mackenzie.—When we came with the two engines to the bridge at the station, the man who collects the tickets came up, thinking it was the mail train. We told him it was the luggage train, and that we had left the waggons on the road. We left Taylor to see after the Pilot engine.

Richard Challinor examined.—I am guard of the mail train from Rugby to Leeds, employed by the Post Office. I was inside the Post Office carriage on Thursday night. I think we left Rugby about twelve minutes past one, I am not certain; we left Leicester about two o'clock, but I am not quite sure as to the time. When we came near Derby I felt a shock; I got out as quick as I could. I found the fireman laid on his back, and the water from the tender flowing on him. He was jammed between the tender and the engine. I got him out; there was a great deal of steam and smoke. The night was very misty. The other man was found underneath the carriages. There were four or five carriages, and twelve or fourteen passengers.

By Mr. Mackenzie.—We were about our regular time, which at Leicester is 1.44; at Derby 3.9. We were not more than three or four minutes either too late or too soon. I heard a whistle a very short time before the concussion, perhaps a minute. I fancied the train slackened its pace a little. We were going about 25 miles an hour including stoppages, so that we should go about 30 miles an hour when in motion. A higher speed would not be dangerous on the road where the accident occurred. The night was very foggy; and the red light could not be seen more than fifty yards. The guard outside was badly hurt.

Mr. H. Gisborne, surgeon, examined.—I saw the bodies yesterday morning. Taylor's right thigh was broken in two or three places; the left thigh was laid open to the bone, from two or three inches above the knee to the pelvis; dividing all the muscles and some branches of the arteries. The pelvis was severely very injured, and broken into many pieces. These injuries are sufficient to cause death. On Livesey there was only one external mark of violence; that was on the lower part of the abdomen, or between that and the spine. No limbs were broken, but probably his bladder or bowels were burst, or some injury might be done to the spinal marrow, which would occasion death.

William Singleton examined.—I am the guard to Pickford's luggage train; I was with the train on Thursday night last; I was left with the train when the engines were detached. Bonham, Taylor, and the other fireman went with the engines. When the train stopped I met Brown about half way along the train; he said one engine was frozen up, and the "live" engine was going to take it on. He told me to tell Wale to go back with the red light. I asked him the time, and he said it was half-past two. Wale was against the break waggon when this was said to him. Wale was to go back with the red light. I walked back with Brown to the break waggon. Brown laid hold of the signal lamp, and turned on the red light, he then gave it Wale. The red light is the signal of danger to stop as fast as they can. I was close by when the light was given to Wale, we kept saying "We must mind, and not let the mail train run into us;" but no direction more than this was given to him. We all three walked back towards Leicester; we went about 40 yards, or it might be further. The "live" engine then came back, and then we all returned to the train. I went up, and asked why he did not bring the *Pilot* engine; he said he did not see anything of the men. Bonham tried to take the train and could not; he then took part, and said to me, "mind and go back with the red light far enough, and mind that we have no mess." I went direct to Wale and said we must go back far enough with the red light; we went back about 400 yards; we went till the mile post said, 14 miles to Nottingham. We went beyond the mile post. We heard an engine coming, and I said, "the mail is coming, I think." We listened a bit, and found it was Bonham's engine coming back for the luggage train. We then walked back towards the luggage train. As we were walking back, about half way, we heard his whistle. I said to Tom, "he wants to know whether we are right or not." We got up to the train; we thought the whistle was to bring us up to the train. When we got to the train it was started at a slow pace. I ran beside of it till I could just jump on the step. The moment I was on the step, Wale shouted, "Here is the mail." He was on the road behind the train. I jumped off, and tumbled over the bank. I don't think Wale could have got up to the train in time to go by it. I heard the crash; I got up; the fireman was moaning, and the mail guard was with him trying to get him out. I got him on my knee. It was very misty; we could see but a very little way. I should think we could not see the red light above 30 yards, but we did not step the ground. I turned back because it was my place to go with the luggage. I can't tell why Wale turned back. It did appear to me extraordinary that he should turn back, but I said nothing to him. I think Wale did say, "I think we shall get in Derby before the mail train.

By Mr. Mackenzie.—I did not then think of the impropriety of his coming back, as he was placed there to prevent danger.

Thomas Wale examined.—I am in the employ of the Midland Counties Company. I was a porter at first, I have been breaksman a fortnight yesterday. The whole time I have been engaged with luggage trains. When this stoppage took place, I was on the break-carriage; there was a waggon behind it.

Digitized by Google

I also to carry a signal lamp at night. I understand the use of it; the signal lamp was in my hand. I got down before they quite stopped. When the engines went on, I was left with Singleton and Brown. Before Bonham and Taylor left, I heard no direction given. Brown, and I, and Singleton went down the line towards Leicester. I carried the lamp; the red light was on. The first time we went from 40 to 50 yards from the train; we returned back on hearing the engine come back from Derby. They tried to take the whole train and could not; and then they took part, leaving the other behind with me and Singleton. Before they went away, they said what o'clock it was, and said I had better go down the line. I am sure none of them said anything to me, except that Brown said I had better go down the line. I and Singleton went towards Leicester from 6 to 700 yards to stop the mail train. We stood there waiting till we heard the engine coming, and then we heard a whistle. I did not know what engine it was at first; but we ascertained it was the engine from Derby; we were then walking backwards and forwards. When we heard the whistle we said to each other, "it is to call us up to it." We ran as fast as we could to catch the train. Did not hear the mail train. I did not overtake the train, for when I got near to it, it was going as fast as I could run. Singleton was in the act of getting up, when I heard the mail train; I had not heard it till it was close upon me. It was very foggy. I was about the space of four or five carriages off the luggage train, and I could but just discern Singleton attempting to get up. I called out, "The mail train is coming." I was between the two lines, and I got out of the way as quick as I could. There was the red light at the end of the train; but it could not be seen more than 20 yards off, and very small then.

By Mr. German—I thought it was my duty to go with the train I was attending upon.

By Mr. Hackett—I thought it my duty to go to prevent the mail train from running in upon the other.

By Mr. Mackenzie—It was half-past two, Brown said, when the train stopped. I did not know the time the mail train was due.

By Mr. Macaulay—I supposed it was my duty to keep watch till my own train was going, and then to go with it.

By Mr. Mackenzie—I and Singleton had no conversation about danger from the mail train; we thought we should get to Derby in time.

By Mr. Macaulay—I have always been in the habit of acting by the order of the engine driver. I always understood that it was my place to take care of the luggage. I have nothing to do with anything but to see that the luggage is safe.

Mr. Woodhouse examined.—I am Resident Engineer and Superintendent of the line. I know the spot where the accident happened; it is perfectly straight towards Leicester for a mile and a half; on the spot it is level, towards Derby it rises ten feet in a mile. It would depend on the weight behind the engine whether it could be stopped in more or less space. I consider 300 or 400 yards with the mail train sufficient. Supposing it had been a clear night the red light might have been seen a mile; I am speaking within compass. If it had not been for the fog, the engine-driver must have seen it time enough to stop. The driver is the person charged with the safety of the train in reference to accidents. Each driver has a book of instructions. It is his business to take steps to prevent his train being run into. The guard or breaksman is bound to obey the orders of the engineman. The greater part of his duty is to assist in stopping the train by the break. He is under the control of the driver. I am not aware that any definite instructions were given to Wale. I consider him intelligent; his predecessor had misconducted himself, and as he had gone accidentally no fault before he was selected to fill his place. I do not say that in this instance Wale has disobeyed any rule. He has gone many times on guard with passenger trains when the guards were absent. The two engines are perfectly master of their work. I have known them take 46 waggons. They started 1.20 before the mail train left. Immediately after the accident the pilot engine went out and brought in the passengers. During the last week there has been several instances of engines being set fast by the frost. The pilot engine is kept to go out to meet the mail train if not in a quarter after its time. When the accident happened it was three quarters of an hour before the time the pilot should be ready. When Taylor got to the station the steam was not up in the pilot engine; it takes 1½ hour to get up the steam.

Mr. Kearsley examined.—I am superintendent of engines to the Midland Counties Railway. The instructions to the men are that the pilot engine be ready, and tender full, to go out at three o'clock; that is as soon as the mail train is due in sight; can be seen three miles off, but not if it be a foggy night; in that case nine minutes past three is the time. The pilot was ready to go out before three o'clock: when Taylor came in disabled she was on the rails: she pushed the first load brought by Bonham into the station, which enabled him to go sooner for the second. The pilot engine that morning was ready before its time.

The CORONER then addressed the jury. He was at first inclined to attach blame to Wale, but since he had heard the evidence he could not consider him criminally negligent; he had evidently acted under the impression that it was his duty to keep with his own train to take care of the luggage. He then remarked upon the readiness of the agents of the Company to give every facility to arrive at the truth, and thought the jury could come to no other conclusion than that the catastrophe was owing to circumstances which could not be foreseen or controlled.

The jury deliberated till nearly eight o'clock, when they returned a verdict of "Accidental death, with a deodand of 300*l*.

ACCIDENT AT THE RUGBY JUNCTION.

A COLLISION took place on Sunday night between the Birmingham and North Midland trains at Rugby, whilst the shifting of the carriages took place. Three persons were severely injured.

The accident is stated to have arisen from the negligence of the officer on duty who had the care of the red light, which he neglected to display.

The Birmingham train was uninjured, and the whole calamity fell upon the North Midland. The following is the official account:—

"The mail train, which left the Euston-square station at half-past eight on Sunday night, on arriving at Rugby, detached two carriages, which were to proceed on to the Midland Counties' line. The carriages were in the act of being passed from the London and Birmingham down line for this purpose, when the mail train, which leaves Birmingham for London at twelve p.m., arriving very slowly at the station, ran unfortunately in contact with the crossing carriages, and caused contusions to four of the passengers, and a slight fracture of the collar bone to a fifth. Surgical attendance was at hand, and every care taken of the parties. The immediate cause of the accident is now under investigation."

THE HULL ADVERTISER.—Established half a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England; while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser	73,000
Hull Packet	10,000
Hull Times	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.

The HULL ADVERTISER is published every Friday morning, in time for post, at the office, 26, Lowgate.

WATERPROOF LUGGAGE COVERS,—Manufactured by JOHN EMES, late Milton and Co.; Cut Wade, Limehouse, London, for Railway Trucks, Waggons, Barges, &c. The great improvement in the manufacture of these Covers, which are now in use on the principal Lines, and which can be recommended with confidence to the notice of Dock and Railway Companies; Barge and Waggon Proprietors, Contractors, Builders, and others, as an article of durability, possessing all the necessary qualities—viz., that of being perfectly Waterproof, and flexible, and not subject to adhesion, a fault much complained of in tarred Cloths; and can be made of either light or heavy quality to suit the purposes required. It is also prepared for covering Roofs, Verandas Coach and Guard Aprons, Horse Cloths, &c.

A supply of Covers on hand for hire, to Builders, Excavators, Bargeowners, &c., requiring temporary Coverings, Rick Cloths, Poles, Blocks, Cordage, &c.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, an manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4): and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond-street; Reake and Varty, 31, Strand; W. Lund, 24, Fleet-street; T. Lund, 57, Cornhill; Jackson, 23, Cannon-street, City: in Edinburgh, by Sanderson and Son, 32, St. Andrew-square: in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street: in Birmingham, by Osborn and Sons, Bennett's-hill: in Liverpool, by T. Dismore, Bold-street: in Manchester, by Allen and Raphael, 28, Nightingale-street: and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1	0	0
A ditto in a handle for the pocket	1	5	0
A ditto with Mordan & Co.'s ever-pointed pencil	1	10	0
A ditto, ditto, with reserve of leads	1	14	0

December, 1840.

ANDREW SMITH'S PATENT WIRE ROPE. WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire-drawers, Birmingham
Robertson and Co., 12, Goree Piazzas, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every exectation. It has been used in Shipping Five Years.

SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 910, published this day, price 3d., contains detailed Abstracts of the following Patents recently enrolled:—Leese's, for improvements in printing calicoes and other surfaces; Mechi's, for apparatus to be applied to lamps in order to carry off heat and the products of combustion; Palmer's, for improvements in ploughs; Lecomte's, for constructing fire-proof buildings; Beale's, for improvements in steam engines; Barnett's, for certain improvements in fastenings for wearing apparel. Also, illustrated description of Smith's patented improvements in solar lamps; improved spring buffer for railway carriages; Jack Frost's vagaries; A paper on plane metallic surfaces, and the proper mode of preparing them; Adaptation of Captain Ericsson's transversal propeller to the New York packet-ship *Clarion*; The utility of giving a lead to the slide valves of locomotive steam-engines; Fire-escapes; Safety mattresses; Lithographic printing; new theory of the Universe; Opposition to the London and Westminster Water Company; Dreadful fire-escape accident, &c. &c. &c.

The MECHANICS' MAGAZINE, Vol. 33, price Ten shillings boards, illustrated with upwards of Two Hundred Engravings, was published January 1st, containing Abstracts of all the most important Specifications of Recent English Patents, as well as all the new inventions, and complete lists of English, Irish and Scotch Patents for the last six months.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

TO ENGINEERS, MILLWRIGHTS, AND OTHERS. Just published, with five Copperplate Engravings, price One Shilling,

A DESCRIPTION of WHITELAW and STIRRAT'S PATENT WATER-MILL, with an account of the performance of one of these machines lately erected at Greenock. To which is added, a practical method of determining the power which may be obtained from any given fall of water; with directions for economising the water which runs down a fall, and of rendering available as a water-power the rain which falls on their lands. By JAMES WHITELAW, Engineer, Glasgow.

Published at the Mechanics' Magazine Office, 166, Fleet-street, London; and sold by D. Robertson, 168, Trongate Glasgow.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY COMPANY.—A General Meeting of the Subcribers to the Company, was held at the Company's offices, 23, Bond-street, Manchester, on Monday the 11th day of January, 1841, pursuant to a public notice in that behalf from the Provisional Directors of the said Company duly convening the said Meeting, at which there were present 60 Subscribers for, in the aggregate, 3315 shares.

THOMAS ASHTON, Esq., in the Chair.

The Directors Report having been read, it was moved by John Bradshaw, Esq., seconded by Henry S. Chadwick, Esq., and unanimously resolved—

That the Report now read be received and printed for distribution under the sanction of the Provisional Directors.

It was then moved by George R. Chappell, Esq., seconded by John Brooks, Esq., and resolved, with four dissentients (subscribers for 175 shares)—

That it is expedient that a variation of the intended line of the Manchester and Birmingham Extension Railway, whereby the same railway will commence by a junction with the line of the Grand Junction Railway, in the county of Stafford, in substitution for the originally proposed commencement thereof by a junction with the Manchester and Birmingham Railway, should be adopted, and that in order to the effectual prosecution of the said varied undertaking, by the re-constitution of the Company, it is further expedient that the said Manchester and Birmingham Extension Railway Company, as constituted by the Subscribers' agreement or provisional deed of settlement of the same Company, bearing date the 30th day of June, 1838, and the supplementary Subscribers agreement, bearing date the 1st day of December, 1838, should be dissolved, and for that purpose the original Company shall be and is hereby dissolved by virtue or in pursuance of the provisions in that behalf contained in the said Subscribers' agreement or provisional deed of settlement.

It was subsequently moved by Leo Schuster, Esq., seconded by Joshua Proctor Westhead, Esq., and resolved unanimously—

That the power of winding up and adjusting the affairs of the said original Company, subject to the accounts thereof being audited by Messieurs William Higgins and Henry S. Chadwick, who are hereby appointed by the purpose, shall be, and is hereby, vested in the provisional Directors of the same Company, who shall have the like discretion and authorities relative thereto, and for the settlement, determination, and arrangement of all transactions, accounts, questions, matters, and things in relation thereto, as were by the said Subscribers agreement and the said supplementary agreement vested in them, in relation to the conduct and management of the affairs of the same Company; and for such purpose only, the provisions of the same agreements and the constitution of the same Company, and the Board of Directors thereof, shall continue in force until the final adjustment of the affairs thereof.

THOMAS ASHTON, Chairman.

Mr. Ashton having left the Chair, Henry S. Chadwick, Esq., was called thereto, and

The thanks of the Subscribers were unanimously given to the Chairman for his satisfactory conduct in the Chair.

HENRY S. CHADWICK.

THE DIRECTORS' REPORT.

The Advertisment which convenes this Meeting explains its object. That such object may be better understood, it will be useful to review briefly the proceedings of the Company.

It was formed in the year 1838, with the design of shortening the communication with London, by the construction of a railway through the Valley of the Trent—a district which is known to possess almost unequalled facilities for the purpose, and your Directors, under the Subscribers agreement constituting the Company, are empowered, in their discretion, to select, and from time to time to vary, the point of commencement or of termination or the course of the railway. The line as originally laid down, joined the Manchester and Birmingham Railway near Stone, in Staffordshire, and passing through or near the towns of Rugely, Lichfield, Tamworth, Atherstone, and Nuneaton, terminated at Rugby, upon the London and Birmingham Railway. There was no provision, under the then arrangements, for the transfer of traffic from the Grand Junction to the proposed line, nor was any junction between the lines in immediate contemplation, and hence the town of Liverpool, and the large population whose route to and from London is by way of Liverpool, may be said to have been practically excluded from the benefits of the new communication.

An application was made to Parliament in the Session of 1839 for the necessary powers to construct the railway, but the application did not result in the passing of an Act. The Parliamentary Committee, however to whom the Bill was referred, encouraged the Company to renew their application, by appending to their Report the very unusual, if not altogether unprecedented, recommendation that "every facility of which the rules of the house would admit, should be afforded to the promoters in a future Session." Assured by this recommendation, and by the unanimous sanction of their Shareholders, conveyed by resolutions of a meeting held in September, 1839, your Directors prepared for the Session of 1840, and perfected their arrangements for a second application.

Pending the Parliamentary preparations for that application, the line of the Chester and Crewe Railway was purchased by the Grand Junction Company, who then sought, as the Shareholders are already aware, and accomplished an arrangement with this Company under which it is provided that the whole traffic between Liverpool and London, which comprises much of that from Ireland and Scotland, should traverse the Trent Line.

The Railway which the Company had then in view, contemplating only the traffic between Manchester and London, and between Manchester and the eastern counties of England, was (as has been explained) unadapted to the extended prospects thus opened to it; and the Directors, therefore, deemed it advisable to postpone for a year their application to the Legislature, in order that in the interval the railway might be so varied as to meet the Company's altered circumstances. But before such postponement was determined upon, the Shareholders were called together, and their opinion was requested on the subject. The Directors further took occasion to submit, for adoption or rejection, a proposition which had been made to them by the London and Birmingham Company, to the effect that the latter Company would pay to this Company 20,000*l.* if the project were abandoned, and a majority of your Directors would pledge themselves not to be parties to its renewal. This proposition you unanimously rejected; the proceedings of your Directors you as unanimously approved; and, acting under the sanction then obtained, plans were deposited, in pursuance of the Standing Orders of Parliament, as the basis of an application in the now ensuing session, for one of two lines, namely, a line from Stone to Rugby, with two branches, or a line from Stafford to Rugby, with one branch, both of which lines are calculated to form a junction with the Grand Junction Railway, and are, therefore, adapted to the Company's new arrangements.

The choice of line was left open for future inquiry and arrangement, and the Directors have decided, after mature deliberation, to adopt and apply to Parliament for its sanction to the latter line.

The preparations connected with the deposits and notices are all completed; and although under the Subscribers agreement already executed, the Directors deem themselves empowered to pursue the projected measure, yet as it comprises deviations from the original line of some extent, they are unwilling to proceed further in the exercise of the powers so conferred upon them, without giving to any Proprietor, whose judgment may differ from their own, an opportunity of recording such opinion by withdrawing from the Company.

The Directors, therefore, have now to suggest that for this purpose the Company originally constituted under the title of "the Manchester and Birmingham Extension Railway Company," be formally dissolved, with a view to the organization of a substituted Company, to carry out the objects specified in this Report.

It will of course follow as part of this arrangement, that the accounts of your Directors (who are the sole creditors of the Company, no portion of the deposits already paid having been expended or appropriated) should be audited, and the sum ascertained, to which, after contributing their quota to the expenses incurred, the several retiring Shareholders, if such there be, will be entitled.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY.—RAILWAY FROM STAFFORD TO RUGBY.—We, the undersigned, Owners and Occupiers of Lands on the projected line of railway from Stafford to Rugby, do hereby declare our dissent from the scheme, and our determination to oppose it by every means in our power; convinced that it is an unjustifiable interference with and invasion of private property, being wholly uncalled for, and unnecessary for the accommodation of the public.—January, 1841.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY.

—The following is the Document referred to in the report of the Meeting on Monday last, given in another column:—

TO THE SHAREHOLDERS IN THE MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY.—STAFFORD AND RUGBY RAILWAY.

Ford Bank, January 9, 1841.

GENTLEMEN,—I came to Manchester for the purpose of presenting myself at the meeting of the Manchester and Birmingham Extension Railway Company, to be held on Monday the 11th instant, and explaining to the Proprietors that the line now proposed to them for adoption is one which will meet with the most decided opposition from the Marquis of Anglesey (whose Agent I am), and also from a large proportion of the landed gentry in his neighbourhood.

I assumed that all parties holding Scrip Shares in the undertaking would be considered as Shareholders, and would as such be entitled to attend the meeting; and as I was authorised to represent the holders of many hundreds of shares, I presumed that an opportunity would have been thus afforded me of communicating the information with which I was charged, and which it is obviously of so much importance to the Proprietors to be made acquainted with. To my surprise, however, I am told that the meeting is to be confined to the small body of original Proprietors who have not parted with the shares allotted to them in 1839, and that all persons who have subsequently become the purchasers of Original Shares are to be excluded from the meeting.

Under these circumstances, the only mode left me of making known the object of my mission, is by thus publishing the fact, that the Marquis of Anglesey has authorised me to notify his determination to oppose the intended Stafford and Rugby line by every means in his power, and that I have satisfactory reasons for believing that the Earl of Litchfield is now adverse to the new line, although neither of those noblemen offered the slightest objection to the original Manchester and Birmingham Extension Railway project of 1837.

The new line indeed, within 8 miles from its starting place at Stafford, will cut through no less than 3 parks, viz., Great Haywood Park and Chase, belonging to Lord Anglesey, to the extent of nearly three miles; Oakage Park, belonging to Lord Litchfield, to the extent of nearly one mile, and within sight and hearing of Shugborough; and Wolsley Park, belonging to Sir Charles Wolsley, through its whole extent, and close to the mansion house, the character of which it will totally destroy.

In addition to these opponents, the Hon. Colonel Howard of Elford Hall, Hugo Malvesyn Chadwick, Esq., of Mavesyn Ridware, the Rev. R. Levett, of Milford Hall, the Rev. Thomas Levett, of Packington Hall, John Levett, Esq., of Wichnor Park, Major Chetwynd, of Brockton Hall, and other influential landowners in my immediate neighbourhood, besides a long list of others on other parts of the line, whose names have been published in the newspapers, have signified their unqualified dissent to the measure, and their determination to appose it by every means in their power.

Sir George Chetwynd is also, I am credibly informed, still an opponent, and has sent in his dissent to the measure.

It cannot, therefore, be supposed for one moment, that Parliament will sanction a line so wantonly ruinous to the ornamental estates of the resident landowners; and it is important to the shareholders to be made acquainted with the opposition which they will have to encounter, in the event of their making an application to Parliament.

I am, Gentlemen, your most obedient servant,
THOMAS LANDOR,
Agent to the Marquis of Anglesey.

TO SCRIPHOLDERS.—MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY COMPANY.

—Company's Offices, Bond-street, Manchester, January 12, 1841.—NOTICE is hereby given, That at a Meeting of the Subscribers to the Company, held, pursuant to advertisement, on the 11th instant, it was resolved that the Company should be, and the same was, dissolved; and the affairs thereof were directed to be immediately wound up, with a view to a substituted Company being organised for the purpose of applying to Parliament in the now ensuing session for power to construct a Railway from Stafford to Rugby, according to the notice given and the plans deposited in that behalf.

All parties intending to claim, as scripholders, the benefit of any share or interest in the funds of the Company, are requested to deposit such scrip with the Company, at their offices, within fourteen days from the date hereof; and no scrip will be received for deposit after the time hereby limited.

This notice does not apply to the Company's Subscribers, but to the purchasers of scrip certificates.—By order of the Provisional Directors.

RICHARD FOSS, Secretary.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.

—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,
THOMAS WOOD, Secretary.

NORTHERN AND EASTERN RAILWAY.

—The Directors of this Company will meet at their offices in Shoreditch, on Thursday, the 21st January, at One o'clock precisely, to receive Tenders for the Execution of the Portion of the Railway between Burnt Mills and the old turnpike-road near Harlowe, being a length of about two miles.

Plans and specifications, with conditions of the Contract, may be seen at Broxbourne, from Monday, 11th January, to Wednesday the 20th January.

Tenders (sealed up), addressed to the "Board of Directors," to be delivered before One o'clock on or before Thursday, the 21st January instant. The Directors do not pledge themselves to take the lowest Tender.

WM. BOURNE, Secretary.

Shoreditch, Jan. 7, 1841.

BERLIN AND HAMBURG RAILWAY.—A

Committee composed of some of the most influential and respectable houses in Berlin have opened a Subscription for a Provisional Fund to defray the preliminary expenses of estimates and surveys for the proposed Railway between Berlin and Hamburg on the right bank of the Elbe, by way of Wittenberge.

This Subscription Fund is in the course of collection by the undermentioned agents:—

In Berlin—Anhalt and Wagener; Busse and Son; Conrad and Clemme; T. S. von Halle; S. Herze; M. Oppenheims' Sons; Robert Moritz.

In Hamburg—Lutteroth and Co.; Salomon Heine.

In Leipzig—Frege and Co.; Meyer and Co.

Copenhagen—C. T. Hambro and Son, f. Tutein and Co.

Breslau—Eichborn and Co.; Jos. fr. Kraker, Ruffer and Co.

Frankford—Ernst Ecclus.

Schwerin—A. Henrichsen.

Wismar—Joh. Andr. Koester.

And in London, by Messrs. B. Hebeler and Co., and Messrs. Baxendale, Tatham, Upton and Johnson.

Every Subscriber of Five Prussian Dollars and upwards (the Prussian dollar being taken at three shillings sterling), will receive a deposit receipt which entitles the holder to a pro rata apportionment of shares, but no Subscriber is bound ultimately to take shares.

A Prospectus may be had on application to Messrs. B. Hebeler and Co., 106, Fenchurch-street, London, and Messrs. Baxendale, Tatham, Upton and Johnson, Solicitors, No. 7, Great Winchester-street, London, to whom applications are to be made by parties desirous of subscribing.

LAST DAY FOR THE APPLICATION FOR SHARES, From the Country the 26th, and in London the 30th inst.

LONDON and WESTMINSTER WATER COMPANY.

—to be empowered by Act of Parliament, for which notices have been given. Office, 7, St. Martin's-place, Trafalgar-square. Capital—£600,000, in Shares of £50 each.—Deposit (in order to comply with the standing orders) £5 per Share.

PROVISIONAL COMMITTEE.
(From whom the Directors will be elected.)

Sir, Francis Burdett, Bart., M.P.
The Right Hon. Sir Charles Grey, M.P.
Sir Wm. Colebrook, 11, York Gate, Regent's Park.
Sir Henry Halford, Bart., M.D. G.C.H., F.R.S., F.S.A.
John Humphery, Esq., Alderman, M.P.
P. A. Mackinnon, Esq. M.P.
The Hon. Col. F. H. W. Needham, Jermyn-street.
The Hon. H. R. Westenra, M.P.
The Hon. Col. J. C. Westenra, M.P.
Major Adair, H.E.I.C.S.
Wm. Chaplin, Esq., Lad-lane, and Euston-square.
John P. Clarke, Esq., Vincent-square, Westminster.
Colonel Dacre 28, York-place, Portman-square.
Thomas De Vear, Esq., Lisle-street and Kensington.
C. M. Eld-rton, Esq., Lincoln's inn-fields.
Wm. Evans, Esq., Millbank.
Wm. Gristhenwaite, Esq., Camberwell grove.
Robt. Keate, Esq., Surgeon to the Queen.
Capt. M Dougal, Fir-grove, North Brixton.
G. Mackintosh, Esq., Upper Seymour-street.
P. Morrison, Esq., Prince's-street, Bank.
Dr. Paris, Dover-street, F.R.S., F.L.S.
Jeremiah Pilcher, Esq., 46, Russell-square.
Dr. Hamilton Roe, Hanover-square.
James Ruddell Todd, Esq., Portland-place.
Joseph Workman, Esq., Greenwich.

With power to add to their number.

Bankers.—Messrs. Jones, Loyd, and Co., Lothbury; Messrs. Drummond and Co., Charing Cross.
Engineer.—Robert Stephenson, Esq.
Solicitors.—Messrs. Winter, Williams, and Williams, 16, Bedford-row.

The Sub-Committee for the consideration of the applications for Shares hereby give notice, that they will receive no more applications from the country after Tuesday, the 26th day of January instant, being the first day of the meeting of Parliament, or from persons residing in or near the Metropolis, after the 30th day of January instant.

In the meantime applications may continue to be made to any of the following members of the Sub Committee:—Wm. Chaplin, Esq., Lad-lane and Euston-square; Thos. De Vear, Esq., Lisle-street and Kensington; or Captain Macdougal, Fir-grove, North Brixton; the Solicitors, Messrs. Winter, Williams, and Williams; to W. S. Northouse, Esq., Parliamentary Agent, 4, Parliament-street; M. E. Wilkinson, Esq., Guildhall-yard; or G. W. Blanch, Esq., 7, St. Martin's-place.

By Order of the Sub-Committee.

Committee-room, Jan. 14, 1841.

DUKE OF CORNWALL'S HARBOUR AND LAUNCESTON AND VICTORIA RAILWAY COMPANY.

—NOTICE is hereby given, that in pursuance of the Act of Parliament, the next Half-yearly General Meeting of the Proprietors of this Company will be held at the London Tavern, Bishopsgate-street, in the city of London, on Thursday, the 4th day of February next, at one o'Clock precisely.

By order of the Board,
GEORGE DYSON, Secretary.

3, Copthall-buildings, January 14, 1841.

LONDON AND BIRMINGHAM RAILWAY.

—Office, Euston Station, January 15, 1841.—NOTICE is hereby given, That the Books for the Registration of the Transfer of Shares of this Company will be closed from Saturday, the 30th of January, to Saturday, the 13th of February, 1841, inclusive.

(By Order)
R. CREED, Secretary.

LONDON AND BIRMINGHAM RAILWAY.

Office, Euston Station, 15th January, 1841. NOTICE is hereby given, That the February Half Yearly General Meeting of the Court of Proprietors of the London and Birmingham Railway Company will be held at the Queen's Hotel, Birmingham Station, on Friday, the 12th February next, at Eleven o'clock in the Forenoon. The chair will be taken at 12 o'clock precisely.

GEORGE CARR GLYN, Chairman,
JOSEPH F. LEDSAM, Deputy-Chairman,
Of the Board of Directors.

(By Order)
RICHARD CREED, Secretary.

LONDON AND COUNTY BANK.—NOTICE

is hereby given, that the ANNUAL GENERAL MEETING of the PROPRIETORS of this COMPANY will be held at the Bank, No. 71, Lombard-street, on Thursday, the 4th day of February next, at One o'Clock precisely, to DECLARE A DIVIDEND, and for other purposes. At this meeting, Three Directors, viz. Alexander Rogers, Esq., William Cory, Esq., and William Hawes, Esq., retire by rotation, but being eligible for re election, offer themselves accordingly.

By Order of the Board,
R. P. NICHOLS, Secretary.

71, Lombard-street, Jan. 13, 1841.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—CALL FOR NINTH INSTALMENT.

—The Directors of this Company having resolved to make a Call, under the provisions of the Act of Parliament, for an Instalment of Ten Pounds per Share—Notice is hereby given, that the several proprietors in the capital stock of the said Company are required to pay the said call or sum of £10 on each of their respective shares, on or before the 22nd of February next, to one of the undermentioned Bankers, viz.:—

Sheffield—Messrs. Parker, Shore, and Co.
Manchester—The Manchester and Liverpool District Bank.
London—Messrs. Rogers, Olding, and Co., and Messrs. Smith, Payne, and Smith.

Interest after the rate of 5 per cent. per annum will be charged by the Bankers on all sums which shall remain unpaid after the said 22nd day of February until payment thereof.

The Directors take this opportunity of stating that £5 per cent. per annum is allowed on all sums paid in advance.

By order of the Directors,
CHARLES THOMSON, Clerk and Secretary.

15, Piccadilly, Manchester, 13th January, 1841.

Just published, in Foolscap 8vo. with 75 Wood Cuts, 4s. 6d. in Cloth,

A MANUAL OF CHEMISTRY, with Glossary and Index.

By RICHARD D. HOBLYN, M.A., Author of a Dictionary of "Terms used in Medicine," &c.

"The present treatise has been prepared to afford elementary instruction in the principles of Chemistry. The most important facts and theories of the science are stated in as condensed a form as the subject admits, and recapitulatory questions have been appended to each chapter for the examination of students."

London: Scott, Webster, and Geary, 36, Charterhouse-square.

In fcap. 8vo., with wood-cuts and plates, price 4s 6d. each,

MACGILLIVRAY'S MANUALS OF GEOLOGY; BOTANY; and BRITISH ORNITHOLOGY, Part I. containing the Land Birds.

"We unhesitatingly recommend the Geology as the best elementary treatise extant."—*Carnarvon Herald.*

"The student of Botany will find every thing so methodised, classified and explained, that the book may be called a railroad conveyance to the science."—*Bath Herald.*

"The Ornithology contains a short introduction, which includes all the particulars requisite to enable the student to compare the objects with their descriptions, and these are given so fully as to enable him to determine every species. The essential characters of the Genera, Families, and Orders, are also given."

London: Scott, Webster, and Geary, 36, Charterhouse Square.

WARWICK AND LEAMINGTON BRANCH RAILWAY,

being an extension of the London and Birmingham to those towns. Office, No. 7, Tokenhouse-yard. Every information relative to this undertaking may be obtained by application at the above Office, between the hours of Ten and Four daily.

YORK AND NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the January Half-Yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company, will be held, in pursuance of the provisions of the Act of Incorporation, in the Offices of the Company, in the City of York, on Friday, the 29th day of January next, at 12 o'Clock at noon precisely.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

York and North Midland Railway Office,
Tanner-row, 7th January, 1841.

DUBLIN AND DROGHEDA RAILWAY.—TO CONTRACTORS.—Notice is hereby given, that in consequence of the extension of the Malahide Contract on the above railway, the plans, sections, drawings, and specifications thereof will be ready for inspection at the Company's office, 19, Marlborough-street, Dublin, on the 20th January, and not on the 5th, as previously advertised.

This Lot commences in a certain field in the parish of Raheny, and townland of Mountolive, county Dublin, numbered 2, on the Parliamentary plan, and terminates at the northern boundary of Kilcreagh, in said county, being a distance of about six miles and a-half. The contractor will be required to make and maintain all the excavations, embankments, archways, culverts, drains and fencing; and to complete the ballasting and laying of the permanent way of the said railway over the whole of the said distance and to keep the whole of the said works in repair for the space of twelve calendar months after completion, and to find and provide all the requisite materials according to the plans, sections, drawings, and specifications within the period, and upon the terms and conditions mentioned and contained in the draft contract.

The Directors of the above railway propose to meet on Thursday, the 17th February at their offices, Marlborough-street, Dublin, at twelve o'clock, to receive tenders for the above Contract.

Printed forms of tender may be had at the Company's offices, at which place all tenders must be lodged at or before the hour of meeting, endorsed, "Tender for Works," and addressed to the Chairman of the Board of Directors. No tender will be received which is not made according to the printed form.

The party whose tender is accepted, will be required to enter into a bond to the amount of five per cent. upon his Contract, and to give two sureties for the due performance of such Contract. The names of such sureties, with their descriptions, must be set forth in the tender.

The Directors will not consider themselves bound to accept the lowest tender.

Parties tendering, or persons duly authorised by them must be in attendance at the Company's offices at the time of meeting.

GEORGE ALEXANDER HAMILTON, Chairman.

December 24th, 1840.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY.—NOTICE is hereby given, That a stated General Half-yearly Meeting of the Edinburgh, Leith, and Newhaven Railway Company is to be held within the Company's Office, 14, South St. Andrew-street, Edinburgh, on Thursday, the 28th instant, at two o'clock in the afternoon, for the purposes mentioned in the Act. No Proprietor in arrear of any part of the calls is entitled to attend or vote.

By order of the Board,
ALLEN GEO: FIELD, Sec.

Edinburgh, 9th January, 1841.

Just published,

THE RAILWAY CALENDAR FOR 1841, illustrated with an elaborate and splendidly executed MAP of the RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information; besides answering every purpose of a general Almanack.

Price 1s. 6d.—In Case for the pocket, 4s.; mounted on canvass and rollers, 5s.—In neat frame, 5s. 6d.

Published at 122, Fleet-street; and sold by all Booksellers and Newsmen.

WANTED—A Superintendant of Locomotive Engines on the Brandling Junction Railway. The most satisfactory testimonials of competency to superintend the repairs of the engines will be required, and a person who has filled a similar situation will be preferred. Application, post paid, addressed to the Directors at the railway office, Gateshead, will be received until the 20th instant.

By order,
JOHN REWCASTLE, Clerk to the Company.

Brandling Junction Railway Office, Gateshead,
7th January, 1841.

NORTH KENT RAILWAY, Office, 42, Lombard-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

LONDON and BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-Yearly Meeting of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, on Wednesday, January 27, 1841, at the London Tavern, Bishopsgate-street, at 1 o'clock precisely, when the following Directors will wo out of office, but who, being duly qualified, offer themselves for re-election: John Harman, Esq., John Cattley, Esq., H. M. Dyer, Esq., John Hodgson, Esq., and Lieutenant-Colonel Moody, R. E.; and at which meeting certain shares upon which the 7th Call has not been paid, and have been in consequence thereof declared forfeited, under minute of the Board of Directors of the 19th of June last, will be submitted for confirmation of such forfeiture; and at which meeting there will be laid before the Proprietors certain articles of agreement entered into between this Company and the London and Croydon, and the South-Eastern Railway Companies, relative to the joint purchase, enlargement, alteration, and proprietorship, use, and management of a station for the said three Companies near London-bridge, in the parish of St. Olave, Southwark, in pursuance of the Resolution of the General Meeting held on the 30th of January, 1840.

The transfer books of this Company will be closed on the 16th instant, and remain shut until after the meeting.

Under provision of the Act of Parliament, no person can vote at this meeting who shall not have paid all calls due.

JOHN HARMAN, Chairman.
THOMAS WOOD, Secretary.

London and Brighton Railway Office, 10, Angel-court, Throgmorton-street, Jan. 6, 1841.

TUCK'S HERMETIC ENVELOPES, on an entirely new plan *(Manufactured by Machinery, and registered pursuant to Act of Parliament)* offer advantages possessed by no other Letter-cover yet devised. The Postage Stamp Label is affixed to the Envelope in such a manner as to serve at once to seal and frank the Letter.

Separate Waxing or Wafering rendered unnecessary.

Time in making up and dispatching less than the before introduction of the Penny Postage system.

All envelopes hitherto made on the old plan may be easily opened without breaking the seal, their contents read or abstracted, and the envelope re-placed in its original state, so as to defy detection. But this cannot be done with the HERMETIC ENVELOPES, which renders them invaluable for the enclosure of Bills of Exchange, Remittances, Confidential Communications, Legal and Official Documents, &c.

May be had at the Office, 122, FLEET-STREET, in quantities of not less than 250 of various sizes, in neat paper boxes, from 10*s.* to 15*s.* per 1000, and of all Stationers in the kingdom.

*** Orders also received at 138, Aldersgate-street.

This day is published,

TUCK'S MAP OF THE RAILWAYS THROUGHOUT ENGLAND AND WALES TO THE CAPITAL OF SCOTLAND, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1*s.* 6*d.*; in paper covers, 1*s.*; mounted on canvass, in cloth case, 2*s.* 6*d.*; on rollers, 3*s.* 6*d.*

Published at the RAILWAY TIMES Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster-row; Hyde & Co., and G. Bell, Fleet-street; Mann, Cornhill; and by all Booksellers and Newsmen.

Just published,

TUCK'S ROLLER CALENDAR for the Year 1841.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda, indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board-Room, Counting-House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5*s.* 6*d.* The Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Published at 122, Fleet-street, and sold by all Stationers and Booksellers.

THE NEW RAILWAY PERIODICAL.
Now ready, price half-a-crown,

THE RAILROAD QUARTERLY JOURNAL, No. I.—CONTENTS.—1. The Railway Accidents during the year 1840, with Remarks, classed under the following heads, viz.—Fires—Bad Fencing—Malignity—Furious Driving—Engine Drivers—Fog—Want of Communication with Guards—Superintendents—Springs—Buffers—Accidents to Workmen—the late Fatal Accidents.

London: Simpkin, Marshall, and Co.; and may be had of every Bookseller and Newsvender in the United Kingdom.

A CARD.—COLLINSON AND FLINT, Sharebrokers (late WM. COLLINSON AND CO.), No. 20, High-street, Hull.

TO CONTRACTORS, BUILDERS, IRONMASTERS, &c.—GREAT WESTERN RAILWAY, BRISTOL DIVISION.—For Sale, the following useful Railway and other Stores, all made of the best description of materials, and in good condition:—About 70 tons of flat bottomed rails, 45 lbs. per yard; 500 tons chair rails, 30 lbs. per yard; Chairs, averaging 8 lbs. each, with a large assortment of Box Wings and Crossings; a great number of Sleepers; 250 Railway Waggons; 30 Stone Trucks, all with 30 inch wheels, and 3 inch square axles; several Strong Cranes with wrought iron guys, and gearing complete. A 6 inch Wheel, Timber, Carriage, 2 Waggons, 13 Carts with 6 and 3 inch wheels; also 6 superior Cart Horses, Smiths' Bellows, Anvils, Troughs, &c. A large quantity of Tunnel Centres and Iron Work for Tunnel purposes; Memel and Pine Timber; Crow Bars of various sizes; Sledges, Jumpers, and Blasting Tools, &c., &c. Two River Barges, one of twenty tons, the other of 50 tons burthen. Also, 3 Pile Engines.

The whole of the above named Materials lie on convenient Wharfs for Shipment, on the banks of the River Avon, between Bath and Bristol, from whence they can be conveyed at a cheap rate, to any part, the port of Bristol offering every advantage to Shippers.

For terms and further particulars enquire of Mr. Roberts, 7, Vernon-place, London; of Mr. Hugh Ross, Saltford, near Bath; or Mr. Charles Nixon, Keynsham near Bristol.

Saltford, 25th Nov., 1840.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—

From the

SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver, 10*s.* 6*d.* each pair.

Omnibuses to and from every train—Fare 6*d.*

ROMAN CEMENT.—CONTRACTORS, BUILDERS, and others, are respectfully informed that any quantity of this article, of the best quality, may be obtained at George H. Newton's Manufactory, Wilmington Works, Groves, Hull.

G. H. N. can undertake to furnish Contractors for Public Works with a regular supply of Cement, upon the best terms, having supplied from his late Works in Derbyshire and Staffordshire, some of the heaviest Railway Contracts in the kingdom.

TO ENGINEERS AND MILLWRIGHTS.—To be Disposed of, by Private Contract, a limited number of Licences for erecting Messrs. WHITELAW AND STIRRAT'S PATENT WATER MILL.—A description of this Water Mill will be found in a pamphlet just published. The Mill may also be seen in operation at the Shaws Water Works, Greenock; at Mr. Stirratt's Manufactory, Paisley, and other places. From its simplicity, regularity of motion, absence of liability to wear and tear, adaptation to every kind of water-fall, however high; its giving more available power from a given quantity of water and height of fall, and the cost of erection being less than one-third the price of an overshot water-wheel, it will no doubt supersede the use of the latter altogether.

Parties taking Licences early will secure to themselves superior advantages. For further particulars and terms of licence, apply to Mr. Robertson, Mechanic's Magazine and Patent Office, 166, Fleet-street, London; Mr. Whitelaw, 4, Wellington-street, Glasgow; or, to Mr. Stirratt, 61, High-street, Paisley.

TO ARCHITECTS, BUILDERS, SURVEYORS, &c.—The Manchester and Liverpool Plate Glass Company, having made arrangements with Mr. JOHN SCOTT, of Princip-street Works, to represent their interest in the sale of Plate Glass, at Birmingham and its environs, beg to assure you, that any orders forwarded by him will meet with prompt attention. Samples, and any information required may be obtained, and orders executed, by applying to their Agent, Princip-street Works, Birmingham.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 38 Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, January 16, 1841.

YORK AND NORTH MIDLAND RAILWAY.—Notice is hereby given, That the January Half-Yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company, will be held, in pursuance of the provisions of the Act of Incorporation, in the Offices of the Company, in the City of York, on Friday, the 29th day of January next, at 12 o'Clock at noon precisely.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

York and North Midland Railway Office,
Tanner-row, 7th January, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 2, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Now ready, in 1 vol. quarto, 600 pages and 17 splendidly executed engravings of the various Classes of Locomotive Engines and Carriages, a Railway Map of the United Kingdom, &c., &c., price £1 11s. 6d.,

THE RAILWAYS OF GREAT BRITAIN and IRELAND. By FRANCIS WHISHAW, Civil Engineer, Member of the Inst., of Civil Engineers.

"No railway capitalist will remain long without it. It is a work of immense labour and research—rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"Peculiarly valuable on account of the original and authentic information it contains."—*Midland Counties' Herald.*

"Useful to every class of persons interested in railway communication—a class which, in point of fact includes almost every member of the community."—*Liverpool Mercury.*

"Interesting to the general reader from being interspersed with Mr. Wishaw's own remarks and observations during his seven thousand mile railroad tour."—*Gardener's Gazette.*

London: Simpkin, Marshall, and Co., Stationer's Hall-court.

RECIPROCATING SYSTEM OF RAILWAYS.—By this system the most complete Railway, with the best appointments, including engines, carriages, &c., calculated for any amount of traffic, may be effected at from £10,000 to £15,000 per mile according to the nature of the country to be traversed, and the expected amount of traffic. By this mode *accidents* by *collision* are rendered next to *impossible*.

FRANCIS WHISHAW.

Gray's Inn, and Hampstead, Middlesex,
January, 1841.

GEOLOGICAL MAP OF CENTRAL AND WESTERN EUROPE.—Mr. WEALE, after a long preparation, has now completed for publication a large GEOLOGICAL MAP of England, Wales, Scotland, Ireland, France, Germany, Switzerland; portions of Italy and the Austrian and Prussian States. Corrected to the present time. By W. S. HUGHES, F.R.G.S. Finely coloured, price £1 10s., mounted and varnished on rollers, or folded in a case, price £2 2s.

*** The Geological features of these countries offer much research to those who seek information on minerals and the precious metals.

59, High Holborn.

BRISTOL AND GLOUCESTER RAILWAY.—CONTRACT FOR WORKS, WICKWAR TUNNEL.—Notice is hereby given, That the Directors will receive at their Offices, Exchange Buildings, Bristol, on or before 12 o'clock on Monday, February 8th, Tenders for the construction of the Wickwar Tunnel, and works connected therewith.

Drawings and Specifications of the Works will be exhibited at the Company's Offices, Exchange Buildings, Bristol, on and after Wednesday, 30th December inst.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office at One o'clock on the 8th February.

ROBERT FLETCHER, Secretary.

Bristol, December 22, 1840.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £500, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,
THOMAS WOOD, Secretary.

THE LONDON STOCK AND SHARE LIST, published every Saturday evening. Terms, £1 1s. per annum. Postage, 9s. extra, payable in advance.

This List contains the closing prices of each day's actual transactions upon the Stock Exchange, from Monday to Saturday inclusive. The length in miles, miles opened, number of shares, amount per share, amount paid up, last calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom. The present nominal value, and every other essential particular of the principal Insurance Companies, Joint-Stock Banks, Bridges, Docks, Institutions, Canals, Gas-Light Companies, Water Works, British and Foreign Mines, and other Miscellaneous Joint-Stock Companies, North American Securities, Government Funds, Foreign Stocks, Course of Exchange, Bank of England Averages, Private and Joint-Stock Bank Circulation, Grain Averages, Remarks upon the Money Market, &c. This List is got up in a most convenient form for binding, is peculiar for its lucid arrangement, and contains more matter than any other similar publication.

The same Proprietors also publish THE LONDON DAILY STOCK AND SHARE LIST, in which is given the ACTUAL DAILY TRANSACTIONS upon the Stock Exchange to 4 o'Clock, p. m. Published every evening. Terms, £2 5s. per Annum. Postage, 30s. extra, payable in advance.

They likewise publish A DAILY LIST OF NOMINAL QUOTATIONS, containing the "Jobber's" NOMINAL PRICES of the leading Railway Shares, Consols, and Spanish, at the commencement of the day, 10 o'Clock, a. m. and at the close of the market, 4 o'Clock, p. m. Published every evening. Terms, £2 10s. per Annum. Postage, 30s. extra, payable in advance.

These Lists have been established nearly 12 months, under the patronage of the most eminent Members of the Stock Exchange, Bankers, and other Capitalists interested in Public Securities, and are attended to by parties who have access to the best information, and are practically acquainted with the markets.

Orders for the regular supply of the above Lists to be forwarded to the Proprietors, J. S. TRIPP & Co., 12, Copthall-court, London.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £200, upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of 5 per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1845.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

PROPOSED RAILWAY TO CANTERBURY AND RAMSGATE.

MEETING OF THE SOUTH-EASTERN RAILWAY COMPANY.

A SPECIAL General Meeting of the proprietors of the South-Eastern Railway was held on Wednesday, at the London Tavern, Bishopsgate-street, T. W. TYNDALE, Esq., in the Chair, "for the purpose of taking into consideration the propriety of applying to Parliament for powers to make a branch railway from the line of the South-Eastern Railway at Ashford, to Canterbury and Ramsgate, or one of them."

The attendance of proprietors was numerous.

The SECRETARY (J. S. YEATS, Esq.) read the advertisement calling the meeting.

[The CHAIRMAN commenced explaining its objects, when he was interrupted by Mr. Richard Tyrrell (the periodical disturber of the Company's proceedings), who contended that the register of proprietors ought to be produced and sealed. The Chairman explained that this was not necessary except on the occasion of half-yearly meetings—a position which Mr. Tyrrell called in question in no very courteous terms.]

The CHAIRMAN said, the object of the Directors in calling the present meeting was so clearly set forth in the advertisement, that it was not necessary for him to take up the time of the proprietors by entering into any lengthened explanation. He had only to say, that the resolutions which it was intended to submit for the sanction of the meeting, had been drawn up in a very general and comprehensive form, as it appeared to him and his brother Directors that the object contemplated could thus be best carried into effect. The first resolution which he should now propose, was in effect, that it appeared highly desirable that a railway should be made from Ashford to Canterbury, and subsequently to Ramsgate, with a branch to Margate. [The resolution was here read.] This subject had been referred to by the Parliamentary Committee on the original South-Eastern Railway Bill. That Committee had in their Report stated, that the railway "traverses the centre of the district between the Thames and the British Channel, in a line nearly straight and level for a distance of upwards of forty miles, where no means of water communication exist—that the agricultural districts in the Weald of Kent are greatly in want of improved communications—and that the line of the South-Eastern Railway forms a main trunk, which, from its central direction, presents facilities of extension by means of branches on both sides, not only to most of the principal towns in the county of Kent, but also to several important districts in Surrey, and in East Sussex, and to the southern coast, the towns and fisheries of which will derive from it the most essential benefits." Such being the opinion of the Parliamentary Committee, the Directors were now taking another step in carrying out the important objects referred to by the Committee, by recommending the construction of a line from Ashford to Canterbury, and subsequently to Ramsgate. Many gentlemen now present had doubtless attended the general meeting of the Company in November last, and would recollect that Mr. Cubitt, the Company's Engineer-in-Chief, in describing the condition of the undertaking, had said,—

"The state of the works at the present time is—that from the Brighton line to Tudeley, two miles beyond Tunbridge, a distance of twenty-two miles, the works are every where in active progress, in twelve divisions or contracts, a considerable portion of which in the Tunbridge division is nearly completed, and will be ready for the commencement of the permanent way during the next summer: and from Tudeley to the Staplehurst road, a distance of ten miles more, the land is being fenced off ready to let in contracts for the formation of the line, and the brickwork for the bridges and culverts is already contracted for, so that in the spring of 1842 the railway may be open to Tunbridge, and in the summer of the same year to the Staplehurst road, twelve miles beyond Tunbridge.

"From the Staplehurst Road in the Ashford district to Ashford, a distance of fourteen miles, the works are so very light that, if the means be forthcoming, the railway may be completed to the Ashford station, a distance of sixty-six miles from London, in the same time as it can come up to the Staplehurst Road, and thus the whole of the country and coast southward and eastward of Ashford to Canterbury and Folkestone inclusive, would be open to the advantages of a communication with London by railway, and at a less cost both of time and money than by any other means of conveyance: and at a far less proportional outlay than by stopping short at either Tunbridge or Staplehurst."

Such being the case, the Directors had thought it desirable to take Time by the forelock, and call the present meeting for the purpose of considering whether the proprietary generally were disposed to sanction any plan or incur any expense that might hereafter contribute so materially to the success of the great undertaking in which they had embarked. This was the object of the resolution which he had just read, and beyond that there was very little to detail. The proposed line had been inspected by Mr. Robert Stephenson, the eminent engineer, who was now present, and doubtless would be happy to give any information that might be required. Mr. Cubitt, the Company's Engineer, who was likewise present, had examined the proposed route, and the opinion of these two most competent gentlemen was, that the line to Ramsgate could be constructed for 350,000*l.* (Hear, hear.) When the meeting considered the immense traffic between London, Ramsgate, Canterbury, and Margate, he thought they would agree with him in thinking that upon so small an outlay the return could not fail to be large. (Hear, hear.) They had not at present any traffic tables to lay before the meeting. All this, and much more, would be for the future consideration of the proprietors; what was now wanted was simply the sanction of the proprietors to those preliminary proceedings which were necessary to carry out a plan which promised to be so beneficial to the present undertaking, and so profitable to those who might embark their property in it. Mr. Stephenson would now answer any question that might be in his power.

Mr. ROBERT STEPHENSON said, he had to express his regret that he had no regular Report to lay before the meeting. It was only very recently that he had examined the proposed line; in fact, he had returned to town not later than that morning, and consequently, had not had time to bring into shape the rough notes he had taken. In examining the line he had divided it into two parts, namely, from Ashford to Canterbury, and from Canterbury to Ramsgate. With respect to the first part, namely, from Ashford to Canterbury, the necessary plans had already been deposited for an application to Parliament. Of these plans he (Mr. Stephenson) approved. Only a very few deviations were, in his opinion, necessary, and these could be effected under the Standing Orders of the House. As regarded the other division of the line, namely, from Canterbury to Ramsgate, he thought it would admit of very considerable improvement. As now laid down it interfered with the river Stour, so as to render necessary the construction of drawbridges which would be very inconvenient as well to the railway communication as to the navigation of the river. He had no hesitation therefore in recommending to the Company to move the line further from the river Stour, leaving the navigation unimpeded, but still following the course of the river on the north side. By this diversion not only would expense be saved, but much opposition obviated from parties interested in the navigation of the Stour. He would also recommend that the approach to the town of Ramsgate should be made in a manner different from that which was at present contemplated. It was originally intended that the line should terminate on a terrace upon the cliffs, which would have rendered this part of the line exposed to the strong action of the sea. He would suggest that the high ground should be taken before approaching Ramsgate, and that the line should terminate near the windmill, on the left of the town, whereby, in addition to other advantages, facilities would be afforded for the construction of a branch to Margate, almost as important as the Ramsgate line itself. As respected the first division, namely, from Ashford to Canterbury, he had no hesitation in recommending that the present plans should be proceeded upon. He had not had time to go minutely into the estimates of cost which had been prepared, but from his pretty extensive experience on other lines, he had no doubt that this part of the line could be made for 25,000*l.* per mile, including locomotives, carriages, &c.,—in fact, the whole "plant." (Hear, hear.) From Canterbury to Ramsgate, a single line of road would not cost more than 11,000*l.* per mile with all proper appliances. He could not, however, recommend that this latter portion should be proceeded with until further investigation had been made, but as regarded the division from Ashford to Canterbury, the plans had his decided approbation, and he was ready to support them before Parliament. (Hear, hear.)

Mr. JENNINGS having, in answer to questions, been informed by the Secretary, that the distance by road from Dover to Ramsgate was 18 miles, and from Ashford to Ramsgate by the proposed line 29 miles, recommended that the line to Dover should be first completed, and then a branch made from Dover to Ramsgate, as being the shortest distance of new line to construct.

Mr. STEPHENSON said, the line to Ramsgate was not intended to facilitate the traffic between that town and Dover, but between that town and London.

In answer to further questions by Mr. Jennings, Mr. Stephenson said he had made no estimate of the probable cost of a line from Dover to Ramsgate. He doubted very much whether, from the nature of the country, such a line were practicable at any cost, but there could be no doubt that not a single passenger would go from London to Ramsgate *via* Dover, as it was a question not merely of time, but of money.

Mr. PARSONS inquired whether it was proposed to incorporate this branch line with the parent undertaking.

The CHAIRMAN said, this would be matter for future consideration. At present the feeling of the Directors was, that the two should be associated, on some plan similar to that which had succeeded so well in the case of the South-Western line and its branch to Gosport.

Mr. PARSONS thought it would be detrimental to the South-Eastern Company to be compelled to take up the shares in the proposed line.

The CHAIRMAN was of a different opinion. There would, however, be no compulsion. The shares would of course be offered in the first instance to the South-Eastern proprietors, and if they refused them, they would be submitted to the public generally.

Mr. BARLOW was glad to hear that there would be an option. When the proprietors had already so much on their hands, and had so many difficulties to encounter, he did not imagine that the new shares would be taken up. He could only judge from the market price of the present stock. He thought, therefore, that under present circumstances it was premature to enter into further engagements.

After some further conversation,

Mr. BAXENDALE (Deputy-Chairman) said, he thought they were going further into detail than was at present necessary. The question of a branch to Canterbury must sooner or later be considered, and all that the Directors now sought was the sanction of the proprietors for the expenditure of a sum of money in order to ascertain whether it was desirable to proceed this year or the next. The Directors were anxious that the matter should be fully investigated before they went before Parliament. To do this effectually some expense must be incurred, and whether that expense were large or small the Directors were anxious that it should first be sanctioned by their constituents. Mr. Stephenson had already given his opinion in favour of the proposed line, and the Directors also were impressed with its advantages to the main undertaking. At present they were not prepared to go into details respecting the mode in which the necessary capital should be raised, for although the subject had been discussed by the Board, nothing definite had yet been determined upon. All that was at present sought was the means of making further inquiry. (Hear, hear.) If the proprietors thought the subject ought not to be entertained at all, they would of

Digitized by Google

course say so; but if they were of opinion, with the Directors, that it was one of very great importance to the prosperity of the South-Eastern Railway, they could not hesitate to sanction the resolution which had been read, and which in reality pledged them to nothing. (Hear, hear, hear.)

Mr. Parsons said, the explanations which had been given had removed his objections. He thought it highly desirable that the matter should be fully investigated, and as the Company were not to be pledged to any future course as to the raising of the capital, he would support the resolution. (Hear, hear.)

The Chairman said, the resolution did not pledge the Company to any thing; it merely enunciated a fact.

Mr. Field inquired whether another Company had not previous possession of the ground.

It was explained by the Secretary, in answer to this and other questions, that a Company, called the South Eastern and Canterbury Company, had proposed to undertake the construction of the line, and for that purpose had deposited the necessary plans, and issued scrip. It was principally upon these plans that the proposed line as far as Canterbury, was now founded. The South-Eastern Company had had nothing to do with the receipts of the other Company. There had been separate bankers and a separate management of affairs. There was no doubt that the deposit on the scrip issued would be returned to the subscribers. The South-Eastern Company were in possession of all the plans, &c., of the other Company.

Mr. Balfour thought it would be impossible for a railway to Ramsgate to compete with the steam boats. The saving of time would undoubtedly be something, but the fare by railway could scarcely be less than from 15s. to 20s., whereas by water it was not more than 6s. This difference would, in summer, attract all the passengers to the steamers, and in winter no person visited Ramsgate.

The Chairman said, there would be a saving of at least one-third in time, besides obviating the necessity of a sea voyage.

Some general conversation ensued as to the steps to be taken should the first resolution be carried, whereupon

Mr. Baxendale read the second resolution, which was in effect that the Directors be empowered to take the necessary measures for surveying the line and obtaining Parliamentary sanction for it, subject to the approval of a future meeting.

Mr. Symons said, these preliminary expenses would fall upon the South-Eastern Company, even if the next meeting did not consider it desirable to go on with the undertaking.

Mr. Baxendale said, the expense would undoubtedly fall upon the Company, and that was the reason why the Directors were desirous of obtaining the sanction of the proprietors. They wished the fullest information to be given to the proprietors on this and all other points, (hear, hear), and it was for the meeting to say whether it was worth while to pursue the investigation as to the merits of the undertaking farther. The Directors were strongly of opinion that it was well worth the expenditure of the small amount that would be required. Mr. Cubitt thought a sum of 1,000*l.* would cover every expense. (hear, hear, hear.) In such a Company as this, where more than a million of property was at stake, the Directors considered that 1,000*l.* would be well spent in furthering any scheme which would contribute so materially to their success, as it was hoped and believed, would be done by the proposed line. (Hear, hear.) If a new Company were formed, of course the amount expended would be repaid. (Much applause.)

Mr. Holland said, the object in forming the proposed line was to enable the people of Ramsgate, Margate, Broadstairs, Sandwich, Canterbury, and other towns to enjoy the means of railway communication with London. To imagine that persons from London to Ramsgate would travel by the roundabout way of Dover was absurd. By making a line from Ashford to Ramsgate, this Company would be in the position of the Midland Counties' Company, whose line branched off to Leicester, on the one side, and Nottingham on the other. The roads in Kent were so execrable that the coaches were often nearly 14 hours in travelling from Ramsgate to London, whereas by the railway it could be done in three and a half or four hours. As for the sea voyage it was to many, especially to females, a source of great terror. (Hear, hear.)

Mr. Baxendale said it should, moreover, be recollected, that there were such things as protective measures. (Hear, hear, hear.) The South Eastern Railway left the northern side of Kent unprotected, and they knew very well that that district had been looked at by other parties. (Hear, hear, hear.) By carrying the line to Canterbury, all future injury to the South Eastern would be obviated. (Hear, hear, hear.)

Mr. Balfour reiterated his opinion that the comparative cheapness of the route by water would render a railway to Ramsgate unproductive.

Mr. Holland said, it was the large number of passengers that enabled the Steam-boat Companies to carry individual passengers so cheap. When a railway came into competition with them, the numbers would of course be less, and the charges greater.

After some desultory talk,

Mr. Jennings moved, as an amendment to the first resolution, that the further consideration of the subject be adjourned.

The Chairman asked who seconded the amendment.

After a pause,

Mr. R. Tyrrell said he would do so.

Mr. Cubitt thought the question now before the proprietors was, whether the South-Eastern Railway was hereafter to be the South-Eastern Railway or not. (Hear, hear, hear.) If they did not put the Board in a position to do what was now proposed, they would not have a leg to stand on before Parliament, should others come forward to abstract a large portion of their traffic. (Hear, hear.) It was necessary that plans, &c. should be deposited before the 1st of March next, and if their determination were deferred for another week the thing could not be accomplished. He stood before the proprietors at present in a different position from that in which he had heretofore had the honour to address them. He was not interested in the proposed line except as being the adviser of the South-Eastern Board, and, therefore, he could speak more freely respecting it. The Directors had very wisely and prudently consulted one of the highest railway authorities in the kingdom, and the meeting had heard the sentiments of that gentleman in reference to the undertaking. He (Mr. Cubitt) had no doubt that the expenditure on preliminaries would not exceed 1000*l.* The history of the proposed line was this. In 1835 or 1836, when he (Mr. Cubitt) was not connected with the South-Eastern Railway, certain parties had made surveys, and deposited the Parliamentary and other plans for the South-Eastern and Canterbury Railway. The survey had been made by Mr. Blackburn, then a practising engineer, and Mr. Blackburn's plans had been the foundation of those upon which it was now sought to proceed to Parliament. The plan of Mr. Blackburn had been laid down very fairly, although having reference to various peculiarities which at that time had formed the subject of discussion before Parliament, as for example, that there ought to be no curve of a less radius than half a mile, and no gradient steeper than 1 in 330. Subsequent experience had proved that it was not necessary to observe these rules, and consequently the expense of making the line would be greatly reduced. The question for the meeting now to consider was, not how the capital was to be raised, but whether the Directors were to be placed in such a position as to meet with effect those parties who might hereafter oppose them. He should be happy to give any further information in his power. (Great applause.)

Mr. Parsons begged to withdraw any opposition which he might have offered to the measure. (Hear, hear.) The expense was very trifling, and they ought to do everything in their power to prevent the stream of traffic from being diverted off their line. Mr. Stephenson, whose ability no one could call in question, had given his opinion in favour of the proposed line, and it would be greatly to be regretted if the matter were not fully inquired into. (Hear, hear.)

[Mr. Tyrrell here wished to withdraw from seconding the amendment, and as no other person took his place, the amendment of course fell to the ground].

Mr. Baxendale said, they must also consider what effect it would have upon the people of Canterbury if this resolution were not passed. A large and most respectable meeting had been held in that city on Monday last, at which resolutions in favour of the proposed line had been agreed to, and if the inhabitants of Canterbury were to suppose that the South-Eastern Company were indifferent to the scheme or opposed to it, of course they would look for co-operation elsewhere.

Mr. Parsons said, the misfortune was, that the parties engaged in these country meetings were ready enough to encourage proprietors to proceed, but did not take shares themselves. (A laugh.)

A Proprietor said, the voice of the inhabitants of Canterbury having been given in favour of this line, they could not hereafter offer them any opposition, or encourage any other party.

[Mr. R. Tyrrell here proceeded to enter into one of his usual dissertations on the accounts. He was repeatedly called to order, which induced the Chairman to observe, that Mr. Tyrrell's remarks were very irregular and foreign from the business of the meeting, but that although he was well aware of Mr. Tyrrell's motives and objects, such was the anxiety of himself and colleagues to give every information in their power in regard to the Company's affairs, that *he* should not interrupt him. Mr. Tyrrell then went on, but the meeting would not long tolerate him, and at last it was unanimously resolved, as at the last meeting, that no more of his questions should be answered.]

After a few words from Mr. Cardwell and other proprietors, deprecating any further discussion, and expressing the greatest confidence in the prudence and discretion of the Board, the first resolution was put and carried, with but *five* dissentients.

The second resolution was then, after a short discussion, carried with only *one* dissentient, it having first been explained that another meeting would be held before any application was made to Parliament.

The Chairman then declared the meeting dissolved.

PUBLIC MEETING AT CANTERBURY.

[Abridged from the *Kentish Gazette*.]

On Monday a public meeting, convened by the Mayor, pursuant to a requisition, was held for the purpose of considering the propriety of supporting a branch line of railway proposed to be constructed by the South-Eastern Railway Company, from Ashford to Canterbury.

The meeting took place in the Guildhall, which was respectably filled; many influential gentlemen of the city being present.

The Mayor having taken the chair, briefly stated the object of the meetiug, and having read the requisition, called on Mr. Fearon, the Solicitor of the Company, to open the proceedings.

Mr. Fearon then rose and addressed the meeting at some length. On reference to the large plan lying on their table, they would see that the proposed branch would commence from the South-Eastern Railway station at Ashford, and would take the whole course of the valley of the Stour. The inclinations throughout were of the gentlest description; indeed to any one who was acquainted with the country, that fact must be obvious. The only works of any importance would be cutting off the spurs of the hills, in order to carry the railway in a more direct line than by following the sinuosities of the river. Indeed, so well adapted was the ground for the construction of a railway, that Mr. Stephenson had declared it was scarcely possible to find in the

Digitized by Google

whole kingdom any 28 miles more favourable for such a work than the 28 miles between Ashford and Ramsgate. The gradients would therefore be extremely favourable, and would consequently admit of the highest possible velocity—a circumstance which was of great importance, not only with regard to the cheapness with which such a line could be worked, but to its adaptability to any improvements which might hereafter be made in locomotive engines; since, once lay down a line with bad gradients, and it could not be afterwards improved. The subject of the branch from Ashford to Canterbury, and its extension to Margate and Ramsgate, had been before the South-Eastern Company from the commencement of that undertaking, but as it was necessary to decide first of all upon a main line, and as no main line through Canterbury could be obtained, it was thought wiser for the Company not to undertake too much in the first instance. In coming forward now to ask them to support a branch line from a main trunk, it was right that he should satisfy their minds that the main trunk would be completed. There never was any difficulty but the difficulty of money, and that difficulty they had now overcome—(hear)—and he could positively assure them, as far as faith could be placed in the prospects of a Company, that in the early part of the year 1842 the South-Eastern Railway would be opened as far as Tonbridge; in the middle of the year 1842 as far as Staplehurst, and in the latter end of that year as far as Ashford. Everything was prepared for this. Each of the great heavy earthworks was in a sufficiently advanced state to enable them to calculate upon it with certainty, and he could boldly state, that at the latter end of the year 1842 the distance from London to Ashford, 66 miles, would be completed. The goodness of the gradients enabled them to calculate upon the highest velocity, and he might therefore fairly reckon that they would travel at the rate of 28 miles an hour. Supposing the journey from Ashford to London to occupy 2½ hours, and the journey from Canterbury to Ashford, 14 miles, in a coach, 1½, the railway would still bring them within four hours of London, instead of seven hours, and sometimes more, as at present. But if a line of railway were established between Canterbury and Ashford, the journey, which before would occupy one and a half, would then be performed in half an hour, and Canterbury would consequently be brought within three hours' distance from London—a circumstance which could not but prove a great saving in time and money. It must also be borne in mind that this line would join the Brighton line a little below Reigate, and thus open a communication between Canterbury and Brighton in three hours and a quarter; and doubtless onward to Portsmouth and the west of England. The line would also, hereafter, in all likelihood, be extended to Margate and Ramsgate, to which places a vast number of persons went down solely to spend money and amuse themselves, and the facility thus afforded would therefore, doubtless, bring a large additional influx of strangers into Canterbury. (Hear, hear.) The plan for a branch would have been brought before them earlier but for the doubts, whether the Company could proceed. Now, there was no doubt on this point. Within five acres, every inch of land was purchased, and there was no doubt the line would be completed to Ashford in 1842. He begged to say, he should, as was his duty, be happy to answer any question and give any explanation that might be required, and in conclusion, thanked them most sincerely for the kind attention with which they had honoured his statement. (Applause.)

Mr. ALDERMAN BRENT said, it was no longer a question whether there was to be a railway between Canterbury and the metropolis. That railway would shortly be running. The real question, therefore, was, whether they should have a direct communication with London, or whether they should altogether shut themselves out from the line of traffic, and suffer it to go through another part of the county. (Hear.) We [illegible] to go through Ashford, [illegible]bury? (Hear.) Without such a branch as was now proposed, he considered the South-Eastern Railway injurious to them and any branch which increased their intercourse with the metropolis beneficial. When he saw the number of persons who took their families to Brighton from London, running up and down twice or three times a week to attend to their business, but still returning to Brighton to get out of the London smoke; and the whole expenditure of their families going for the benefit of the Brighton tradesmen. He saw no reason why their beautiful city and neighbourhood when in its attraction to visitors and also to residents. (Hear.) He brought within three hours of London, should not vie with Brighton thought nothing of the objection that persons would avail themselves of the railway, to go to London, and to make their purchases, instead of buying of the Canterbury tradesmen. He thought this was notlikely with individual purchasers, whereas, it would give the tradesmen greater facilities of purchasing better assortments and selling at cheaper rates than before. Mr. Brent concluded by proposing the first resolution.

OSBORN SNOULTEN, Esq., seconded the resolution.

Mr. PEARSON then rose to propose an amendment. He contended that the branch railway would be highly injurious to the tradesmen of Canterbury. Mr. Pearson then contended that its proposed extension to Canterbury and Ramsgate, would destroy the Canterbury and Whitstable Railway.

Mr. AUSTEN seconded the amendment.

Mr. BURKE (Parliamentary Agent for the Company) replied to Mr. Pearson's observations.

Mr. H. BUCKTON supported the original resolution, and contended that it was to the interest of the tradesman and the consumers to support a branch railway.

Mr. TRIMNELL supported the amendment. The question was then put from the chair, when the amendment was lost, and the original resolution carried by a majority of at least three-fourths.

Mr. Alderman Neame moved, G. Buckley, Esq., seconded, and Mr. Alderman Cooper supported the second resolution for the formation of a committee.

On the list of names being read, W. H. BALDOCK, Esq., said, it was most proper that as Mr. Pearson and Mr. Trimnell entertained doubts on the subject, that they should be placed on the committee, and complimented them on the manner in which they had defended their opinions.

Mr. BOWMAN proposed the third resolution, and denied that the tradesmen of Canterbury generally agreed in what had been advanced in opposition to the line.

Mr. Alderman W. PLUMMER seconded the resolution, which, after a few words from Mr. Hodges, was carried.

R. HALFORD, Esq., moved a vote of thanks to the Mayor, for the impartial conduct which he had shown in the chair, and for the great and highly satisfactory attention which he always, in his official capacity, paid to all public questions.

Mr. FEARON seconded the motion, which was carried by acclamation.

The MAYOR on rising was loudly cheered. He thanked the meeting for the good opinion they had expressed of his conduct. He had hitherto throughout the discussion carefully abstained from expressing any opinion on the subject. He would now, however, say a few words. The question was whether they were content to stagnate and vegetate, as though there were no other population surrounding and competing with them, or whether they would become a part of the general march and onward movement of society. (Hear.) He had paid some attention to the remarks of his fellow tradesmen, but he did not give them the weight which they attached to them. He was convinced that every respectable tradesman, the course of whose trade was placed on a sound footing, would gain and derive benefit from a railway. On the other hand he was satisfied, that without a railway this city would ere long gradually dwindle down, and Canterbury, except its cathedral, be little else but a name. (Great applause.)

The meeting then broke up.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—I have seen with equal sorrow and surprise that you have permitted for many weeks past your journal to be rendered the vehicle of some very rash and unfounded strictures upon the Manchester and Birmingham Railway. If the feelings of enmity and distrust by which it is evident that your correspondents are actuated towards that undertaking, can be supposed to have their origin in a dispassionate conviction of the probability of its failure, I shall content myself with expressing a doubt whether in the absence of that information which our Directors have hitherto deemed it premature to communicate to their shareholders—you are quite justified in giving publicity to such severe and sweeping condemnation. If upon the other hand the writers of the letters to which I make allusion, should turn out to have been instigated by motives of a less honest and creditable nature, and are rather to be viewed in the light of eager and interested adversaries, than that of temperate and impartial judges of a project they are so studious to malign, I must be suffered upon such a contingency to deprecate and lament the conversion to purposes thus disingenuous of an able and respectable journal. I claim in either event the insertion in your columns of this letter, not less as a matter of justice to yourself, than to the shareholders in the Manchester and Birmingham Railway. It will prove to such of your readers as may honour it with their perusal, that the Editor of the *Railway Times* is not so uncandid as to deny publicity to statements that militate against, as well as to those which favour, his own opinion, and it may be attended with the effect of dispossessing the more timid of my fellow-proprietors of some of those doubts and fears, which your disparaging and hostile correspondents have not unnaturally excited in their minds.

I will first address myself to the consideration of the probable cost of our undertaking. For the completion of the five and a quarter miles of our line between Manchester and Stockport, we have expended, I am sorry to state, a not less considerable sum than 470,000*l*. We have only to offer in explanation of this vast and unexpected outlay, the enormous prices at which we were necessitated to purchase the very valuable land lying in the vicinity of those important towns. Great, however, as have been our disbursements upon that portion of our line, they are very largely beneath the cost of some of the minor metropolitan railways, whose enormous expenditure has been occasioned by the operation of a similar cause. Upon the London and Blackwall Railway, of which the length is but three and a half miles there had been laid out in September last no less a sum than 670,000*l*., while the London and Greenwich Company have not constructed their short line for 200,000*l*. a mile. To compute the cost of the remainder of our line from the expenditure incurred upon this portion of it would be as extravagant as to estimate the construction of every mile of the London and Birmingham Railway by the sums disbursed upon the Kilsby Tunnel or Haversham Viaduct, or to form our judgment of the Great Western Railway by the works at Maidenhead or Box. At what expence we are likely to complete our undertaking, let us now proceed to inquire.

From Stockport to Crewe there remain to be constructed about 25 miles. We have purchased the whole of the land, and contracted for the entire works upon this portion of our line. Furnished with these grounds for forming his estimate, of which no man can deny the sufficiency, our engineer has computed our expense at 23,500*l*. a mile. To this calculation of Mr. Buck's, let us add the sum

Digitized by Google

of 1,500*l.* a-mile to provide for every contingency, and we shall arrive at a total for these 25 miles of 625,000*l.* Joining that amount to the sums that we have already expended upon our line between Manchester and Stockport, we shall construct our railway to Crewe for 1,095,000*l.* The length of our branch from Stockport to Macclesfield consists of 10 miles. Upon that portion of our undertaking we have purchased four-sevenths of the land, and entered into contracts for nearly one-third of that which remains. Forming his judgment of the expense of the land from the prices that we have already paid, and computing the cost of the works upon a similar scale with those between Stockport and Crewe, Mr. Buck has estimated our outlay at 22,000*l.* a mile. Let us make the same addition of 1,500*l.* a mile in this as in the other case, and our Macclesfield branch will require the disbursement of 235,000*l.* We have thus arrived at a computation of 1,330,000*l.* for our whole 40 miles of railway. To that sum let us make an addition for our legal and Parliamentary expenses, for our Store-street and other stations, and for what is technically termed our "plant," of the vast and disproportionate amount of 470,000*l.*, and we shall obtain a total of 1,800,000*l.* That estimate I have very strong grounds to suppose will exceed by more than 60,000*l.* the sum that we shall actually require.

Let us now see if the returns of our railway are likely to be such as will furnish us with a moderate yet handsome remuneration for the capital that we have invested in it. The average receipts of the Grand Junction Railway, extending over a period of two years, have amounted in round numbers to 9,100*l.* a week, of which sum 6,300*l.* have been obtained by the conveyance of passengers, and the remaining 1,800*l.* have arisen from the carriage of goods. Of that gross amount, I find from a careful comparison of the tables submitted to me at Warrington and Liverpool, that 2,100*l.*, or one-third of the sum paid by passengers, and 1,800*l.*, or nearly two-thirds of the profits derived from the transport of goods, have been contributed by the town of Manchester. Those sums added together, willl furnish us with a weekly return of 3,900*l.*, or an annual income in large figures of 200 000*l.*

The receipts upon our local railway, between Manchester and Stockport, have averaged 340*l.* a week, or about 17,000*l.* a year. When our arrangements shall have permitted us to open the other line of rails, and to convey goods between those great towns, it will be no unreasonable supposition that we shall increase our weekly returns by the sum of 60*l.*, and extend our annual income to 20,000*l.* For the double distance of our branch to Macclesfield, let me content myself with the conjecture of an equal annual revenue, and we shall derive from those fifteen miles of railroad a yearly income of 40,000*l.* We are thus furnished with a gross return of 240,000*l.*

I will now endeavour to form an estimate of the expense of working our line. For the forty miles constructed by ourselves between Manchester and Crewe, and Stockport and Macclesfield, I should deem it unsafe to compute our disbursements at less than 40*l.* per cent. Assuming our gross returns from that distance to be 100,000*l.* a-year, we must be content to diminish them by the sum of 40,000*l.*, and reduce our entire revenue to 200,000*l.* Upon our remaining fifty-four miles of railway between Crewe and Birmingham, we are precluded by the terms of our agreement with the Grand Junction Company, from the necessity of any other expense than that occasioned to us by the cost and wear of our engines. The usual estimate of locomotive expense I believe to be 15*l.* per cent. Let us calculate our own costs at 18*l.* per cent., and deduct from our revenue of 140,000*l.*, which I have computed to be derived from that distance, the sum of 25,000*l.* We have now reduced our gross returns to 170,500*l.* From that amount it remains to make a further and final abatement of 54,000*l.*, to be paid to the proprietors of the Grand Junction Railway for the use of this portion of their line. We have then left to us to be divided amongst our proprietors, the sum of 121,000*l.*, or about 6*l.* 10*s.* per cent. Whether now that Manchester is connected by a railway with the important town of Leeds her own commerce and communication with London, are not likely to become more large and frequent, or whether, when there exist the means of a direct intercourse with the metropolis it would be fair to suppose that the traffic of Stockport and Macclesfield will continue exclusively local, are considerations upon which I have not deemed it expedient to build expectations of additional gain. I leave them without hesitation to your equitable and unbiassed judgment.

It only remains to say, that I have with the utmost frankness, and upon the best grounds that I have been able to obtain, furnished you with my opinion upon the present state and eventual prospects of the Manchester and Birmingham Railway. If in any future number of your journal, yourself or any of your correspondents shall do me the honour to reply to my statements, I have only to desire that our controversy may be conducted upon the ordinary rules of disputation, and that your attack shall have for its object either the soundness of my premises, or the correctness of my conclusions. To sarcasm however pungent, to vituperation however virulent, I shall not condescend to return a reply. Let my opponents only evince that they are actuated by the love of truth, and I shall deem it honourable to combat, and not disgraceful to be defeated by them.

With a very sincere desire that the temper in which you receive this communication shall be such as may justify the high opinion that I would willingly entertain of yourselt and your journal,

I have the honour to remain,

Your very obedient servant,

CANDIDUS.

MANCHESTER AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

Sir,—In furtherance of the observations offered in your last number on the subject of this railway and its extravagant outlay, permit me to suggest to you the following facts, the general accuracy of which I have been at some trouble (through a friend) to ascertain.

The Act for the Manchester and Birmingham Railway was obtained upwards of three years ago, and, as you state, only five miles of it are yet completed. During those three years, however, an establishment has been kept up which appears to me competent to the completion of a hundred miles of railway instead of five. It consists, so far as I can hear, of a Chairman, a Deputy-Chairman, and eleven others—in all thirteen Directors, of whom either three or two are "acting," that is, are paid heavy annual salaries, the others also having an allowance; a Consulting Engineer; a Resident Engineer (recently advertised as being in Denmark!); five Assistant Engineers; a Head Surveyor; two Deputies (I believe); an office full of Draftsmen; an Architect; a Book-keeper, or Secretary; an Assistant to him; and an assistant youth to *him*.

How much work these parties find, of course is matter for conjecture and opinion; but I saw the other day that Mr. Sharp, one of the acting (*i. e.* paid) Directors, to whom therefore a long job is more agreeable than a short one, was actually *boasting* of what they had got through in three years and a quarter, and trying to magnify their merit by stating that at that "long time ago" they had nothing to start with but their Parliamentary plans. What else they wanted or needed, I don't know, but that the gentlemen's boasting had some foundation I do not deny; for I believe I do not repeat mere idle gossip when I say that more extraordinary turning and twisting, more miserable vacillation, than these gentlemen have indulged in, never was exhibited by any Company. When they got out of Parliament in 1837, they set to work, under Mr. Rastrick, surveying the line to Stockport. Having laid it out (or partly so) they abandoned it for another preferred by their present Engineer, for which (by the bye) it was necessary to go to Parliament. Then they surveyed their line through the Potteries, and there also the Engineer (fond no doubt of London) found three other desirable deviations. For these all the surveys were made and plans lodged, and then one of them was abandoned. They went to Parliament for the other two, and having got an Act abandoned them also. Then they turned their active minds to their Macclesfield branch, and that also was surveyed and laid out. The line, however, was discovered to be a bad one, and was abandoned for another, for which surveys were made and plans lodged. In process of time, however, *that* also was abandoned, and another adopted made up of patches of each, and for Parliamentary sanction to it all the preliminaries were in like manner gone through. Then that was abandoned, and another line (I suppose a "consent" one, as they did not go to Parliament last Session, and tell us they are not going again,) surveyed, laid out, and the contracts advertised. All seemed now smooth—no room for another wriggle—when lo! their *Resident* Engineer, having gone to Denmark, the letting of these contracts is postponed, and we may now live in hope of another "artful dodge" touching this branch. Meanwhile, and as if to keep up their reputation in that particular branch of science, wherein Jim Crow is the most eminent professor, they abandon in like manner their main line, whereon sub-engineer, surveyors and contractors, had severally fixed for themselves pleasant habitations; and the long forgotten despised "Crewe Branch" (the original Cheshire Junction scheme, which if adhered to would indeed have returned a golden harvest to the proprietary,) is returned to. After 180,000*l.* spent in Parliamentary fights—after a vast outlay on the noted Congleton viaduct—after acting Directors, assistant engineers and surveyors had gorged to repletion on the Pottery project—this abandoned line, I say, is reverted to, and the routine of surveying, laying out, abandoning, resuming, hesitating, and at last contracting, is again run through. It appears, then, that this Mr. Sharp's talk of having done so much from so small beginnings, is not without a foundation; but whether it is not rather matter for shame than for boasting, I leave for your readers to decide.

Our other fact is worth mention in reference to this well-paid gentleman. I remember him well three and a half years ago, the vehement (I might almost say the virulent) opponent of this same Cheshire Junction scheme, which he is now being paid for carrying out, after having by an insane opposition on the part of himself and his friends, been the means of reducing to a very doubtful result the question of its *ever* paying the shareholders common interest on their money. I say nothing of his want of consistency in such conduct—of his want of pride in receiving wages from the founders of a Line he so opposed—but should any of us choose as our agent to carry out a costly and onerous undertaking, one who by word and act had been its most strenuous opponent?

I may trouble you hereafter with some hints as to the prices paid by this Company for the works on their Line. I have heard it stated that upon one of their contracts (and that among the heaviest) they actually paid for extra works more than the amount of the original contract!

I am, Sir, your obedient servant,

A PRACTICAL MAN.

London, Jan. 6th, 1841.

London and Birmingham Railway.—Notwithstanding the snow storm of last [Thursday] night the mail train with the northern bags arrived at the Euston station only 67 minutes after time, and the mail dispatches by the London and Birmingham and Great Western Railways were the first received at the General Post-office. The day mail train arrived at the Euston station eight minutes before time. Satisfactory proofs these of the great superiority of railway over road travelling in heavy snow. The three passengers who received hurts in the carriage at the Rugby station on the Sunday night were well enough on Monday morning to proceed to their destination by the first Midland Counties' train.—*Courier*, Jan. 15.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY.

To the Shareholders in the late Manchester and Birmingham Extension Railway.

GENTLEMEN,—The meeting for considering the propriety of dissolving the late Manchester and Birmingham Extension Railway Company, and forming a new one for making a railway from Stafford to Rugby, is now over. The report of its proceedings is before you in the public papers, and I entreat your earnest consideration of it.

It was stated at the meeting, that the efforts made in the public papers to dissuade parties from joining the new project, proved sufficiently that it was one deserving of support, for, unless feared by its opponents, they would not be so active in their exertions against it.

The fallacy of such an argument is obvious. If a person invades my property for purposes of his own, and endeavours to procure the assistance of others by false representations, do I prove him in the right, by endeavouring to expose those misrepresentations, and thus protect myself from invasion? Surely it is no compliment to the good sense of the people of Manchester, to endeavour to lead their judgments by reasoning of such a description: let them read and consider dispassionately the arguments for and against the measure in which they are solicited to embark their capital, and let them from these arguments form their own opinions of its success. I avow myself, and always have done so, an opponent both of the Manchester and Birmingham Extension Railway, and still more so of the now proposed Stafford and Rugby Railway, both of which I consider uncalled for by the necessities of the public, unjust to the proprietors in the existing railways, unprofitable as a means of investment, and calculated not only to shake the public confidence in all existing railways, but also to deprive Manchester and other important districts of an independent railway, which would afford both to them and to the public at large, benefits far more substantial and enduring, than any which the mere shortening of distance by the present proposed lines would attain.

It is said by the promoters of these projects, that anonymous communications, exposing the fallacies on which they are based, are not entitled to any weight, and you have been called on on that account, to disregard the statements which have hitherto appeared in the newspapers on the subject of your railway. If in those statements facts were asserted unsupported by *argument* or evidence, I should be inclined to admit that their anonymous character would deprive them of authority; but how can an *argument* be strengthened by the signature of the person who uses it?

The writer, by appending his signature, may draw down on himself attacks of a personal nature from those whose projects he attempts to expose and defeat; but he cannot give greater force to his *reasoning*, if his readers are themselves competent to form their own judgment on it. It may therefore suit the purpose of the projectors of the scheme against which I have occasionally written under the signature appended to this letter, to endeavour to weaken my arguments on account of their being anonymously given, rather than to endeavour to meet them by counter argument; but I feel satisfied that those among you who are in the habit of thinking for yourselves, will not be led by such flimsy pretences, to disregard the plain common sense statements which I take the liberty of addressing to you.

With these observations, then, I beg of you to consider well the following remarks on the subject of the report addressed to you by your Directors, and to draw from them your own conclusions. I refrain from going over again any of the arguments so frequently addressed to you on the subject of the inexpediency of the measure to which they ask your support, and I content myself simply with those inferences on the subject which may be drawn from the representations of your own Directors, and from the singular course they thought fit to adopt at your late meeting.

First, then, let me ask you, whether, as men of business, you have ever known persons possessing scrip shares in any undertaking, which they have purchased for a valuable consideration, excluded from a meeting assembled to deliberate as to the dissolution of that undertaking, and the division of its funds among the shareholders? It was said as an excuse for adopting such a course, that scripholders might, by their votes specially created for the purpose by the opponents of the measure, have carried resolutions detrimental to the interests of the Company. The position of the managers of the undertaking cannot be very enviable, if they have reason to believe that such would have been the course pursued by a majority of their present proprietors; but if such a result were apprehended, and it was deemed expedient to prevent it, upon what principle were scripholders prevented from attending the meeting as spectators, and from asking questions upon points of essential consequence to them, even if it should have been deemed advisible to prevent them from voting? A requisition I am told, was sent to the chairman, with this object, and refused! Is such a course calculated to inspire confidence in the new undertaking? Is it by shuting out inquiry and fair discussion, that the merits of the Stafford and Rugby scheme are expected to be made obvious to the public? Or is it thought that highly coloured *ex parte* statements, emanating from persons having a *direct interest* in the prosecution of the scheme are more likely to procure subscribers to it, than *facts* resulting from free and open discussion? The public will judge for themselves; but I beg of them to follow the proceedings of the meeting to the end, lest they form their judgment too hastily. One or two extracts from the report of these proceedings will suffice, to show them the extaordinary manner in which they were conducted, and the extent of real information which the Directors are willing to give, by way of inducement to the formation of this proposed new Company. (I quote from the report appearing in the *Manchester Guardian*.)

Mr. Bright (a shareholder) asks, "may we be informed what agreements have been made with the various railway companies?" and assumes that arrangements are contemplated with the Birmingham and Derby and other Companies.

Mr. Tootal (a Director), without answering the first distinct question, replies, "We know nothing with respect to any contemplated arrangement with any other Company!"

Mr. Rawson (a shareholder), "If I understand Mr. Bright's question it is in substance—Have you not enabled the Grand Junction Company to go over the Extension line at a less rate than they otherwise could do according to the Parliamentary rate?"—*Mr. Tootal.* "No Company in the kingdom *does* charge the Parliamentary rate?"—*A Shareholder.* "We don't read in the Report what the arrangement with the Grand Junction Railway Company is, and we are not told about it."—*Mr. Chappell* (a Director). "*Why put a sword into your enemy's hand to cut your own throat?*"—*Mr. Bright* said "he had attended a meeting of the Company twelve months ago, at which he took no part, but was then excessively annoyed at what appeared to be the desire of the Directors *to keep every thing quiet.*"

Well indeed might he be! It is a fact notorious all over Manchester, and among all the shareholders, that the old independent Extension Railway has been given up, and the new Stafford and Rugby line adopted, at the suggestion of their old enemies the Grand Junction Railway Company, who have made an arrangement with respect to the future use of it, obviously satisfactory to them, and therefore of a suspicious nature to you; yet one Director knows nothing about it, and another admits that, if it were revealed, it would afford a weapon to your enemies by means of which your throats would be cut, or in other words your project would be destroyed!

Does this gentleman suppose that he can keep it equally secret in Parliament? If so, I will tell him that so late as the last session, the production of an agreement between the North Midland and Midland Counties' Railway Companies, injurious to the Birmingham and Derby Railway Company, was compelled by the House of Lords, on the petition of the latter Company, and cancelled by the unanimous vote of the Committee, it being a standing rule of Parliament, that public railways shall be used by all the public and by all railway Companies on the same terms! Surely, Gentlemen, your Directors must consider you children, and not men of business, if they imagine that you will embark your money towards a speculation of which they dare not tell you the real merits, but avow that, if revealed, they would prove your ruin!

Mr. Bright then observes, in reference to the adoption of the new proposed line instead of the old one, "that the Company will lose by it a great many arguments which they had on occasion of their last application to Parliament."—*Mr. Newbery* (a Director). "I beg your pardon, but is it desirable we should put *arguments in our enemies' mouths?*"—*Mr. Bright.* "But these are so palpable that any child might perceive them."—*Mr. Newbery.* "Then it is not worth while to occupy the meeting with them. *We shall never pass Parliament if we thus give every advantage to our opponents, as to any weak point we have!*"

Here, then, is another admission by a Director that, unless concealment be adopted, Parliament can never sanction your undertaking! Truly these are bright prospects for the shareholders, and calculated to give a most favourable impression of the *bona fides* and respectability of their undertaking!

A lengthened discussion then took place as to the justice of applying to the purposes of the new Company, any portion of the funds paid up by the shareholders in the old, who would not consent to a renewed application to Parliament; many proprietors contending, and obviously with truth, that to appropriate towards a Stafford and Rugby Railway (*the creature of the Grand Junction Company!*) funds subscribed towards an extension of the Manchester and Birmingham Railway (originating *in opposition* to the Grand Junction, and in a desire to obtain for Manchester an *independent* line, under their own control), was little short of robbery from the persons interested in those funds, who object to the Stafford and Rugby scheme.

Here again the absence of the scripholders was most convenient, and it was determined that the parties wishing to withdraw, should be entitled to receive back their proportion only of the sum in hand, *after paying all the expenses up to the present time, of complying with the Standing Orders of Parliament applicable to the Stafford and Rugby project!* Auditors named by the Directors to investigate their own accounts, and no doubt favourable to the new project, were then appointed, and the prospect of a liberal dividend of 3*l.* per share held out to all persons wishing to retire!!!

There can be no question that this resolution is *illegal*, and if the excluded scripholders choose to dispute it, they may succeed in so doing. The original parliamentary contract is for making a railway in extension of the Manchester and Birmingham Railway, *the same to commence by a junction with the Manchester and Birmingham Railway* at or *near Stone-in-the-Potteries*: such are the words of the deed; and although the Directors may have the power of making diversions in the line, or altering its commencement or termination, still the *junction with the Manchester and Birmingham Railway* forms the basis of the contract, and the abandonment of that will enable any shareholder to claim the unexpended proportion of his deposit money remaining in the hands of the Directors at the time of such abandonment. Neither can the vote of a majority of shareholders, compel him to bear a proportion of the expense attending an application to Parliament for any project, other than *an Extension of the Manchester and Birmingham Railway*, to which he originally subscribed. The arguments adduced by the Managers themselves, to show the impossibility of a majority of shareholders binding a minority, in reference to another matter alluded to at the meeting, prove sufficiently the correctness of this assertion.

It may be conceived by these gentlemen, that

Digitized by Google

the offer of only a small dividend to shareholders desirous of retiring, may induce them to forego that intention, and sign the new deed; and this may be inferred from an observation of one of the Directors, who says, "*Would it not be very hard to those who remained, if one-third or one-half the shareholders left? The other half would be a useless body!*"

By way of further inducement, the shareholders are told, that no more deposit money will be called for, from those who consent to go on with the new undertaking! Here again there is occasion to admire the singular candour and explicitness of information supplied to the Proprietors. A shareholder asks, whether, under the Standing Orders of Parliament, each subscriber to the new deed will not have to pay up 10 per cent. of the amount of his subscription?

Mr. Tootal (a Director)—"Where would you like to have the question answered?" *Mr. Ollivant* (a shareholder)—"It *must* be answered, or it will not be satisfactory to the shareholders." *Mr. Tootal*—"It *shall be*, most distinctly, *but don't ask me to cut your throat and my own.*" *Mr. Wheeler* (the law clerk)—"Mr. Ollivant is perfectly right as to the operation of the Standing Orders, but the Directors' Report has already stated, that the existing deposit has not been appropriated in any way, and they *hope to provide a course, which it is not expedient to state here*, by which any further payment by the shareholders will be obviated!" So then, your chances of success depend on the *hopes* of the Directors to provide a course for evading the Standing Orders!

What if these hopes are not fulfilled? What becomes of the shareholders? Mr. Tootal, the Director, admits that if he were to reveal the course to be pursued, his own throat and that of the shareholders would be cut by it; and the Solicitor to the Company, admitting that the operation of the Standing Orders is to require a re-deposit of 10 per cent. on the subscriptions, says the Directors *hope to find a mode* of avoiding it! Let him if he can state one case in which this has been permitted.

Ingenious as the juggle may be of making the Directors (?) of the Manchester and Birmingham Railway Company (?)—creditors for the expenses incurred, and thus *apparently* keeping the original deposit money untouched, it is not to be conceived for a moment, that the House of Commons will allow its Orders to be evaded by a mere trick of this description. The Manchester and Birmingham Extension Railway Company is *dissolved*; the subscription deed creating the Company, is a dead letter; the project to which the original subscriptions were obtained in 1839 is defunct; more than half the 10 per cent. deposited on those subscriptions, whether lent or not, is expended, and if lent must be repaid; a *new* Company must be formed; a *new* deed signed towards the proposed *new undertaking*; and the Standing Orders of Parliament imperatively require, that each subscriber shall pay up 10 per cent. of his subscription, and that his name and address, with the amount subscribed, and *the amount paid up by him*, shall be *printed*, and circulated among members, in order that no deception on the subject may take place.

I defy any man acquainted with the practice of Parliament, to adduce one precedent of a case in which these Orders have been allowed to be infringed, since first they came into operation. Whatever *hopes*, therefore, the Directors may entertain of the success of the plan which they propose of getting rid of the Standing Orders, but which they *dare not avow*, the shareholders may rest assured that those hopes will not be realised. The very publication of the admission by the Directors, that concealment of their intentions is necessary to ensure their success, is enough to awaken the suspicion of Parliament on the subject, if it do not wholly destroy the confidence of the shareholders in an undertaking conducted upon such principles.

So much for the course of proceeding adopted at the meeting. Now let us look to the Report prepared by the Directors, and circulated among the shareholders, by way of inducement to the formation of a new Company.

It commences by stating the power of the Directors, under the subscribers' agreement, to alter the course of the railway as originally proposed, which subject I have before disposed of. *They have no power to abandon the junction with the Manchester and Birmingham Railway.*

They then state that the Extension line would not have formed a junction with the Grand Junction Railway, and point out the advantages to be derived from such a connection, without in the remotest manner alluding to the sacrifices by which it is to be obtained, and by which the hitherto strenuous opposition of the Grand Junction Company has been hushed. Neither is there any allusion to the abandonment of the main inducement for the Extension Railway, viz. its being of Manchester origin, and under the control of Manchester men, affording them an independent line to London, instead of one subservient to the rules and regulations of the Grand Junction Company.

Next, they allude to the recommendation of the Parliamentary Committee, that facilities should be given for a renewed application, in respect of the *Extension* Railway, not adverting to the fact that that undertaking has been now given up, and that the recommendation does not apply to a *Stafford and Rugby* Railway. If they pretend that the two are the same, allow me to point out the difference between them, by a short extract from *their own printed statements* of 1839, circulated in Parliament in support of the Extension Railway.

"The Grand Junction Company oppose, because the promoters of the Extension line, whilst willing to have made a large pecuniary sacrifice to have ensured their co-operation, declined to admit them to a half share in the management, *deeming it to be their duty, as trustees for the public*, to assist *in defeating*, rather than in *perpetuating*, *monopoly*, and to impress upon the new undertaking a character of perfect usefulness, by ensuring the free and wholesome *competition* of an *independent* line!"

How does the Stafford and Rugby Railway carry out this description? Where are the benefits of competition which it holds out? Where is its independence? What becomes of the Potteries, who so efficiently supported the Extension Railway?

Again, with reference to the interests of landowners on the new line, whose case, I presume, even the promoters of the scheme do not consider to have been prejudiced by Parliament. I find in the report of the meeting held the defeat in 1839, the Directors, drawing a comparison of the Extension line with that proposed by the Grand Junction from Stafford to Rugby, and pointing out, among other advantages of the former, *the little injury it would inflict on landowners as compared with the latter!*

Where then is the analogy between the two lines; and what are the facilities which are hoped for from Parliament? They are, like all the other promised advantages of this hopeful measure, just glanced at by the Directors, and intended to have their due weight with the shareholders, on the principle of "*omne ignotum pro magnifico*;" but reduced to a reality, they amount to absolutely nothing. There is not one facility which Parliament will or can grant to the Stafford and Rugby Railway Bill different from the ordinary course of proceeding, with reference to all other similar Bills. If there be any, let it be pointed out.

All in this Report of the Directors, as well as in their verbal representations, is *couleur de rose*; but whenever *explanation* is demanded on any doubtful point, it is refused. How far this may be a usual course of proceeding, the public will best judge of; but it appears to me that *concealment* is not a very usual element in any *bona fide* undertaking, and that its necessity does not afford much encouragement to those who are solicited to embark in it.

My letter has already extended beyond the limits I had anticipated; but I cannot conclude it without calling attention to the singular representations by which, among its other merits, the shareholders are led to believe that this is to be a *cheaper* railway than any other.

It is admitted at the meeting, by Mr. Alderman Brooks, in answer to the question of a shareholder, that sums may have been agreed to be given to landowners, though none have yet been paid; and, even without such an admission, this fact is sufficiently notorious along the whole line, where several properties of an ornamental character are interfered with, and prospective bargains of a most extravagant nature have been made with landowners to prevent their opposition; yet, in the Parliamentary estimates, the land is valued at so much per acre according to its agricultural value, and all information is refused as to the sums actually agreed to be given to particular landowners!

How can the shareholders know what the land will cost, or what their estimates should be, unless they know the extent of the liabilities to which their Directors have bound them in these preliminary bargains? Again, only the *usual* margin is allowed on the estimate for contingencies, including the expense of passing the Act, without calculating *any thing* for the expenses of the session of 1839, admittedly exceeding 60,000*l.*, if we may judge by the sum to be returned to the shareholders! Neither is anything allowed for the expense of providing engines, carriages, &c.; but the shareholders are led to calculate their probable profits, on a highly coloured statement of revenue, based on an *assumed* outlay, which the merest tyro in the science of railway making must know to be insufficient.

How does the case of the Extension, or the Stafford and Rugby Railway, differ with regard to estimates, from that of the Manchester and Birmingham Railway, with which the promoters of the scheme must be pretty well acquainted?—The same sanguine hopes prevailed with regard to that measure as to this, and in the Parliamentary Report of 1837, grounded on the evidence of its promoters, I find it stated as *proved*—

"That the amount of the estimate, of the cost and other expenses to be incurred up to the time of the completion of the railway, is 1,565,391*l.*, which amount has been *supported by evidence*, and appears to be fully adequate to the purpose."

(*See the Votes of the 22nd May*, 1837.)

I find, also, in the published report of the proceedings of a meeting of the Manchester and Birmingham Railway Company, held September, 1839, the following passage:—

"At the close of the business a shareholder, whose name we did not learn, inquired if the capital already subscribed would be sufficient for the completion of the line to Stone? and was answered by the Chairman—that it would be amply sufficient without borrowing money."

This opinion, be it remarked, was expressed by a very respectable gentleman, after the Act had been in operation two years. How far he has been mistaken, as well as those who framed the original estimates, is unfortunately too well known to need observation. Is it, then, unreasonable to suppose the possibility of the promoters of the present scheme being equally deceived? If they be so, what is to make this project pay? Without knowing the sacrifices to be made to the Grand Junction Company, you cannot even form an estimate of your probable revenue; but in 1839 the Report from the Committee on the Manchester and Birmingham Extension Railway Bill was in substance as follows:—

"The amount of the estimate of the cost of the work is 1,158,683*l.* With regard to the estimate of traffic, the *usual* mode of computation has been to *double* the passengers travelling by coaches, post and private conveyance, but the promoters have *trebled* the passengers travelling by the road coaches in 1837, and have taken the number of those then travelling that route by post and private conveyance without assuming any increase in respect of the railway."

Why did not they follow the usual course of doubling, instead of trebling, the passengers, unless because by adopting that mode they would not have been able to show a sufficient income, even on their own estimate of the cost of the work? Yet the shareholders are told to accept the amount of

Digitized by Google

traffic arrived at by this process, as having been *proved* to exist, and without knowing the terms of arrangement under which their quondam opponents of the Grand Junction Railway have been converted into supporters of the measure, are told to build their hopes of a dividend, (for which, even should their Bill be obtained next session, they must wait till the year 1846,) on mysterious data, for the accuracy of which they must trust to their Directors alone, without further inquiry!

To show to the proprietors how far the judgment of these gentlemen is to be depended on, I beg to subjoin an extract from *their own printed statements*, when opposing the South Union Railway, which they successfully did, in 1837.

"Of this distance, fifty-four miles and three quarters (viz. the present proposed Trent Valley line), are to be constructed to effect, in a journey of nearly *two hundred* miles, a saving of at most *nine miles and three quarters*, but which saving may readily be reduced to *eight miles and a quarter*; and the line, moreover, throughout this district, traverses a country *the whole population of which does not exceed* 30,000 *persons*"!!

This, be it remarked, is the statement still on record of the principal promoters of the present scheme! When, therefore, we consider the changes which this Company has undergone since its origin, and which I exposed in a previous letter—when we read the statements published by themselves in 1837, and now remaining recorded against them, on which they obtained a resolution of Parliament, that a line beyond Stone, in the Potteries, was *inexpedient and uncalled for*—when, in 1839, we find the *same persons* asserting the *necessity* of such a project, and that its essential feature of importance was the affording an *independent line* to Manchester, and a *competing* one to the Grand Junction—when we read the petition of the Grand Junction Company to the House of Commons, as to the injustice of such competing line to them, and to the London and Birmingham Company, and its *perfect inutility to the public*—and, when we see the people of Manchester now sold to their rivals of Liverpool, for the sake of obtaining an Act of Parliament, at any price, and the two hostile Companies now concurring in the same object, and endeavouring to obtain for its support, by negativing every statement made by them during the last five years, may we not exclaim with Cicero,

"Quousque tandem abutere patientia nostra!"

You may be told, gentlemen, not to attach importance to this letter because it proceeds from an enemy, but remember that I am an enemy only of the Stafford and Rugby Railway, and not of Manchester, or of the districts which you, most of you, inhabit. I address to you *arguments* such as you are capable of understanding and appreciating, whether from friend or foe; and I support them by reference to *documents* to which you can yourselves refer, and by the experience and example afforded by other undertakings of which you are cognizant. I believe, most sincerely, that the Stafford and Rugby Railway never would pay its proprietors, although it would inflict serious injury on others. I believe that it is not needed for the public convenience, which is already sufficiently provided for by the present means of communication—I believe that it is calculated to shake the public confidence in all existing railways—and, I believe, lastly, that if the measure be carried, it will tend to defeat another of far more importance to Manchester and the manufacturing districts, as well as to the country at large.

On the merits of this scheme, if the Stafford and Rugby Railway Bill ever should be brought forward Parliament must eventually decide; but, as men careful of your own interests, and desirous of maintaining the prosperity as well as the *independence* of Manchester, I call upon you to consider dispassionately the arguments I have addressed to you, and to weigh well the expediency of embarking in an expensive contest for a railway suggested and supported by your rivals and recent opponents of Liverpool, who, believe me, are sufficiently far sighted not to have undertaken that opposition unless for the protection of their own interests, and not to have abandoned it for the promotion of yours.

I remain, Gentlemen, your obedient servant,

AN INHABITANT OF STAFFORDSHIRE.

RAILWAY MANAGEMENT—THE JOINT STATION AT LONDON BRIDGE.

To the Editor of the Railway Times.

SIR,—As my last effort before the meetings, I wish to lead your attention to two or three concurrent events which, it appears to me "mark the signs of the times," as referable to Railway Boards and their constituents. My opinion of course is, that *now* is the time for a great, a radical change, in the form of officers' election, and that without it an oligarchy will be permanently established, who will work the roads as, by my honor and conscience, I think they have hitherto been worked, "for the benefit of the few at the cost of the many." It is not your recommendations, undaunted as they are temperate, nor "Examiner's" exposition of principles, nor my more humble practical suggestions, that can avail anything in bettering the condition of the proprietary, if they are determined not to act for themselves; the remedy, the obtaining what success their speculation is capable of affording (alas! little enough), is in their own power; the fruit is ripe for their gathering, if they will reach out their hands to pluck it, and they will be not deaf, but dead, to their interests, if they fail to secure it by longer neglecting to take their own affairs into their own hands.

In your this day's number there is an advertisement of the Brighton Directors as to the management of the station in London, and if anything were wanting to prove to me that the attempt to charge their concern with a payment to themselves of 333*l.* 6s. 8d. per annum as "Managers" is wicked—and known to themselves to be wicked—it would be afforded in the laboured and perfectly ludicrous amplification they make of the one word "*management.*" They call it "*the joint purchase, enlargement, alteration and proprietorship, use and management of a station,*" the whole of which means "*management*" and nothing but "*management,*"—a sort of "*management*" which another Company, under circumstances precisely similar, not only took without extra pay, but insisted upon taking,—but I descant upon the method, only to show the intention. It is evident that attention having been directed to this monstrous proceeding of the three Companies, it is now the resolution of the Brighton Board to brave it through if they can; they show fight to their proprietary; they are ready to deliver them battle; they profess to put the matter upon what it does not possess—its merits—and *vi et armis*, to pocket the money; it is part of the general system pursuing towards proprietors by Directors, who are now preparing to make a resistance which, if successful, will end in uncontrolled sway, and the life, and perhaps hereditary possession of Board-room seats, to the utter extinction of the voice of the shareholder. * * *

Directors have union—combination; proprietors have neither. On the 19th a meeting, of which Engineers are *ex officio* members, of delegates from Boards, is to be held in Birmingham, and do you suppose plans of organised resistance to proprietors' wishes will not there be discussed and settled? Then why not form *shareholders'* clubs, and there hold monthly general meetings, in London, Liverpool and Manchester, to debate and determine upon circumstances as they arise from day to day? I throw out this in support of a somewhat similar proposition from you, Sir, a week or two ago, and in the meantime I exhort every proprietor in the kingdom to attend the meetings personally (or those who cannot, to withdraw their proxies from Secretaries and Directors), and without waiting for each other to begin the war, singly strive who shall be first for the honor of proposing a new and better system of management.

As a last recommendation to shareholders, to whom their railway existence is of any consequence, I give, Hip! hip! hip!—nine times nine and one cheer more—for *Auditors, unpaid Auditors, in rotation from the share-lists; Directors for largest holding, residence near the lines, and alphabetical order: no man to be Director of two Companies, nor eligible for re-election in less than three years.* Promptly in effecting these changes, lies the salvation of private fortunes—the prosperity of English railways.

A RAILWAY SHAREHOLDER.

January 9, 1841.

[It is very seldom, indeed, that we cut out any part of our able correspondent's remarks; indeed, they are always so much to the purpose that we should not be justified in withholding them from our readers. In the present case, however, we have omitted a somewhat lengthy passage, for reasons which cannot be given here, but of which we are sure our correspondent would approve were they known to him. Suffice it to inform him, that the notice referred to in the excised passage was not issued by the parties until they had been attacked most shamelessly and slanderously.—ED. R. T.]

RAILWAY MANAGEMENT—CARRIAGE OF GOODS.

To the Editor of the Railway Times.

SIR,—Not only the proprietary, but the public, who are deeply interested in railway communication, are under much obligation for the ready means your columns supply of discussing any measure tending to improve the developing of this mode of transit, and the only exceptions are a few leviathans of railway interest, who want to carry out their own particular views. I did hope that with the opening of the new year much improvement would have been perfected in the management of the lines already in operation; but so long as the present principle exists of scrambling for the Direction by men making a business of it, so long will the talent of a Board be stultified by disunion. Many articles are written in your journal advising remedies for better "Management," "Prevention of Accidents," &c., &c.—the former by fewer or more members; the latter by adopting green, white, or red lights, regulating dials, notice springs on the rails, and a variety of other suggestions, some of them as crude as they are impracticable; but one of the most important preventions appears to be lost sight of, and so long as this is the case, all the flags, lamps, and other things as signals (useful in their way), will be unavailing—that is, until men of business-talent are elected to regulate these signals—men to be substituted for the protegés of patronage. It is no uncommon thing to be told, on remarking the inefficiency of an executive, that it is a new thing, and although the management is not so good as they could wish, still it will by experience get better. This is a poor excuse, and one little consoling to those whose protectors or friends have been victims to the patronage-appointment of an inefficient Manager.

As Boards of Direction are now constituted, it would be impossible to expect any manager, however perfect in his duties, to carry them on satisfactorily to himself or the public. I think this would be verified in the case of the London and Birmingham and Midland Counties' Railways. If common report speaks correctly, the interference of these Boards with the executive, cost them the loss of an able manager on each, Captain Moorsom on the former, and Mr. Hutchinson on the latter.

Railway Management has principally yet related to passenger traffic, a department much more easily conducted, and sooner perfected in its working, than another source of revenue expected and claimed extensively by the promoters of railways, namely, goods' traffic. Although military and naval men may make very good disciplinarians in the regulation of servants, and in the coaching department as well in general matters, still I cannot conceive men

Digitized by Google

less calculated to organize a large carrying trade. Such duties require a man whose experience in business enables him to judge readily between the traders' necessity and the Company's profits. Experience also shows that even the same system cannot be carried out on all lines. Two years since, I was consulted by a party largely interested in the Grand Junction, as to the trade likely to be made available on that line. My answer was, that it would be some time before their traffic would amount to their Parliamentary estimate—that there would be two convulsions on their line in this trade from the weakness of their arrangements, namely, one in introducing carriers on the line, and a second, in getting them off; and it will be observed, that the last is just accomplished in ridding themselves of Pickford & Co. in a way that is unworthy of a respectable body of men.

I am not discussing which principle may be best. For the public, I think the trade on each line should be in carriers' hands, but for the railway proprietary that it should be in their own, feeling confident that the same cause that influenced the Junction Company will sooner or later do so with every other that is to take it into their own hands to protect themselves against frauds. If carriers cannot make arrangements with the Companies that will give them a profit with fair declarations of the class and quantity of goods they carry, the system cannot go on without disappointment. The plan hitherto pursued in carrying overweight on canals and turnpike-roads cannot continue on railways, where the facility of inspecting the goods is so much greater; and besides, the monopoly of the line for the class of goods counteracts the disposition of the Directors to wink at it as is the case on some canals, with competing lines.

If then this trade in its formation is so complex, how necessary it is business-men should direct it, and not juvenile engineers, nominees of the engineers in chief. The manager of the passenger traffic should be gifted with vigilance and perseverance—qualities appertaining as much to military and naval men as to most others, probably more so; but the qualifications of a manager for goods traffic are infinitely more important. He must, in addition to those named, have a knowledge of the applicability of rails for the transit of goods, the cost of tractive power on different gradients, a thorough knowledge of the carrying trade, the competing lines of conveyance, the charged rate and Parliamentary rate on the canals, to how low a scale the tonnage can be reduced on these canals, as also the description of goods in transit likely to be made available for his line. How can Directors expect to find such qualifications in men unaccustomed to business, and if some better system is not adopted in the election of their officers, they will find disappointment from their goods' traffic returns.

THESIS.

Birmingham, 12th Jan., 1841.

THIRD CLASS FARES.

To the Editor of the Railway Times.

SIR.—The question of third class fares has been ably discussed in your columns. I have carefully perused the arguments advanced by your correspondents on both sides of the question, and the conclusion I have come to, is that the whole matter hinges on *the extent to which the third class carriages interfere with the first and second classes.* If the third class traffic obtain by the 1d. per mile fare *in addition* to that which the first and second classes would otherwise have had, there cannot be a doubt that it will pay well to establish third class fares. Even the London and Birmingham and other companies most hostile to the third class fares must own this, or they are chargeable with gross inconsistency in carrying goods; for passengers even at 1d. per mile pay much better than goods at 4d. *toll* per ton per mile, or even than goods at 1d. per ton *carriage* per mile.

Captain Laws, R. N. stated in evidence before the Committee last session, that the Manchester and Leeds Company had been much annoyed by gentlemen of fortune travelling in their waggons or third class carriages. This it appears to me justifies that Company in those measures they have adopted to prevent the higher classes from travelling in those waggons, which were established solely for the use of the working classes.

Can any of your readers of the legal profession inform me if there is any thing to prevent the Leeds Directors from putting a stop to this practice by advertising that the waggons at 1d. per mile were for "children and working people," just as is done by the booth companies at Greenwich fair! The remark may seem flippant, but from motives of philanthropy I should like to see the lower classes accommodated by railways, and it is evident that they cannot be so, especially on expensive lines like the Manchester and Leeds, if the higher orders desert the first and second class carriages.

When the alteration in the duty has been carried into effect, I firmly believe that (under proper restrictions) third class passengers may be carried with considerable profit on every line in the kingdom.

I am Sir, your obedient servant,

LONDONIENSIS.

London, 12th January, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Your correspondent, a "Railway Traveller," seems to mistake assertion for argument. My list of 117 coaches which the opening of the Leeds line will remove from the road, is extracted, as I stated formerly, from a list published by authority of "the Board of Stamps and Taxes." "A Traveller" flatly denies the correctness of my list. It is for your readers to decide whether "A Traveller" or the "Board of Stamps" is the best authority on the subject!

My sole object in addressing you respecting the Leeds line having been to state to my brother shareholders why I consider our line will pay a fair dividend, I deprecate the personalities in which "A Traveller" indulges. I did not say that "I frequently travelled on the line;" I said I had repeatedly inspected the line as an investment. The last time I did so was in August last, and *consequently* previous to the late opening. In October, I sent my servant to inquire the 3rd class fare to Leeds, and got for answer, that no 3rd class passengers could be taken for the present. No list of departures having been published by the Company, I was ignorant (until informed by "A Traveller") that any 3rd class passengers had been conveyed over the 27½ miles recently opened.

Not being in the secret, I cannot inform "A Traveller" the amount of our weekly receipts; it is reported, however, in Manchester and generally believed, that they have fallen short of the Directors' expectations. How could it be otherwise with only three or four trains in place of nine per day?

"A Traveller" asserts that my letter was "principally built" on the fact of no third class passengers having been conveyed; this is incorrect. I stated that my hopes of success were founded on our dense population—cheap coke—great present coach traffic—and the good management of our admirable Board of Directors. With respect to the coach traffic, I beg to state for the information of your readers, that previous to the opening of the "Liverpool and Manchester Railway, there were only *twenty* coaches running in winter and *twenty-eight* in summer. This will enable them to decide on the merits of our line, which has as many coaches *throughout*, and ninety besides for shorter distances such as to Halifax, and Huddersfield. Now, Sir, the Liverpool line had no local traffic whatever, except one or two coaches to Warrington, which is the only town on the line; whereas, between Leeds and Manchester there are no fewer than *seven* large towns, viz., Oldham, Heywood, Rochdale, Halifax, Huddersfield, Bradford, and Wakefield, besides several others of less note.

As "A Traveller" seems anxious about our branch lines, I beg to inform him that the Heywood branch is partly formed, the Company's Engineer is busy preparing the working sections for the Oldham branch, and we are bound by the Act to finish the Halifax branch within (I believe) two years from this time. A branch to Huddersfield would not cost more than 30,000*l.*, being only three miles through a level and easy country.

"A Traveller" insinuates that our gradients and curves are objectionable. He is mistaken in this; we have only one bad curve near Hebden Bridge. It is merely a temporary one, and only a few chains in length. With respect to gradients, our worst is one rising 32 feet per mile, and "A Traveller" must be grossly ignorant of the subject on which he writes if he does not know that late experiments on the Grand Junction line have proved to demonstration that that line which has gradients of 52 feet per mile can be worked at the same speed and same cost as an almost perfectly level line.

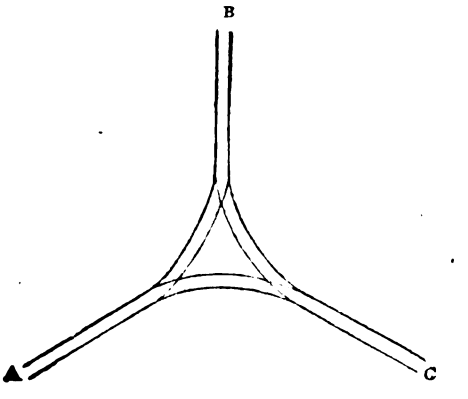
The Manchester and Leeds line will, I consider, prove a safe investment, and I am so pleased with "A Traveller's" remarking that it may ultimately prove one of the *very best* lines, that I forgive him the severity of his strictures on my former letters.

And I am, respectfully yours,

A HOLDER OF UPWARDS OF ONE HUNDRED SHARES IN THE LEEDS LINE.

January 9, 1841.

REVERSING OF ENGINES AND TENDERS.



To the Editor of the Railway Times.

SIR,—I have occasionally seen a good deal of time wasted and useless labour incurred in reversing locomotive engines and tenders, to do which by the ordinary turn-table, requires that they should be first separated from each other. Now there is a much simpler, and consequently easier, way of doing it, by means of which the engine and tender can remain connected, and if necessary, half a dozen waggons be reversed at the same time with them, and that too in a twentieth part of the time which is required by the turn-table. The plan, which I have never seen practised by any engineer besides myself, will be easily understood by the annexed diagram.

I am, Sir, yours very respectfully,

A RAILWAY ENGINEER.

January 6, 1841.

Suppose the engine to come on at A, it will proceed to B, from whence it will be backed to C; it will then be again reversed, and go forward to A, where it will present the contrary or opposite to that with which it first entered.

HEATING RAILWAY CARRIAGES.

To the Editor of the Railway Times.

SIR,—Having been during the last two months a frequent traveller by railway, my attention has been drawn, by the intense cold we have so lately experienced, to a method of keeping the carriages warm, as it is in the feet that the cold is so severely felt.

My plan is to receive all the waste steam from the locomotive engine into a pipe constructed for the purpose, and so conduct it through the flooring of all the carriages; and by leaving the end of the pipe under the last carriage in the train, open, the condensed steam would thus be enabled to run off,

Digitized by Google

after having distributed its warmth to the different carriages composing the train.

The pipes would of course be provided with sliding tubes to allow for the play between the carriages, and also to allow of their being detached from the train, without unscrewing any part of the pipe.

I think something of this kind might easily be constructed, and it would (in the winter months, certainly,) conduce greatly to the comforts of railway travelling.

I am, Sir, yours respectfully,

G. W.

London, January 11, 1841.

GREENWICH AND CROYDON RAILWAYS —TOLLS AND FARES.

To "Veritas."

Sir,—In the *Railway Times* of this day fortnight or three weeks back (which, I cannot now immediately remember or refer to, as those papers are with my bookbinder, to add the 3rd volume of that excellent journal to my library), there appeared a question put to you by my respected fellow-townsman, "Common Sense," which was in substance whether you considered a *large* income from a *small* toll, or a *small* income from a *large* toll, the most in keeping with your vaunted principle, that the greater the cost of the railway the greater should be the toll. For your answer to that simple question I have looked in vain, although I perceive you have found time to indite a long letter to prove that which nobody denies, namely, that the Greenwich Railway has been monstrously costly, and that the income which the Greenwich Company receive from the Croydon traffic by the *present high* toll, *is very small*. Begging you will refer to my friend "Common Sense," and favour him and me with a straightforward answer,

I am, your ingenuous friend and cousin,

CANDOR.

Liverpool, Jan. 9, 1841.

GREENWICH AND CROYDON RAILWAY FARES.

To the Editor of the Railway Times.

Sir,—It must be lamented on all sides that a principle has not been agreed upon by which the fares and tolls on these railways should be regulated, some contending that *distance*, and others that *original cost* should determine the matter. It seems to have escaped the notice of some, that if one Company ought to charge the maximum fare allowed by Parliament, the other Companies in connection with it, by the same rule, should do the same; and this is one of the results to which such disagreements unfortunately lead. Such a result would occasion us to travel from London Bridge to Brighton at the highest allowable charge, which probably would prove as little beneficial to the different Companies as to the public. If, then, it be desirable to modify the rate of charge, at least for second and third-class carriages, why may not this be done upon the following principle? Take the maximum fare allowed by Parliament in each railway as a standard; and if it be expedient to reduce the fare in one of the Companies a third, a fourth, or a fifth of its maximum, let this be the reduction that may fairly be required of the other Companies, viz. a third, a fourth, or a fifth of *their* maximum. Acting upon this principle, which has respect to the rights secured to each Company by Parliament, all may unite to fix that amount of fare which will best gain the sanction of the public, and be most lucrative to the Companies.

I am, Sir, your very obedient servant,

EQUITAS.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—You are of course aware that the North Midland, and the York and North Midland Railway Companies, have jointly taken a lease of the Leeds and Selby line for 31 years at 17,000*l.* per annum, net rent.

As a North Midland shareholder I should feel obliged if you would state the reason why you do not publish the weekly receipts on the Leeds and Selby line.

I wish also to know why the North Midland receipts, published by you, do not *include* the toll paid by the Leeds and Manchester Company.

If you will have the kindness to insert this letter the Directors of the respective Railway Boards will probably furnish you with this important information.

I am, Sir, your humble servant,

ZERO.

19 January, 1841.

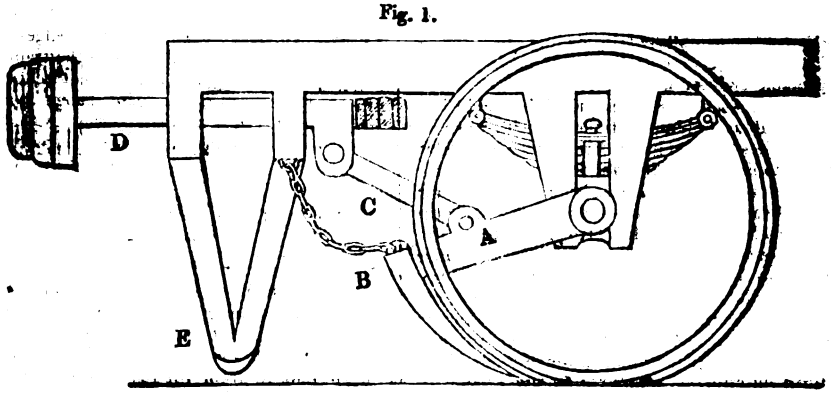
[We publish the Returns as they are sent to us. —Ed. R. T.]

ESSAY ON THE MEANS OF PROMOTING SAFETY IN RAILWAY CARRIAGES.

BY SIR GEORG CAYLEY, BART.

[Continued from the *Mechanics' Magazine*.]

Fig. 1.



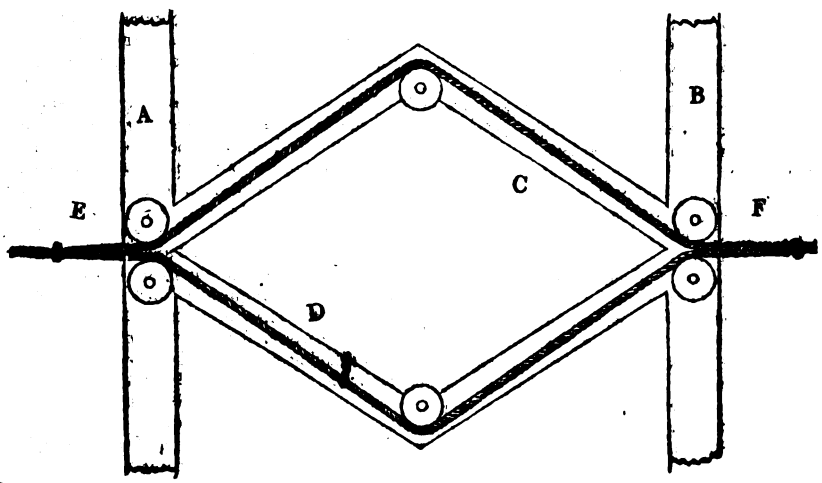


Fig. 2.

It may be thought superfluous to place a general buffer behind the trains; and if *every* train be provided with one in front it would be unnecessary, but engines unattached to anything are frequently moving about, may escape, and with unrestrained velocity run in upon a train at rest. If this be too remote a contingency to deserve notice, the hind buffer may be dispensed with—however agreeable it may be to have two buffers between us and danger in most cases, and certainly one in all. It may be thought, in lieu of the air buffer, which is necessarily of considerable weight, that a series of mattresses being lighter, and of course not absorbing so much engine power to propel them, would be preferable; but it ought also to be considered, that the leading vehicle in a train, in proportion to its lightness is more readily thrown off the rail and thus gives a wider range to accident, which it is our great object to avoid. The pads of the air buffer, as before described, show a flat face, which upon the whole, I think likely to prove the best form; but they might in front have the form given them of a gothic arch, for the double purpose of obviating the resistance of the air, one of the great impediments to velocity, and the better to cast light objects, or human beings, off the line of the rail with an oblique and less forcible blow: but here again the same objection arises —we are increasing the risk by a side force of driving the buffer carriage off the rail. These are matters deserving of serious inquiry; and which scarcely any thing but practice can finally determine.

When we meet a train coming at full speed on another set of rails, the rush past is really terrific; and conveys an idea that were they to meet on the same rails nothing could save either from destruction. There is quite terror enough in the public mind on the subject of railways; and it is therefore well to make calm estimates of the degree of danger attending even such cases of possible occurrence as this. Paradoxical as at first it may appear, the shock to each train in this case, if of equal weights and velocities, would not be greater than if it had gone against any solid object; for if the elasticity of the buffers, be supposed perfect, each train would rebound with the same velocity it advanced; and the retardation at the moment, of each from the other, is just sufficient to furnish the resistance necessary to produce that equivalent rebound.

If equal trains meet, having unequal velocities—say one at 10 miles per hour, and the other 20—they will average the shock between them, the slow train getting more shock than it would against a solid object, and the other less.

Heavier trains meeting light ones with the same velocity will communicate the greater share of the shock to the lighter ones—for the momentum of each, after the shock, will be equal; and of course the velocity of the rebound, which is the cause of

Digitized by Google

danger to passengers, will be greatest in the lighter train.

There is one case truly terrific in the meeting of trains, and that is, if, when on different rails, any very strong portion of one carriage firmly chained to the rest, should, from getting displaced, catch some weaker portion of the other train, the latter would successively give way, and the whole force of both trains be expended in the work of devastation. Fortunately this is a most remote contingency, and may be rendered, by precautions that will be pointed out, almost impossible.

Having taken a cursory view of general train buffers, there is something yet to be considered in a minor way respecting the application of elastic matters to secure safety to passengers.

The padded cushions on all sides of the first-class carriages should, in a coarser, but not less efficient way, be extended to all carriages for passengers, for each man's life is equally valuable to himself, and it may easily occur that the better man may be killed in the worst carriage.

It was very properly suggested lately in some of the public papers, that railway carriages should be fitted up for only single rows of passengers, so that no one should sit opposite to another. I have always held this opinion, and feel more confirmed in it than ever, by finding that others agree in it. As the feet of one set might pass under the seats of those in front of them, little space would be lost by this arrangement when new carriages have to be built. In the meantime, some one has suggested a broad padded belt to be placed in front of each passenger, to retain him in his place in case of accident, and to prevent a collision with each other. How John Bull may relish this sort of straight waistcoat I do not know; but perhaps some modification of it for his own safety may be tolerated.

If single rows of passengers be adopted, a few carriages might also be fitted up on the same principle for night trains, with horizontal berths one above the other, to sleep in, as in packet boats. These would at all times be of important use to invalids and elderly persons, and if well padded on all sides, would be as secure as the nature of the case permits.

There is one point that seems unaccountably to have escaped the notice of railway engineers—and that is, placing the engines under regulation as to velocity, by the usual mechanical means. The common expanding centrifugal force regulator, for cutting off the steam when the engine is going too quick, is as applicable to railway purposes as to engines in any other situation. The Directors may agree that no trains shall on any pretence be permitted to go at more than a given number of miles per hour; let them set the regulator accordingly, and let it be locked up in a case of which they have the keys; the result would be certain. But where the declivity is such as to cause a greater velocity without engine power, the regulator might be so connected with a lever power, that when the steam was cut off, it should liberate the catch of a forcible spring break upon the wheels of the engine: a matter which any of our common engineers could contrive if required.

The next subject of serious importance to the safety of railway travelling is to have such a mechanical arrangement as will cut off the free action of the wheels from the moment of receiving any shock; and also to have the power of so doing at any time according to the will of the conductor when he perceives danger at hand. This may be done in several ways, and some drawings for this purpose were prepared by Mr. Worsley and myself last year. I understand the subject is now taken up by Mr. Stephenson, under whose auspices it can scarcely fail to be ripened into practice.

To elucidate the subject, rather than to submit a perfectly matured plan for the purpose,—

Let fig. 1 represent the front wheel and end of a railway carriage-frame. On the axle of the wheel let an arm A, terminating in a concentric shoe B, turn freely. Connect this arm by the rod or link C with the shanks of the buffer D, which is held in its place by the buffer spring E. It will be evident from this arrangement that when the buffer is pressed back, the point of the shoe B, will approach the rail, and if further pressed, the wheel will get upon it and the carriage instantly be on the drag; and this can be made to take place at any required degree of force applied to the buffer.

To get off the drag, the carriage must be slightly backed, to which there will be opposed no resistance. The perforation in the arm of this drag to receive the axle must be a little elongated in the direction of its length, so that the wheel, which must not touch the drag when not in action, may by its own weight rest firmly upon it when brought under it. A spring may perhaps be found requisite to regulate this simple process. If the two front wheels be thus converted into sledges whenever any serious resistance occurs to the train, perhaps it may be sufficient; but if required, the hind wheels may undergo the same change, by connecting similar drags applied to them with the front movement. As the front wheels, however, are so readily made available as drags by the involuntary action of the buffers in times of accident, it will probably be best to furnish the hind wheels with a similar apparatus to be put into action at the will of the conductor of the train. A little difficulty arises in conveying the pull of a chain or cord from the place where the conductor stands to the carriages at a distance from him, because the play of the buffers keeps continually altering the distance of the carriages from each other. To obviate this difficulty, let A and B, fig. 2, be the hind part of the frame of one carriage and the front frame of another, between where the buffers keep them asunder. Suppose C D to be a jointed parallelogram framework, so made as to be put on at pleasure by a couple of bolts, and carrying guide pulleys for the rope or chain E F, which is divided into two portions to follow the form of the frame, and unites again on the other side. By this arrangement, it is plain, that although the jointed parallelogram frame can accommodate its diagonal length to every play of the buffers, still each of its sides continues to be of the same length, and hence the chains that correspond with them will neither shorten or elongate as respects the distance of its two extremes E and F, from the frames A and B, so that a steady tension can be transferred from the conductor throughout all the train, if furnished with these parallelogram frames properly fitted up for retaining the chain or rope in the pulleys; consequently, the drags on the hind wheels can by this means be brought to act, at the will of the conductor, in every variety of distance each carriage may chance to be from another, at the time the drags are wanted.

Another great branch of inquiry respecting railway carriages is, how best to secure them from getting off the rails, and many things might perhaps be suggested for an entirely new work; but the main question is, what can be done as things are now arranged? and without some additional means nothing can be effected but by precautionary measures on this head. Should the railway companies by their own power, or by the assistance of Government, not weighing money against life, choose to fill up the interval between the rails, excepting near stations, with masonry well clamped together (or even strong oak sleepers near each wheel, if nothing more can be afforded), great additional security would be gained; and such a wall would be the means of keeping men and cattle out of the path of the carriages. Should a wheel break down or come off, much additional security would also be derived by having four feet to each carriage, one of which is represented at F, fig. 1, which would sustain the carriage like a sledge as soon as the wheel in its vicinity failed, and not cause any friction by touching the rail before its services are required.

TAFF VALE RAILWAY COMPANY—SPECIAL MEETING.

A Special General Meeting of the Taff Vale Railway Company was convened, by advertisement, at the Angel Inn, Cardiff, on Wednesday last—Sir J. Guest, Bart., M.P., in the chair. The hon. chairman introduced the business by stating, that the Directors had not succeeded in raising the requisite sum for finishing the works, on the plan proposed at the last general meeting; and had, therefore, adopted what appeared to them, after much deliberation, the best alternative, which would be placed before the meeting in the form of a resolution; and he believed it was for the interest of the shareholders universally, to concur in the proposition, as the best calculated to ensure a speedy completion of the line, with the undoubted result of a fair dividend on the capital expended.—James Poole, Esq., then moved, and C. James, Esq., seconded a resolution, to the effect that the Company's new shares of 25*l.* each, should bear permanent interest, at the rate of five per cent., to be paid out of the income of the Company, in preference to any other dividends.—J. Vaughan, Esq., objected to this plan, and proposed issuing a sufficient number of shares at a discount, for the completion of the main line, when, he did not doubt, the value of the original shares would materially rise in the market.—E. P. Richards, Esq., supported Mr. Vaughan; and after some clear practical explanations from Anthony Hill and Walter Coffin, Esqrs,, and some further explanatory conversation between the Chairman and Mr. Vachell, an extensive shareholder, the resolution was put to a show of hands, and carried by a great majority. It was stated by Mr. Coffin, that there was every prospect of the revenue from passengers alone paying the whole amount of interest now granted to the holders of the new shares, although that branch of traffic had not originally entered into the calculations of the proprietors. The number of passengers, averaging, we are informed, above 1500 weekly, using the railway in its present incomplete state, proves the extent to which it is likely to be employed when open all the way to Merthyr. It is expected that this will be accomplished in March next.—*Cambrian*, January 15.

YORK AND NORTH MIDLAND RAILWAY.

[From the *Yorkshire Gazette*, Jan. 16.]

On Monday were opened, the new and very elegant buildings recently erected within the city walls, as a joint station, by the York and North Midland and Great North of England Railway Companies. The trains now regularly arrive at, and depart from, the same. On the side towards Tanner-row stands the principal building, having a large and commodious booking office in the centre, and on either side proper and convenient waiting-rooms for first and second class passengers. On the first floor are arranged suite of offices for the York and North Midland Railway Company, consisting of the secretaries, engineers, managers, and board rooms. The appearance of this building towards Tanner-row, is much improved by a colonnade and basement of the Tuscan order, in stone; the remainder of the building is of brick, with stone dressings.

Within the station, adjacent and parallel to the booking offices, is the departure stage, 400 feet in length by 18 feet in width. This stage, although by no means of such gigantic dimensions as the one at the Derby station, is yet sufficient to accommodate a very large train. On the side opposite to the booking offices, is the arrival stage of similar dimensions; and adjoining to it are arranged first and second class refreshment rooms, a ladies waiting room, &c., for the convenience of passengers arriving, and waiting for the departure of a succeeding train. The first class refreshment room is of considerable size, and it is intended to open it as a coffee room, where dinner, breakfast, &c., will be provided on the arrival of the different trains. Proper and convenient kitchens, larders, cellars, &c., are arranged on the basement.

The departure and arrival stages, and lines of railway within the station forming the passengers shed, are 300 feet in length by 100 feet in width, are inclosed by a wrought iron roof.

The station has been designed and executed by Mr. Andrews, the architect of this city. Messrs. Holroyd and Waller, of Sheffield, being the contractors; and Mr. Bingley, of Leeds, executed the iron roof.

TO CORRESPONDENTS.

Mr. T. W. Rathbone, Mr. Edward Cropper, and Mr. David Hodgson.—Jurator *requests us to inform these gentlemen that "he does not mean, like* R. T. F., *of Raymond Buildings, to be satisfied with the inference to be drawn from their long silence, respecting the six guinea job laid to their charge, but that at the next general meeting of the Eastern Counties' Company, when he hopes to be favoured with their company, he intends to put one or two questions to them on the subject, to which, with the approbation of the meeting, he will insist for plain 'Aye' or 'No' answers."*

E. F., *on the East Anglian Railway, in our next.*

Scrip.—*The wretched stuff upon which our correspondent comments is beneath notice.*

A Countryman *will have a full answer in a very few weeks. The meeting is announced.*

A Reader of the "Railway Times" *seems to forget, that at the period referred to there was still a balance due on the last-created shares, which has since been called for, and amounts in the whole to no less a sum than 250,000l. We are sure our correspondent's letter is not mischievously intended, but under present circumstances we fear its publication would do harm.*

A Lover of Facts.—*We have of late given more space to the affairs of the railway referred to by him than we could well spare. For the present we must cry "Hold!"*

Mancuniensis *need scarcely be told, that the publication of his letter (even were it unexceptionable in other respects), would subject us to half-a dozen actions for (so-called) libel. We agree with him that the law is greatly deficient, when such parties as he describes are allowed to pass unpunished.*

W. (*Florence*) *has been received and attended to. A paper was forwarded yesterday.*

Great Western Railway.—Omega and Veritas, *if possible, next week.*

Examiner *is in type.*

Mr. Wesson's *circular shall be noticed.*

*** The Volume of the *Railway Times* for 1840 is now ready. A few complete sets may also be had. As the number does not exceed *ten*, early application is necessary.

THE RAILWAY TIMES.

SATURDAY, JANUARY 23, 1841.

THE indispensible necessity of observing the most rigid economy in the future management of railways, is now so generally acknowledged, that if reformation always followed conviction, it would be superfluous to say one word further on the subject. Unfortunately, however, it is a common failing of human nature—a failing of which ruling bodies have oftentimes more than an average share—to see and approve of what is right, and yet to persist in the less perfect system which past practice has rendered familiar. It does not necessarily follow that Railway Boards must have corrupt purposes to serve, when they exhibit an indisposition to effect improvements in their several establishments. Habit may so far deaden their perception of defects, that what they may have at first considered to be a glaring abuse, and strenuously determined to remove, may become at last in their eyes a scarcely discernible blemish—nay, it is much if it be not transformed into a positive grace, such is the power of office, and a constant and closer connection with the original subject of complaint. What is it that transforms the eloquent denouncer of political abuses, and the ardent advocate of progressive improvement, into the apathetic minister, fearful of change—what is it that makes of the clamorous railway proprietor, a silent and satisfied Director? Personal objects, and the effect of those "evil communications" which corrupt good principles may, undoubtedly, have their influence in certain instances, but as regards the great majority, there is no need to take so unfavourable a view of public virtue; the cause lies in that principle which, according to the poet, makes mankind something more than barely tolerant of Vice—

——"seen too oft, familiar with her face,
We first endure, then pity, then embrace."

If such be one of the effects of official connection with existing arrangements, it becomes more than ever incumbent upon the railway public at large to lose no opportunity of bringing forward whatever improvements may suggest themselves, and of keeping up such "pressure from without" as will *tell* upon the administrators of their affairs. We would not have a constant harassing contention about trifles, carried on between the proprietors and their representatives; but we wish to see the former once fairly roused from their apathy in matters of vital moment—being satisfied that nothing more is wanting with many Boards, to induce a very marked improvement in their proceedings, than a conviction that their constituents are fully determined to see with their own eyes, and to form their own unbiased judgments, instead of taking everything upon trust from parties who may possibly be interested in misleading them.

It is much to be regretted, indeed, that railway shareholders should have lain so long dormant. All that many of them can *now* hope to accomplish of economical arrangement, is trifling in comparison with what *might have been* effected, had a due degree of supervising control been exercised during the early progress of their several undertakings. Extravagance the most reckless has, in many instances, borne unbounded sway, and this not in the actual construction merely, but in the very character, of the works. Secondary lines have been formed at a cost scarcely justifiable in relation to the main arteries of communication through the kingdom, and the result need not be predicted. It is *this* which has given such a check to railway enterprise, that during the last two sessions of Parliament, scarcely one new line was sanctioned, and *not* the impediments thrown in the way of speculation by the Standing Orders of which we hear so much. These Orders would be perfectly harmless, could capitalists see that existing railway property was likely to prove a profitable investment, but how *can* it be so, when the expenditure has in many, if not most, instances been double or treble what it ought to have been? The adaptation of railways to the traffic which is likely to come upon them must never be forgotten. In poor districts, the lines must go *over* the hills by steep inclines, and the Directors be content to let the public travel at an average of 15 or 20 miles an hour; whilst in more favoured localities, and in these alone, it is justifiable to construct viaducts and tunnels at an expense of from 40,000*l.* to 50,000*l.* per mile in order to secure a speed of 25 or 30 miles. The Manchester and Birmingham Directors are likely, as we lately endeavoured to show, to expend 70,000*l.* per mile upon *their* work, in open disregard of their own original calculations, and without the smallest excuse from the position of the line. If the proprietors choose to submit to this attack upon their pockets, they will have themselves alone to blame; *we* shall not cease to protest against it, as an injustice alike to them and to the railway system at large. We alluded in a previous article to the case of the Great Western line, and it presents so forcible an illustration of our argument, that it cannot be too frequently brought forward. Had that railway been constructed on the same economical principle as the Grand Junction and South Western lines, its cost could not, it is believed, have exceeded 25,000*l.* per mile, whereas it will now in all probability cost 60,000*l.* Should it return, as now constructed, a dividend of 5 per cent. to its proprietors (some say it will produce less, others more; but in either case our argument has equal force), what would the result have been under the other system? The question is easily answered, and the same may be said, in a less degree, of the North Midland and Manchester and Leeds lines, as well as of the line already referred to, the Manchester and Birmingham.

It is to be hoped that this dearly-bought experience will not be thrown away upon such of the Companies as have it still in their power to control the engineering branch of their expenditure. "Utility," not "magnificence," should be their motto. Every shilling that can be saved, must be saved, if they would secure an adequate return for the capital embarked. To allow of an unlimited outlay of money upon the works of a railway, when no such outlay is necessary, save to gratify the ambition or the whims of an Engineer, or the grand conceptions of a Board of Management, and then to cavil about the cost of working, were indeed to be "penny wise and pound foolish." The original outlay must be kept down, and a constantly recurring drain upon the receipts will thus be prevented. A shilling unnecessarily expended on the *working* of a line, diminishes the available results of one half-year, and there an end: the same sum unnecessarily laid out in *constructing* the line, entails a charge upon the Company's resources for ever.

The promoters of the new schemes now in agitation will be greatly to blame if they do not profit largely at the cost of their predecessors. They must not only elect to the management of their affairs good men and true, but keep a vigilant eye upon all official proceedings *from the very commencement*. An abuse may easily be nipped in the bud, which otherwise would flourish and bring forth its usual fruit—the bitter fruit of disappointment to the proprietors. Directors themselves are not unfrequently, we apprehend, more sinned against than sinning in the matter of an extravagant outlay. They are so much at the mercy of their officers—of engineers in particular—that they can scarcely help either themselves or their constituents. This is one of the results of the vicious system which has grown up of delegating too much power to irresponsible individuals. Had Directors kept engineers in check from the first, they, in common with the shareholders at large, would have escaped many a heavy disappointment; had shareholders exercised a similar superintendence over Directors, irresponsible parties could scarcely have done much mischief to either. The Companies now forming must look to this. *They*, at least, will surely escape the scandal and the ruin resulting from grossly inaccurate estimates of cost. Such a plea even as incapacity itself, will be urged in vain should revised and

Digitized by Google

re-revised statements, deliberately issued by professional men, prove hereafter as utterly fallacious as almost all that have heretofore been put forth. There can be no excuse *now* in the novelty of railway making. It would be well if means could be devised for making engineers answerable for every excess of estimate not arising from circumstances which could not have been foreseen. Such an arrangement would have an excellent effect, could it be rigorously carried out. In the mean time, a moiety of the large salaries (often extravagantly large) of these gentlemen might be reserved to be forfeited upon such gross exhibitions of incapacity as many that might easily be named. A portion of the contractor's money is kept back in case he should fail to fulfil what he has undertaken; why should not a similar plan regulate the allowance of the engineer?

THE proceedings at the special meeting of the South-Eastern Railway Company, held on Wednesday last, on the subject of a branch line to Canterbury and Ramsgate, possess considerable interest, not merely as bearing upon the future prosperity of the great undertaking which is the more immediate object of the Company's exertions, but as indicating, we trust, the commencement of a better system in regard to the construction of future railways.

In the first place, we are gratified to find that the inhabitants of the district which will be benefitted by the proposed line, are ready to co-operate with the Company in carrying it into effect. The highly respectable meeting held in Canterbury on Monday, of which we give elsewhere a slight sketch, is a further proof in addition to those supplied by Norwich, Falmouth, and other places, that the facilities supplied by railways are beginning to be properly appreciated. It is true, as was remarked by Mr. PARSONS at the meeting on Wednesday, that it is one thing for the inhabitants of a district to encourage a speculation by raising their voices in its favour, and another to support it by subscribing for shares; but it is something to obtain even the *voices*. It would be no difficult matter to reckon up some half-dozen towns, or more, the inhabitants of which were suicidal enough to oppose projects of this description, as likely to be injurious to their interests, whereas, had they viewed the question aright, they would have seen *then*, as they see *now*, that their only chance of preserving their ancient *status* lay in fostering the enterprises which they, in some cases successfully, resisted. It is something therefore, we repeat, to have secured the votes of the citizens of Canterbury, in favour of a line of railway to that place; we have little doubt, that further inquiry and reflection will induce them to hold out to its promoters patronage of a more substantial kind.

We are pleased, too, to gather from the explanations given by Mr. R. STEPHENSON and Mr. CUBITT that it is proposed to construct a comparatively inexpensive line. The character of the ground is, we understand, remarkably favourable, and it seems to be intended to have only a single line of rails for that portion at least which will extend from Canterbury to Ramsgate, while the results of recent experience in regard to gradients will be applied throughout the entire length. Should the calculations given at the meeting be found to be at all correct, the line will indeed be a cheap one. The plan of having only a single track of rails ought to have been followed upon several lines, which, as now constructed, stand but a poor chance of returning even a moderate dividend, and such a plan *would* have been followed but for the ruinous policy, of which we have elsewhere treated today, of constructing secondary lines on a scale of magnificence vying with the great channels of communication throughout the kingdom.

The proposed railway is deserving of the best encouragement at the hands of the South-Eastern shareholders, were it only that it will effectually prevent the chance of future competition—and this is another reason why we regard the proceedings of Wednesday with no small degree of interest. Nothing can damage not only particular lines, but the railway system generally, so much as holding out encouragement for the construction of rival railways. The result must always be hurtful to the proprietors, and has never yet shown itself to be for the advantage of the public. The active steps taken by the South-Eastern Board, will, we trust, avert all apprehension of injury to the property of their constituents from such a cause.

It will be seen that the steps hitherto taken by the Directors and sanctioned by the proprietors are merely preliminary. All details as to the raising of capital are very wisely postponed, as being premature, until full and satisfactory data have been laid before the proprietors. The days have happily gone by when vague assurances of success, unsupported by facts, could tempt capitalists to embark in railway speculations—we say *happily*, because an effectual check has thus been given to many schemes based upon delusion. If a few such still disgrace the market (for it is with the *market* that they are principally concerned), they are not more numerous than might be anticipated from the extravagant and unreasonable expectations of some, and the personal interests of others, of their promoters. That the Directors of the South-Eastern Company will be able, at the proper time, to lay before their constituents a satisfactory statement of future revenue from the contemplated branch, we have little doubt, if any reliance is to be placed upon the statements which have reached us from other quarters. We hope and believe that before the matter is ripe for more active measures, the stock of the parent line will bear a value in the market, somewhat proportioned to its real merits. The undertaking is sound at heart, and we rejoice to see that its prospects are gradually, but surely improving.

A SHORT notice of what transpired at a meeting held in Birmingham of delegates from the different Railway Boards in reference to the prevention of accidents will be found in another column. The resolutions passed upon that occasion are on the whole very judicious, and even should little practical good result from the Conference, these resolutions will show the legislature and the public that the Managements are really anxious to render the arrangements of their several establishments as perfect as is possible.

The danger most to be dreaded as likely to arise from the recent calamities, is crude and hasty legislation by parties, who, with due difference be it said, can be but very imperfectly acquainted with the requirements of the case. In matters of general arrangement the two Houses of Parliament may interfere with effect, but in the regulation of details as to signals and other points of practice, we fear they must be considered as by no means competent to the task which some of their members—the pseudo-scientific above all—pant to undertake. The delegates appear to have been strongly impressed with this sentiment, and earnestly deprecate precipitate measures on this most important matter.

In all that they say as to the necessity of selecting proper persons to perform the duties of subordinates—in their recommendation not to employ delinquents discharged from other lines—and in their opinion as to the propriety of carrying into force most strictly the provisions of Lord Seymour's Act, we most cordially concur. These very points, we need scarcely remind our readers, have been repeatedly urged in our columns upon the attention of Railway Managements. The last of them more especially has been our constant theme during many weeks, and we have the satisfaction of knowing that our expostulations have aroused the Directors of more than one Company to a more vigorous discharge of their duty in this particular. Much yet remains to be done. The penal provisions of the Act must be rendered much more stringent, but above all, there must not be so much left to the discretion of magistrates who are frequently but too well disposed to look upon Railway Companies with a most unfavourable eye.

We cannot altogether go along with the delegates in their opinion that it would be inexpedient to place a *third* man on the engine, as conductor or captain of a train. We think it might be so arranged that a person should confine himself to keeping a constant look-out for obstructions, without at all "distracting attention, dividing authority, or removing or diminishing the responsibility of the engineman," as the delegates appear to apprehend. Whether such a person ought to be placed "*on the engine*," or in a prominent position near to it, would of course be a proper matter for consideration. Into this point, however, we need not at present enter.

The expediency of having one uniform system of signals recognised upon all railways is too obvious to require to be more than mentioned. We trust that before the next meeting of the Conference, a system will be agreed upon, the simplicity and sufficiency of which will render its adoption by every management a matter of course.

THE excellent letter which we give elsewhere, from our able correspondent "An Inhabitant of Staffordshire," on the late hole and corner meeting of the Manchester and Birmingham Extension Board and their friends, relieves us from the task of exposing still further the hollow pretences put forth by the *disinterested* "Managers." If after reading and reflecting upon the unanswerable arguments contained in our correspondent's letter, any person should be silly enough to risk his property in the scheme, all that we can say is, that he will richly deserve the loss and mortification which inevitably await him.

While on this subject we may state that Mr. ASHWORTH, in a letter to the Manchester papers, confirms the contradiction which we gave last week as to the non-participation of the Birmingham and Midland Counties' Boards in the document read by Mr. CHAPPELL, relative to the purchase of shares. Mr. ASHWORTH (addressing Mr. CHAPPELL) says—

"I feel myself called upon, therefore, to state, that my instructions to buy the five shares referred to, came by post, from a distance, *accompanied by the form of contract which you read at the meeting* on Monday last; and that in purchasing those shares, which were the only shares, bought by me under a written agreement, I acted merely

Digitized by Google

in the capacity of a sharebroker, whose object was to negociate between buyer and seller on such terms as might be mutually agreed upon.

"I distinctly deny that I at any time received instructions with reference to the document alluded to as the agent of ANY Railway Company; and a letter received by me this morning from the London agent of the London and Birmingham Railway Company informs me, that the first notice that he had of the existence of such a document was its appearance in the *Manchester Guardian*, in the report of the proceedings of the late meeting. Equally untrue is it that either the London and Birmingham, or Midland Counties' Railway Companies, endeavoured by the purchase of scrip shares to obtain a majority of votes at the meeting, which fact must be sufficiently obvious by the scrip falling instead of rising in value previous to the meeting taking place.

"*How* you *obtained possession of the form of my client's contract I shall not take the trouble to inquire*; but I can tell you that it is no uncommon thing for parties buying the scrip of a project, for which an Act of Parliament is not passed, to propose, for their own security, certain conditions in writing, and in this particular case I bought the five shares from a proprietor who signed the contract (which came to me ready prepared) without objecting to the stipulations therein contained."

We have no doubt whatever that if Mr. ASHWORTH, were at liberty as a professional man, to disclose the name of his client, there would be little difficulty in tracing the origin of the affair to parties not so far removed from the Extension scheme as either of the respectable Boards for whom Mr. ASHWORTH was asserted to have acted.

ONE of the most influential meetings ever assembled in the United Kingdom, was held in Dublin on Thursday last, "to take into consideration the best means of obtaining for Ireland a general and comprehensive system of railways, under the control and direction of the State." The meeting was called in consequence of a requisition to the Right Hon. the LORD MAYOR, signed by his Grace, the ARCHBISHOP OF DUBLIN, *sixty-eight* peers, and nearly five hundred of the most eminent commoners in Ireland. The *Dublin Evening Mail*, one of the most persevering and able opponents of the Commissioners' plans, says: "There certainly never was a requisition in the United Empire, presenting the same array of aristocracy, wealth, station, and intelligence, with such a combination of men of all shades and complexions of party, religion, and politics; and we hope and trust that something beneficial to our common country, in whose welfare and well-being we are more deeply interested than half the fellows who brawl about patriotism, may result from the united labours of such men." In this wish we most cordially join.

It cannot, indeed, be otherwise than very gratifying to us who were not merely among the first, but *the very first*, public journalists who bestowed upon the Report of the Irish Railway Commissioners the high commendation which it so eminently deserves, to find that the views so ably illustrated and enforced by these railway authorities, are daily becoming better understood, and that there is every reasonable prospect that at no distant day they will be carried into practical effect. The question has *forced* itself upon the consideration of many of the influential noblemen and gentlemen who were present at the meeting on Thursday, and we have no doubt will be by them *forced* upon the early consideration of Her Majesty's Government. But for the culpable remissness of some of the members of that Government, this boon to Ireland would long since have been secured. We cannot think, however, that even were they less well disposed towards the project than they profess themselves to be, Lord MORPETH and his colleagues will *now* venture to disregard the appeal made to them by the late meeting. Apart altogether from the ultimate benefits which a "general and comprehensive system of railways" must confer on Ireland, no surer means could be found than the abundance of profitable labour which the construction of such works would for a long period supply, to neutralize the machinations of the unscrupulous knaves with whom that unfortunate country is cursed.

The meeting having taken place at so late a period of the week, we cannot to-day give an account of the proceedings, but we shall supply full particulars in our next number.

THE question as to the mode of conducting the carrying business on the Grand Junction Railway, which has recently been referred to in our columns, came before the Court of Queen's Bench on Thursday; but, as will be seen from a brief report under the proper head, was disposed of upon a mere point of form. We have reason to believe that Messrs. Pickford are at this moment taking such steps as will speedily bring the question to a full discussion before the Court *upon its merits*.

THE following illustration of the Falstaffian mode of "backing one's friends," is taken from the *Bedford Mercury* of last Saturday. It has reference to the Manchester Direct project:—

"The hole and corner proceedings of the Bedford Committee do little to advance the interests of the railway. Were the business arrangements of that Committee placed in other hands, we are sure that the interests of the promoters of the railway would be advanced. At present we see little real service has been done by the pomposity of the Committee of do nothings, for such they appear."

—o—

WE learn from the *Halifax Guardian* that the Manchester and Leeds Railway has just "knocked off the road" the *Defiance* coach, which used to run between the two towns—the first stage coach, it is believed, ever driven through Halifax.

RAILWAY OFFENCES AND OFFENDERS.

ON Thursday the Directors of the London and Greenwich Railway Company brought a switchman named *William Banks*, before Mr. Trail, of Union Hall Police-office, charged with omission of duty. The prisoner had neglected a certain switch, so that a train was thrown off the rails, and a delay of twenty minutes was the consequence. Fortunately no person was hurt. The prisoner virtually admitted that he was not at his post. He said [we quote from the daily papers of yesterday] "the switch was all right *when he last examined* it, which was a short time before the train was thrown off the rail, and that twenty minutes previously a Croydon train had passed over that part of the line where the switch was. He added that he *thought* that it was all right or he should not have omitted examining the switch previously to the train coming up." It had previously been stated to the magistrate that the man ought to have been in *constant* attendance at the spot, and yet the decision was thus given:—

"Mr. Traill said, that under all the circumstances of the case he should prefer leaving the punishment of the defendant to the Directors of the Company, rather than inflict a *small* fine upon him. He was of opinion that the infliction of small penalties in such cases would be a bad precedent, and tend to no good purpose in the punishment of offenders for offences of this description. The Directors of the Company had the power of discharging the man altogether from their service for a breach of their regulations, or suspending him and stopping his wages for any length of time they thought proper. The magistrate added, that *in cases where accidents from neglect had arisen*, he had determined, upon their being proved, of inflicting the highest penalties on the offenders."

The magistrate seems not to have known that the Act under which this man was charged, inflicts the same penalty whether an accident *has* arisen or *might have* arisen from a railway servant's negligence; but common sense might have taught him that as prevention is better than cure, it would have been a much wiser determination to inflict *some* punishment on a person proved guilty of neglect, had it been only as a warning to others, than to allow him to escape (for anything that he knew) wholly unpunished. We gather from the magistrate's reasoning that had any one of the passengers by the train been seriously injured he would have inflicted the "highest penalty" on the switchman, yet wherein would the man *Banks* have been more culpable in the one case than in the other? Had two or three of the carriages been precipitated over the parapet, *Banks* would have stood a fair chance of appearing at the Old Bailey, and that such a catastrophe did not occur was not owing to any merit in *him*, yet Mr. Trail argues as if it were so. He dislikes inflicting "*small* penalties in such cases," as likely to be "a bad precedent;" then why not inflict a *large* fine—as large as the Act will authorise? How often must we repeat that "in the punishment of offenders for offences of this description," (to use the words attributed to the magistrate,) the slightest mark of mercy is most ill-judged—is gross injustice to the public! Mr. Trail says the Directors may punish the man by "discharging" or "suspending" him. If they have any regard for their own character, or for the safety of the public, they have of course discharged him before this time; but that is not enough. They did not require magisterial permission to send a delinquent servant about his business. They brought the man to Union Hall Police Office, to be dealt with as the law directs—that law which *requires* such persons as Mr. Trail to see that its provisions are put in force. That Mr. Trail has not done *his* duty is no fault of the Directors, who, we are glad to find, are determined not to suffer offenders of this class to escape.

Three men, named *Pitchforth*, *Nutter*, and *Hinchcliffe*, were brought before the Halifax magistrates on Wednesday week, on a charge, under Lord Seymour's Act, of having by their neglect caused an accident on the Manchester and Leeds Railway on the previous Monday.

The complaint against Nutter and Hinchcliffe was for disobeying the orders of their superior. On Sunday, one of the Company's servants was directed to take two cranes from Hornbury up to the Summit tunnel. The cranes ran on the rails, and were drawn by horses; but the horses being tired they could get no further than Elland. At this place they were put into the "sidings" (completely off the line), and the master of these two men ordered them not to proceed any further until he returned from the Summit, whither he went to receive orders as to where the cranes should be taken. In defiance, however, of his orders, they yoked their horses to the cranes on Monday night, between eight and nine o'clock, and proceeded along the

Digitized by Google

railway towards Sowerby Bridge; but when they were under North Dean Wood, a luggage train came up and ran into them. The engine and cranes were very much damaged, and the driver almost miraculously escaped death, for the train was going at the rate of 15 or 16 miles an hour at the time. This was the offence with which the two men were charged. The complaint against Pitchforth was, that he was a watchman employed on the railway, and that it was his duty to examine each train, and to look behind, for if two lamps were hung on the last carriage it was a signal that another train was coming up, and that he must stay until it so came, to give signals to it if anything was amiss. The train which went up about six o'clock had two lamps behind it, which lamps were on at Brighouse, and were seen on after the train passed through the Elland tunnel. The cranes were taken on the line about nine o'clock, and when the luggage train came up, Pitchforth was not there with his lamp to make the proper signal to the engineer that there was an obstruction. Had he made such a signal the accident would not have happened.

It appeared in evidence that the usual signal was two *red* lamps, but that on this occasion one was a common light, as the frost had broken the bottle and the red liquor had run out. It appeared further, that Pitchforth was not regularly employed by the Company, but had been doing duty for a man named Boggess who was so employed, but who was then unwell. Boggess had even left it for Pitchforth and another man to arrange the duty between themselves. This substitution had not, it seemed, been notified to the Company's superintendent. The result is thus given in the *Halifax Guardian* of Saturday last :—

"The magistrate [W. Briggs Esq.] said, that there were several circumstances which weighed in Pitchforth's favour. There was a deficiency in the lights; there was only one red light, whereas the instructions were that there should be two red lights. But what he looked at more was what had passed with Boggess. He could not think the Company gave any power to their regular servants to employ any man they thought proper to fill up their place. And Boggess did not even appear to have employed Pitchforth, but left it for one of the two men. This was much too loose a way of doing business. It was the business of Boggess to watch, and he could not therefore think himself justified in convicting Pitchforth for 'wilfully' neglecting to do another man's work. It appeared that he thought he had done his duty, and he must therefore be discharged. As to the other men, there could be no doubt they had transgressed, and must suffer for the offence.

"Mr. Higham, on behalf of the Company, prayed for a lenient punishment upon Hinchcliffe, who was not a regular servant of the Company, and who there was every reason to believe had been misled by Nutter. As to Nutter he was a regularly employed servant of the Company, and Mr. Higham pressed for the highest penalty, 'two months with hard labour.'

"Hinchcliffe (in answer to inquiries from the magistrate) said he was a poor man and kept a horse for hawling and jobbing about. He did not want the job of drawing the cranes on the line, but out of good nature he took it as they could not get another horse.

"The magistrates therefore sentenced Nutter *to two months' committment to Wakefield House of Correction, 'with hard labour,'* and in respect of Hinchcliffe having been misled into the offence of which he had been guilty, imposed a mere nominal penalty, namely 5s."

We trust that the Directors of this Company, who have been commendably active in cases of this kind, will not allow Boggess to escape unpunished. On the following day, *John Shires*, the driver of the luggage train above referred to, was charged with neglect of duty. It appeared that after the collision with the cranes, he had fallen asleep upon his engine while awaiting the arrival of assistance. He was fined 40s. We suppose he was moreover dismissed the Company's service.

On Monday, as we learn from the *Derbyshire Chronicle*, James Hancock, of Hasland, was charged before the sitting magistrates of Derby with riding in a North Midland Railway carriage, by a down train, without paying the fare. It appeared from the evidence, that the train was in when Hancock arrived at the station, and the doors being closed, he scaled the wall, and got into one of the carriages without paying his fare. In his defence Mr. Hancock said he was on urgent business,—that he had frequently done so before, and had paid his fare at the other end, both in going to and coming from Eckington, and that he paid his fare at the Eckington station that day. The inspector stated to the Bench that the train was a quarter of an hour after its time, and therefore there was no excuse for Mr. Hancock. Unless the regulations were enforced, ticket takers might defraud the Company by obtaining the fares and pocketing them. The Bench convicted Mr. Hancock in the penalty of 1*l.*, with 1*l.* 6s. costs.

THE WEATHER AND THE RAILWAYS.

THE late sudden thaw has done considerable damage to several of the railways, in consequence of the great (we may almost say the unprecedented) accumulation of water in the valleys.

The Northern and Eastern line appears to have suffered most of all those that are in operation. On Sunday it was found necessary to close the line altogether, and it remained shut up during the whole of Monday and Tuesday. On Wednesday the traffic on the rail was resumed as far as Lea Bridge station. For the remainder of the distance, and on Monday and Tuesday throughout the entire length, the Directors made arrangements for conveying the passengers by omnibuses at railway fares. Yesterday the trains ran throughout to Broxbourne, as usual. We understand that little permanent injury has been inflicted on the line.

The neighbouring line—the Eastern Counties'—although almost equally exposed to the accumulation of water has, we are happy to state, suffered no damage. Great praise is due to Mr. John Braithwaite, the Engineer-in-Chief, for his foresight in guarding against the effects of such a calamity. No flood so general or so extensive as the present has occurred in England for the last sixteen years; and the works of the Eastern Counties' line having stood the test, may now be looked upon as proof against all ordinary inundations to which the district is peculiarly liable.

The Midland Counties' line has not altogether escaped. As some very exaggerated reports having appeared in the public papers during the week in reference to this subject, we have much pleasure in being able to give from authority upon which we can rely, the following statement of facts :—

On Saturday night last, owing to the rapid thaw, a small sewer which runs over the bridge at the New Walk, Leicester, became choked and burst. The water from it flowed to the back of the wing of the bridge, and, being in the night, threw it down before any one was aware of the circumstance. Accordingly the up-mail on leaving Leicester ran into the earth, and a delay of three hours was the consequence, but not the slightest injury was sustained by any individual. The line was cleared for the down-mail before it was due, and within an hour of the accident.

On Friday night there was the largest flood in the meadows near Loughborough, that has occurred for many years. Near the station at that place the water rose above the level of the rails, and washed away the ballast from the blocks for about thirty yards in length, and so damaged the road as to make it impassable. The passengers and bags by the up and down mails were forwarded between Loughborough and Leicester by chaises, &c., with as little delay as possible, By the time the morning passenger trains were due the road was restored, and the trains regularly passed over. No other accident impediment or delay has taken place on the line during the week.

The Great Western, too, has suffered. The particulars will be gathered from the following letter, which appeared in the *Times* of Tuesday last, and which we re-publish, as bearing testimony to the very commendable conduct of the Company's servants in a case of difficulty :—

"SIR,—As there is no doubt you will have various statements as to the stoppage which took place on the Great Western Railway on Saturday last, in consequence of the sudden thaw, I think it right, as one of the parties unfortunately detained on the occasion, to give a short statement of the occurrence. I do so more particularly, that I may have the opportunity of bearing testimony to the good conduct of the conductor and guards, also the workmen.

"I left Reading by the train at a little after 6 o'clock in the evening (as I constantly do every Saturday), and on arriving at Twyford we took up about 20 labourers, in order to set them down at a spot about two miles further on, where it appears some water had for the last hour been issuing from the side of the cutting, which in that place is very deep. On arriving at this spot the train was stopped in order to put the men down, and it so happened that the carriage in which I sat came just opposite to the stream which was forcing its way through the bank. At that moment it increased to such an extent that in a very few minutes the wheels of the carriage I was in, and two adjoining ones, were completely buried in chalk and mud. Fortunately, the engine had got so far in advance of the spot as to get clear, and then went on to Slough station for some carriages in which to remove the passengers.

"This new train in the course of two hours was able to back down on the other line to within 20 yards of us, and the guards and labourers then carried us all to it through the water in safety.

"The men had all the interim been engaged in the water endeavouring to turn the course of the mud along the sides of the railway.

"We again started, and reached a spot within two miles of Slough, and again we were fixed in the same way, and fortunately the engine as before got clear. We were here detained another three hours, when at length another train was backed on the other line to our assistance, and we were for a second time trans-shipped. We shortly after arrived at the Slough station, and one and all were placed in close carriages for London, where we at last arrived in perfect safety at a quarter past three o'clock on Sunday morning.

"I must say that much praise is due to the conductor and guards for their attention and exertions, who suffered very severely, being many times up to their middle in water.

"We certainly met with every attention and civility from all connected with the railway; and I do hope that the conductor, guards, and workmen, who were so many hours in the water, will not go unrewarded by the Company. I am, Sir, yours most respectfully,

"G. R. DODD.

"16, New Broad-street, City, Jan. 18."

SOME LOST CHAPTERS OF ANCIENT EASTERN HISTORY.

[*Found in exploring the Ruins of Rogulaneum.*]

Chapter the Fifth.

1. And after it had been ordered that every one of the Board of Governors should share alike in the twenty and four hundred talents whether present or no, and whether he did anything or nothing, those of them who were of the Company of Merchants and Chapmen which came up from the banks of the Mehr, returned unto their own homes, till the time for the receipt of wages should come round.

2. And now behold there sat on the chariot seat, by the side of Bozrah, one who handled the reins for him,

3. While Bozrah blew the horn;

4. Even the man Malahaleel, whom the men of Mehr had procured to be appointed Comptroller of the Iron-way.

5. And who, from this time forth, ordered all things as seemed to him best for himself and his brethren.

Digitized by Google

6. For, as oft as the Gogs and Magogs kicked against the pricks, Malahaleel would despatch swift messengers to bring up his brethren from the banks of the Mehr.

7. Who hastening to his succour would ask the malcontents, "Who *they* were not to do as they were bidden?"

8. And warn them, threateningly, to beware of the next feast of Purim.

9. Whereat the Gogs and Magogs, seeing themselves fewer in number than the Roggs and Demroggs, and being men of a mean spirit, would sit silent and abashed.

10. And so whatever Malahaleel did, the Roggs and Demroggs with one voice approved.

11. And authority greater than his there was none.

12. But now complaint was made unto the King by the Magogs who had been cast out of office by the scratching of the balls, of the evil designs entertained by the Roggs and Demroggs.

13. How that in contempt of the Royal Edict for the making of the Iron-way to the Orient Sea, they had resolved to stop at Kuhldesak.

14. How that they sought only to make a profit to themselves, of that which the King had designed for the benefit of his people.

15. And how that they meant to make rich by half measures and false weights, which are an abomination.

16. Whereat the King being much incensed, and willing that due and speedy justice should be done, commanded that the Board of Governors should instantly proceed to make and complete the Iron-way according to the provisions of the Royal Edict;

17. Or that they should show cause to the contrary thereof, lest in their default the same complaints should be repeated.

18. And that they should return unto the King how they had executed these his commands, on peril that might fall thereon.

19. Great now was the confusion among the Roggs and Demroggs.

20. Swift, swift the messengers which Malahaleel dispatched to the banks of the Mehr.

21. Swifter, swifter the chariots which brought Jesui and Edcrop, and Rogg and Demrogg, and Frererogg, and Korasbi, and David, and Dikon, to the city of the King.

22. Deep, deep the dismay of the vain and weak man Bozrah.

23. Casting his horn of exaltation aside, he wrote a Song of Lamentation.

24. But Malahaleel tried to comfort them, saying, 'Though Derus, who taught us the device whereby we attained unto power, be now dead, there are, I ween, among the Scribes and Pharisees, other magicians as great as he, who may teach us how to keep hold of that we have.'

25. At which being lifted up, they walked forth into the city, and through the Inns and Courts thereof, inquiring for a Wise Man.

26. And they were directed unto one Pholetti, whose skill in making black white, and white black, was said to be greater than that of any other man living.

27. And they disclosed to Pholetti the danger which threatened them.

28. And this was the counsel of Pholetti:

29. Get you these two things and the wrath of the King shall not harm ye.

30. 'A fool who will believe and swear any thing.

31. 'And a rogue or two who will do any thing.'

32. At which the Roggs and Demroggs, looking one at the other, and ever and anon askance at Bozrah, exclaimed, as with one voice, "Easy! easy! The day is ours!"

RAILWAY FROM NORWICH TO LONDON BY CAMBRIDGE.

Norwich, 21st January, 1841.

THE Committee appointed by the county meeting met this day, and was very numerously attended. Only four of the fifteen members appointed on it were absent, namely, Lord Berners, Sir Jacob Astley, and the Mayors of Norwich and Thetford. Lord Sondes, who presided at the public meeting, was also in the chair on this occasion. The proceedings of the Committee lasted from twelve till half-past five o'clock. Mr. Rastrick was very fully examined as to the merits of the East Anglian scheme. Then Mr. Braithwaite was called in on behalf of the Eastern Counties' Company, who admitted that there was no intention of prosecuting that Company's original line by Ipswich, and stated the reasons which led the Company to think that a preferable line for the interests of Norfolk and Suffolk would be formed by branching off at Kelvedon, and going by Sudbury, Bury, and Stowmarket—Had not yet prepared any plans or sections of this new line, except of some parts, but though the country was lofty in some places, thought that by adopting higher gradients than usual, and arranging them on a compensating plan, there would be no engineering difficulty to encounter. Cross-examined at a great length by the members of the Committee.—Would not say that the plan and sections of the Kelvedon and Sudbury line could be ready for this next session. Did not know of any Company or Committee being yet formed to take up this line, but was sure the Eastern Counties' Company, and the Liverpool people would support it. Mr. Rastrick was then re-called to give some further explanations. The Committee after this remained by themselves for some time in deliberation, after which the parties in attendance were called in, when Lord Sondes informed them that the Committee had come to the following resolutions. (The exact words I cannot pretend to give you, but this is the substance.)

"1st. That the Committee as far as they are able to judge from the information laid before them, are of opinion that the line of railway which will be most beneficial for Norfolk, will be one by way of Cambridge.

"2nd. That the Committee recommend to the inhabitants of Norfolk, to support no Company which does not take up the whole line from Bishop's Stortford, where the Northern and Eastern terminates, to Norwich and Yarmouth."

Of the absent members, Lord Berners, Sir Jacob Astley, and the Mayor of Thetford, are known to be in favour of a Cambridge line; and Mr. Willett, the Mayor of Norwich, is a gentleman of too much good sense to be likely to take a different view of the subject. The resolutions therefore may be considered as all but unanimous, and though they leave the field open to other lines, by Cambridge as well as the East Anglian, they are at least quite decisive of the determination of the county to have nothing more to say to the Eastern Counties' people.

D.

EASTERN COUNTIES' RAILWAY COMPANY.

To the Editor of the Railway Times.

From my Corner, High street, Shoreditch, 20th January, 1840.

DEAR MR. EDITOR,—The state of alarm into which the late Norfolk agitation has thrown the people here, is not exaggerated in your leader of Saturday last; but you must allow me to correct you in a few particulars. The Board *did* send a deputation down to Norwich previous to the county meeting; but as their mission was limited to creating a division, if they could, in the enemy's camp, it was thought that this might be more readily effected by private misrepresentation and manœuvre than by any appearance of the deputation in public. The members of it were the Manager, Mr. Hall, and the Engineer, Mr. Braithwaite. "Thompson" offered to go too—he "knew Chute well"—and would "be bound to make all right with the Norfolk squires." "He! he!" But to this it was objected, that were so great a personage as the Chairman of this great Company—and he, the renowned "Thompson"—to be of the deputation, it would be impossible for them to maintain the privacy which was so desirable—since the least that could be looked for would be a turn out of the whole population to welcome the arrival of the immortal author of "Pooh! Pooh!" in the land, the glories of which he has sung so inimitably:—

> "The land wherein you'll find whate'er
> Can give you zest or wealth,
> Employment, agriculture, Sir,
> Amusement, sport and health."
>
> *'Pooh! Pooh!'* p. 22.

The offer of "Thompson" was for these weighty reasons declined, and the Manager and Engineer dispatched by themselves to the scene of action. Of the anonymous "Circular" which you have mangled so cruelly, the deputation took a large impression with them. The author of this precious *morceau* is *not*, however, the gentleman you suppose. It is shocking bad sense to be sure, and worse English; but there are other people who can excel in these respects as well as Mr. T. W. Rathbone. I might name to you the real author, but I am content with exculpating the innocent. The new line proposed in this paper from Kelvedon by way of Sudbury to Scole, is confessed on all hands here to be intended for "the diversion sake" merely; it is, as you truly term it, an "engineering absurdity," and to do Mr. Braithwaite justice, he does not hesitate to tell them so. Indeed, Messieurs the Dictators are not over pleased with that gentleman for the reluctance he manifests to back them up in all they say of it. The Manager is by no means so scrupulous. He does not hesitate to name the very sum for which this line can be executed, though of the country through which it goes he knows absolutely nothing, and to give also most solemn and positive assurances of its being taken up by the capitalists of Liverpool—providing only the counties will but lend a hand, and have nothing to say to the much dreaded East Anglian project. The sum fixed upon by this cautious and scrupulous calculator is one million. One million only, to execute 70 miles of railway through a hilly and difficult country. Hear this ye Stephensons and Brunels! No wonder Mr. Braithwaite demurs to identifying his professional reputation with so ridiculous an estimate. And why is it so ridiculous? Simply because it is an *underbidding* estimate—hazarded for no other purpose than to buy off the counties, if possible, from the support of the East Anglian scheme, the promoters of which meaning no false play—no deception—nothing but real business, in an open, upright, and honourable way—have founded *their* estimates on an actual survey of the *loci in quibus*, and an actual experience of prices. It is scarcely to be imagined that the counties can be duped by so palpable a piece of moonshine as this; but if they should, then will they most assuredly deserve to remain without a railway to the end of time. Still the thing is just possible, and if possible, it is *certes* worth attempting. I hear grumbling

Digitized by Google

shareholders often ask of what use this Mr. Manager Hall is, with his 1,000*l.* a-year, (except to write every night what has passed during the day to the Deputy Chairman and that other Dictator Mr. R. M.) seeing that there is a Secretary, an accountant, and a superintendant besides, to do all the ordinary business of the Company—but behold an instance of extraordinary service which must for ever put all such cavillers to the blush! Think only of the power of face requisite to promulgate, with suitable gravity, so "diverting" a scheme! Think only of the dance of principle which must be going on within! Think only of the possible gain to the Company from such prodigious self-devotion! It was the celebrated Lord Camelford, I think, who once advertised for a butler in these terms: "If simply honest 50*l.* a year; if he can lie well, and stand a bottle at his head, 100*l.*"

The Liverpool eight (for as regards the ninth man, Mr. Hoyes, the answer still is, he is "married and cannot come") were at the railway conference on Tuesday, and they are here to-day, arranging for the monthly meeting of the Board, which takes place the day after to-morrow. The time will then be fixed for the holding of the February general meeting, and a much-debated question settled—namely, whether the names of the six out-going Directors shall be published previous to the meeting, or not. They had better make a merit of necessity; for if they don't publish them, I promise you I shall. The detestable scratching system, you will be glad to hear, has been at length abandoned—thanks to your memorable exposure of it—and an order of rotation established in its stead.

The Chairman, Sir R. A., Mr. S. A., Mr. G., Mr. H., and Mr. L., are in great trouble about a certain peremptory mandamus which has been served upon them personally since the last meeting of the Board; and well they may, for they make up just such a lot as the dictator octemvirate would be glad enough to *leave in the lurch*, and so get rid of.

"Thompson" talks now of resigning, but much in the '*nolo episcopari*' vein. He would like nothing better than to be assured that he has nothing to fear from the February kalends; but his doom, as I told you before, is sealed—unless, indeed, the recent six-guinea exposure should have made such havoc of the reputations of a certain lot of Chairmen *in posse* as to make it difficult to find him on the instant a suitable successor.

I am, dear Mr. Editor, your faithful servant,

Q.

HINT TO SIX-GUINEA-HUNTING DIRECTORS.

To the Editor of the Railway Times.

Sir,—You will of course have heard the proceedings of the meeting held here this day. That man of *many* railways, Mr. Rathbone, had a very intelligible hint given to him. A Committee of Directors was nominated for the purpose of maturing the suggestions thrown out at the meeting, and Mr. Rathbone was proposed as one of that committee; but this was so particularly distasteful to the gents' connected with the different railways, that an amendment was proposed, substituting the name of another gentleman, which met with the universal approval of the meeting, and the *six-guinea Director* was obliged to walk out of the room! Let the proprietors of railway shares at the ensuing annual meetings also mark this gentleman in a similar manner, and relieve him from *some* of his arduous duties. He has ambition enough to attempt to manage anything, but he evidently has not sagacity enough to manage himself.

Q IN A CORNER.

Birmingham, 19th Jan., 1841.

LONDON AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

Sir,—Having a lively interest in whatever pertains to the London and Birmingham Railway, I write on the eve of that Company's Report being drawn up, expressing my heartfelt gratification at some remarks made public by Mr. Creed, at the late Harrow inquest,—and I address you as a means of this letter being read elsewhere, in the hope of seeing the statistical matter named below republished in the Report, and completed to the close of last year.

Mr. Creed, 12th November, 1840, having informed the coroner that he had held the office of Secretary to the London and Birmingham Company since its formation in 1829, proceeded to say—

"The line of the London and Birmingham Railway was opened on the 17th September, 1838. Since that period up to the 31st October, 1840, the aggregate number of miles travelled on the line is 89,855,141. The number of passengers who have travelled upon it within that period amount to 1,349,030, being an average of 65 miles per passenger."

"Up to which time," Mr. Creed said, in reply to another question put by the coroner, "no fatal accident had happened to any passenger on the line." The passengers and miles travelled require to be added, and this remarkable statement will be complete to 31 December, 1840.

Reference has often been made to receipts of this line, and in particular to that portion previous to the general opening. I myself have more than once seen discrepancies in printed statements of the weekly traffic. I suggest, therefore, if it would not be better to have published, by authority, for future reference and use of every proprietor, what I shall term a traffic paper, as it will be desirable that it does not form any part of the Report, otherwise than being distributed at the same time, and to contain not only the weekly receipts of the last six months, but of every past half-year, commencing from the first partial opening and continued to the close of last year; the same plan to be followed up twice in every succeeding year; and to simplify the table, I ask for the different heads of income to be added together, and only the sum total carried out.

I presume there can be no reasonable objection to the "Weekly Traffic" being collected and arranged, in an authentic tabular form. It is most easy of accomplishment. Particulars of past traffic are no secret, having long been spontaneously given by the Board. Should expense of printing be urged as an obstacle, publication may be made (perhaps not altogether correct) by others. But I will ask, what fractional portion of a farthing per share, could be the cost? It is not opening new ground, for most railway proprietors have a list in manuscript, more or less correct.

Unless the Board of the London and Birmingham Railway, have very strong reasons for selecting *a later* dividend day, than some other Companies, I should like to see their time approximate nearer to that usually fixed by the Liverpool and Manchester, Grand Junction, and other lines for making their payments. The latter Companies generally choose about the fifth of the month, and the former ten days afterwards.

In the *Railway Times*, page 953, a few weeks of London and Birmingham traffic are given. The remarks I have made are applicable to every other railway. *It is desirable the weekly traffic should be published*, under authority, by every Company, and given to their shareholders every six months.

Your obedient servant,

A. B.

Liverpool, 19th January, 1841.

RAILWAY CONFERENCE.

On Tuesday last, the 19th inst., a general meeting of delegates from all the principal Railway Companies in England, was held at the Queen's Hotel, Birmingham, for the purpose of considering the best means to be adopted for preventing a recurrence of the accidents which have lately taken place on railways. A numerous and highly influential body of Directors, with some of the most eminent Engineers and Managers of railways, attended. Mr. George Carr Glyn, the Chairman of the London and Birmingham Railway Company, was called to the chair; and probably no meeting was ever held where the members represented a larger amount of property. The parties present were the representatives of considerably above 50,000,000*l.* of capital. The utmost cordiality was manifested, and the strongest desire expressed by all present to adopt every possible means of accomplishing the proposed object. Those who were most conversant with the management of railways stated their conviction that by far the greater part of the accidents which had occurred were referable to the neglect and disobedience of orders on the part of railway servants; and while some few casualties must be expected to occur in any mode of locomotion by such immense numbers of persons as are conveyed on railways, it must be to an improved state of discipline and moral responsibility on the part of the men employed on railways that the exemption from accidents must be looked for. In these sentiments every person who delivered his opinion concurred. The deliberations of the meeting lasted for several hours, during which time the regulations and signals adopted on all the principal lines were fully discussed, and the following resolutions were unanimously passed; after which the meeting broke up, with the understanding that a future conference should be convened whenever it appeared desirable:—

"Resolved, 1. That in consequence of the public anxiety occasioned by the accidents which have taken place on various railways, the Companies here represented, in order to profit by the combined experience of the principal lines, have deemed it expedient that a general conference should be held for the purpose of taking into consideration the causes and circumstances of such accidents, and the means, that may be desirable of more effectually guarding against their occurrence for the future.

"2. That this meeting acknowledge the grave responsibility which attaches to Railway Directors, and the obligation under which they lie to adopt all judicious and practicable expedients for insuring the general accommodation, comfort, and safety of the passengers entrusted to their charge; that, under a strong impression of this responsibility, they have assembled on this occasion, and have pursued their deliberations at the present conference.

"3. That this meeting, while it deeply regrets the accidents which have occurred, looks forward with confidence to the beneficial result of unremitting vigilance and habitual caution steadily enforced and established, as the great means of increased safety to railway conveyance; and accordingly they would deprecate any sudden or hasty legislation on the subject, being convinced that the means referred to, aided by such improved arrangement and mechanical adaptations as a more matured experience may suggest, will amply accomplish the desired object.

"4. That the moral character and general fitness of enginemen and firemen, as well as of policemen and other servants, in the correct performance of whose duties the public safety is involved, are so essential to the security of railway travelling, that this meeting recommends to all railway companies the strictest examination into these points, and that it should be a rule more generally adopted amongst different managements not to employ servants having worked on other lines, without authentic and satisfactory testimonials from their former employers.

"5. That in case of serious neglect of duty on the part of railway servants, it is desirable more frequently to put in force the penal provisions of Lord Seymour's Act, in order that the strictest discipline may be maintained. At the same time this meeting considers it due to men whose services are so arduous to encourage the requisite discipline and obedience of orders by adequate remuneration, and by suitable rewards for extraordinary exertions or long-sustained good conduct.

"6. That the Directors at this meeting assembled have taken into their serious consideration the expediency of placing on the engine a third man as conductor or captain, in addition to the engineman and fireman usually employed, and they are of opinion that such a measure, by distracting attention, dividing authority, and removing or diminishing the responsibility of the engineman, would increase rather than lessen the risk of accidents to the train.

"7. That this meeting considers it desirable that there should be an uniform system of signals recognised, and applicable to all railways; and they recommend that the following rules and regulations with this view be submitted to the consideration of each Railway Company."

(Here follow the regulations and signals.)

COACH ACCIDENT.

The *Earl of Mar Coach*, on her way between Alloa and Glasgow, broke down on Monday se'nnight, in consequence of one of the axletrees giving way. The passengers, of whom there happened to be a considerable number, were of course thrown upon the road, and some of them sustained very serious injury by the concussion. The breech not having, it is presumed, been sufficiently welded, again snapped, while near Cumbernauld on her way to Alloa on Saturday evening, to the rather serious damage of some of the passengers. No blame is attached to the driver.—*Glasgow Courier.*

On Tuesday afternoon last, the *Regulator* coach, from Sheffield to Manchester, met with an accident of a frightful nature, although, happily, attended with no serious consequences. At the Snake Inn an extra horse was put to it on account of the heavy fall of snow on the hills. About two miles from the Snake, a bridge forms an angle of the road, under which at a great many yards in depth, runs a little river. When the coach arrived at this place, the leading horse became unmanageable, and got towards the side of the bridge, and plunged over the wall into the yawning chasm with the rider upon his back. The coachman and passengers were of course, in the greatest consternation, and the coach was instantly deserted. Strange to say, the man was found to be quite uninjured, having been saved by falling on deep snow. The horse rolled down to the very bed of the river, and after half an hour's useless exertions in endeavouring to extricate in, was left in its perilous position. If the traces of the leading horse had not broken short off, it is probable that all would have gone over together.—*Sheffield Iris.*

The London and Aberystwith mail, on its way to Kington, was overturned on Monday morning last, near Strethough, going at the foot of Pynlimmon. In consequence of the snow storm the coachman had provided an extra pair of horses, and the postilion missed his way in crossing the road, where on one side is a ravine of considerable depth, into which the coach and two inside passengers (Mr. J. Hughes and Mr. Monkhouse, of Aberystwith) were precipitated, the whole turning over twice or thrice, and yet both gentlemen miraculously escaped with only a few slight scratches and bruises. The coachman and guard threw themselves off, and were not hurt, and the postilion received no injury, though he was in a most perilous situation. In a few hours the coach, &c. was righted, and proceeded on its journey. —*Hereford Times.*

RAILWAY ADJUDICATIONS.

THE QUEEN V. THE BRISTOL AND GLOUCESTER RAILWAY COMPANY.

Court of Queen's Bench, Jan. 21.—Mr. WHATELEY moved for a writ of *certiorari* to remove into this Court an indictment which had been preferred against the defendants. This was an indictment against the Company for not obeying an order of sessions.

Mr. Justice LITTLEDALE asked the learned Counsel if he had ever before heard of such an indictment?

Mr. WHATELEY said, that was the difficulty he laboured under; he would plead to the indictment, but he had been told by the Judge at the assizes that he could not do so. He could not get a copy of the indictment.

Mr. Justice LITTLEDALE said it was a very unfortunate situation to be placed in.

Lord DENMAN said, the rule would be granted, and, according to the practice of the Court, it would be absolute in the first instance.

EX PARTE PICKFORD, IN RE THE DIRECTORS OF THE GRAND JUNCTION RAILWAY COMPANY.

Court of Queen's Bench, Jan. 21.—Mr. CRESSWELL showed cause against a rule which had been obtained for a *mandamus* directing the defendants to allow Messrs. Pickford to carry goods on this line of railway on the same terms as other carriers. He contended that this was a case in which a *mandamus* was not the proper remedy, as it called upon the defendants to carry into effect the 27th section of their Act of Parliament, and in such a case the Court had held it would not interfere.

Lord DENMAN called on the other side to support the *mandamus*.

Sir F. Pollock, Mr. Richards, and Mr. Cardwell supported the rule.

The affidavits alleged that Chaplin and Horn were allowed to carry goods on the railway on better terms than any other carriers, as they were not compelled to change the trucks at Birmingham, and were charged a less price per ton.

Lord DENMAN said, that it did not appear that a proper demand and refusal had taken place, and therefore the rule must be discharged, but without costs.

THE LATE ACCIDENT ON THE LONDON AND BIRMINGHAM RAILWAY.

Bail Court, Jan. 18.—Sir WM. FOLLETT applied to his Lordship for a writ of *certiorari* to remove into this Court the coroner's inquisition taken on the bodies of Joseph Simpson and William Dawson, the former of whom was an engine-driver, and the latter applied to assist him, on the above railway, and who were both killed by a collision that took place on the line. (The circumstances of this case were fully detailed at the time.) An inquest was held on the bodies of the deceased persons before one of the coroners for the county of Middlesex, when the jury returned a verdict of wilful murder against Simpson, the engine-driver, as regarded the death of Dawson, and *felo de se* as regarded his own death. They also found that the engine was moving to the death of the deceased, and levied a deodand of 2,000 upon the engine. The Learned Counsel said there were several objections to the inquisition on the face of it. The most important was that the jury, having found that a felony had in two cases been committed, could not afterwards find that, as in case of an accident, the engine was moving to the death of the deceased. It had been laid down in Coke's Institute and other authorities that no deodand could be fixed by a coroner's jury except where the death of the party was caused by accident. In cases of the death being caused by felony it was well known that the party by whom the felony was committed had thereby forfeited all his goods and chattels, and no deodand could thereby be levied on the goods. Another objection was that there was no allegation in the inquisition of the time or place, when and where the deaths of the deceased took place. There were several other objections with which he did not think it necessary to trouble the Court at present.

Mr. Justice WILLIAMS—You may take a writ.

MANCHESTER, BOLTON, AND BURY, CANAL NAVIGATION AND RAILWAY—DIRECTORS' REPORT.

FIFTH HALF-YEARLY REPORT.

In presenting the annexed statement of accounts, the Committee have pleasure in noticing the augmented profits.

Contrasting this half-year with the corresponding period of 1839, it will be seen that from additional traffic, and by a reduction in the working expenses, there has been an increase in the nett receipts of 4311*l.* 17*s.* 9*d.* As the increased receipts cannot be referred to any improvement in commerce, of which neither this undertaking, nor the country generally, has yet experienced the advantage, it does not seem too much to infer from the progress already made in extending the Bolton and Preston Railway northwards, and from sources of traffic only just developing themselves on your own line, that there is sufficient reason for expecting still further, and ultimately, considerable improvement in the receipts.

Nine miles of the Bolton and Preston Railway are already completed, and are expected to be opened next month, by which the Railway conveyance will be continued to near Chorley. Arrangements have been made by your Committee to supply the Bolton and Preston Railway Company with engines, carriages, and waggons, for working this portion of their line, until the remaining five miles be finished; an event of great importance to you, and which is expected to take place next year.

In the meantime the proprietors will be benefited not by the increase of any local traffic only, but also after this half-year, by the amount of interest on 40,000*l.* of bonded debt, which the present call, after discharging the other liabilities of the Company, will enable the Committee to pay off; leaving a bonded debt amounting to 32*l.* 9*s.* 8*d.* per share for the liquidation of which alone can any further calls be made.

The coal traffic on the railway is increasing, 2784 tons were carried last half-year and 15,223 tons have been carried this half-year, without diminishing the coal traffic on the canal. In connexion with the Kearsley Moor Branch another branch railway which the coal owners are making, is nearly completed, it will connect the railway with additional pits from which all the coal has, hitherto, been carted on the turnpike road.

The balance of rent of Ring spiggot Field and other land is brought to the foot of the account, in place of blending it with the railway expenses; as the Company have in Salford and other situations, especially in Salford, a large quantity of unappropriated land of much higher value than that amount; for the advantageous disposal of which the times, so far, have not been favourable.

In order to the Company's affairs being conducted under the best and most effective management, your Committee are of opinion that your officers should be resident on the spot. They recommend therefore, that at the general meeting on the 28th instant, the proprietors should elect a law clerk resident in Manchester, in the room of Mr. W. S. Miller, who is resident in Liverpool.

Salford, 14th Jan., 1841.

RECEIPTS and DISBURSEMENTS on the Railway and the Canal, for the Half-Year ending 31st December, 1840.

A dividend of £1. per share amounts to £6,201, leaving on hand a surplus of £1,683 2s. 1d.

Your Committee, in reference to the preceding statement of accounts, have directed a dividend of 1l. per share to be paid to the proprietors on the 1st of February next.

JAMES BRANCKER, Chairman.

P.S. The dividend as ordered will be payable at the Railway Office, New Bailey-street, Salford, between the hours of Ten and Two, on and after the 1st of February next.

MECHANICAL ARRANGEMENTS OF RAILWAYS—RESIDENT ENGINEERS.

To the Editor of the Railway Times.

SIR,—There are so many sensible observations in the letter of "Scrutator," in your number of January 9th, on the mechanical arrangements of railways, that the admixture of error causes more regret than it would in a less valuable communication. On this ground I am induced to call your attention to a few points, in which I think you will see that he is rather mistaken.

The first principle which he lays down is a very important one—the necessity for the selection of the *best* engine; and after very ably pointing out their defects, he condemns the four-wheeled and the American engines,—a decision in which probably nine engineers out of ten will fully agree with him.

The general similarity of engines is, doubtless, an advantage, for the reasons he states; but surely by carrying it to the ultimate condition of all the engines of a railway being precisely *fac-similes*, as he proposes, an effectual bar is placed to any further improvement of the locomotive.

I think that most practical Resident Engineers will differ from "Scrutator" *in toto* in his assertion that all spare parts required in the repairs of a locomotive can be supplied cheaper and better by the manufacturer. There are a few parts which it is commonly more economical to obtain of the manufacturer, from their requiring more extensive resources, as to men and power, than the repairing shops of most railways command; such as boilers, crank-axles, wheels, tubes, and castings in general, &c.; but the greater part of the engine-work, the pistons, connecting rods, slide valve gear, steam pipes, &c., can be *executed* in the shops of the Railway Company as cheaply as in those of the manufacturer, to say nothing of the maker's profit. A certain number of hands are required for keeping the engines in order and re-fixing defective parts; is it not economical, when they are not necessarily thus employed, that they should be preparing as stock jobs, duplicates of those parts of an engine most likely to fail? One great advantage in having the work required in the repairs of locomotives executed by the railway Company themselves, is that they can insure good materials, the great competition among manufacturers inducing some of them to use very inferior materials in order to increase their profits.

In thus objecting to "Scrutator's" opinions, I am not speaking by surmise or theory, but from individual experience. I plead guilty to being one of that class upon whom he has lavished his censure,—a Resident Engineer. By his account we must be, indeed, a melancholy specimen of the depravity of the age. The devil is not, however, quite so black as he is painted; and perhaps "Scrutator" may have some other motive than disinterested philanthropy in thus pouring out his anathemas. Am I wrong in suspecting that he may possibly be some one of the "experienced and intelligent coach or engine makers," whom he states to be exposed to the whims or contemptuous treatment of Resident Engineers?

His attacks are directed against the whole body, and you will perhaps allow me, as one of that body, to endeavour to meet them.

In the first place, I think that Resident Engineers are not quite so ignorant a set as he represents them to be. My acquaintance may not be so extensive as his, but most of the Resident Engineers that I have known, besides their regular course of education as civil engineers, have served their time in engine factories, and there acquired a thorough practical knowledge of their business.

We are charged with undue assumption, and treating others with contempt. In reply to this I need say nothing. Resident Engineers are not nearer to perfection than other mortals, but I am not aware that they are more than others supercilious or arrogant.

By prohibiting Resident Engineers from trying experiments on railways, you would prevent Railway Companies from endeavouring to improve the present system. Surely "Scrutator" can hardly think that railways have already arrived at perfection; yet, the commencement of his letter, and his forbidding Railway Companies to experiment, would seem to imply such a conviction. If you grant that Railway Companies may endeavour to amend the working of the system in its practical departments, who is so fit a person to make the attempt as the Resident Engineer? Should it be one of the Directors? or the Secretary? or the Lawyer? The *engine user* is more likely to find out defects in its working (which some alteration of his may obviate) than the *engine maker*. A practical proof of this is found in the fact, that the most useful improvements in the locomotive have been made by the suggestion of men connected with the working of railways.

But our ignorance, our arrogance, and our fondness for "childish and injurious alterations" are not our greatest faults: there is a charge of still blacker dye brought against us—that of gross dishonesty and favouritism, implying of course bribery. This assertion "Scrutator" either knows positively to be true of some particular individual, or he does not. If he does not—why make a statement which he cannot substantiate? If he does—why not come forward honourably, and hold up the guilty party to the contempt he merits, instead of bringing such an accusation against a whole class?

The melancholy accidents which have occurred on railways during the last few months, some of them, it must be allowed, arising from culpable neglect, have excited the public alarm, and subsequently their indignation. This was directed first against engine-drivers, but your correspondent seems anxious to divert itto the Resident Engineers. Be it so; we are quite resigned to our fate, until he can prove his assertions.

Railway Directors must certainly be much obliged to "Scrutator" for his patriotic efforts to enlighten their minds, and his indirect compliment to their sagacity. If he inquires further, he will find that they are generally very properly particular not to appoint a Resident Engineer without ample testimonials of his character and qualifications; and it certainly is their own fault if one is to be found in their service who is *ignorant, arrogant, or dishonest*.

I am, Sir, your obedient servant,

A RESIDENT ENGINEER.

PROPOSED RAILWAY TO STIRLING.

A MEETING was held in Stirling on Friday week, for the purpose of hearing the Report of the Committee appointed at the previous meeting to communicate with the Directors of the Edinburgh and Glasgow Railway, as to the proposal of forming a railway to join the Edinburgh and Glasgow Railway. Among those present we observed—The Earl of Dunmore, Colonel Abercromby, M.P., Mr. Murray, of Polmaise; Mr. Johnstone, of Alva; Colonel Graham, of Meiklewood; Mr. Smith, of Deanston; Mr. Stirling, of Glenbervie; Mr. Galbraith, town-clerk of Stirling; Bailie Smith, Mr. Thomfactor, of Keir; Mr. Geldes, Bannockburn, Mr. Ross Macvicar, Keirfield; Mr. Andrew Roy, Allod; Mr. Blackadder, civil engineer, &c. &c.

The Earl of Dunmore having been called to the chair, delivered his Report as convener of the Committee appointed at the previous meeting, to correspond with the Directors of the Edinburgh and Glasgow Railway, with the view of ascertaining their opinion on the subject of a branch railway. His lordship stated that, as a Company, the Directors did not contemplate at present interfering in the matter, and declined saying any thing definite on the subject until negociations were entered into.

After some discussion, in which the Earl of Dunmore spoke against the project.

The following motions were agreed to:—

It was moved by Colonel Abercromby, and seconded by Mr. Murray, that this meeting is of opinion that the formation of a railway to join the Edinburgh and Glasgow Railway, would be of great public advantage.

Colonel Graham, of Meiklewood, moved, and Bailie Smith seconded, that in order to facilitate the introduction of such a line of railway as would be least injurious to the interest of proprietors, a committee should be appointed to make full inquiry into the matter, to communicate with the proprietors of the Edinburgh and Glasgow Company, to appoint a survey to be made by a competent engineer, and to report from time to time to the general meeting.

Mr. Smith, of Deanston, moved, and Mr. Roy seconded, that a subscription be entered into for the purpose of defraying the expense of the survey.

The same Committee as that formerly appointed was continued, with the addition of Mr. Smith, of Deanston, the Provost of Stirling, and Bailie Smith—Lord Dunmore having withdrawn his name.—Abridged from the *Stirling Journal*.

FORTH AND TAY RAILWAY—EDINBURGH, DUNDEE, AND NORTHERN RAILWAY.

A MEETING of the Committee was held yesterday—Provost Wallace of St. Andrew's in the Chair. It was unanimously agreed that the railway should be called the Edinburgh, Dundee, and Northern Railway. Communications received from various quarters were laid before them, and among others one from Sir John Richardson, as chairman of the Committee of the county and town council of Perth, favourable to a railway by Stirling, stating that they were favourable to the line by Stirling, so as to join the grand trunk line from London, but inquiring whether, in the event of that line being found impracticable, or in the event of its being thought that a Fife line should also be formed, the promoters of the Eastern Railway will submit to a neutral engineer of eminence to decide as to the best line for the county in general through Fife. The meeting resolved that as there are not two competing lines through Fife, the object of the Western line appearing to be to reach Perth, while the object of the Edinburgh, Dundee, and Northern line is to unite these two towns and the north, they decline acceding

Digitized by Google

to the request of the Perth committee; but, at the said time, express a desire to aid and forward a junction line from the trunk at Kettle, or in that neighbourhood, to the towns of Perth and Newburgh, and mouth of the River Earn; and resolved that every exertion should be made to carry forward and complete the line from Edinburgh to Dundee without delay. Mr. Grainger laid before the meeting a report as to the projected lines, which were ordered to be printed and circulated as widely as possible. A letter from Mr. Thomas Couper, warehouseman, Edinburgh, was produced, stating that, although not embarking in railway shares, from the long connexion he had had with Fife, and the merchants of Cupar in particular, that he would have pleasure in giving a donation of 10*l.* for preliminary expenses. The thanks of the meeting were voted to Mr. Couper.—*Fife Herald*, Jan. 14. [We understand that the surveys, &c., are so far advanced that the promoters will be able to give the necessary notices by the 1st of March next.—Ed. R. T.]

THE PROPOSED RAILWAY FROM LONDON TO STAINES.

On Monday week a numerously-attended meeting of the owners of property and occupiers of houses within the parish of Kensington, who will be affected by the projected new railway from Knightsbridge-green to Staines, was held, pursuant to public notice, in the large room of the Swan Tavern, at Old Brompton, for the purpose of adopting measures to prevent its being carried into effect. Mr. S. Carter Hall was called to the chair. Mr. Martin (the solicitor for the opposition) then read from the book of reference attached to the plans the names of the parties whose property would be most materially affected by the railway, amongst which were Lord Kensington, Earl of Harrington, Earl of Listowell, Lady Hotham, Lady Langford, Sir Charles Cockerill, the Westminster and West of London Cemetary Company, and Messrs. Gunter, Hutchins, and Poupart, the extensive market gardeners, &c. It also appeared that the site of the new church and burial ground at Brompton would also be required for the purpose. Letters were then read from Mr. Cresswell, M.P., and the Count de Peperi, excusing their absence and expressing their decided opposition to the measure. The following resolutions were carried unanimously:—"That the meeting views with great alarm the proposal of an intended railway, to be called the Staines Railway, and which in their opinion will most injuriously affect the parish of Kensington and destroy the interests of the neighbourhood. They therefore resolve to oppose the said railway by every means in their power. That it is highly desirable that all necessary proceedings be taken for effectually opposing the said measure in and out of Parliament." A committee was then appointed to conduct the proceedings in opposition to the Bill, and to collect subscriptions to defray the expenses; and thanks having been voted to the Chairman, the meeting broke up.—*Daily Papers.*

THE PROPOSED CORNISH RAILWAY.

A Committee meeting was held on Monday last, at the Council-room, Truro, at which the Earl of Falmouth presided, and which was attended by Lord Boston, Sir Charles Lemon, Mr. J. Ennis Vivian, M.P., Mr. Hutchins, M.P., Messrs. M. Williams, H. Williams, J. H. Tremayne, R. R. Broad, F. Rodd, Rev. W. J. Coope, and several other gentlemen. At this meeting Captain Moorsom returned the progress he had made towards the completion of the survey; and we learn that his statement afforded great satisfaction, showing that he had prosecuted this important object with a diligence and perseverance which have reflected upon him the highest credit. The weather has been unpropitious; but notwithstanding the obstacles which have presented themselves, four principal lines have been examined, and the result thus far has been that a good practical working line has been surveyed, and the sections completed, so as to form a common trunk from Exeter to Falmouth. This line will afford an opportunity to the Plymouth and Tavistock people to avail themselves of its advantages, without passing over the high land of Dartmoor, while the distance added to Mr. Rendle's line will not be more than three miles and a half, and no plane will exceed the inclination which a locomotive engine of the first class will pass over with an ordinary train at 17 or 18 miles per hour. Several members of the committee doubted whether Captain Moorsom could perfect his plans by the first of March next; but he expressed himself so confidently on this subject, that it was determined, at the suggestion of Mr. Hutchins, to proceed with the survey without delay. We cannot but express our great satisfaction at this determination of the committee; for the packet question, which will, no doubt, be brought to a decision immediately after the meeting of Parliament, must be mainly affected by the manner in which the county affords its support to this vast, and most important undertaking.—*Cornwall Royal Gazette.*

The Capability of Railways.—The railway has in its nature, such obvious advantages over every other mode of conveyance, in its rapidity, smoothness, ease, and comfort, and in the extent of its accommodation, as to promise that in a short period it must supersede all other vehicles. From its capability of moving the most extraordinary burthens, it might convert its carriages into splendid saloons, fitted up with every luxury of princely life—it might be a moving mansion rather than a rapid coach—it might be anything that the increasing taste of the times could demand—it might be a succession of rich and various apartments, with rooms for refreshment, reading, retirement. If this is to be called fanciful, it is only what has been done already in the steam boat. It would not be a greater change than has been made in the ordinary American passage, handsome as the packets were. Since the Great Western and Great Liverpool have begun to traverse the Atlantic, we have in those vessels, not ships but floating palaces—no narrow and simple nests of beds for forty or fifty cramped and uncomfortable passengers, but flying households of two or three hundred people, surrounded with every enjoyment of life, and rushing through the ocean with the speed of eagles.—*The Britannia.*

Manchester and Leeds Railway.—As already announced in the *Mercury*, this line of railway was opened throughout (with the exception of the Summit tunnel) on Thursday, the 31st ultimo. On perusing the Report of the Directors, dated 17th September, 1838, we find it stated that "during the present year the entire line may be expected to be in the course of execution, and it is hoped, should *nothing unforeseen* occur, will be opened to the public within the year 1840." Considering how difficult it is to state, so long before-hand, the probable period when works of even ordinary magnitude may be completed, this certainly affords an extraordinary instance of the liberal fulfilment of the expectations held out by Directors to their proprietors. This appears the more remarkable when the gigantic character of the works in question is taken into account; the difficulties in which were pronounced by many to be insuperable. The repairs now going on at the tunnel, we understand, were quite "unforeseen," but even this circumstance will not delay the entire opening beyond a month from the present date.—*Leeds Mercury*, Jan. 2.

Birmingham and Gloucester Railway.—The north mails from Cheltenham to Birmingham are to be put upon the railway on the 5th of next month, on and after which date the up mails will leave Gloucester at seven and nine p.m., and the down return mails will start from Birmingham at three and five a.m., daily. By this arrangement Cheltenham ought to gain an hour in the making up of the bags of the first north mail, which will be a great convenience to many persons who are in the habit of corresponding with Birmingham, and other places further north, which are dependant for the transmission of their letters upon the arrangements of the post-office of that town.—*Cheltenham Looker-on.*

THE WELSH RAILWAY QUESTION.

(From the *Chester Chronicle.*)

On Friday week a meeting—purporting to be a county meeting—was held in the Shire-Hall, Carnarvon, with what object does not very distinctly appear from the report in the *North Wales Chronicle*, but as far as we can gather from that report, for embarrassing the London and Dublin direct communication question, with the Portdynllaen crotchet.

The main actors on the occasion in question remind us of an old political squib, called "The Loves of the Triangles"—one side being represented by Mr. Ormsby Gore, another by his son Mr. Ralph Gore, and the other by Mr. Bulkeley Hughes, who is their nominee for the borough of Criccieth. It was attempted by the first gentleman to make it appear as if this demonstration was a North Wales one, and at the instance of "a great number of persons who felt an interest in the matter"; but the High Sheriff, to his consternation, had let the cat out of the bag, that it was *solely* promoted by Mr. O. Gore, and Mr. Archer, who has long been known as the promoter of the interior or Shropshire line in connection with Portdynllaen. In fact, it was a Shropshire demonstration altogether—no one appearing to have anything to say upon it but the two Gores and their shadow, save and except Gen. Sir Love Parry. Never was a poorer case made out for revising a scientific decision, and so the gallant General seems to have felt, hence he was driven to quote a partizan article from the *Nautical Magazine*, in favour of Portdynlaen, and against Holyhead.

It is clear, not only that the meeting was a failure, but that had it not been that a meeting had been called for the same time and place to petition against the prospective union of the dioceses of Bangor and St. Asaph, no one would scarcely have thought it worth his while to attend, except the aforesaid triumvirate. The main question was altogether bilked, and what oratory was hazarded was principally in reference to the eligibility or non-eligibility of each port for *an asylum harbour*. Everything that was alleged left untouched the superiority of Holyhead as a packet station, in connection with the best and most eligible line of railway. It is no part of our province to contend against Portdynllaen, as an asylum harbour. It may be, and doubtless is, all that its partisans say, and there may exist grounds sor converting it into one: but still that leaves untouched the coast line railway project with Holyhead as the coast terminus. Let, therefore, the proceedings of the meeting go forth to the public, for what they are only worth, and not as a North Wales demonstration in favour of Portdynllaen and against Holyhead, as the packet station connected with London and Dublin direct communication.

[We suspect that this opposition to the Great Holyhead Railway will, after all, end in nothing. We understand that the subject will be brought before Parliament early next session.—Ed. R. T.]

Great activity is displayed in tracing the Coburg railroad, which is to connect Coburg, Hildburghausen, Meiningen, Gotha, Weimar, Erfurt, and Eisenart, and is to join the Prussian road further north. The work will begin in the spring. What an advantage, when this is finished! A traveller can go in two days to Nuremburg, the centre of south-German commerce, or from Bamberg, the junction of the Main and the navigation of the Ludwig Canal, to Berlin, or Bremen, or Hamburg.

Old English Travelling.—A writer describing England early in the reign of William the Third, "of Glorious memory," speaks of it as excelling all other countries in the convenience of coaches, but especially that of stage-coaches, which he praises for their commodiousness and ease, and particularly for their expedition. "Here one may be transported (he says) without over violent motion, and sheltered from the injuries of the air, to the most noted places in England, with as much speed that some of these coaches will reach above *fifty miles in a summer's day!*"

—o—

RAILWAY ACCIDENTS.—Nearly all the accidents that have occurred upon the railroads (says the author of the *Music of Nature*) have arisen from inattention and carelessness, or the heedless conduct of the drivers. In the hands of scientific men, these terrific machines are to be controlled by the strength of a child, and none but scientific persons should be suffered to guide them. The present foggy weather however, has presented a formidable difficulty. The lights cannot be seen at a distance sufficiently remote to prevent one train running into another, and a dreadful collision is the consequence. Could not a musical tube be affixed to give out a loud concordant sound, like the notes middle C, E, and G, upon an organ, which I conceive, would be heard at the distance of three or four miles; and might not a gong be affixed to the train, which with a simple contrivance, could be played upon, if necessary, through the whole of the course. With this music, and a good pair of ears in the last carriage—surely these dreadful accidents in future may be prevented.

MANCHESTER AND SHEFFIELD RAILWAY.—We have had the pleasure of seeing a section of the line of this railway from Manchester to Glossop, in which the parts of the work done are coloured, and it is gratifying to perceive that very great progress has been made.—*Sheffield Patriot.*

TO RAILWAY COMPANIES—Public Security, Efficiency, and Economy, in FENCE for RAILWAYS, J. PORTER begs to state, that he has within the last month introduced a New Description of Iron Fence for Railways, so strong as to resist the heaviest cattle, and prevent the possibility of sheep getting through. It is bold in appearance, and will bear the weight of men passing over or jumping upon it, without injury.

This Fence will be sound and good 50 years hence, and the cost of post and rail fence to last 10 years would purchase it.

Lighter Fence of the same description, also strained Wire Fence of the very best kind, fixed in a superior manner, by experienced workmen, at any part of the kingdom, at the lowest possible price.

This Fence is also suitable for the use of private gentlemen, Iron Bedsteads for families, public institutions, and exportation.

82, Upper Thames-street, and the Grove Iron and Wire Fence Manufactory, Southwark.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, and manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4): and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Roake and Varty, 31, Strand; W. VAN BUTCHELL ON FISTULA, &c.

Fourth Edition, just published, in 8vo., cloth boards, price 7s. 6d., enlarged,

FACTS and OBSERVATIONS relative to the successful Mode of Treating Piles, Fistula, Hemorrhoidal Excrescences, Tumours, and Strictures, without cutting or confinement; illustrated with numerous cases; being a familiar exposition of the Practice of S. J. VAN BUTCHELL, Surgeon and Accoucheur.

Published by H. Renshaw, No. 356, Strand; sold also by the author, No. 16, Percy-street, Bedford-square.

"This volume presents to us a number of illustrations of his singular success under circumstances that would have induced despair in any professor of less mastery, or less accustomed to accomplish cures where cures seem impossible. The statements here made are most convincing, and place beyond doubt the superiority of the treatment to which he refers."—*Court Journal.*

PREVENTION OF DAMP, &c.—The Parisian Bitumen Company have at various times announced to the public the perfect prevention they have obtained by a particular mode of manufacturing their Bitumen against the running of water through roofs, and the security of, and dryness to cellars, &c. They think it right at the present time to bring the matter more prominently before the public, and they can confidently affirm that the Bitumen as made by them will fully answer in every respect, and moreover that it has been altogether unaffected by the late severe frosts.

RICHARD FOSS, Secretary.

STAFFORD AND RUGBY RAILWAY.—ATHERSTONE.—At a Public Meeting of the inhabitants of Atherstone, in the county of Warwick, held at the Town Hall on Monday the eighteenth day of January, one thousand eight hundred and forty-one, called by the Constable, pursuant to a numerously and respectably signed requisition,

CHARLES HOLTE BRACEBRIDGE, Esq., in the Chair.

It was proposed by Joseph Wilday, Esq.; seconded by Mr. William Bourne, and

Resolved—That viewing with much satisfaction the renewed attempt to construct a railway through this town by the same parties, although under a different name, who, during the session of 1839, maintained such an arduous contest for that purpose, and it appearing that the proposed alteration in the line at its north-western terminus, will be highly advantageous, inasmuch as, in addition to affording a desirable access to London, Manchester, and the manufacturing districts, it will also open a direct and economical communication with Liverpool, Chester, North Wales, and Ireland, this meeting regards the Stafford and Rugby Railway as an object of the most vital importance to the prosperity of the town and trade of Atherstone, and of great accommodation to the surrounding neighbourhood, and thereby placing this town and neighbourhood, upon an equality with other towns enjoying the like advantage; and that, should the railway company consent to make a first class station at Atherstone, they will be entitled to, and shall receive, the utmost support of the inhabitants.

Proposed by John Vinrace, Esq.; seconded by Mr. John Noble, and

Resolved—That a committee consisting of the following inhabitants of Atherstone, namely, Messrs. Bracebridge, Wilday, Vinrace, Sale, sen., Neale, Corbett, Power, Bourne, sen., and Collis, be appointed to watch the interests of this town and neighbourhood, and to further the objects of the undertaking.

Proposed by the Rev. Edward Power; seconded by Mr. Morris, and

Resolved—That unless the projected railway from Stafford to Rugby be carried into effect, in all probability a serious monopoly may exist greatly detrimental to the interests of the public at large.

Proposed by Henry Power, Esq.; seconded by Mr. Thomas Simmons, and

Resolved—That the petitions now read in favour of the Stafford and Rugby line of Railway be adopted for presentation to the two Houses of Parliament respectively, at the earliest opportunity after the assembling of Parliament.

Proposed by George Sale, Esq., seconded by Mr. Edward Noble, and

Resolved—That the Right Honourable the Earl Howe be respectfully requested to present the petition to the House of Lords, and that William Stratford Dugdale, Esq., M.P., be solicited to present the petition to the House of Commons.

Proposed by William Henry Collis, Esq., seconded by Mr. John Bourne, and

Resolved—That a copy of the above resolutions be transmitted to Sir J. E. E. Wilmot, Bart., and William Stratford Dugdale, Esq., members for the northern division of this county, with a respectful request from this meeting that they will give the projected railway their sanction and support when the subject shall be introduced into the House of Commons.

That in the opinion of this meeting it is desirable communication should be opened with the inhabitants of other towns immediately situated, and especially with the petitioners against the Stafford and Rugby line, and that petition of [illegible] districts that [illegible] injured by the present monopoly be forwarded to Parliament, requesting that equal facilities be given to each part of the united kingdom where railways may be proposed, that a fair competition be excited between the different parallel lines, which will be for the good of her Majesty's subjects as well in railways as in the general trade of the country.

(Signed) C. H. BRACEBRIDGE, Chairman.

Mr. Bracebridge having vacated the chair, and Joseph Willday, Esq. having been called thereto, it was

Resolved—That the best thanks of the meeting be given to Mr. Bracebridge for the very satisfactory manner in which he has conducted the proceedings of the day.

(Signed) JOSEPH WILLDAY.

THE GUIDE AND COMPANION to the London and Birmingham, Grand Junction, Liverpool and Manchester, Birmingham and Derby Junction, Midland Counties', North Midland, Sheffield and Rotherham, York and North Midland, Manchester and Leeds, Leeds and Selby, Hull and Selby, Whitby and Pickering, the Great North of England, Stockton and Darlington, Stockton and Hartlepool, Clarence, Durham and Sunderland, Newcastle and Carlisle, Newcastle and North Shields, the Brandling Junction, and the Stanhope and Tyne Railways, is now preparing for Publication,

By STEPHEN GLOVER,
Wilmot-street, Derby.

Under the Patronage of the Directors, and dedicated by Permission to GEO. STEPHENSON, Esq., of Tapton House, Derbyshire; Engineer-in-Chief of the London and Birmingham, the Grand Junction, the North Midland, the York and North Midland, &c. &c.; in four parts, each part will be a complete Guide to the Lines described.—Price to Subscribers, 5s. each Part, with Maps, Lithographic Prints of principal Stations, Tunnel Entrances, Bridges, Viaducts, &c. &c.

The First Part will include the London and Birmingham, the Grand Junction, the Manchester and Liverpool, and the Derby and Birmingham Junction Railways.

The Second Part will include the Midland Counties', the North Midland, the Sheffield and Rotherham, and the York and North Midland Railways.

The Third Part will include the Manchester and Leeds, the Leeds and Selby, Hull and Selby, and Whitby and Pickering Railways.

The Fourth Part will include the Great North of England, the Stockton and Darlington, Stockton and Hartlepool, the Clarence, the Durham and Sunderland, the Brandling Junction, the Stanhope and Tyne, and the Newcastle and Carlisle Railways.

Upwards of 2,000 Subscribers have patronised this useful Work.

The Author most respectfully announces to the Inhabitants of London, Harrow, Watford, Rickmansworth, St. Albans, Hemel Hempstead, Berkhampstead, Chesham, Tring, Alesbury, Leighton Buzzard, Woburn, Wolverton, Newport Pagnell, Stoney Stratford, Northampton, Towcester, Blisworth, Weedon, Daventry, Crick, Rugby, Brandon, Coventry, Hampton in Arden, Birmingham, and the intermediate Towns and Villages on the London and Birmingham Railway; Aston, Handsworth, West Bromwich, Walsall, Dudley, Wednesbury, Darlaston, Bilston, Willenhall, Shiffnall, Wolverhampton, Brewood, Penkridge, Rudgeley, Stafford, Eccleshall, Stone, Trentham, Stoke-upon-Trent, Burslem, Lane-End, Hanley, Tunstall, Shelton, Newcastle-under-Lyne, Macclesfield, Congleton, Nantwich, Sandbach, Middlewich, Northwich, Tarporley, Chester, Frodsham, Warrington, Altringham, Runcorn, Newton, and intermediate Villages on the Grand Junction Railway; Manchester, Liverpool, and intermediate places on the Liverpool and Manchester Railway; Tamworth, Walton-on-Trent, Barton, Burton on-Trent, Repton, Willington, and intermediate places on the Derby and Birmingham Junction Railway; Lutterworth, Ullesthorpe, Wigston, Leicester, Syston, Sileby, Barrow, Mountsorrel, Loughborough, Kegworth, Nottingham, Beeston, Sawley, Borrowash, Spondon, and intermediate places on the Midland Counties' Railway; Derby, Belper, Matlock, Bath, Wirksworth, Cromford, Bakewell, Crich, Alfreton, Wingfield, Chesterfield, Staveley, Eckington, Masborough, Rotherham, Sheffield, Swinton, Doncaster, Barnsley, Wakefield, Leeds, Aberford, Tadcaster, Pontefract, York, Selby, Howden, Goole, Hull, Beverley, Bridlington, and all the intermediate towns and villages on the North Midland, the Sheffield and Rotherham, the York and North Midland, the Leeds and Selby and the Hull and Selby Railways. Eastugwold, Boroughbridge, Aldborough, Thirsk, Northallerton, Darlington, Stockton, Richmond, Ripon, Middlesborough, Bernard Castle, Bishop Auckland, Hartlepool, Sunderland, Durham, Stanhope, Monk and Bishop Wearmouth, South Shields, North Shields, Gateshead, Newcastle, Hexham, Carlisle, and all the intermediate Towns and Villages connected with the Lines of Railway in the counties of Durham, Sunderland, Northumberland, and Cumberland; Liverpool, Manchester, Huddersfield, Halifax, Bradford, Dewsbury, Wakefield, and intermediate towns and villages on the Liverpool and Manchester, and Manchester and Leeds Railways; that he has been some time actively engaged in collecting and arranging the requisite materials for the formation of a complete Guide and Companion to the several lines of railway designated by the above names, and connected by their common terminus in the grand central station at Derby.

The utmost care and attention will be constantly bestowed upon the continued selection of important facts and details, as well as upon all the necessary arrangements, so as to expedite the progress of the work, and prepare it for immediate publication, as soon as the opening of the entire lines shall have connected the Great Northern Mining and Manufacturing Districts, commencing at Carlisle, Newcastle, Sunderland, Durham, North and South Shields, Hartlepool, Stockton, Darlington, York, Hull, Leeds, Huddersfield, Barnsley, Rotherham, Sheffield, Chesterfield, and Belper, with the central terminus at Derby; and thence through all the intervening midland districts with the metropolis, by the line of the Midland Counties' to its junction with the London and Birmingham Railway at Rugby, and also by the Birmingham and Derby Junction line to the vicinity of Birmingham. And the port towns of Liverpool, Hull, Newcastle, Whitby, Hartlepool, Sunderland, North and South Shields, &c. &c.

The work will contain ample information, drawn from the most accurate sources, of all particulars connected with the origin, progress, of formation, and execution, of these most important and stupendous undertakings. It will comprise a topographical account of the country traversed by the several lines of railway;—the adjacent seats of the nobility and gentry, contiguous towns and villages, with a general description of the principal towns, their public buildings and institutions, statistics of trade and manufactures, historical reminiscences, natural and artificial curiosities, and other objects of public interest. Also correct tables of the times and fares from and to the various stations, with information on all subjects of general importance, or of particular interest to the residents in the vicinity of the lines; or that may render it a desirable and valuable companion to the railway traveller.

Considerable portions of the information on which this work will be founded, will be derived from sources accessible to few. It will, therefore, possess some peculiar and almost exclusive advantages. The fine lithographic views of the various stations on the North Midland Railway, are transferred from beautiful and accurate drawings of Francis Thompson, Esq., architect of the whole line, and Alexander Ross, Esq., the eminent Engineer, to whose kindness and liberality the author is highly indebted. The views on the other lines have been supplied by John Green, Esq., Architect of the Great North of England Railway; F. G. Andrew, Esq., Architect of the York and North Midland; John Blackmore, Esq., Engineer, and Benjamin Green, Esq., Architect of the Newcastle and Carlisle Railway, who have most liberally furnished the author with numerous elegant drawings of stations, viaducts, bridges, &c., and a great fund of valuable information; and by other talented artists: and in whatever departments the valuable assistance of competent persons has been desirable, to carry out the design of the work on the most liberal scale of utility, or to beautify it by illustrative representations, such assistance has been uniformly sought and obtained.

Each part will contain about two hundred and fifty pages of letter-press, and will be illustrated by a Map of the Railways, with sections of the gradients, and by beautiful lithographic views of the Grand Central Station at Derby, and the other principal and secondary stations, as well as of churches, public buildings, &c.

In confident anticipation of a demand commensurate with the useful and interesting character of the work, several thousand copies will be printed, presuming, therefore, on a very extensive circulation among various classes of the community, it must necessarily become a most desirable and advantageous medium for the insertion of the Advertisements of public companies and institutions, manufacturers, wholesale and retail traders, proprietors of hotels, general carriers by land or water, conductors of seminaries, &c.

The Advertisements will be carefully arranged so as to render them distinct, clear, and conspicuous; and displayed tastefully in beautiful type, to be shown to the best advantage.

TERMS OF ADVERTISING.

A whole page	£1	0	0
Half a page	0	12	6
One-third of a page	0	9	0

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament) of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly; or at the office of Slater and Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.

LONDON and BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-Yearly Meeting of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, on Wednesday next, 27th instant, at the London Tavern, Bishopsgate-street, at 1 o'clock precisely, when the following Directors will go out of office, but who, being duly qualified, offer themselves for re-election: John Harman, Esq., John Cattley, Esq., H. M. Dyer, Esq., John Hodgson, Esq., and Lieutenant-Colonel Moody, R. E.; and at which meeting certain shares upon which the 7th Call has not been paid, and have been in consequence thereof declared forfeited, under minute of the Board of Directors of the 19th of June last, will be submitted for confirmation of such forfeiture; and at which meeting there will be laid before the Proprietors certain articles of agreement entered into between this Company and the London and Croydon, and the South-Eastern Railway Companies, relative to the joint purchase, enlargement, alteration, and proprietorship, use, and management of a station for the said three Companies near London-bridge, in the parish of St Olave, Southwark, in pursuance of the Resolution of the General Meeting held on the 30th of January, 1840.

The transfer books of this Company will be closed on the 16th instant, and remain shut until after the meeting.

Under provision of the Act of Parliament, no person can vote at this meeting who shall not have paid all calls due.

JOHN HARMAN, Chairman.
THOMAS WOOD, Secretary.

London and Brighton Railway Office, 10, Angel-court, Throgmorton-street, Jan. 6, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—NEW SHARES.—Call of £5 per Share, in addition to the deposit of £5, making £10.

The Directors of the Birmingham and Derby Junction Railway Company having resolved that an instalment of £10 on each of the new Third Shares in this undertaking, created under the provisions of the Act relating thereto, passed in the last Session of Parliament, (3 Vict., cap. 51), payable on or before the 29th day of January next, should be called for, proprietors of such new Shares in this Company are hereby required to pay, on or before that day, to any of the undermentioned Bankers, the sum of £10 on each of their respective New Shares.

BANKERS.

London.—Messrs. Glyn, Hallifax, Mills, and Co., Lombard-street.
Birmingham.—The Birmingham Banking Company.
Manchester.—The Manchester and Salford Bank.
Derby.—Messrs. W. and S. Evans.
Burton-upon-Trent.—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield.—Messrs. Parker, Shore, and Co.

The Bankers have been severally instructed to charge interest at the rate of £5 per cent. per annum, according to the provisions of the Act above referred to, from the 29th day of January next, on all sums which shall be tendered after that day.

HENRY SMITH,
Chairman of the Board of Directors.
THOS. KELL, Secretary.

Waterloo-street, Birmingham,
Dec. 31, 1840.

N.B.—The proprietors who have paid the deposit of £5 will have credit given them for the amount so paid, on payment of the above Call, and as part thereof.

OFFICES and CHAMBERS.—To be LET, three excellent OFFICES, on the ground floor, conveniently fitted up, and admirably adapted for the use of a solicitor, parliamentary agent, or other person having business connected with Parliament or the Courts of Law, being situate within five minutes' walk of Westminster Hall. Commodious chambers for domestic purposes, with attendance, may be obtained, if desired, in the same building.

For cards to view apply to Mr. Calcutt, butcher, Little Queen-street, Westminster.

NOTICE.—R. B. WATSON & Co., of Leeds, beg to acquaint their friends and the public, that they have opened a branch house, in Hull, for the sale and purchase of shares of all descriptions, under the firm of R. B. Watson and Bell.

R. B. W. has known Hull for thirty years, and Leeds for twenty-five, having lived in the former place twenty years, and in the latter ten.

SHANNON COMMISSION.—TO CONTRACTORS AND BUILDERS.—The Commissioners for the Improvement of the River Shannon hereby give NOTICE, That the Plans and Specifications of the several Works to be executed on the River Shannon for the several Piers and Landing Wharfs at the undermentioned places below Limerick, viz.:—

Querin ..... County Clare,
Kilrush ..... County Clare,
Kildysart ..... County Clare,
Kilteery ..... County Limerick,

And for the Wooden Bridge across the river opposite Plassy Mill, in the county of Limerick, are ready for inspection, at their office, Dublin.

The sites of the proposed Works will be pointed out, upon application to W. H. Owen, the Commissioners' Engineer, at Limerick; and any further information may be obtained from Thomas Rhodes, Esq., the Commissioners' principal Engineer, Custom House, Dublin.

Security will be required for the due performance of the Contracts.

The Commissioners do not bind themselves to accept the lowest, or *any*, Tender.

A separate Tender will be required for each work.

Sealed Tenders, addressed to the Secretary, marked in left-hand corner, "Tender for (what proposed)," to be delivered on or before the 15th day of February next, after which day no Tender will be received.

The Commissioners are also prepared to receive Tenders for the Supply of Twenty Wrought Iron Buckets and Links for Dredging Vessels. The drawing or pattern of same can be seen at the Commissioners' Office, Dublin.

No Tender for the Buckets will be received after the 23rd instant.

By order,
(Signed) EDWARD HORNSBY, Secretary.
Shannon Commission Office, Custom House, Dublin,
8th January, 1841.

TUCK'S HERMETIC ENVELOPES, on an entirely new plan (*Manufactured by Machinery, and registered pursuant to Act of Parliament*) offer advantages possessed by no other Letter cover yet devised. The Postage Stamp Label is affixed to the Envelope in such a manner as to serve at once to seal and frank the Letter.

Separate Waxing or Wafering rendered unnecessary.

Time in making up and dispatching less than the before introduction of the Penny Postage system.

All envelopes hitherto made on the old plan may be easily opened without breaking the seal, their contents read or abstracted, and the envelope re-placed in its original state, so as to defy detection. But this cannot be done with the HERMETIC ENVELOPES, which renders them invaluable for the enclosure of Bills of Exchange, Remittances, Confidential Communications, Legal and Official Documents, &c.

May be had at the Office, 122, FLEET-STREET, in quantities of not less than 250 of various sizes, in neat paper boxes, from 10s. to 15s. per 1000, and of all Stationers in the kingdom.

*** Orders also received at 139, Aldersgate-street.

This day is published,

TUCK'S MAP OF THE RAILWAYS THROUGHOUT ENGLAND AND WALES TO THE CAPITAL OF SCOTLAND, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the RAILWAY TIMES Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster-row; Hyde & Co., and G. Bell, Fleet-street; Mann, Cornhill; and by all Booksellers and Newsmen.

Just published,

TUCK'S ROLLER CALENDAR for the Year 1841.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda, indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board-Room, Counting-House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d. The Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Published at 122, Fleet-street, and sold by all Stationers and Booksellers.

Just published,

THE RAILWAY CALENDAR FOR 1841, illustrated with an elaborate and splendidly executed MAP OF THE RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information; besides answering every purpose of a general Almanack.

Price 1s. 6d.—In Case for the pocket, 4s.; mounted on canvass and rollers, 5s.—In neat frame, 5s. 6d.

Published at 122, Fleet-street; and sold by all Booksellers and Newsmen.

TO CONTRACTORS, BUILDERS, IRON-MASTERS, &c.—GREAT WESTERN RAILWAY, BRISTOL DIVISION.—For Sale, the following useful Railway and other Stores, all made of the best description of materials, and in good condition:—About 70 tons of flat bottomed rails, 45 lbs. per yard; 500 tons chair rails, 30 lbs. per yard; Chairs, averaging 8 lbs. each, with a large assortment of Box Wings and Crossings; a great number of Sleepers; 250 Railway Waggons: 30 Stone Trucks, all with 30 inch wheels, and 3 inch square axles; several Strong Cranes with wrought iron guys, and gearing complete. A 6 inch Wheel, Timber, Carriage, 2 Waggons, 13 Carts with 6 and 3 inch wheels; also 6 superior Cart Horses, Smiths' Bellows, Anvils, Troughs, &c. A large quantity of Tunnel Centres and Iron Work for Tunnel purposes: Memel and Pine Timber; Crow Bars of various sizes: Sledges, Jumpers, and Blasting Tools, &c., &c. Two River Barges, one of twenty tons, the other of 50 tons burthen. Also, 3 Pile Engines.

The whole of the above named Materials lie on convenient Wharfs for Shipment, on the banks of the River Avon, between Bath and Bristol, from whence they can be conveyed at a cheap rate, to any part, the port of Bristol offering every advantage to Shippers.

For terms and further particulars enquire of Mr. Roberts, 7, Vernon-place, London; of Mr. Hugh Ross, Saltford, near Bath; or Mr. Charles Nixon, Keynsham near Bristol.

Saltford, 25th Nov., 1840.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford-on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—

From the
SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE KUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver 10s. 6d. each pair.

Omnibuses to and from every train—Fare 6d.

THE HULL ADVERTISER.—Established half a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England; while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser	75,000
Hull Packet	10,000
Hull Times	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.

The HULL ADVERTISER is published every Friday morning, in time for post, at the office, 26, Lowgate.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 38, Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, January 23, 1841.

No. 181. Vol. IV.—No. 5.] SATURDAY, JANUARY 30, 1841. [Price 6d.

NORTHERN AND EASTERN RAILWAY.—The Directors of this Company will meet on Thursday, the 11th day of February next, to receive TENDERS for the erection of a STOREHOUSE at STRATFORD.

Plans and Specifications to be exhibited at the Railway Station, LEA BRIDGE, on Wednesday, the third day of February. The Directors do not bind themselves to accept the lowest Tender.

WM. BOURNE, Secretary.

Shoreditch, London, January 29, 1841.

NORTHERN AND EASTERN RAILWAY.—CALL of TEN POUNDS per Share.—Notice is hereby given, That the Directors of this Company have made a Call of Ten Pounds per Share, payable on or before the 15th day of February next, and the Shareholders are requested to pay the same to either of the following Bankers, viz.—

London—Messrs. Masterman, Peters, and Co.
Manchester—B. Heywood and Co.
Liverpool—Messrs. Heywood and Son.
Cambridge—Messrs. Tyler and Sons.

Interest at the rate of 5 per cent. per annum will be charged on all sums which remain unpaid after the day above appointed.

WILLIAM MARSHALL,
Deputy Chairman.
WM. BOURNE, Secretary.

London, Shoreditch, 26th Jan., 1841.

LONDON AND GREENWICH RAILWAY OFFICE, London Terminus, January 26, 1841.

Notice is hereby given, That the First Half-yearly General Meeting of the Proprietors of this Company, will be held at the London Tavern, Bishopsgate-street, on Tuesday, the 9th February next, at Twelve for One o'Clock.

The list has fallen on the following gentlemen to retire from the Direction, namely, J. W. Childers, Esq., M.P., Thomas Corsey, Esq., and James Cuthbert, Esq., of whom J. W. Childers, Esq., M.P., and Thomas Corsey, Esq., offer themselves for re-election; and Andrew Monar, Esq., will be proposed to fill the vacancy occasioned by the retirement of James Cuthbert, Esq.

The Transfer Books will close on Monday, the 1st, and re-open on Monday, the 22nd of February next.

By order of the Board,
J. Y. AKERMAN, Secretary.

RAILWAY ACCIDENTS LESSENED.—The Right to a Newly-Invented Buffer, of extraordinary Power, to be Disposed of; also a Brake; the Advertiser's other avocations preclude him from devoting the time required for securing the Patents, establishing it, &c.

Address (free) Y. Z., *Railway Times* Office, 122, Fleet-street.

WATERPROOF LUGGAGE COVERS.—Manufactured by John Emms, (late Milton and Co.), Cut Side, Limehouse, London, for Railway Trucks, Waggons, Barges, &c. The great improvement in the manufacture of these Covers, which are now in use on the principal Lines, and which can be recommended with confidence to the notice of Dock and Railway Companies; Barge and Waggon Proprietors, Contractors, Builders, and others, as an article of durability, possessing all the necessary qualities—viz., that of being perfectly Waterproof, and flexible, and not subject to stiffness, a fault much complained of in tarred Cloths; and can be made of either light or heavy quality to suit the purposes required. It is also peculiarly fit for covering Roofs, Verandas Coach and Chaise Aprons, Hearse Cloths, &c.

A supply of Canvas on hand for hire, to Builders, Exhibitions, Encampments, &c., requiring temporary Coverings, Tilt Cloths, Poles, Blocks, Cordage, &c.

DARNICK AND GLASGOW RAILWAY.—The Annual General Meeting of the Company of Proprietors of the Darnick and Glasgow Railway, will be held on Friday, the 19th day of February next, at Two o'clock, afternoon, in the George Hotel, Glasgow.

Printed extracts of the Report by the Committee of Management, with an abstract of the Accounts, will be sent to the Shareholders previous to the day of meeting.

By order of the Committee,
CHAS. ALEX. KING, Secretary.

Darnick and Glasgow Railway Office, St. Rollox, Glasgow, 20th January, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Now ready, in 1 vol. quarto, 600 pages and 17 splendid executed engravings of the various Classes of Locomotive Engines and Carriages, a Railway Map of the United Kingdom, &c., &c., price £1 11s. 6d.,

THE RAILWAYS OF GREAT BRITAIN and IRELAND. By FRANCIS WHISHAW, Civil Engineer, Member of the Inst., of Civil Engineers.

"No railway capitalist will remain long without it. It is a work of immense labour and research—rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"Peculiarly valuable on account of the original and authentic information it contains."—*Midland Counties' Herald.*

"Useful to every class of persons interested in railway communication—a class which, in point of fact includes almost every member of the community."—*Liverpool Mercury.*

"Interesting to the general reader from being interspersed with Mr. Whishaw's own remarks and observations during his seven thousand mile railroad tour"—*Gardener's Gazette.*

London: Simpkin, Marshall, and Co., Stationer's Hall-court.

RECIPROCATING SYSTEM OF RAILWAYS.—By this system the most complete Railway, with the best appointments, including engines, carriages, &c., calculated for any amount of traffic, may be effected at from £10,000 to £16,000 per mile according to the nature of the country to be traversed, and the expected amount of traffic. By this mode *accidents* by *collision* are rendered next to *impossible*.

Gray's Inn, and Hampstead, Middlesex,
January, 1841.

GEOLOGICAL MAP OF CENTRAL AND WESTERN EUROPE.—Mr. WEALE, after a long preparation, has now completed for publication a large GEOLOGICAL MAP of England, Wales, Scotland, Ireland, France, Germany, Switzerland; portions of Italy and the Austrian and Prussian States. Corrected to the present time. By W. S. HUGHES, F.R.G.S. Finely coloured, price £1 10s.; mounted and varnished on rollers, or folded in a case, price £2 2s.

*** The Geological features of these countries offer much research to those who seek information on minerals and the precious metals.

59, High Holborn.

ALL SHAREHOLDERS IN RAILWAYS should send the SOUTHERN ADVERTISER and RAILWAY GAZETTE, published every Wednesday, and may be obtained of Mr. Heywood, Manchester; John Smith, News Agent, 24, Scotland-place, Liverpool; and at 326, Strand.

TO RAILWAY COMPANIES AND CONTRACTORS.—Larch and Scotch Fir Timber, Sleepers, Paneling, Planking, and Scantling of any description, may be had at the Saw Mills, Green Odd.

Apply to John Fell, Sparke Bridge, near Milnthorpe.
January 30th, 1841.

THE LONDON STOCK AND SHARE LIST published every Saturday evening. Terms, £1 1s. per annum. Postage, 9s. extra, payable in advance.

This List contains the closing prices of each day's actual transactions upon the Stock Exchange, from Monday to Saturday inclusive. The length in miles, miles opened, number of shares, amount per share, amount paid up, last calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom. The present nominal value, and every other essential particular of the principal Insurance Companies, Joint-Stock Banks, Bridges, Docks, Institutions, Canals, Gas-Light Companies, Water Works, British and Foreign Mines, and other Miscellaneous Joint-Stock Companies, North American Securities, Government Funds, Foreign Stocks, Course of Exchange, Bank of England Averages, Private and Joint-Stock Bank Circulation, Grain Averages, Remarks upon the Money Market, &c. This List is got up in a most convenient form for binding, is peculiar for its lucid arrangement, and contains more matter than any other similar publication.

The same Proprietors also publish THE LONDON DAILY STOCK AND SHARE LIST, in which is given the ACTUAL DAILY TRANSACTIONS upon the Stock Exchange to 4 o'Clock, p. m. Published every evening. Terms, £3 3s. per Annum. Postage, 30s. extra, payable in advance.

They likewise publish A DAILY LIST OF NOMINAL QUOTATIONS, containing the "Jobber's" NOMINAL PRICES of the leading Railway Shares, Consols, and Spanish, at the commencement of the day, 10 o'Clock, a. m. and at the close of the market, 4 o'Clock, p. m. Published every evening. Terms, £2 2s. per Annum. Postage, 30s. extra, payable in advance.

These Lists have been established nearly 12 months, under the patronage of the most eminent Members of the Stock Exchange, Bankers, and other Capitalists interested in Public Securities, and are attended to by parties who have access to the best information, and are practically acquainted with the markets.

Orders for the regular supply of the above Lists to be forwarded to the Proprietors, J. S. TRIPP & Co., 12, Copthall-court, London.

ULSTER RAILWAY COMPANY.—In compliance with a Resolution of the Directors, this day entered into, I hereby give Notice, That they have made a Ninth Call, for the Sum of £2 10s. Sterling, on each and every Share of the Company's Stock. Payment to be made on or before the 1st day of March next, to the Northern Banking Company, Belfast, or any of their Branches; to Messrs. Boyle, Low, Pim, and Co., their Agents in Dublin; or to Messrs. Brown, Shipley, and Co., Liverpool.

Dated at the Ulster Railway Office, Belfast, this 7th day of January, 1841.

JAMES GODDARD, Chairman of Directors.

In tendering the Money as above, it will be necessary to state the number of each share on which the instalment is paid.

Interest at the rate of five per cent. per annum will be allowed to the first of March on all sums paid of this call in advance.

MOST IMPORTANT TO RAILWAY COMPANIES, Engineers, Wheelmakers, and others.

Messrs. ADAM MURRAY and SONS are authorized to receive, until the 15th of February, written offers (the highest of which above the reserved prices will be accepted) for a LICENCE for PARKIN'S PATENT WOOD RAILWAY WHEEL, for each of the Railways having a terminus in London, Bristol, and Birmingham, and the Llanelly and Taff Vale.

The success of these wheels—the cheapest and most durable ever made—has been completely established on the Liverpool and Manchester and Great Western Railways and as they cannot break, and will prevent the breaking of axles, railway travelling will become much more safe and easy, whilst Directors will be relieved of anxiety and responsibility.

Drawing to be seen, and particulars had, of A. Murray and Sons, Surveyors, &c., 47, Parliament street.

RAILWAYS IN IRELAND.

[Abridged from the *Dublin Monitor*.]

AN important and highly respectable meeting of the nobility, landed proprietors, bankers, merchants, and inhabitants, was held on Thursday, January 21st, in the Royal Exchange, Dublin, for the purpose of taking into consideration the best means of obtaining for Ireland a general and comprehensive system of railways, under the control and direction of the state.

The meeting was very numerously attended, and amongst those present we observed:—His Grace the Duke of Leinster, his Grace the Archbishop of Dublin, the Earl of Charlemont, the Eart of Mountcashel, Lord Dunsany, the Provost, the Honourable Frederick Ponsonby, Sir Richard Franklin, (late Mayor of Limerick), High Sheriff Browne, Colonel Conolly, M.P.; C. Fitzsimon, Esq.. D.L.; George Alexander, Hamilton, Esq., D.L., county Dublin; Alderman Hoyte, Alderman Hodges; Pierce Mahony, Esq.; A. C. Lambert, Esq., D. L., Mayo; Peter Purcell, Esq.; Sir David Roche, Bart., Sir Percy Nugent, Bart.; C. Bianconi, Esq.; Colonel Blacker, J. Molony, Esq., county Clare; Colonel Creighton, Lieutenant county Fermanagh; Professor Butt, Professor Kane, E. Taaffe, &c.

Precisely at one o'clock the Chair was taken by the Right. Hon. the Lord Mayor.

JAMES PIM, jun., Esq., was requested to act as secretary.

The CHAIRMAN said, on receiving that document the requisition), I was really astounded by the extraordinary and peculiar manner in which it was signed; not only numerously signed, but signed by the nobility, gentry, and landed proprietors of this country in a manner unparalleled (cheers). It demonstrates the anxiety which is naturally felt to give employment to the people of this country; and I am convinced that in doing that the best interests of Ireland are consulted (loud cheers). I know of no subject which, if carried into effective operation, would do more incalculable service to this country, than the establishment of railways in it. Exclusive of the many other advantages which it would ensure to the people of this country, it would most undoubtedly, have the effect of reducing the number of admissions into the poor houses, increase the comforts of the people, diminish taxation, and thereby benefit the country.—(Cheers.)

Mr. PIM read letters of apology from the Right Hon. F. Shaw, the Most Rev. Dr. Murray, Lord Glengall, and Mr. Hume, M. P., and expressive of their approbation of the objects of the meeting.

His Grace the Archbishop of DUBLIN rose to propose the first resolution. In the course of a long and excellent speech he said—It is superfluous to dwell upon all the advantages the country will derive from the facility of internal communication. It promotes wealth, and in a better way than if it pleased Providence to send a most plentiful harvest to each nook of this island. I think that quick transition tends to cultivate the mind as well as to improve the body. (Hear, hear.) I think freedom of intercourse, besides its conduciveness to national wealth, would do away with narrow prejudices and blind ignorance, and almost brutish notions, which we find prevalent in the most sequestered parts of the kingdom, and that the manners of the Irish people will be improved, as well as their external circumstances, by the facility of intercourse between the various parts of the country. (Hear.) By their establishment money would be circulated and knowledge increased, and that would be only one of the consequences resulting from such an undertaking. (Hear.) It only remains to be considered, without dwelling further on the general advantages of such communication, how far it would be desirable that government should take a part in it. (Hear, hear.) I may be allowed to speak from experience, having travelled on railways in England and Belgium; and I think if we took a leaf out of a foreigner's book, we would learn a great deal from the government of Belgium; for there the railroads are in exceedingly good order, and travelling much cheaper than here- and cheapness and expedition are most essential. (Hear, hear.) It must be evident that government can regulate them in a much more effectual manner than individuals; and it is a case where government must interfere, for there cannot be a railway without an Act of Parliament. (Hear, hear.) It is better that the private interests of individuals should not be mixed up with public legislation, and it is better that government should do it all through. (Hear, hear.) I may refer to the manner in which railroads are carried on in England to prove what I say. Look to the expense of travelling on the English railways. (Hear, hear.) I would say that a remunerative return might be fairly expected, even at a lower rate than that paid on our railway, if the whole concern was centralised; but supposing this was not the case, and that the freight and passengers, and luggage, and goods did not pay the interest on the money, still the money would be so laid out that it would come back to government through the medium of the nation. (Hear, hear.) From the increase of consumption of excisable commodities, and the many persons from distant farms that would send their articles to market, the increased value of land and labour, when the produce could with facility be transported from place to place, all tending to enrich the country, must of course enrich the government of the country. (Hear.) There is another point of view that is frequently overlooked. Take, for example, the Dublin and Kingstown Railway Company, the only one in this country. I say the value of the undertaking is not to be estimated by what is paid by passengers; there are persons who derive benefit from it beyond what they pay—the payment comes from each individual who actually travels by the steam carriages. But one other great advantage which many derive from it is, the possibility that he may go at once, and the circumstance of having a mode of conveyance by which he can travel at once, gives a facility to business, and very often the means of health and professional activity, when the individual perhaps does not expend five shillings in the year on it. A person in ill health, who was forced to reside in Dublin to have the benefit of medical aid, can now reside in Kingstown; and if assistance be wanting, a person can be sent to or from Dublin at half an hour's notice. (Hear, hear.) There are many who if asked whether they would rather than 20*l.* a year to have this railroad, would say they would rather than 50*l.* a year to have it though perhaps they may not expend five-shillings on it. Then, with respect to the effect it would have in preserving peace and order in remote parts of the country. (Hear, hear.) It is quite manifest that a small number of police could more effectually preserve order than a large body, when there is a want of such means of communication. The people will become more civilised by having such roads made, for they will afford a ready appeal to legal protection from lawless violence. (Hear.) And even if an invading enemy landed in the country—though there is not much fear of it yet—10,000 men would be able to contend with 100,000 if we had the country intersected with the railroads—(hear, hear)—while the invaders could not make use of them, for if they attempted to do so they could be blocked up. (Hear.) These are only a few of the advantages that would arise from an application of steam on railroads, in the hands of government, and I would wish, before I conclude, to advert to one collateral circumstance; and I do believe that however strenuously those persons may labour who are exerting themselves for the promotion of Irish industry, facilities of intercourse—which creates expenditure of capital and affords protection to the peaceable, will do more to promote industry than any combination. (Hear.) There is no person more anxious to encourage Irish industry than myself. I have been convinced that the only effectual way to encourage Irish manufacture is to encourage the production of articles of the best quality and at the cheapest rate. (Hear.) Let them stand on their own basis. I am sure that a forced adherence to the manufactures of any country will destroy them for it will make the workmen lazy, and it will induce them not to take the same care they otherwise would do. But increase Irish skill and capital, and then you may leave the Irish manufacturers to take care of themselves. (Hear.) I say that forced manufactures of any kind, which creates a legal or illegal monopoly, is like a green-house plant, which is reared up by artificial means, but when you leave it to itself it lingers and dies. (Hear, hear.) But if they want to increase consumption, bring forth a healthy plant that will be hardy and rooted in the soil. (Hear, hear, and cheers.) It is protected by itself and needs no other protection. (Hear.) I think the system of railroads under the protection of government is one of the most effectual ways of promoting Irish manufactures. (Loud cheers.) I will point out one way out of many by which it would have that effect. People on the sea coast find it less difficult at the present to import many articles that they want from England, Scotland, or even America, than to get them from the interior of the country in consequence of the expense of carriage; but establish railroads, and afford them a mode of conveyance for those goods, and they will not send for any article by sea to other countries when, for articles of Irish manufacture, they can have a cheap transit from one end of the country to the other. (Cheers.) I therefore think that the establishment of railroads will conduce to the general peace and prosperity of the country. His grace then proposed the following resolution.

"That one of the greatest public benefits which can be conferred by any Government upon any country is to provide for all classes of the community the means of safe, expeditious, and cheap internal conveyance and intercourse;"

and resumed his chair amid loud cheers from all parts of the house.

The Earl of MOUNTCASHEL seconded the resolution. It appeared that the government of every country was alive to the utility and necessity of establishing general lines of railways in their respective countries; and when they had done so would it not be highly blameable if the Government of this country did not do the same, when the benefits and advantages arising from it had been ascertained? (Hear, hear.) The Government were not entitled to any credit for what had been effected in this way in England; the wealth, capital, and enterprise of England had done it, but it was unfortunately well known, and all should deplore it, that Ireland was a poor country, and her poverty was so great that she could not establish a capital for any national object. It is by acts (continued his lordship) that opinions should be ascertained, and when we find that the English people do everything to improve their own immediate country and forget us, then we should be linked together more than by any other means; and if we can be assured upon substantial grounds that our hearts, our interests, and our wishes are really united, there is no doubt the countries will be united too. (Hear, hear.). Then let the Government come forward upon the present occasion—let them show that our interests are really identified, and I venture to say the countries shall continue to be bound together by ties which cannot be severed. (hear, and cheers.) It would be endless to recapitulate the benefits which would result from the establishment of railways in Ireland. It would give almost permanent employment to the poor—it would prevent thousands from obtaining subsistence in poor-houses, while it would enable many, who are now in misery and suffering, to earn an honest livelihood, and support their families in honesty and industry. (Hear, hear, and loud cheering.) The establishment of railways would be the means of spreading throughout the country a large sum of money, which would go from the hands of the shopkeeper to the hands of the artisan, the manufacturer, the agriculturist, and others; and would therefore have the effect of spreading amongst every class of society a degree of comfort and independence. The establishment of railways would supply employment in a variety of ways, which would be of the utmost advantage to the people. It would add to the wealth of the country, in proportion as it increased its available industry; it would promote commerce, and it would undoubtedly ensure the success of the present movement in support and encouragement of Irish manufacture (hear, hear, and cheers); but unless the establishment of railways was first effected, he feared the efforts made in favour of Irish manufacture would totally fail. (Hear, hear.) If railways had been once established in this country, he had no doubt they would afford a greater facility to the success of the exertions of those who interested themselves for the promotion of Irish manufacture, and that it would induce capitalists to come over to this country to speculate where there are so many inducements of every description. (Hear, hear.) Nothing could conduce so much to the comforts and enjoyments of the people of this country as the establishment of railways; it would not only relieve them from the necessity of travelling on foot on bad roads, but offered them an opportunity of cheap and expeditious intercourse, and otherwise prove a present source of advantage. His lordship concluded by stating that he mentioned those few reasons for the purpose of supporting the resolution, and he hoped that every person who heard him would agree with him that they were strong and powerful arguments in support of the propriety and advantages of establishing railways in this country. (Cheers.)

His Grace the Duke of LEINSTER rose to propose the next resolution. The noble duke said this was a a subject so well understood, and so ably laid before the meeting by the right rev. prelate and the noble lord who had last addressed the meeting, that he did not deem it necessary to detain them by any lengthened observations. He, however, trusted that the Government would take into consideration the resolutions that would be adopted by the present very respectable and influential meeting. (Hear, hear, and cheers.) His grace concluded by moving the following resolution:—

"That the establishment in Ireland of an extended and comprehensive system of railways, under the immediate control of the State, by affording to this portion of the empire these important advantages, must materially promote its future improvement and prosperity."

The PROVOST of Trinity College, Dublin, came

Digitized by Google

forward to second the resolution. He said the advantages of railways had been so much spoken of that it was unnecessary he should detain them long. However, there was one advantage which it would have, which had not been much insisted upon, and that was to bring the waste lands of Ireland into a state of improvement. (Hear, hear.) There were four millions of acres in Ireland at present waste, but which were fully capable of improvement. What was the reason that so little had been done in that way? Want of internal communication, which had rendered it so far scarcely worth the while of those who possessed these lands, and which were generally distant from any market, to expend money on their improvement. (Hear.) However, that there was no doubt they would amply repay the amount expended on them, he (the Provost) could say, having reclaimed some of the very worst of those waste lands, which had amply remunerated him; but if railroads were established, that obstacle would be done away with. (Hear.) What would be the effect of bringing those lands into cultivation? Why, that one-fifth would be added to the available territory without increasing the population. (Hear.) He (the Provost) had made a calculation, and he found that the waste lands would be sufficient to afford ample employment to the country for fifty years to come. (Hear, and loud cheers.) One great evil of the country was, that the people should not have employment—there it existed in abundance, but it could never be made available until there were railroads established. (Hear.) Every owner of property was interested in the progress of this measure, for those who had no waste lands to reclaim would be benefitted by having markets brought closer to their doors, and they would add to the value of their lands by the employment of the labouring population. (Hear.)

Mr. GEORGE ALEXANDER HAMILTON, here addressing the Lord Mayor, said he had attended as the chairman of a railway Company, but not to create disunion, for there was no man more anxious than he to preserve unanimity. His object was to put a question, and he was sure that the answer to it would be entirely satisfactory, for he anticipated it would be in the affirmative. Mr. Hamilton's question was, whether, in the event of their succeeding in inducing the Government to take up the question of railroads, it was the desire of the meeting that private Companies, whose works were in progress, should be protected.

The LORD MAYOR said he was sure Mr. Pim would be able to answer the question.

Mr. PIM said, without directly answering the question, he would state the course the Committee intended to adopt. They had intended to advocate principle, and to avoid details. They did not desire to point out any course, but to recommend that railways in Ireland should be taken under the control of Government, because they felt they could not be attended to by any other means. If they should succeed in that, then he thought the Government were bound to provide that ample and sufficient compensation should be made to those Companies already in existence; and the justice of that was so obvious that they had not deemed it necessary so introduce it. (Hear.)

Mr. HAMILTON—I am perfectly satisfied.

The resolution was then put and carried.

The Earl of CHARLEMONT, in proposing the next resolution, said that the impossibility of establishing railways by private capital in this country was so self-apparent to any person who considered the state of Ireland, that it was quite unnecessary for him to detain the meeting by any observations upon it.

Mr. High Sheriff BROWNE, in seconding the resolution, said he would not occupy their valuable time further than to express his great pleasure in seconding the resolution.

The resolution having been put from the chair, was carried unanimously.

Colonel CONOLLY, M.P., proposed the next resolution. The gallant colonel passed a very handsome eulogium upon Mr. James Pim, who had, by the matter in his pamphlet, proved beyond the possibility of contradiction, that the money spent upon railways would not be laid out upon an untried project, but that, though it might not pay an individual, yet it would be amply remunerative to the State. It had been alleged, not proved, that railways in Ireland would not yield a profitable return; but that statement was not true in any way. But, however it might remunerate a body, there was no question that it would amply compensate the State. Mr. Pim had shown that Exchequer bills to any amount necessary would be absorbed in this country, a matter which was of very considerable consequence. That was the great question; and for what Mr. Pim had done in that respect he felt bound to give him the most full testimony of his approval and his thanks. In England the Directors of Railway Companies were almost always the largest holders of shares, and few of them, though they gave directions for works or improvements, understood the meaning of the terms they used; the consequence was very great injury to the interest of the public and their own. On the plan proposed in this country the management of railways would be committed to competent engineers of high character and attainments, and who would be responsible for their proceedings. (Hear, and cheers.) The government themselves, using those roads for the transmission of the mails, would have an additional motive for keeping them well. It would be just like giving the mail coach contractors the repairs of the road. (Hear.) The government again could borrow money at 3½ per cent., whereas they should pay 5 per cent. for it. What reason then could prevent the Government from proceeding with it? In their hands it was free from the probability of failure; it was sure to pay if directed in the proper channel. It was a measure fraught with dignity, with wealth, with advantage to the country, and one with which men of all parties were called on to urge them to proceed. (Cheers.) Thus, then, they would have their Bill passed for nothing; they would have the money passed for 3½ instead of 5 per cent.; they would have their railways under proper control.

Mr. PETER PURCELL next came forward and said that, inconsistent as it might seem in him to come forward in support of a project of railways, interested in, and connected so extensively with the internal communications of the country, yet he had been always anxious to procure employment for the people, and he had held back hitherto because he foresaw the attempt made to procure a grant for railways was not attended with much hope of success. (Hear, hear). The Bill now proposed, however, had his sanction, placed as it was intended to be in the hands of the Government; and he had no doubt the project would be successful, aided by those noblemen and gentlemen whose names were signed to the requisition, and by many of whom he was at that moment surrounded. (Hear.) It was immaterial to them, and the poor labouring classes in the country, where the money came from if it were expended for their benefit. They wanted employment for their poor, and as peace and tranquility were going hand in hand with temperance throughout the country, he did think that Parliament ought to listen to their demand, and cheerfully and honestly give that assistance to which they were entitled. (Cheers.) If they expected to maintain the union, it would only be by dealing fairly, honestly, and openly with that country; and, having said so much, he would not detain them longer than by reading the resolution. Mr. Purcell then read it, and continued by saying—My private interest is but a secondary consideration when contrasted with my honest and sincere desire for the benefit of my native land. (Cheers.)

Mr. BERMINGHAM next addressed the meeting at some length. He advocated the proposed formation of railways on the grounds, amongst others, that the undertaking would afford employment to the poor, and observed that they were entitled to pecuniary assistance from Government to enable them to carry it on, as all money previously lent to this country by Government had been repaid.

The resolution was then put and carried,

Mr. JOHN O'CONNELL, previous to moving the next resolution, said—I confess I have a particular degree of zeal in this cause—all the zeal of a convert—for, when the question was introduced a few years ago, I was one of those who thought it better to leave the matter to private enterprise, and that the interference of Government would not be justified by the sound principle of political economy. I have since seen abundant reason to change that opinion, and the only portion I retain of it is, that if the undertaking does interfere with private enterprise, already begun, there should be compensation given to the parties by the state. (Cheers.) I was induced to change my opinion from a feeling that private enterprise did not avail itself of the open given to it, and that there was not capital to carry on such an undertaking; and I was also induced to change my opinion by the working of the railway system in England and Belgium, the great and numerous losses of the Companies in England before a foot of the railway was contracted for, the bad regulations, and the grounds of complaint given to individuals travelling on the railway, the little redress to be obtained by the best urged complaints to the Company; and finally, the great number of accidents, which is an important consideration. (Hear, hear.) Now, in Belgium none of those exist, and not a single accident, I believe, has occurred since they were established. (Hear.) I trust that the system which is adopted in Belgium will be adopted in Ireland. In asking for money to carry on the undertaking, we are only seeking for our own. Every loan given to us has been abundantly repaid, and we are only looking to our own taxation for it. (Cheers.) I am glad that we, Irishmen, have found one more among the many common grounds on which, without compromising our principle, or offending the private opinions or prejudices of others, we can unite with each other for the common good of our common country. (Loud cheers.) In conclusion, the Hon. Member moved the fifth resolution:—

"That it appears equally manifest that in the future maintenance and direction of such a system of railways, the Government would possess a vast superiority over private capitalists. A central board of management would necessarily be not only more efficient, but more economical, while its general effect would be to establish a system of uniformity, as well as of strict regularity and responsibility in all its details and subordinate departments, not to be attained under separate local boards; the entire and permanent control of the whole system, affording the Government at the same time an unlimited facility in introducing every improvement, and carrying out every alteration which future circumstances might call for."

Colonel CREIGHTON seconded the resolution, which passed unanimously.

The Hon. FREDERICK PONSONBY proposed the following resolution:—

"That the result of the economy attainable in these various ways by the Government, would necessarily be a reduction of the charge for the conveyance both of goods and passengers, to an extent which it would be impossible to arrive at under the present system."

He said, that it appeared to him that the statement laid down in that resolution was undeniable. When private individuals formed companies to carry on works of this kind, the only object with them was naturally enough to render the speculation as profitable as possible to the shareholders, and in pursuance of that to obtain the highest rates from the public. (Hear.) On the contrary, when they would be undertaken by the Government, they would only regard the mere interest of their money and the expense incurred in the work. They would merely look to very small returns, much less than that by which individuals could be compensated. But there were other grounds for committing the establishing of railways to the hands of Government; and it was, that the internal communications of the country, by such means, should remain as the Queen's highways, and should not be converted into sources of private monopoly. Again, it should be borne in mind that the state, for whatever money it should advance, would receive an usurious interest, because such would be the increase in the excise department consequent on the improvement of trade and commerce by means of railways, that a return of 30 or 40 per cent. would be certain to the state. (Hear, hear.) For one more reason he would advocate the measure—and that was the immense employment it would afford the population. They were deeply indebted to a gentleman who had addressed them that day—he alluded to Mr. Purcell, a most extensive coach proprietor. (Cheers.) That gentleman had evinced as much true disinterestedness, as much genuine patriotism, as any man he had ever known. (Tremendous cheering.)

Mr. TORRENS M'CULLAGH having addressed the meeting,

The resolution passed unanimously.

Sir PERCY NUGENT, Bart., said, he was, however, one who repudiated the idea of going to beg from the Government any loan, without it could be shown that it was by the unanimous consent of all parties connected with Ireland, and for the universal benefit of their country. They had a right to expect assistance from the Government of the country for the promotion of so great an object—their capital was their labour in land, which they were ready to mortgage for the money advanced, and when, moreover, they would be able to show no loss could accrue—it was, he thought, making out a case which could not be resisted. The honourable baronet concluded by moving the following resolution:—

"That in recording our acknowledgments for the benefits which have accrued to the people of Ireland from the loans (limited as they have been) for the extension of public works in this country, it is satisfactory to be able to state, that the monies advanced for this purpose, during recent years, under the control of the Board of Works in Ireland, have been repaid, not only without loss, but actually with profit to the State. And it appears to us that the revenues to be derived from the intercourse upon a general and comprehensive system of railways, would afford ample security for any advance to be made on the credit of Government for this national work."

Digitized by Google

Mr. Charles Bianconi, of Clonmel, next presented himself and was received with loud cheers. He would state one fact, which came immediately within his own knowledge. He recollected when there was no mode of conveyance between Carrick-on Suir and Waterford—the latter a city containing a population of thirty thousand, and the former ten or twelve thousand, but a small boat, which conveyed the passengers in five or six hours, and they were often obliged to wait for the tide, which of course made the delay greater. But at that moment, such was the convenience of internal communication, that the modes of conveyance were capable of conveying to and from each of those places one hundred and twenty persons per day. (Cheers.) He (Mr. Bianconi) said, that instead of their being under a compliment to the Government for a loan to establish railways, they ought to be much obliged to them for asking it. (Cheers.)

The resolution was carried unanimously.

Mr. Christopher Fitzsimon moved the following resolution:—

"That we refrain from referring in detail to the various and manifest advantages which must accrue to the people of Ireland and to the empire from the success of the measure we advocate—to its effects in promoting agriculture—in extending manufactures—in increasing the revenue — in establishing the most rapid and closely connected communication between the most distant part of Ireland and the seat of Government—in enabling Government to select the harbour or harbours best suited for the Post-office communications with the western world, and more especially, in enabling the country at the present moment, by the new sources of employment which would be thus afforded, to sustain the pressure of those burdens for the maintenance of the destitute poor which are now in progress of being imposed upon us; in respect to all which we feel assured that the more fully the proposed measure is considered, the more entirely will it be found deserving of encouragement and support."

Colonel Blacker seconded the resolution, which was passed by acclamation.

Mr. Henry Grattan, M.P., next addressed the meeting on the injustice of withholding from Ireland what was clearly her right.

Mr. Pierce Mahony called the attention of the meeting to the evidence upon the subject given by the Duke of Wellington before a Committee of the House of Lords in 1834, when he stated if a western harbour or station were established in Ireland during the Peninsular war, it would have saved Europe millions of money, and given increased security to his operations. (Cheers.)

Sir Richard Franklin, ex-Mayor of Limerick, proposed the following resolution:—

"That the movers and seconders of the resolutions which have been now passed, be appointed a Committee (with liberty to add to their number) for the purpose of preparing and forwarding petitions to both Houses of Parliament, founded on these resolutions, to collect funds to pay the necessary expenses, and to take such other measures for the furtherance of the important objects of this meeting as shall appear to them advisable and necessary."

Mr. Molony, D.L., of Clare, seconded the resolution, and stated that the Duke of Leinster, the Earl of Kingston, and other noblemen and gentlemen, had offered to give the land on their property through which the railway would pass without any charge whatever.

Mr. Staunton having spoken,

The Duke of Leinster had great pleasure in proposing a resolution with the sentiments expressed in which he entirely and heartily concurred, and to the justice of which he was able to give his testimony, from the frequent intercourse he had with Mr. Pim. He would, therefore, move that the marked and especial thanks of the meeting be given to that gentleman for his exertions in bringing together so respectable an assemblage, and for the clear and comprehensive manner he had elucidated the subject of the introduction of railways into Ireland. (Cheers.)

The resolution was then put, and carried amid great cheering.

The Earl of Charlemont then moved that the Lord Mayor do leave the chair, and that his Grace the Duke of Leinster be called thereto; after which the marked and especial thanks of the meeting be given to the Lord Mayor, when the meeting separated.

Collision on the Leipsic Railway.—The *Leipsic Gazette* mentions that a collision took place a few days since between two trains on the railway from that town to Halle. The engineer of one of the trains was killed.

NEWCASTLE AND NORTH SHIELDS RAILWAY COMPANY—GENERAL MEETING.

The General Meeting of the Proprietors of this Company was held in Newcastle on Thursday the 21st instant. It was numerously attended, and the reading of the report, &c. &c. was received with great applause.

THE FIFTH ANNUAL REPORT

Of the Directors of the Newcastle and North Shields Railway, read at the Annual General Meeting of the Company of Proprietors, 21st January, 1841.

On surrendering the trust at this, the second, annual general meeting, since the line was opened to public traffic, the Directors of this railway feel most sincere pleasure in being enabled to congratulate the shareholders on the fact that, notwithstanding the increased number of trains during the past year, not the slightest accident has occurred to any passenger nor to any of the trains. They have made it their most anxious study to prevent the possibility of any such accidents; and they trust that the shareholders will regard this gratifying result as a proof that the attention of the Directors has not been ill-directed, nor their arrangements ill-advised. This important fact they also think cannot fail to increase the favourable opinion previously entertained by the public of this railway, and to insure their confidence in its regularity and safety.

The experience of another year's running, enables the Directors to express their confident opinion upon the principle of longitudinal timbers, upon which this railway is laid, both in reference to the wear and tear of engines and carriages, and to the ease and comfort of travelling. The engines have now been running upwards of a year and a half, and some of them have travelled upwards of 30,000 miles, and yet the tires of the wheels are very little worn; nor has it been found necessary to new tire or touch the wheels of any railway carriage on the line. Owing also to the attention bestowed on the fuel and water used, there has not been a failure of a single tube in any locomotive; these performances, the Directors believe, cannot be paralleled by any other railway.

The Directors have much gratification in referring to the satisfactory increase in the number of passengers conveyed in the last half of the year 1840, over the corresponding period of the previous year, viz.:—

	No. of Pass.
From 30th June to 31st December, 1839.....	336,619
From 30th June to 31st December, 1840.....	415,650
Increase in 1840.....	79,031
Total number of passengers conveyed in the whole year 1840.....	752,045

Large as the above number already is, the Directors are far from thinking it has attained its maximum.

The traffic of the summer months commencing at Easter when a marked increase took place, and ending in the middle of October, when so marked a diminution occurred, greatly exceeded that of the winter months, this clearly pointed out the necessity of affording greater accommodation during the summer months, and in anticipation of such necessity, your Directors last year appointed seven additional trains to run daily each way, by which means they were enabled to convey a very great number of passengers with perfect ease and safety.

Whilst, however, such an increase in numbers took place, the Directors found that the receipts did not keep in a corresponding ratio with it, and they therefore felt themselves bound in justice to the shareholders to advance the fares of the second-class carriages, so as to make them approximate more nearly to those of the class, whilst they enclosed them and made them more comfortable. At the same time they added a third class open carriages at a lower price.

The passenger duty, it will be seen, forms a very heavy item of expenditure. During the last session of Parliament a petition was sent from this railway company, praying that the mileage duty might be changed to a per centage upon the receipts. That petition was not altogether unsuccessful, as the Parliamentary Committee on Railways, in their Report afterwards, recommended a graduated per centage on the receipts. And as the present mode is so decidedly oppressive on those railways which afford the greatest accommodation, and cheapest travelling to the public, there is every reason to hope that it cannot be long before the principle is altered. The Directors would now suggest a renewal of such petition in the approaching session. They further beg to suggest that, as in consequence of the endeavour to give such exaggerated importance to the accidents which have unhappily occurred lately on railways, it seems but too certain that some attempt will be made to impose heavy expenses and restrictions on all railways, the Chairman and Vice-chairman of this Company be empowered to act in concert with any body assembled to watch the proceedings.

The receipts from the conveyance of goods has continued gradually to improve, and a further increase is expected.

After the close of the summer's running, the Directors commenced to make preparations for the conveyance of coals for the supply of Newcastle, and a depot of some extent, at the west end of the Ouseburn Bridge, is now in a very forward state, and will shortly be ready for use. This depot, it is considered, is well adapted to supply the demands of a very populous district.

The Directors feel sincere pleasure in announcing that since the special meeting of shareholders, in Dec. last, they have been engaged in negotiations with a most respectable and influential gentleman for the letting, not only of the above depots, but also of those which may be hereafter built in the Manors and at Shields, and for the conveyance of coals from some of the best neighbouring collieries. These negotiations have been brought to a successful close, and from this source they confidently trust a very considerable addition will accrue to the income of the Company. The Directors are in treaty for the purchase of the necessary property in the Manors for the erection of the depots there.

Some vacancies which occurred in the establishment during the past year have not been filled up; and in order that the working of the line may be carried on with as small an establishment as is consistent with its efficiency, a committee of investigation has been formed, but has not yet brought its inquiry to a close.

The Directors append a statement of the accounts, and recommend that a dividend at the rate of 6*l.* per cent. per annum, on the subscribed capital, be declared and paid on the 3rd day of May next.

Your Directors, in conclusion, trust that they will not be accused of improper boasting, if they add, that this railway stands almost single in having paid for the first year 5 per cent. on the capital out of the bona fide profits, and at the rate of 6 per cent. per annum for the first half year of the second year; in addition to the gratifying fact, that the railway has been conducted since it was opened without a single accident.

The report of the Directors of the Company, with a statement of the account, having been read,

If was resolved, on the motion of A. W. Swain, Esq., seconded by H. Ridley, Esq.,

"That the same is approved of and adopted, and that they be printed, and a copy sent to each shareholder."

On the motion of J. C. Jobling, Esq., seconded by Nathaniel Hindhaugh, Esq.,

"That the following shareholders be re-elected directors for the ensuing year, viz. Matthew Bell, Esq., M.D. John Hodgson Hinde, Esq., Nathaniel Grace, John Potts, Richard Spoor, Thomas Barnes, George Cruddus, Christian Allhusen, Thomas Hodgson, Mark Lambert, Matthew Hudson, John Jobling, James Lownds, John Gibson, and John Straker, Esqrs."

On the motion of Charles Rayne, Esq., seconded by J. Jobling, Esq.,

"That the best thanks of the Company be given to the Chairman, Vice-chairman, and Board of Directors, for the unremitting zeal and attention shown by them in forwarding the interests of the Shareholders during the past year."

Moved by Nathaniel Grace, Esq., seconded by H. Ridley, Esq.,

"That the thanks of the Company are especially due, and are given to Richard Spoor, John Potts, James Lownds, and Thomas Hodson, Esqrs. the Managing Directors, for their great devotion to the welfare of the Company."

Mr. Bell having left the chair—

On the motion of John Hodgson Hinde, Esq., M.P., seconded by R. P. Phillipson, Esq.,

"That the thanks of the meeting be given to the Chairman, for his able conduct in the chair."—*Northern Times.*

The Late Fatal Railway Accident on the York and North Midland Railway.—We are glad to learn that a subscription has been commenced for the relief of the widow and family of the late Mr. H. Pattison, printer, who, it will be remembered, was killed by the late railway accident which occurred at Taylor's Junction near Monk Fryston. The York and North Midland Railway Company have *liberally* placed a donation of 100*l.* at the head of the subscription list.—*Halifax Guardian.* [Not a *very* "liberal" donation we think, considering the circumstances.—Ed. R. T.]

London and Blackwall Railway.—The Directors of the Blackwall Company have made a proposition to the government, and we understand there is every probability of its being taken advantage of. It is to the effect that all steam-boats inward bound from foreign ports shall deliver their passengers and luggage at the company's wharf at Blackwall, they (the company) undertaking to have covered vans and trains always ready for the conveyance of them to their warehouses in Fenchurch-street. Upon the plan pointed out, an immense deal of the smuggling which is now carried on by travellers by steam-vessels may be prevented.—*Morning Post.*

LONDON AND BRIGHTON RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the proprietors of this Company was held on Wednesday, at the London Tavern, Bishopsgate-street, JOHN HARMAN, Esq., in the Chair.

The attendance was very large.

The advertisement calling the meeting having been read,

It was unanimously resolved, on the motion of the Chairman, that the common seal of the Company be affixed to the register of proprietors, which was done accordingly in presence of the meeting.

The CHAIRMAN then remarked that the periodical meetings of the proprietary naturally assumed a higher degree of interest, as the great undertaking in which they had embarked progressed towards completion. It was now his pleasing duty to call the attention of the meeting to the Report of the Directors—a document which had been drawn up with much care and anxiety on their parts, so as to give the fullest information that might be required as to the condition of the undertaking, and its progress up to the present point. From that Report it would be seen that the Directors had not been idle since they had last the pleasure of meeting their constituents; and if the proprietors found that a farther amount of capital would be required for the completion of the works than was contemplated at the period of the last meeting, they would find also from the Report that it was not intended to make any farther call upon them. (Hear, hear.) At that stage of the proceedings he did not think it necessary to take up the time of the meeting by anticipating the details of the Report. He should rather take an opportunity at a later period of entering into any farther particulars that might be required beyond those which the Report embraced, and of giving any explanation, or answering any question that might be desired. With the permission of the meeting, he would now call upon the Secretary to read the Reports of the Directors and the Engineer. (Hear, hear.)

The SECRETARY (Thomas Wood, Esq.) accordingly read as follows, printed copies having previously been distributed in the room:—

REPORT OF THE DIRECTORS.

The Directors, in laying before the proprietors a statement of their proceedings since the last half-yearly general meeting, beg to refer to the Report then submitted for their approval, and more particularly to the expectations held out by the Directors in that Report.

It was then proposed to expedite the works as much as possible, with a view to the opening of a part of the line as far as Hooley-lane, simultaneously with another portion, from a point to the southward of Mersham, to the Three Bridges, near Crawley. But, with all their exertions, the Directors found it impossible to effect this, with a due regard to the interests of the proprietors and the safety of the public. They do not, however, regret the delay in opening these portions of the line, as it gives time for the works to consolidate, and affords an opportunity for the Directors so to regulate the system of working the line as to avail themselves of the various improvements adopted, and in course of adoption, by other Companies.

The tunnels, the formation of which have hitherto been considered by many as presenting impediments of a nature almost insurmountable, are in the following condition:—That at Mersham, having only 91 yards unfinished, will be executed in three months; that at Clayton Hill, having now only 328 yards unfinished, will be open from end to end by May next; and the Directors are happy to add that the tunnel at Balcombe is completed, with the exception of eight yards at the north entrance.

The works on the entire line have been carried on with vigour, and are, consequently, in an exceedingly forward state, of which a detailed account is given in the annexed Report of Mr. Rastrick; and the Directors are enabled to confirm their former anticipations of opening the line to Hayward's Heath not later than Midsummer next, and throughout to Brighton in the ensuing autumn.

Since the opening of the Shoreham branch there have been carried upon it 126,426 passengers. The goods' traffic is greatly on the increase; and by the end of March next the station at Brighton will be ready to receive coals, from which the Directors expect a considerable revenue. A Company has been formed for the purpose of making a railway from Worthing, to join the Shoreham branch; and the Directors believe that an application will be made in the next session of Parliament for powers to make the same, and they confidently hope it will meet with the support and co-operation of all persons interested in the success of the London and Brighton Railway, to which it must prove a most advantageous auxiliary.

There are 35,691 shares registered in the books of the Company, upon which nine calls, to the amount of 45*l.* per share, have been made, and it is not the intention of the Directors to make any further call. Upon the first eight calls there is only 12 686*l.* in arrear, and upon the last call 143,630*l.*, making the total amount due upon the registered shares 156,316*l.*

By a minute of June 19, 1840, the Directors declared 6,909 shares to be forfeited, since which the calls have been paid upon 6,886 of such shares, thus leaving 27 shares to be absolutely forfeited by the proprietors, and which the Directors recommend to be done, and 45 shares awaiting the decision of a point of law.

Should this course be adopted there will then be at the disposal of the Company 323 shares that have been forfeited, and 663 shares that have never been allotted to any proprietors, or registered, which may ultimately be disposed of for the benefit of the undertaking.

The following is a statement of the Receipts and Payments to the 31st of December last:—

DR. *General Abstract of the Receipts and Payments to 31st December, 1840.* CR.

SHOREHAM BRANCH.

DR. *Statement of Traffic, from 13th May to 31st December, 1840.* CR.

To Locomotion, repairs, wages, printing, and sundries	£3,609 1 8	By Passengers, merchandise, and parcels	£4,454 9 7
To balance with general account	845 7 11		
	£4,454 9 7		£4454 9 7

Having thus explained the present position of the works, and the finances of the Company, the Directors proceed to lay before the proprietors the probable amount necessary to complete the undertaking.

In the last Report it was stated, that calculations had been made to enable the Directors to form an approximate estimate of the further amount requisite to meet every expense, incident to the opening of the line throughout upon a liberal scale, and the result led them to the belief that 600,000*l.* would be sufficient. Since that period the works have been progressing rapidly, and as the greater portion is now on the eve of completion, the Directors can, with more accuracy than heretofore, arrive at the amount which will, as nearly as they can ascertain, be required for that purpose, and the result is as follows:—

The amount required to complete the contracts and extra works	£180,000
Tunnels	60,000
Iron	60,000
Engines	20,000
Carriages	10,000
Stations	40,000
and	10,000
A liberal allowance for every other expense	50,000
	£410,000

The gross amount at present expended, and for which the Company are under liabilities, is 1,660,000*l.* which added to the 410,000*l.* required to complete the line, will make a total of 2,070,000*l.* from which will eventually have to be deducted 80,000*l.*, for extra land to be resold, which will reduce the actual cost of the line to 1,990,000*l.* In addition to this, when the South Eastern Company avail themselves of the agreement for the purchase of a moiety of the line between Croydon and Red Hill, this last amount will have to be reduced by about 350,000*l.*, so that in that event the entire cost to the proprietors will be about 1,640,000*l.*

The Directors have now in hand, and due upon calls 181,652*l.* 14*s.* 1*d.*, and they have power to raise upon debentures a further sum of 420,000*l.*, independent of the value of the forfeited and unregistered shares, which, if sold at par, will realise 43,115*l.*, so that the Directors anticipate being able to provide from these sources an amount amply sufficient for all purposes.

Since the last general meeting two vacancies have occurred in the Direction, by the resignation of John Moss, Esq. and Captain Pringle, which the Directors have filled up by the appointment of John Entwisle and Henry Shurrock, Esquires, and under the provisions of the Act, John Harman, John Cattley, John Hodgson, H. Moreton Dyer, Esquires, and Lieutenant-Colonel Moody, R. E., this day go out of office, but these gentlemen being eligible for re-election, offer themselves to the proprietors accordingly.

At the last meeting, the Directors adverted to the state of the proceedings before Parliament, on the subject of the station at London Bridge. These proceedings terminated in giving powers to the Greenwich Railway Company to construct two additional lines of rails to the south of the present line, from London Bridge to Corbett's Lane, where the Croydon diverges from the Greenwich Railway; authority was also given to the Greenwich and Croydon Companies to exchange stations, and the latter Company is, by another Act of the same session, empowered, either in conjunction with the Brighton and South Eastern, or alone, to procure an additional space for a station, beyond that which the Greenwich Company is to provide in exchange for the Croydon station. The Directors have considered it advisable, in accordance with the power given to them at the last meeting, to co-operate with the Croydon and South Eastern Companies in effecting these objects, and they have for some time been engaged in maturing the necessary arrangements. Three members of each Board have met weekly on the subject, and an agreement has been entered into for carrying them into into effect. The substance of the agreement is, that a station, covering the present Greenwich Railway Station, with some other ground adjoining, and sufficient for the purposes of the South Eastern, Brighton, and Croydon Companies, as a city terminus, shall be built at the joint

Digitized by Google

cost of the three Companies, by which, this Company will not only secure to itself the advantages of a good and sufficient station at one-third of the cost of making it, but also at one-third of the cost of maintaining and managing the same, and their interests will be fully represented and protected. As it was always contemplated that this Company would have to pay a rent for the use of a station at London Bridge, the costs of its construction formed no part of any previous estimate, neither is it included in the before-mentioned amount of 410,000*l*. It is, however, at present proposed by the Directors to meet the payments under the agreement, by monies arising out of the Brighton Act of Parliament, although power is given to raise the amount required by new shares under the Act of Parliament which was obtained by the Croydon Railway Company during the last session. An analysis of the agreement will be read to the meeting.

It is painful to the Directors to have to communicate to the shareholders that differences have arisen between them and Isaac Lyon Goldsmid, Esq., one of the Directors of the Company, emanating from a desire on the part of the Directors to meet the wishes of that gentleman, as to the use of a certain road, the land for which they have purchased of him, and which differences may have to be settled by the decision of the Court of Chancery, as Mr. Goldsmid has filed a Bill against the Company. The Directors have felt it their duty to allude to this, in consequence of the relative situation of the parties; but they trust the shareholders will see the propriety of abstaining from requiring any detailed explanation at the present period, which might tend to prevent an amicable arrangement of the disputes in question, and the more particularly as the Directors have to put in their answer, on oath, to the Bill. It is to be regretted that Mr. Goldsmid has been advised to this course, as the Directors have shown every disposition, consistent with their duty to the proprietors, to arrange amicably with him, as will at a proper time be fully explained.

Having in this Report laid before the meeting the principal subjects that have occupied the attention of the Directors during the last half year, they trust that there is much to gratify, and also to convince the proprietors that the Directors have done everything in their power to promote the best interests of the undertaking; and they doubt not but they shall, at the next general meeting, have to congratulate the proprietary upon the completion and opening of the line to within 15 miles of Brighton.

JOHN HARMAN, Chairman.

ENGINEER'S REPORT.

To the Directors of the London and Brighton Railway Company.

GENTLEMEN.—Since my last Report the buildings and other works at the station at Croydon have been progressing rapidly, and are now in a very forward state, and will be finished by the end of April.

Contracts Nos. 1 and 2.—The works on these contracts may be said to be finished, there only remaining the dressing up the cuttings and the slopes, and laying down a small portion of the permanent rails, all which can be completed in six weeks.

Contract No. 3.—The works up to the Star inn are completed. These from the Star inn up to the mouth of the Merstham tunnel are nearly so, the cleaning out the cutting and laying the centre culvert being the principal works remaining, and can easily be finished by the beginning of May.

Contract No 4, Merstham Tunnel.—This tunnel will be open throughout in March next; both ends are opened out to the cutting, and five of the spaces between the shafts have been thirled, and only five spaces between the remaining shafts have to be finished, which can easily be accomplished by the second week in March. There will then only remain the centre culvert, and the laying the rails, which will occupy six weeks, so that the tunnel will be ready for the traffic by the first week in May.

Contract No. 5.—The whole of the works, with the exception of the embankment on Earlswood common, may be said to be finished. This embankment, which is a work of no ordinary kind, has received my most anxious exertions and attention, and is now proceeding satisfactorily, as I am enabled to form it of excellent sand, which I could not do heretofore. The permanent way will be laid by the middle of April, and will be ready for opening by the first week in May.

Contract No. 6.—All the works upon this contract are finished, and the permanent way might have been laid some time since, but I thought it more advisable to let the embankment thoroughly settle.

Contract No. 7.—The works upon this contract may also be said to be completed, with the exception of the bottoming up of about 200 yards of the cutting, at the north end of Balcombe tunnel, and the dressing and soiling the slopes, and the erecting the fences. One line of permanent rails has been laid over the whole of it to within 200 yards of the tunnel, and one-half of the second line of rails has also been laid, and the remainder of the works can easily be completed in two months or less. There is an uninterrupted run for a locomotive engine of nine miles on this and the preceding contract.

Contract No. 8, Balcombe Tunnel.—The whole of this tunnel is thirled, except about eight yards at the north entrance, and there is now a clear road all through it. The centre culvert is being made, and the permanent way will be shortly laid down, and everything completed for opening by the middle of March.

Contract No. 9.—The principal works on this contract are finished. Those remaining are the joining of one embankment, bottoming up the cuttings through Kemp's farm, and at the north end of the Ouse Viaduct; the dressing off the slopes, and the laying the rails, which can also be easily completed by the middle of March next.

Contract No. 10, Ouse Viaduct.—The whole of the arches have been turned and keyed in two months. Immediately the weather permits, the parapets will be built, and the stone cornice completed. This can all be accomplished and the rails laid, by the first week in May.

Contract No. 11.—The principal works to be completed in this contract, up to the station at Hayward's heath, are the making good the embankments at the south end of the Ouse viaduct, and at Turner's mill, and the cutting at Hayward's heath, and the bottoming up the cutting at Copyhold hill.

These will be all finished by the end of March, and the permanent way laid by the first week in May.

It will, therefore, be seen that the whole of the railway, from it junction with the Croydon Railway to the station at Hayward's heath within 15 miles of Brighton, will be completed, and ready for the traffic, by the beginning of May next; and I may here mention, that all the contracts upon this portion of the line, with the exception of the Merstham tunnel, and the embankment at Earlswood common, might have been much expedited, but I have refrained from doing so in consequence of this tunnel and embankment not being completed, without which it was impossible to have opened the railway to Hayward's heath, but there can now be no doubt of this portion of the line being ready for opening in the month of May next.

The tunnel of 200 yards in length upon this contract, on the Brighton side of the station at Hayward's heath, will also be completed by the beginning of May.

Contract No. 12.—The chief works still remaining unfinished here are the cuttings at Hayward's heath, Folly hill, and Burgess hill, and the embankments on the south side of Valepool viaduct, and at Ley lane, which I expect will be complete by the end of June.

Contract No. 13—The embankment at the north of Hassock's gate, and the laying the rails of the permanent way only remain on this contract, which I expect to be completed by the end of June, and as this embankment, and the work remaining to be done on the last contract are the heaviest between Hayward's heath and Brighton, I shall urge the contractor to use the utmost expedition to complete them; but there is no doubt of their being finished by that time.

Contract No. 14, Clayton Tunnel.—The tunnel is thirled between three of the shafts, and as the greatest distance to thirl between the remainder of the shafts is 20 lengths, and as four lengths have been regularly thirled every month, the tunnel will be completed by the end of May; and as the culvert is being made, and the rails laid simultaneously, I have no doubt the whole will be ready for the traffic by the end of June. The works in this tunnel have proceeded so regularly, that I can calculate the time of completion almost to a certainty.

Contract No. 15.—The excavations on this contract are nearly complete. A large portion of the rails are laid, and the tunnel through Major Paine's grounds will be completed by the end of May.

Contract No. 16.—The works here are in a forward state, two embankments have to be completed, and the slopes dressed up and soiled, and the permanent way to be laid. These can all easily be accomplished by the end of May, or earlier if required.

Contract No. 17.—The Shoreham Branch has been in work for several months.

Contract No. 18, the Brighton Station.—The works are progressing very rapidly. The booking office and passengers' sheds will be finished early in the spring, and every thing necessary for the opening of the line throughout, will be ready by the time required.

The coal station will be finished for the reception of that traffic in two months.

In conclusion I beg to state, that the intermediate stations upon the line are all in hand, and I have no doubt whatever that the railway may be opened to Hayward's heath in the month of May, and throughout to Brighton by the month of August; and, I assure you, no exertions shall be wanting on my part to ensure the opening of the railway at those periods.

I have the honour to be, Gentlemen,
Your obedient servant,
(Signed) JOHN U. RASTRICK.

London, January 21, 1841.

The Reports were exceedingly well received, particularly that of the Engineer.

Mr. I. L. GOLDSMID (a Director) craved the indulgence of the meeting, while he briefly referred to the statement relative to himself contained in the last paragraph but one of the Directors' Report. Mr. Goldsmid then read from a printed paper, as follows:—

"*Mr. Isaac L. Goldsmid's Observations on the Report of the Directors of the Brighton Railway Company.*

"January, 1841.

"I shall pursue the course suggested by the Directors, of abstaining from entering into the details of the question between me and the Company; but as they have shortly adverted to it in a manner calculated to produce an impression that I had shown unnecessary hostility to the Company, I must be allowed to show that any such impression would be wholly inaccurate.

"In the first place the Directors state, that the difference has arisen from a desire on their part to meet my wishes as to the use of a road, the land for which they had purchased of me; but they have omitted to state (what was the fact) that I had previously, at their request, consented to an alteration of the mode fixed by the Act of Parliament of making the works on my property, and had thereby saved the Company several thousand pounds (which the Directors themselves acknowledged by a vote of thanks) and that the agreement which they now say that they cannot carry into effect, had for its object to relieve me from the inconvenience to which it was found that the alteration thus assented to for the benefit of the Company would otherwise have exposed me.

"And, secondly, I ought in justice to myself to state, that the legal proceedings adverted to by the Directors would not have been instituted if they had shown any of the disposition to arrange amicably with me, for which they take credit; on the contrary, they have relied upon my feelings towards the Company, and have denied me justice in a manner that could not have been adopted towards a stranger. After much discussion, I brought my claims formally before them last August; and on my pressing for a decision in November last, a Committee was appointed with instructions to refer the point in difference to arbitration. To that proposition I should have gladly acceded, but it was as suddenly withdrawn, and I was given to understand the Company would avail itself of every objection, however technical, to defeat my claims; and the proprietors will be surprised to learn that one of the objections alluded to was, that the agreement made by the Directors with me did not embody a legal consideration in writing. After I had been compelled to institute a suit, a proposal was made me, acknowledging in substance my title to what I had asked. To this I acceded on the terms of having the expenses I had incurred by the previous conduct of the Directors repaid, and then this proposal was withdrawn.

"Besides these two fruitless attempts at a settlement, I attended the Board in person in December, when the terms of a reference were in substance agreed upon between me and a Committee appointed for the purpose, but the proposal was on a subsequent meeting negatived by the Board. It is not for me to explain this extraordinary vacillation of conduct. It has been stated that legal objections were raised by the Company's Solicitors, but these I am advised are unfounded, and I have expressed my unwillingness to leave to a barrister of high standing, to be approved of by both parties, to determine whether the Company can, consistently with the legal requisitions of the Act, satisfy the engagement they have entered into with me; but there has been no disposition to a settlement: on the contrary, I have been subjected to annoyance and vexation, and, as an illustration of this, I will mention that the Company being bound by the Act to erect a neat and ornamental fence against their works through my land, have put up a fence which is a disfigurement to my residence, and though required to remove it now six months ago, and admitting they were bound to do so, the Directors have taken no steps for this purpose.

"Having joined the Direction solely for the purpose of serving the Company, I have offered to make every sacrifice in my power short of allowing a serious injury to be inflicted on my property. All I have asked is, that the engagement made with me shall be fulfilled, and it will afford me very great pleasure that the hope referred to by the Directors should be realised, and that so desirable an object should be accomplished by an amicable arrangement. It was only as the last resource that I was driven to so inconvenient a step as an appeal to the Court of Chancery.

"There is one word more which I wish to add respecting the situation which I now hold as a Director of the Company. I should long ago have retired, had I not retained it in the hope from day to day, that the differences between me and the Company would be reconciled. I was unwilling to exhibit a sign that I had severed the link which bound me to its interest. I consulted some friends in the Direction, and they fully concurred in the propriety of the course I was about to pursue. I think it right to add, that if the Directors think the interests of

Digitized by Google

the Company will be consulted by considering my places at the Board vacant, they are quite at liberty to do so; and that by the adoption of this course, those feelings of good-will and friendship which have existed between me and several of them (with respect to one during our whole lives, and to others for nearly forty years) will in no degree be altered or weakened."

This statement was received with considerable applause.

The CHAIRMAN was sure every one would admit that he was at that moment placed in a very painful position. (Hear, hear.) He could assure the meeting on the part of himself and his brother Directors; that they had felt and evinced every disposition, and spared no exertion, to meet the views of Mr. Goldsmid in this matter, so far as they could do so consistently with their duty to the proprietors. (Hear, hear.) He was not aware till he entered the room, that such a document as Mr. Goldsmid had just read would be submitted to the meeting, and had he and his colleagues consulted their own feelings merely, they would not have alluded to the subject at all. As it was known however out-of-doors that a disagreement had arisen between the Board and Mr. Goldsmid, they thought they would fail in their duty, and the proprietors have good reason to complain, if the singular proceeding of a Chancery suit instituted against the Company by one of the Directors were not touched upon. He was sure the meeting would not expect him to answer the statements which Mr. Goldsmid had put forth, but the Directors would ill discharge their duty if they allowed the inference to go forth which would naturally be drawn from the *ex parte* representations of that gentleman, if suffered to pass unexplained and unnoticed. He would, therefore, with the leave of the meeting, call upon Mr. Faithful, the Company's Solicitor at Brighton, who was well acquainted with the whole facts of the case to explain them as briefly as he could, and if after hearing them, the meeting were of opinion that farther concessions ought to be made to Mr. Goldsmid, the Directors would be only too happy in carrying their wishes into effect. (Hear, hear.)

Mr. HENDERSON would strongly deprecate any further reference to the subject on this occasion. He much regretted, indeed, that it had been alluded to at all in the Directors' Report. If a statement were now made by the Solicitor, it would in all probability lead to a counter-statement, and thus an interminable discussion would spring up to the neglect of the more important business for which the proprietors had been convened. It was impossible that this meeting could come to any practical settlement of the matter in dispute, and he thought it better therefore to let the question rest upon the good feeling and anxiety for an amicable arrangement expressed by Mr. Goldsmid. It was not right that the time of the proprietors should be taken up in the discussion of a question which seemed principally to involve the personal feelings of the parties—who had, moreover, appealed to the Court of Chancery, by which alone the dispute could be settled if some amicable arrangement, based on the good feeling to which he had referred, were not come to. (Hear, hear, hear.)

The CHAIRMAN would be glad, therefore, to hear any observations that might be offered upon the Report.

Mr. STOREY said it was with great pain that he found himself compelled to take a different view of the matter from the gentleman who had just spoken. He thought the subject was of the very greatest importance, and that it was necessary and proper that the Directors should be supported. It appeared to be the wish of certain parties to throw odium on the Directors—(cries of "No, no")—and the public would have a bad opinion of the mode in which the affairs of the Company were conducted, if imputations were allowed to rest upon the Board. The Directors ought not to be condemned upon *ex parte* statements. (Hear, hear.) He had no wish to promote dissension or to encourage discussion, but he had always understood that Mr. Goldsmid had received for such of his lands as were required by the Company, quintuple the amount which they would have brought in the market if required for any other purpose. He did not say this from his own knowledge, but such was the common report. The gentleman who had just sat down had spoken of Mr. Goldsmid's amicable feelings; did it prove that they were such when he spoke of the "extraordinary vacillation of conduct" exhibited by the Board? Did it——

The CHAIRMAN was sorry to interrupt the honourable proprietor, but if it were the feeling of the meeting not to go into any discussion on the matter, no good purpose could be served by further referring to it at all. The Directors relied upon the merits of the case, and had no doubt that when the details were fairly before the proprietors, their conduct would be fully approved of. (Hear, hear, hear.)

Dr. OUTRAM deprecated any further discussion, and would beg to propose that the matter be now dropped. (Hear, hear.)

Mr. STOREY was again about to speak, when

The CHAIRMAN enquired if he meant to conclude with a motion.

Mr. STOREY said he did. He could not agree with those who thought the subject ought not to be discussed. For what had they come to the meeting, if not to enquire into everything connected with the Management of the Company's affairs? The Report which had been read was a very satisfactory document, but this one part of it appeared to require further explanation. There was another point connected with this dispute which was of some importance. The son of the honourable gentleman (Mr. Goldsmid) was the Company's standing counsel, whose advice of course was taken in matters requiring legal adjustment. Now in this case, father and son were placed in relative positions, which were not at all desirable or proper. More honourable men than both father and son did not, he believed, exist, but still they ought not to be placed in this position with respect to each other. He would, therefore, move that, if this Chancery suit were continued, it would be improper that Mr. Goldsmid's son be standing counsel of the Company. (Hear, hear.)

The CHAIRMAN said, Mr. Goldsmid, jun., had waived his retainer in the case in question.

Mr. STOREY said, such a step only entailed fresh expense on the Company who had to pay a standing counsel and also another barrister.

It was explained that standing counsel are paid only when their services are required.

Mr. GOLDSMID would not say one word in vindication of his son, but would simply appeal on this point to the Chairman and to Mr. Sutton, the Solicitor of the Company. (Hear, hear.) He would solemnly assure the meeting that he had received no advice whatever from his son in reference to this suit; indeed he had been obliged to apply to Mr. Wigram.

The CHAIRMAN said, as Mr. Goldsmid's "Observations" might go into the hands of proprietors who were not present, and who might not know the grounds upon which it was considered better not to enter into a discussion of the case, it was but fair that a brief statement of facts should be made on the other side. (Hear, hear, hear.) He hoped therefore, that Mr. Faithful would be heard. (Applause.)

Mr. HENDERSON rose, and amid great interruption proceeded to state that he had opposed the discussion upon general principles and not from any friendship to Mr. Goldsmid, with whom he had not the pleasure of being acquainted. He thought the reference to Mr. Goldsmid's son was in extremely bad taste. (Hear, hear.) He would move that the discussion be now waived. (Interruption.)

The CHAIRMAN inquired who seconded the motion.

Dr. OUTRAM said, he had himself moved a similar proposition. He would much rather, however, that a resolution were put forward recommending in the strongest terms the propriety of effecting an amicable arrangement, if at all practicable. (Hear, hear.)

It did not appear that Mr. Henderson's motion was formally seconded.

The CHAIRMAN said a one-sided statement had been made, and as the character of the Directors was in some measure at stake, he really thought that Mr. Faithful should be heard. (Great applause.)

Mr. GEORGE RENNIE, jun., suggested that Mr. Faithful should be heard, the meeting first pledging itself to enter into no further discussion of the matter.

Mr. LEVY objected *in toto* to such an arrangement. It was not fair to hear one party and not the other. Either let Mr. Goldsmid deny whatever he conscientiously could deny of Mr. Faithful's statement, or drop the discussion at once. Mr. Faithful being interested in carrying the matter before a legal tribunal, his statements must be received with greater caution than if they proceeded from an indifferent party. For his own part he strongly objected to going to law at all. It was a costly process, and had better be avoided. At any rate it was not fair to allow Mr. Faithful to speak, and then refuse Mr. Goldsmid the right of replying. (Hear, hear.)

The CHAIRMAN said, the honourable proprietor appeared to forget that Mr. Goldsmid had already made *his* statement, and surely the Directors had an equal right to make *theirs*. (Hear, hear, hear.) He would therefore at once put it to a show of hands whether Mr. Faithful should be heard. (Cries of "All, all.")

The motion was put, and only a very few hands were raised against it.

Mr. FAITHFUL accordingly entered into a long explanation, of which the following are the material points. The Company's Act of Parliament, he said, enjoined the erection of a station for the traffic of the Shoreham branch, on the estate of Mr. Goldsmid, at some convenient spot to the north of Fern Hill. When the time arrived for deciding upon the site of the station, a deputation from the Board had an interview with Mr. Goldsmid, and it was then proposed to erect the station, where it had since been made. This decision rendered it necessary to take more of Mr. Goldsmid's land, and also to make a tunnel. There was no difficulty in coming to an arrangement with Mr. Goldsmid relative to the site of the station, the road leading to it, or the price. A Report was accordingly made to the Board, who confirmed it, and subsequently other negociations were entered into and completed, for the purchase of other land belonging to Mr. Goldsmid. After the bargain had been completed, Mr. Goldsmid came to a meeting of the Committee of which he (Mr. G.) was a member, and represented that the carriage of coal down the road already referred to, and which he had sold to the Company, would be prejudicial to his estate, and suggested that no coal should be deposited at that station, nor any manufactories be allowed at the depot. The Committee, consisting of Mr. Harman, Mr. Goldsmid, Mr. Walker, and Mr. Shewell, agreed to recommend Mr. Goldsmid's suggestion to the Board, and subsequently the Board sanctioned and confirmed it. Thus the matter rested until it became necessary to take a conveyance of the land from Mr. Goldsmid. The conveyance was drawn up in the ordinary fashion, but Mr. Goldsmid's solicitor insisted that it should contain a clause rendering the conveyance of no effect if any coals were deposited at the station or carted down the road already mentioned. To this the Company's solicitors of course objected, as the result would have been that in the event of an infringement of the terms of the conveyance, not only would the road which the Company had purchased have reverted to Mr. Goldsmid, but the station also, and the whole of the railway passing through his estate, which he might in that case have broken up or dealt with as he pleased. Subsequently a long discussion took place, and it was ultimately proposed by the Directors that Mr. Goldsmid should have a covenant protecting him against the annoyance which he seemed to dread, the conveyance of the land being executed after the ordinary mode. This proposition was however rejected. True, a reference was afterwards proposed

Digitized by Google

by Mr. Goldsmid, but the basis of that reference was, that the covenant should extend to the land on which the railway was constructed. (Hear, hear.) To this the Directors felt that they could not, in justice to their constituents, accede. A bill had accordingly been filed in Chancery by Mr. Goldsmid, the object of which was to enforce the recommendation of the Committee already referred to. Had the terms of the recommendation been embodied in the original agreement for the land, the Directors must of course have stood by it, but these terms had originated solely in a friendly feeling towards Mr. Goldsmid, who had now made them the object of litigation. (Hear, hear, hear.) Mr. Goldsmid professed an anxiety for an amicable arrangement, and yet charged the Board with vacillation, thereby attempting to tarnish the conduct of the Directors, and in the same proportion to injure the property entrusted to their management. He (Mr. Faithful) who had a larger interest in the undertaking than simply that which arose from his professional connection with the Company, would humbly recommend that the hands of the Directors should be strengthened. (Hear, hear.) Mr. Goldsmid had not yet been damnified. It would have been time enough for him to complain when coals had been deposited at the station or taken down the road. (Hear, hear, hear.) He would not enter into the other matters touched upon by Mr. Goldsmid. He was sure there was every feeling on the part of the Board to avoid anything unpleasant to Mr. Goldsmid, and if the proprietors said that further concessions ought to be made, they would doubtless cheerfully accede to it. What other motive could they have than a desire to protect the interests of the proprietors—a duty which they looked upon as paramount to all other duties? (Much applause.)

Mr. Goldsmid said, without entering into any lengthened reply to Mr. Faithful's observations he would broadly state this, that if the Directors had been left to themselves, they would have settled the matter amicably. With respect to the assertion that he would have had power to take away the land from the Company, he had had the opinions of half a dozen professional men on the subject, and without pretending to know anything in reference to it himself, he was advised that the assertion was wholly without foundation. He was willing to rest the whole case upon that one point. Had he known that he should have had to contend with the legal adviser of the Company he would have brought his own solicitor with him. He would, however, pledge himself to make good to the letter everything brought forward in the statement which he had that day read. He would again repeat that had it not been for Mr. Faithful, the Directors would have arranged the matter amicably. He had been assured of this by several members of the Board. (Hear, hear.)

The Chairman said, he should now be glad to hear any observations upon the Report.

Mr. Waley had much pleasure in moving that the Reports of the Directors and Engineer be received, adopted, and circulated among the proprietors. On the 7th instant he had addressed to the Board a letter containing seven queries relative to the undertaking, and the whole of these had been most satisfactorily answered in the Report. If the proprietors would take the trouble of analysing the accounts, and looking closely into the other matters embraced in the Report, they could not fail to be satisfied and gratified with the manner in which their affairs had been conducted. (Hear, hear.) His reason for putting the questions to which he had already referred was twofold—first, from having a considerable personal stake in it; and secondly, because he knew that no other Company had been subjected to so much malevolence, so much vituperation, calumny, and foul play, as this Company had. (Hear, hear.) The cause of this would be easily understood, when they called to mind the origin of the undertaking. There had been a number of competitors in the field, and the promoters of the present line had gained the victory. It had been intended and hoped, that all would unite in carrying out the line that had been selected, but certain parties had not adopted this course, and were now bespattering the undertaking. He had no doubt that these machinations would sooner or later recoil upon their authors. (Hear, hear.) Men of the highest professional standing had staked their reputation upon the assertion that it was physically and morally impossible to carry out the undertaking upon the principles laid down by the present Company, and instead of now confessing their error, they were doing their best to damage the Company in public estimation. For his own part he did not fear the effects of their malice, which the completion of the line throughout would speedily render innocuous. (Hear, hear.) He thought the Report treated very fully, and very satisfactorily, upon the affairs of the Company, and therefore he had much pleasure in proposing the resolution.

Mr. Smale seconded it.

Mr. Parsons, having premised that he had become a proprietor since the date of the last general meeting, wished for some explanation respecting certain items in the accounts. In the accounts passed by the proprietors in July last, he found that the item for "rails and chairs, stone blocks, sleepers, and Kyanising," up to June, 1840, was set down at 273,553*l.* 11s. 7s., whereas the very same item, up to the very same period, when brought forward in the present accounts, was only 98,834*l.* 3s. 3d. So likewise with regard to "works and contracts." In the last Report the expenditure under this head, up to June, 1840, was stated at 383,547*l.* 9s. 1d.; it was now stated at 558,266*l.* 17s. 5d.

The Secretary explained, that under the head of "rails, chairs, &c.," a large sum for "extra works," had been put down in the accounts submitted in July last. The Directors had thought such classing together of incongruous items was not desirable, and had therefore separated them. The item, therefore, of "rails, &c." now comprised nothing but what was specified. This accounted for the reduction of the sum total expended under that head up to June, 1840, as stated in the present Report. The honourable proprietor would observe also, that there was now an addition to the item of "works," under the designation of "extra works," namely, the amount formerly comprehended in the item of "rails, &c.," and the further sum for which it was stated, in July last, that the Company were then liable. By adding the two items together it would be seen that the total expenditure under these heads was, in both Reports, the same.

Mr. Parsons did not question the accuracy of the sums total, but he thought it extremely desirable that railway accounts should be simplified as much as possible. Had they passed the present accounts without the benefit of the explanations which had now been given, they would have been stultifying themselves. It was customary with railway proprietors in Lancashire to form estimates for themselves. He himself did the same, never having had great faith in the estimates of engineers. When, therefore, on becoming a proprietor of this Company he looked back to the last half-yearly Report, and saw that a sum of 273,553*l.*, was set down as expended on "rails, chairs, stone blocks, sleepers, and Kyanizing," he took it for granted that nearly the whole of these materials had been purchased, as it was easy to calculate what length of rails, &c., and what number of blocks and sleepers would be required for the whole line. It appeared now, however, that a large amount had been mixed up with this item, which did not properly belong to it. If railway accounts were made up in that way it would be quite impossible to form any accurate idea of what had really been expended under particular heads, or remained to be expended. He would repeat that the more that accounts of this description were simplified, the more satisfactory would it be to the proprietors. (Hear, hear.)

The Chairman said the apparent discrepancy seemed to have arisen from the desire of the Directors to simplify the accounts. They had seen that they were wrong in putting "extra works" into the item of "rails and sleepers," and had now rectified the mistake.

The Secretary said Mr. Parsons might have, if he wished it, a detailed account of the expenditure under each separate head.

Mr. Parsons expressed himself satisfied, and then referred to the estimate contained in the Report, of 20,000*l.* and 10,000*l.*, supposed to be sufficient to complete the locomotive and carriage establishment. This amount Mr. Parsons thought would be found wholly inadequate.

The Chairman said, they had made a calculation of the number of engines and carriages which would be required at the first opening of the line. They expected that 22 engines would suffice. Of that number they had already purchased and paid, or were under acceptances, for 12, leaving 10 still to be provided for. Of 42 first class carriages which were deemed sufficient they had already 24, leaving 18 to be supplied. Of 37 second class carriages they had 25, leaving 12 still to be provided. They had only 5 third class carriages, but the Board had not yet determined to what extent this description of vehicle should be used. Altogether they expected that 22 engines and 82 carriages would be sufficient for the opening, and of these they had already paid for, or were under acceptances for, a large proportion. The Directors would be very agreeably disappointed to find that this stock was insufficient, as it would show that the traffic was even greater than was anticipated. While on this subject he might mention that the Board had gone into the particulars of each individual estimate, not only with the Engineer-in-Chief, but also with the sub-engineers who had the practical management of the several departments. The amount which it had been calculated would complete the "contracts and extra works" was 172,500*l.*, but the Directors had thought it better to take a large margin, and had therefore set down 180,000*l.* It was the same with the other items of the estimate, as, for example, the "tunnels," which were set down at 60,000*l.* instead of 40,000*l.* In the present stage of the works it was comparatively easy to calculate what further sum would be required. The amounts now given might be fully relied on. (Hear, hear, hear.)

Mr. Parsons said, the amount previously expended on the locomotive and carrying department was 17,000*l.*, and it was now estimated that a farther sum of 30,000*l.*, making altogether 47,000*l.*, would be amply sufficient. It appeared to him, judging from the experience of some of the great lines, that this 47,000*l.* would not more than suffice for the purchase of engine power. This item in the estimate seemed to him so inadequate, and probably would appear so to others, that he much doubted the sufficiency of the others.

The Chairman would remind the honourable proprietor that their line was only about half the length of some of the great lines. He could only say, that the Directors had entered carefully and minutely into the details, and believed that the estimates would be sufficient. With respect to the carriages, he would repeat, that he should be glad to find the number set down by the Directors insufficient. (Hear, hear.)

The motion for the adoption of the Report was then carried unanimously.

The next subject brought before the meeting was the filling up of the vacancies at the Board.

On the motion of Mr. Maclean (Deputy Chairman), the five gentlemen named in the Report were unanimously re-elected, and the Chairman returned thanks for himself and colleagues.

Mr. Cash next moved the confirmation of forfeiture previously declared by the Directors of 27 shares, upon which the calls were in arrear, as adverted to in the Directors' Report.

The Chairman explained that of these 27 shares all the calls except the last had been paid upon 22, and the last call would be paid in a few days with interest. There would therefore be only 5 shares really forfeited. (Hear, hear, hear.)

The motion was carried unanimously.

The Secretary then read the heads of the agreement entered into by the Croydon, Brighton, and

Digitized by Google

Companies, relative to the joint station at London Bridge. This agreement was described in our notice of the Croydon and South-[illegible] [See *Railway Times* of Nov. 28, and Dec. 12, 1840.]

The CHAIRMAN hoped the meeting would agree with him in considering the arrangement for the [illegible] likely to prove very advantageous to this Company. (Hear, hear.) They would have all the benefits of an excellent station at one-third of the actual cost of construction, and he might add (since the matter had called forth some observations in the *Railway Times*) at one-third of the usual cost of management. (Hear, hear.) If each Company had had a station of their own, each would have had to bear the expense of its management, whereas now the expense of one station would be divided among the three. (Hear, hear.) Never since he had been connected with the Ma[illegible] had any arrangement offered so many advantages. (Hear, hear, hear,)

The CHAIRMAN having expressed his readiness to answer any questions,

Mr. WALEY strongly deprecated the expending of the Company's resources in litigation. He wished to know if it were true that Mr. Goldsmid had offered to have the matter in dispute, between him and the Company, submitted to a reference upon payment of the costs to which he had been put, in asserting what that gentleman believed to be his rights. He (Mr. Waley) was most anxious that some amicable arrangement should be come to in a matter which, as he had heard, did not involve an amount greater than 1000*l*. (Hear, hear.) It might be very well for the Directors to contest the matter with an individual, both parties believing themselves to be in the right, but why should the innocent shareholders suffer? (Hear, hear.) He trusted that the Directors would adopt every reasonable means to avoid litigation. All that the shareholders asked was, that the matter should be settled fairly, honourably, and justly, as between man and man, by law proceedings if it were at all possible. (Hear, hear.)

The CHAIRMAN said, the Directors had placed themselves in an unfortunate position from a desire to meet Mr. Goldsmid—a position which they would have avoided had they known that advantage would have been taken of it. They were advised by no meaner an authority than Sir William Follett, that under their Act of Parliament, it was impossible to carry out the wishes of Mr. Goldsmid. They were endeavouring, however, to carry out in spirit, what they could not do in law. They did not think that Mr. Goldsmid would be at all annoyed, for from the arrangements now being made by the coal merchants at Brighton, they did not believe that a single ton of coal would be deposited at the station referred to, nor a single cart-load taken down the road. The Directors entered fully into the feeling that it was not desirable to expend the resources of the Company on law proceedings, but if persons [illegible] in unreasonable opposition, what were they to do? If Mr. Goldsmid were determined not to execute a conveyance of the land without incumbering it with terms which the Directors were advised were not legal, what other resource had they but to appeal to the law, or surrender the rights of their constituents? (Hear, hear.) If any means could be devised for terminating the dispute amicably, none would be better pleased than the Directors, who were only acting in self-defence. He thought Mr. Goldsmid had been somewhat before-hand with them. He might have waited till the dreaded [illegible] had taken place, and then he would have had his remedy. (Hear, hear.) He did not see why Mr. Goldsmid should doubt the good feeling of the Company towards him. He would assure him and the meeting, that the Directors were well disposed to carry out in full the recommendation of the [illegible], but they were advised that this [illegible] in the mode insisted upon by [illegible]. (Hear, hear.)

[illegible] proceeding, to address the [illegible] called to order by

Captain BEAUCLERC (a Director), who said it would be re-opening the question to permit further discussion.

Other gentlemen seemed to take the same view of the case, and Mr. Goldsmid was interrupted by hisses, &c. We understood him to state, that he had taken the opinions of Mr. Wigram and the Attorney-General, who said the resolution of the Committee could be legally carried out. As Sir William Follett seemed to be of a different opinion, he (Mr. Goldsmid) was willing to refer this point to any barrister of eminence selected by the Directors and himself. He would now repeat that proposal.

The CHAIRMAN said, it would be desirable that Mr. Goldsmid should submit in writing any proposition he might have to make to the Board, in order that it might be considered and discussed.

Mr. GOLDSMID handed his printed statement (above given) to the Chairman.

The CHAIRMAN said, there was so much of what was personally offensive to the Board in that statement, that he thought it had better be withdrawn.

Mr. STOREY described the Hove station (that so often referred to) as a nuisance instead of a benefit, and suggested that it should be given up to Mr. Goldsmid.

Mr. FAITHFUL said, the Company's Act compelled them to make and maintain a station on Mr. Goldsmid's estate. This clause had been inserted at the instance of Mr. Goldsmid himself.

Mr. BOWSER was glad that the discussion of this matter had not been waived. He thought the Directors had fully vindicated themselves, and he should therefore move a resolution to that effect.

Mr. STOREY seconded the resolution, which was passed without opposition.

Mr. B. DAVIS then proposed a vote of thanks to Mr. Rastrick, the Company's Engineer-in-Chief, for his able exertions in prosecuting the undertaking. (Hear, hear, hear.)

The motion having been seconded,

The CHAIRMAN said he had very great pleasure in putting it, for no man better deserved the thanks of a Company than Mr. Rastrick did. (Hear, hear, hear.)

The motion was carried unanimously.

Mr. RASTRICK (amid much applause) returned thanks, pledging himself that the line should be opened partially and throughout at the dates named in his Report.

On the motion of Dr. Outram, a vote of thanks to the Chairman and Directors was carried unanimously, and with loud marks of approbation.

The Chairman made an appropriate acknowledgment, expressing the determination of himself and colleagues to persevere in the same straightforward course which had hitherto secured the confidence of the proprietors.

The meeting then broke up.

FATAL ACCIDENT ON THE BIRMINGHAM AND GLOUCESTER RAILWAY.

[From the *Gloucester Chronicle*, Jan. 23.]

THE following is the official account of a melancholy occurrence which took place on Wednesday night last, at Bredon, to the last down-train of the Birmingham and Gloucester Railway, and attended, we are sorry to add, with the loss of life to the stoker of the engine:—

The train was proceeding at its usual rate towards Gloucester, and had arrived at the Bredon cutting, within 400 or 500 yards of the station there, when the driver suddenly found his engine was ploughing her way through some impediment which covered the rails, and that she was almost immediately off the line and beginning to ascend the bank, which is there about 40 feet high. With great presence of mind the driver, Joseph Newport, turned off the steam the moment he perceived the interruption, and taking hold of the rail of the engine kept his position, although momentarily expecting she would go so high up the bank as to turn over; she however soon became imbedded in the soil and stopped.

Newport, the driver, was unhurt, but not so the stoker, Joseph Billingham; he, poor fellow, at the time was on the foot plate of the engine stooping down to put coke in the fire, the sudden check of the speed made him lose his balance and fall [illegible] the foot-plate of the tender, in a sitting posture, with his legs hanging down between the footplate of the tender and the footplate of the engine. Before he could recover his position the impetus of the train behind drove the footplate of the tender against the footplate of the embedded engine, catching the poor fellow at the knee joints and nearly separating both his legs. An express was immediately despatched to Tewkesbury for a surgeon and Mr. Tate soon arrived, and on his arrival rendered him all the assistance in his power, and the poor fellow was then at his own request put into one of the Company's carriages and conveyed by the train to the Gloucester Infirmary where he died soon afterwards. The deceased had been for some time in the employ of the Company; he was unmarried and very steady and regular in the performance of his duties.

On examining the cause of the accident the line of railway was found covered with gravel to the depth of from 18 to 24 inches on the rail nearest the side of the cutting; the sudden frost coming after the late rain had caused a slight slip in the clay soil of the cutting, bringing down with it a quantity of gravel lying on its side. The gravel had been left by the contractor engaged in its removal about two hours before the accident happened; it was then quite secure, and the ground had no appearance of slipping; it was passed by the policeman on duty when the train was in sight, and only a very few minutes before it came up, and the line was then quite clear, so that the slip must have been instantaneous and occurred at the very moment of the arrival of the train. It was quite dark at the time, so that the driver could not possibly have seen the obstruction. The concussion to the train itself, owing to the excellent construction of the Buffer springs, was very slight. No passenger was even jerked from his seat, nor did any one receive the slightest injury except the poor stoker. A pilot engine came up from Gloucester to convey the train which arrived there about two and a half hours after its regular time. The embedded engine was got out and the line quite cleared during the night, so as to be ready for the train in the morning.

On Thursday afternoon an inquest was held on the body of the unfortunate man who was killed, before T. Bailey, Esq., the Coroner, at the Gloucester Infirmary, when the following evidence was given:—

Joseph Newport was the first witness called. Having been sworn, he said I am an engine driver, in the employ of the Birmingham and Gloucester Railway Company and came from Birmingham yesterday evening by the 5 o'clock train, and arrived about a quarter of a mile from the Bredon station at half-past seven o'clock. It was very dark; none of the passengers could see a yard before them. The fireman was putting coke upon the fire, and I was holding the chain attached to the fire door. At this juncture the engine suddenly jerked and threw the fireman from the tender on which he had been sitting; he fell between the engine and the tender. The sudden jerk the engine received arose from the ballast being on the road; it was from 2 to 3 feet deep. The embankment at this spot is about fifty feet; it is a gravelly soil. We passed up the line early in the forenoon, (about half-past twelve) there was no ballast on the rails at that time. The ballast had fallen down from the embankment upon the rails, by the jerking of the engine. When I felt the engine jerk I immediately let the steam off, and the engine run up the bank. I remained on the engine, and when it stopped I asked the fireman whether he was hurt, he replied "Yes, both my legs are cut off." He was then lying on the foot board of the tender. When I let the steam off, the engine partially stopped, but the force of the carriages threw it off the rails, and up the bank. The engine run about the length of the four carriages and the tender. We were going at our usual speed, about 21 miles per hour. I picked the deceased up and placed him further on the tender; I afterwards fetched one of the guards and placed him in one of the carriages;

Digitized by Google

he was subsequently brought to the Infirmary, where I stopped with him till he died; he expired this morning about half past twelve: he was 20 years of age. The ballast I have before referred to has been on the line for these last six weeks; but I never observed that it bore any appearance from which danger was to be apprehended. The deceased was asked to stay at Bredon, but he said that he would rather be brought to this Infirmary. We did not see the ballast, owing to the darkness; there was no person present, to warn us of our danger—it was about 400 yards from the station, where the accident took place.

Mr. Charlton stated—I am surgeon to the Gloucester Infirmary. The deceased was brought into the house about half past twelve last night; he had a compound fracture in each knee joint, with extensive laceration of the skin; and a second compound fracture on the right leg, near the ankle; he was perfectly sensible at the time; his appearance was that of a man who had lost a great quantity of blood, but it had ceased to flow. Restoratives were applied with a view to "rally" the deceased, but he died about half an hour after he was brought in. The injuries he had received were the sole cause of his death.

Mr. George Coulson was the next witness called. He said, I am a contractor for the Birmingham and Gloucester Railway, and reside at Cheltenham. My brother has a contract with the Birmingham and Gloucester Railway Company, for the removal of some gravel lying at Bredon. The gravel lay on the side of the railway. On the spot in question the line is in deep cutting. The mode of doing the work is to "tip" the gravel down the sides of the embankment, and afterwards to take it away. The gravel is put up in heaps at the side of the railway, ready to be taken away. The work was progressing in this way up to last night, when the accident took place. I last saw the gravel yesterday morning, between nine and ten o'clock. There was then no gravel lying on the rails, nor less than two feet from it. There was not the slightest indications of its being in an insecure state at that time. I see the works daily, sometimes remaining nearly all day. I do not believe any safer plan could have been adopted than the mode pursued. The cutting at this place is about 40 feet deep. We have had from fifteen to thirty-four men employed in removing the gravel, and never knew any slip of the gravel before. I attribute the falling of the gravel to the wet and the frost coming suddenly upon it. There were about 40 cubic yards of gravel at this embankment. The gravel reached about half-way up the cutting from its base on the line of road, and about a yard in thickness. I consider it perfectly safe to have it that height. We have it raised much higher in another part of the line. The height of the cutting is from 35 to 40 feet. When frost comes suddenly, the very best embankments will give way.

Richard Adams was next called. He said, I live at Bredon, and am foreman to Mr. Coulson, and superintend the work at Bredon. I was at work yesterday, and left the line about five o'clock. When I left the heaps of gravel were all safe, and no danger to be apprehended. There might be about 35 yards of gravel on the heap. It had been amassed in about a day and a half. I have been engaged in this sort of work all my life, and I never knew any other course pursued in removing gravel from embankments. We have had ten times larger heaps on the other side of the line, and no accident ever occurred. The heap of gravel which slipped reached about half-way up the embankment. The summit of the bank was about 45 feet. I consider it perfectly safe to put the gravel to such a height as the one reached which slipped.

John Cottey was next sworn. He said, I live at Bredon, and am in the employ of the Birmingham and Gloucester Railway as policeman. My business is to walk up and down the line a little below and a little above the station. My beat is about 2¼ miles in length, I know the spot where the deceased met his death. I was there last night, about three-quarters of an hour before the approaching engine came up. I was there till I saw the Birmingham train coming up, on which the deceased was riding. I then ran to the station-house to give notice of its approach. I had a powerful lamp with me, containing two signals. I am quite sure that at the time I saw the train coming the rails were perfectly clear from gravel. I could see no change in the usual appearance of the heaps. I walked between the two roads, and did not observe any impediment in the way. I must have seen the gravel if it had slipped at the time.

Mr. Frederick Henry Packingham Wetherell.—I am a civil engineer, and connected with the Gloucester and Birmingham Railway Company. It is my duty to frequently go up and down the line to see that all things are going on correctly. I have seen from time to time the work which has been going on in the removal of the gravel. The contractors are removing the gravel under my superintendence—I have seen the work going on, and approved of the manner in which it has been executed. The height of the cutting is about 35 feet. I mean from the surface of the railway to the top of the cutting. The railway cutting is through gravel and clay, the clay being on the top of the cutting, to the depth of 13 feet, and the gravel is about 12 feet. I consider it perfectly safe to put the gravel the height of that heap which slipped. The frost and rain might of course render it more dangerous.

These were all the witnesses called, when the Coroner, after a few general observations relative to the law of deodand, &c. called the attention of the jury to the more important portions of the evidence. The jury then retired, and having consulted for about half an hour, they returned a verdict of "Accidental death," with a deodand of 20*l.* upon the engine and tender.

LIVERPOOL AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

THE Annual General Meeting of this Company took place on Wednesday, at the Cotton Sales Room, in the Exchange Buildings, Liverpool. Charles Lawrence, Esq., Chairman of the Board of Directors, presided.

The report of the Directors, and the accounts of the receipts and disbursements, were read. They were approved of by the meeting.

A dividend at the rate of 5*l.* per cent. was made for the half-year ending 31st December last; and a first instalment, at the rate of 2*l.* per share upon the 100*l.* shares, and of 4*s.* per share upon the original quarter shares, being a portion of the interest to which those shares (only) are entitled, was likewise ordered to be paid to the proprietors of those shares out of the surplus fund.

The thanks of the proprietors were unanimously voted to the Directors, and to their Managers and assistants, for their vigilant and skilful management of the line, and for their care and unremitting attention in these respects.

Charles Lawrence, Hardman Earle, Thomas Sands, and John Cropper, jun., Esqrs., (nominated by the proprietors,) and James Loch, Esq., (nominated by the Duke of Sutherland,) being the five Directors going out of office by rotation, the first four gentlemen above-named were unanimously re-elected Directors.

The following is the Report:—

DIRECTORS' REPORT.

The Directors have great pleasure in meeting the proprietors on the present occasion to lay before them a statement of their proceedings, and the result of their operations for the six months, ending 31st December last.

For the greater part of this period the trade and manufactures of Liverpool and the adjacent districts have been in a state of considerable depression. But in the last month of the year an improvement took place, the exports increased, and a renewed feeling of confidence was established in most departments of business. The receipts for the merchandise traffic for the last six months, have been very nearly the same as in the corresponding period of 1839. But in the month of December, taken by itself, the traffic was about 12½ per cent. larger than in the same month of the previous year.

In the coaching department the receipts have fallen short to the extent of nearly 4,000*l.*, as compared with the corresponding period in 1839. The Directors have taken into their consideration the circumstances which have been instrumental in producing this deficiency, and they are of opinion that several distinct causes, some of them perhaps insignificant, but important in the aggregate, have operated to this end. First, the general depression of trade already noticed second, the unfavourable weather during the greater portion of the season, usually selected for travelling by those whose object is health or pleasure rather than business; third, the penny postage. This popular measure, by cheapening correspondence, has multiplied it at the same time, and post dispatches or covers have superseded, to a considerable extent, the lighter sort of coach parcels, a profitable item of revenue to the Company. It must be admitted also, that the cheapness of correspondence has the tendency to create the habit of transacting business through that medium, and so lessen the necessity and the frequency of personal journeys. The last circumstance which the Directors will mention as having diminished to some extent the travelling by railway, is the temporary want of confidence in the security of that mode of conveyance. The Directors deeply regret the railway accidents which have occasioned this apprehension in the public mind. In the sudden development and extension of this new mode of locomotion, in the marvellous transition from a speed of 10 to that of 30 miles an hour, though we may regret, perhaps we can hardly wonder that newly opened lines have not been altogether exempt from accidents. The earnest attention of Railway Managements is turned to the consideration of the best means of making railway conveyance as pre-eminently safe, as it is decidedly cheap and expeditious, and the Directors have the fullest confidence in the accomplishment of this great object, if indeed taking a fair comparison, it be not already attained. It is a circumstance worthy of remark and congratulation, that the frequency of accidents seems to be in no way connected with the increase of traffic on any railway; those lines where the traffic is the largest in the kingdom having been for a long time almost free from these casualties. In the last twelve months, 1,052,000 passengers have been conveyed on the Liverpool and Manchester line, with but one accident, which befel a passenger who recklessly jumped out of a second class carriage when at full speed, to save a few miles walking from the next stopping place. It would seem that the necessity for constant vigilance and unremitting care on the part of the enginemen, policemen, &c., owing to the almost continuous movement of a large traffic produces as its consequence, that habit of vigilance and that intuitive caution, on which the security of railway travelling must at all times materially depend.

Connected with this subject, the Directors are happy to refer to the General Railway Conference which was held at Birmingham on Tuesday, the 19th instant; the object of which was to consider and devise the means of increased safety to railway travelling. The resolutions passed at the Conference have appeared in the public papers, and copies of the proceedings may be obtained at the Treasurer's office, by proprietors feeling an interest in the subject.

It will be seen by the subjoined accounts, that the total receipts for the half-year amount to 139,323*l.*, being about 4,000*l.* less than in the corresponding six months of 1839; but the Directors are happy to add that the disbursements have been lessened in a still greater ratio, and that there remains a net profit of 70,629*l.*; being an increase of 7,600*l.* over the net proceeds of the corresponding period of last year.

Respecting the contemplated junction with the Manchester and Leeds Railway, the Directors have been in friendly communication with that Company, for the purposes of discussion, and with a view to the fullest consideration of this important subject. It is evident that the amount and nature of the traffic to be expected from that line might materially affect the plan and arrangements of the junction line; it has been considered expedient therefore, the Manchester and Leeds line being so nearly completed throughout its whole length, to wait till actual experience shall enable the Directors to form a judgment on these points.

The following is a Statement of the Receipts and Disbursements for the Half-year ending 31st December, 1840.

RECEIPTS.			
Coaching department	£81,713	3	2
Merchandise department	54,901	4	10
Coal department	2,709	0	7
	£139,323	8	7
EXPENSES.

By the foregoing half-yearly account it appears that the net proceeds amount to £70,629 1 7
To which must be added, surplus from the preceding half-year 9,809 17 10
Total £80,438 19 5

The Directors recommend a dividend of 5*l.* per share on 12,084¼ shares, amounting to 60,446*l.* 5s., leaving a balance of 19,992*l.* 14s. 5d.

Out of this balance the Directors recommend a first instalment at the rate of 2*l.* per share, to be paid to the proprietors of the 5,100 original 100*l.* shares, and 4s. per share to the holders of the 5,100 old 25*l.* shares No. 5,101 to 10,200 inclusive, being a portion of the interest to which these shares are respectively entitled, and which it is enjoined by the Act of Parliament shall be paid after the rate of five per cent. per annum out of any surplus balance, after dividing amongst the proprietors at large at the rate of 10*l.* per annum on every 100*l.* share.

The whole amount of reserved interest to which these original shares and old quarters are entitled, calculated upon the several instalments of the paid up capital from the date of their payment, till the opening of the railway on the 16th September, 1840, is as follows :—

5,100 original £100 shares, entitled to £12 13s. 7d. per Share	£64,665 15 0
5,100 original £25 shares, entitled to £1 4s. 4d. per Share	6,205 0 0
Total amount to be paid from time to time out of surplus balances	70,868 15 0

The first instalment towards this amount recommended to be paid out of the present surplus balance, is as follows :

5,100 £100 shares, at £2 per share	10,200 0 0
5,100 old £25 shares, No. 5,101 to 10,200, at 4s. per share	1,020 0 0
	£11,221 0 0
Which amount being deducted from the above surplus of	19,992 14 5
	11,220 0 0
Will leave a balance of	£8,772 14 5

To be carried to the next half-year's account.

CHARLES LAWRENCE, Chairman.

N.B.—A dividend of £5 per £100 share, and first instalment of interest as above explained, having been declared by the proprietors, the treasurer will be prepared to pay the same at the Railway Office, Lime-street, between the hours of ELEVEN and THREE, on and after TUESDAY, the 9th February next; or the amount will be made payable at Messrs. Barclay and Co's., London, or will be remitted in a bill at a month, at the proprietor's option.

PROPOSED CHURNET VALLEY RAILWAY.

A MEETING of gentlemen, desirous of promoting the formation of a railway from London to Manchester direct, through the Churnet Valley, was held at the Royal Oak Inn, Cheadle, on Thursday last.

Captain SNEYD, of Huntley, having been called to the chair,

J. M. BLAGG, Esq., (the Company's agent for the Cheadle district,) entered into a detail of particulars respecting the proposed railway from London to Manchester, by way of Leicester, which, it was expected, would shorten the distance about thirty miles. It was calculated that 5,500,000*l.* would cover every expense of obtaining the act, purchasing the land, forming the railway, erecting stations, and providing locomotive power; but, not to be within the mark, the capital of the company was fixed at 6,000,000. The Company was not yet formed, and the object in bring the business forward now, was, to enable the projectors to complete their plans and books of reference, so as to bring them before Parliament in March next. To effect this, they required the sum of 3,000*l.* to pay the expenses of surveyors, &c., which they hoped to raise by the contributions of those who were friendly to the undertaking. Two hundred pounds had been subscribed for the object at Luton and Derby, and it was proposed shortly to call meetings, for the purpose of raising the funds requisite, at Leicester. Mr. Blagg acknowledged that he had that morning received a communication informing him that the Derby and Macclesfield line had not been abandoned, but would be proceeded with as soon as an improvement in commercial affairs justified such a step; and that a resolution of want of confidence in the provisional committee of the Leicester project having been passed by a deputation from Bedford, Luton, Hampton, and St. Alban's, those gentlemen had immediately signified their readiness to resign.

Mr. CATTLOW, who attended on behalf of the Midland Counties' Company, said, he was authorised to inform the meeting that the real Churnet Valley line was not abandoned; it extended from Derby to Macclesfield, a distance of 42 miles—could be constructed for a capital of about one million, was not likely to provoke opposition, and would connect Manchester, Stockport, and Macclesfield, with Derby, Nottingham, Leicester, and the Eastern Counties. Mr. Cattlow concluded by moving the following resolution :—

"That this meeting learns with great satisfaction the intention of the Midland Counties' Railway Company to persevere in making a railway from Derby to Macclesfield, through the Churnet Valley; and is of opinion that the Midland Counties' Railway Company is entitled to the confidence and undivided support of the neighbourhood."

The Rev. J. P. JONES opposed the resolution, and moved, as an amendment,—

"That it is desirable to form a railroad from Manchester through Macclesfield and Leek; thence by Cheddleton to Cheadle and Uttoxeter, and from thence to Derby; and that this meeting will support the line that passes nearest the town of Cheadle."

The amendment, on being put to the meeting, was negatived, and Mr. Cuttlow's resolution carried by a large majority.

Thanks were then voted to the Chairman, and the meeting separated.—Abridged from the *Staffordshire Mercury*, as quoted by the *Midland Counties' Herald.*

* Average.

RAILWAYS IN FRANCE.—New efforts are making to raise France from its sad inferiority in railroad enterprise. A considerable number of deputies of the departments of the north, east, and south-east, propose to have a meeting in order to concert definitively in favour of a system of railways respecting which the Chamber will be called upon by some of its members to declare itself. It is proposed to form several lines, composing by their junction, or by the aid of rivers connected with them, a grand line from one extremity of France to the other. This would be the realisation, as perfect as could be desired, at once of the junction of the Mediterranean and the North Sea. The railways which are particularly talked of are three—Paris to Lisle, Paris to Chalons, and Chalons to Mulhause, with branches on the line of Alsace, and leading thus from Paris, Lyons, or Marseilles, to Basle and Strasburg. To these we have to add the railway from Marseilles to the Rhone, that from Rouen to Havre, and that from Lisle to Dunkirk.—*Galignani.*

TEMERITY.—On Saturday se'nnight, as the three o'clock railway train was proceeding from Cardiff, when it had nearly reached the Llandaff station, and was going at a rapid rate, one of the passengers jumped out and fell flat on his face. There was a great outcry, every one thinking the foolish fellow had lost his life, but he rose from the ground apparently unhurt, except a cut on his face. Had he fallen back instead of forward, the wheels must have cut him in pieces.—*Welshman.* [We hope he was punished by the Company for his fool-hardiness.—ED. R. T.]

TO CORRESPONDENTS.

Mr. W. T. Rathbone, Mr. Edward Cropper, and Mr. David Hodgson, and—one other.—*Justus requests us to ask whether* Mr. Richd. Harrison, *late a Director of the Eastern Counties' Company, and also a Director of the Grand Junction, is not equally notorious with the three individuals first above named, to the charge of drawing from the Eastern Counties' treasury six guineas for every trip from Liverpool to London and back, when he travels the whole or part of the way free?*

Delta.—*The seller, we should say, would be entitled to the dividend, inasmuch as it was earned during the time that he held the shares.*

A Reader of the "Railway Times" *still misunderstands the Company's position. The amount still unpaid on original shares is mortgaged for money borrowed—in other words when that instrument is called up it must be applied to the discharge of a debt already incurred. It could not, therefore, have been rendered applicable to the purpose mentioned by our correspondent. Does not our intelligent correspondent perceive how much an unmeaning cry serves the purpose of parties who are doing everything in their power to injure an important undertaking?*

B. O. (*Leeds*).—*No doubt of it.*

Edinburgh, Leith, and Newhaven Railway.—*At a less busy period we should have been happy to publish the letter of the Bristol shareholders to the Directors, but at present we cannot possibly find room. The MS. shall be returned if desired.*

Joint Station at London Bridge—Greenwich and Croydon Railways—Manchester and Leeds Railway—Great Western Railway, &c.—*The discussions on all these topics must positively be suspended till after the meetings. This to at least a dozen correspondents, whom we need not specify.*

Railway Conference.—*The signals, &c., recommended, must unanimously stand over.*

Mr. Adams's *excellent letter (the second) on the* Mechanical Arrangements of Railways, *shall appear next week. Its great length is the only reason for postponement.*

Examiner.—*We owe an apology to our able correspondent for again deferring his letter. It was unavoidably omitted at the last moment, but shall appear without fail next week.*

A Sufferer *(on the Manchester and Birmingham Railway) also in our next.*

THE RAILWAY TIMES.

SATURDAY, JANUARY 30, 1841.

We give to-day as full particulars as the pressure of other matter will admit, of the proceedings at the great meeting in Dublin to which we referred last week, on the important subject of railways for Ireland. The opening of the Parliamentary campaign and the simultaneous holding of meetings in other parts of the empire in reference to questions of a more exciting character, have unfortunately prevented the conductors of the public journals, as well in Ireland as in this country, from bringing the matter before the public with the prominence which it deserves, and hence the greater need that we, who stand aloof from the turbulent arena of political partisanship, should strive to keep attention fixed upon a measure which will contribute to the peace and prosperity of Ireland when the *ad captandum* schemes of the day, like those that preceded them, shall serve only to point a moral on popular credulity or party rancour.

The proceedings at the meeting were entirely satisfactory. There was not much novelty to be looked for except in the expression of feeling in favour of a large and comprehensive system of railways by persons of every shade of politics and religion, and this was supplied in abundance. The facts lie in a very narrow compass. The experience of other countries, and even of Ireland itself, shows that with each successive improvement in the means of internal communication, the prosperity of the inhabitants has advanced, and of all such improvements railways are assuredly the greatest. Equally clear it is that Ireland is not in a position to secure these advantages to any considerable extent without external aid, and hence it only remained for the promoters of the Dublin meeting to take into consideration the most effectual mode of obtaining it. They acted wisely, we think, in abstaining from entering into details, which can seldom be discussed with any benefit in a mixed assembly. The principle being once admitted that Ireland ought to have railways through the intervention of the State, the means of carrying that principle into effect may well be left for future consideration.

Some comparisons were instituted by his Grace the ARCHBISHOP OF DUBLIN between English and Belgian Railways, the inference being that Government interference in the making and managing of these works—or rather that the entire substitution of public for private proprietorship and control—is greatly to be desired. The comparison bears but very remotely upon the question of railways in Ireland, since *there* it is now universally admitted that there is no choice. Private enterprise may be the preferable mode of carrying out local or general improvements, but private enterprise has been proved to be wholly inefficient as regards Irish railways, and therefore there is no alternative but to adopt the other plan—the less perfect it may be—or to leave Ireland as she is. The most ardent advocate for joint-stock enterprise must yield therefore to the necessities of the case, and it is only opening up a much agitated question without the possibility of producing any good effect, to praise up the one system at the expense of the other. In Ireland the question resolves itself into this—*State railways or no railways—Government interference or no further progress.* As regards England, it is not necessary to uphold the mode in which our great undertakings have been carried out, by depreciating the plan pursued in other countries. Each has unquestionably its peculiar advantages and defects, and although we have no hesitation in deciding upon the whole in favour of the well directed efforts of private capital, it is sufficient to say, that if the construction of railways in England had been deferred till the task was undertaken by the State, we, in this country, should have had still less to show at the present moment than the 15 miles of railway which are the only memorials in Ireland of the joint exertions of private capital and government aid. The State is a slow-moving body, altogether incompetent to originate improvements, seldom qualified even to direct or extend them. Railway-making in England was an experiment on a large scale—an experiment too, attended with fearful risks, which nothing but the strongest of all motives, the hope of private gain, could have tempted any set of men to encounter. Its *primum mobile* was individual speculation, as distinguished from that over-caution which characterises public bodies, or at any rate the administrators of public affairs. The experiment has succeeded—it is an experiment no longer, and in extending its benefits to Ireland, the State is but carrying out the principle which has been established at other parties' risk. If the railway system is to be still further improved and perfected, as we hope and trust it will, this will not be effected by anything resulting from Government influence or Government interference, but will spring from the same source as the original scheme of the works themselves. Subject the whole system to the unrestrained control of that passionless power the State, and you remove at once the main excitement to progress—the great sharpner of the faculties, the expectation of profiting by every successive discovery; you keep things as they are, more from the absence of any adequate motive to activity than because an imperfect system is knowingly persisted in. The discoveries once made—the advantages of railway communication once clearly developed—the State has innumerable facilities for carrying them out beyond those which any private individual or body of individuals can possess, and these facilities will of course be brought to bear upon the case of Ireland. That country will enjoy the peculiar advantages of both systems—it will have the results of experience and experiment made tangible at the least possible cost, and be spared the necessity of going through the tedious and expensive process of *blundering* into what is right. If, therefore, the benefits of railway communication should be more apparent in Ireland than with us, the result will be no argument in disparagement of "private enterprise."

We confess, indeed, that we should much and for many reasons prefer seeing railways in Ireland carried out in the same way and by the same means as they have been carried out in England, but, as we have already said, the expectation is hopeless. We know that it was once a favourite assertion with those who opposed what for distinction's sake may be called the Government scheme, that the appearance of the Commissioners' Report had been the sole cause of checking the efforts of private capitalists which, but for that Report, it was said, would speedily have placed Ireland in the same position as regards railway communication as this more favoured section of the empire. This position we have no hesitation in characterising as wholly untenable. We might, indeed, have seen more Irish projects brought forward, but we question whether more miles of railway would have been completed than the insignificant number already referred to. During the prevalence of any particular mania, thousands of schemes are paraded which will not stand the test of calm reflection and sober calculation. It was so with respect to railways, not in Ireland only, but in England. The Report of the Commissioners, based as it was on data that could not be gainsayed, and abounding in arguments the force of which all were compelled to admit, doubtless helped to dispel some of the illusions which visionary projectors had conjured up, but it did nothing more. It did not cut off any one well-ascertained source of expected revenue; nay, it proved that in many places the capabilities of the country would be developed by railways to an extent which had not previously been anticipated. It was not the Report of the Commissioners, then, but their own fears, that prevented capitalists from embarking their property in Irish railways. That some few lines would have amply remunerated private investors we have

Digitized by Google

ever been ready to admit,, and it is matter of surprise to us that one or two such projects have not been proceeded with. The proposed Dublin and Kilkenny line is a case in point. We firmly believe that that line would have been peculiarly productive, and yet it is now virtually abandoned. Why is it so? It could not be from any apprehension that the legislature would interfere with the property of the Company without granting them ample compensation—for there has always been, and we hope always will be, a leaning on the part of a British legislature in favour of vested rights, even where such are less clearly founded upon equity, than those of individuals who have embarked their property on the faith of an Act of Parliament—and yet such is the apathy of the subscribers to the work that, as our readers will recollect, it has generally been a matter of some difficulty to get more than a dozen persons together at the periodical meetings of the Kilkenny Company, and then the principal topic of discussion has been the total abandonment of the undertaking!

While on the subject of compensation to existing Companies, we would express our entire concurrence in the remark which fell from Mr. PIM, the intelligent Secretary of the Dublin meeting, in reply to a question from Mr. HAMILTON, the Chairman of the Dublin and Drogheda Railway. Mr. PIM, who has laboured with much zeal and with great effect in the cause of Irish Railways, said the Committee did not desire to fetter the Government to any particular plan, but would content themselves with the advocacy of the general principle of Government control, "because they felt they could not be attended to by any other means. If they should succeed in that, then *he thought the Government were bound to provide that ample and sufficient compensation should be made to those Companies already in existence, and the justice of that was so obvious that they had not deemed it necessary to introduce it.*" Any other course, as we argued at an early stage of this question, would not only be unjust to individuals, but be altogether unworthy of the great cause which it is the aim of the Committee to promote.

The liberality of the Duke of LEINSTER and the Earl of KINGSTON, ought not to be passed over unnoticed. It was stated at the meeting, that these noblemen, as well as others (whose names it is a pity are not made public), had offered to give, without any charge, the land on their properties through which the railways may pass. This is true patriotism, and in a land where the counterfeit is so very current, ought to be held up for the imitation of others.

THE details of an accident upon the Birmingham and Gloucester Railway, whereby the fireman of one of the down trains lost his life, will be found elsewhere. It would appear that a large heap of gravel having been piled against the sides of a deep cutting, had suddenly slipped, and that the jerk occasioned to the engine had thrown the poor fellow down between the footplate of the tender and the footplate of the engine, so as to cause the advancing train to inflict a mortal injury. When an accident of this kind has occurred, it is easy to say that if such and such a course had been pursued it might have been prevented, but as it is impossible to foresee or guard against every contingency, so it is not always fair to blame the parties for not taking such precautions as can readily be pointed out *after* the event. We certainly think, however, that it was imprudent in the contractor to pile up a heap of gravel to the height of nearly 20 feet, within a very few feet of the rails, more especially in such weather as that of last week. There seems to have been no reason why the gravel should not have been divided into two, three, or four heaps, nor why it should not have been removed before it had accumulated to such a height. The heap, it was stated, had been "amassing about a day and a half," no cause having been assigned why the collection was not removed at the close of the *first* day. The truth seems to be, that custom makes almost all persons connected with railways most incautious, if not desperately reckless. Thus we hear of labourers "timing" the act of stepping from a line to within a second or two of the approach of a train. Their escape in one instance seems but to render them more venturesome, till at last they are struck down and killed. Thus with respect to the heaps of gravel. The contractor says, "I consider it perfectly safe to have it that height. We have it raised much higher in another part of the line." The contractor's foreman adds: "We have had ten times larger heaps on the other side of the line, and no accident ever occurred." The absence of accident in other instances encouraged the parties to persist in a practice which has danger on the face of it, till life has unfortunately been sacrificed. It never seems to have occurred to them, that in the late almost unprecedented state of the weather, it was necessary to adopt many precautions in regard to railways which, under ordinary circumstances, might have been omitted. We take it for granted that now an accident *has* happened, greater care will be observed for the future.

The Coroner's jury evidently did not consider the Managers of the Railway blameless; for they inflicted a deodand of 20*l.* upon the engine and tender. Upon what grounds this deodand was declared, the provincial journal from which we copy the report of the inquest, does not say, but enough is disclosed in the progress of the case, to suggest some very unsatisfactory reflections in regard to this species of punishment. A man is killed on one railway, in consequence of the failure of a certain work performed under the superintendance, and in a manner to meet with the approval, of one of the Company's Engineers, as sworn to by that gentleman himself; and the Company are fined 20*l.*. In a different county, one of the servants of a railway Company is killed by the felonious act of a fellow servant, as the jury themselves formally set forth, and yet their employers are mulcted in just *one hundred times* the amount! Is there equal and even-handed justice here? Is one Company to be punished so severely for the wicked perversity of a subordinate servant, while another gets off almost entirely free from the consequences of the incapacity of a principal officer. We beg it may be understood that WE cast no imputation upon the ability of Mr. Wetherell, the gentleman referred to; it is the jury who show, by their verdict, that they considered his opinion as to the safety of the gravel heaps utterly worthless. They say, in effect—"the contractor was to blame for piling up the gravel, and you, the Company, were to blame also, inasmuch as through your officer you not only did not put a stop to the practice, as you might have done, but even expressly appproved of it; we, therefore, fine you in the sum of 20*l.*" Thus reasons a Gloucestershire jury. A Middlesex jury, says, on the other hand—"your servant, incited by some diabolical agency, deliberately perpetrates the two-fold crime of murder and suicide; we know very well that YOU could not have prevented him from committing these felonious acts; but, nevertheless, we fine you 2,000*l.*" Is there no inconsistency here? Can respect be paid to the decisions of Coroners' courts, when we find one Company punished one hundred times as much for an act over which they could have no possible control, as another Company for an act which they might easily have prevented?

THE present state of the works of the London and Brighton Railway will be found fully detailed in the Engineer's Report read at the half-yearly meeting held on Wednesday last, and printed in another part of this day's number. It will be seen that Mr. RASTRICK has pledged himself that the line shall be opened partially by May next, and throughout in August. We hope it will be so, but the greater our experience in respect of promises and pledges of this description, the less is our confidence in them.

The proceedings at the Brighton meeting are not calculated to inspire any very sanguine hopes that railway proprietors are at last beginning to do their duty *to themselves*. On the contrary, the extreme indifference manifested upon that occasion grieves while it surprises us. But for some very proper questions put by Mr. PARSONS, the meeting would have passed without the slightest notice one item of account which had suddenly sunk from 273,553*l.* to 98,834*l.* in merely being brought forward from one half-year's statement to that of the next, and a second item of 466,835*l.* which had swelled in an equally mysterious manner to 558,266*l.* We allude to the fact elicited by Mr. PARSONS, that in the accounts submitted to the proprietors in July last, no less a sum than 174,719*l.* for "extra works" had been charged—under what head do the unsuspecting shareholders suppose? Under no other than that of "Rails and Chairs, Stone Blocks, Sleepers, and Kyanising!" In the accounts of July last the "Total Payments to 30th June, 1840," under this head are set down at "273,553*l.* 11s. 7d.;" in the accounts of this present January the "Total Payments to 30th June, 1840," under precisely the same head, are set down at "98,834*l.* 3s. 3d.," the difference having it appears been expended on "extra works" which are *now* transferred to the head of "Contracts, &c.!" The Chairman mildly designates the putting together of these incongruous items "a mistake," and talks of the anxiety of the Board to "simplify" the accounts. We have no wish to use harsh language, but we should be glad to know why the "extra works" might not with just as much propriety have been included in the item of "Land and Compensation," or even in that of "Engines and Trucks," as under the head of "Rails and Sleepers." Was it because in the last item the "extra works" could better be concealed? Why was not a word said about "extra works" at all in the accounts of July last? Was it because the large sum of 174,719*l.* for these *extras* would have presented a startling comparison with the 383,547*l.* then expended upon works done *by contract?* Surely it was worth while for some proprietor to enquire, as the Directors did not explain it voluntarily, of what these "extra works" consisted, which in so short a space had swallowed up so large an amount.

Never, assuredly was a Board blessed with constituents so confiding. In their Report of July last, the Directors more than once expressed a confident opinion that the whole cost of the line would "not exceed 1,800,000*l.*,

Digitized by Google

from which" would "have to be deducted, at least 300,000*l.*, for the portion of the line to be taken by the South Eastern Company and the resale of land," making the total cost 1,500,000*l.* In their present Report they state that the cost will, after all deductions, be "about 1,640,000*l.*," (mark the "about,") and yet, although no reason, nor shadow of a reason, is given for this addition of 140,000*l.* in the course of six months, the Proprietors did not care to trouble the Management with a single question! Contented creatures! When the Chairman told them that, although farther capital would be required, no farther call would be made upon *them*, they cried "Hear, hear," as if it mattered whether farther capital were taken directly from their pockets or placed to their account as a debt!

It is an exceedingly painful task to be obliged to find so much fault, but we should fail in our duty to the railway public, if we did not endeavour, by exposing the neglect and apathy of one Company to stimulate others to greater watchfulness. It amazes us, how men of business, as many of the Brighton proprietors are, could suffer accounts to pass without a word of explanation or remonstrance, in which there were such items as these:—

1. An item for "Law Expenses" *in six months* of 1,500*l.*, in addition to a second item of 1,980*l.* for "Law and Surveyor's Charges" on land, and a third item of 500*l.* for "Parliamentary Expences," making altogether within a few pounds of 4,000*l.* for law *within six months!* The "Surveying," it will be seen is lumped into "Engineering," and the two together make 4,173*l.* in the half year! On looking back at the accounts submitted in July, we find "Law Expenses 2,500*l.*," and "Parliamentary Expences 500*l.*" for the previous six months, thus making about 7,000*l.* for the year! Who will affirm that lawyers at least do not profit by railways? The "Engineering and Surveying" for the six months last referred to, amounted to 7,846*l.*!

2. An item of 1,050*l.* for "Direction" in six months.

3. An item of 1,264*l.* for "Travelling and Incidental expenses" *in six months!*

But enough for the present, else we might ask how it is that the net profits from the Shoreham Branch are only 10*l.* greater this half year than they were last, when the gross receipts were 4,454*l.* in the one case and only 1,191*l.* in the other.

Upon the principal topic of discussion at the meeting we shall not say one word, except to express a hope that the expense (and considering the relative position of the parties, the *scandal*) of a Chancery suit may be avoided.

THE first night of the Parliamentary Session was not allowed to pass over without an intimation by Mr. LABOUCHERE, on the part of Her Majesty's Government, of his intention to bring forward, on Thursday next, a Bill "for the better Regulation of Railways." The proposed measure has of course originated in the late melancholy accidents, for we are not aware that anything else has transpired during the recess to call for this speedy legislation. The intimation does not take us at all by surprise, for really there has been a strong *prima facie* case made out for some external interference. Government have a duty to perform to the public which they would grossly neglect if they did not take the earliest opportunity, and use the utmost exertions, to provide for the safety of the community, as regards railway travelling. The new power has so completely superseded every other means of transit with which it has come into competition, that the question of its due regulation naturally forces itself upon the attention of the Legislature. Whether Parliament is likely to succeed or not in effecting the object aimed at we need not now discuss; it is at all events incumbent upon them to attempt to find a remedy for the evils which are universally admitted and deplored.

It will be for the Companies to watch narrowly any measure which Mr. LABOUCHERE may introduce. They cannot expect to be entirely exempt from legislative interference—we wish, indeed, there were no colourable pretext for it; but they must resist very strenuously every attempt to strike at the root of their corporate existences, the right to manage their own affairs so long as the interests of the public are not compromised. We do not think that Mr. LABOUCHERE and his colleagues entertain any hostile feelings towards Railway Companies, but there are many honourable members on both sides of the House who do, and if not closely watched, these parties may contrive to turn an originally unobjectionable measure into a most efficient instrument of injustice and oppression. Let the several Managements then, be on their guard. Combination and co-operation will do much. We observe from the Report of the Directors of the Newcastle and North Shields Railway Company (which appears in another page) that the Chairman and Vice-Chairman of that Company have been empowered to act in concert with other Managements in watching such of the proceedings of Parliament as may effect railway interests. The example deserves to be imitated in every other Company. Separate and disunited efforts will do very little good. The motto of the Companies should be *Union and Strength!*

MR. HODGSON HINDE has placed a notice on the books of the House of Commons for Monday next that he will propose "a modification of the Standing Order respecting Railway Bills, which requires a sum equal to one-tenth part of the money subscribed to be deposited with the Court of Exchequer." Mr. Hodgson, we presume, has special reference to the successful line from England to Scotland, but we doubt whether it would not be better to endeavour to obtain a suspension of the Order in that particular case, than to interfere with its operations under ordinary circumstances. No really good project was ever strangled by the Standing Order in question, and in many cases it is of much use as tending to keep fraudulent schemers in check.

—o—

MR. EWART submitted to the House of Commons on Wednesday last the following series of resolutions in reference to private Bills, under which class Railway Bills are ranged, but was defeated on the first of them by a majority of two.

"1. That it is expedient that Committees on private Bills should be approximated, more nearly than they now are, to judicial tribunals, and exempted, as much as possible, from all motives of local and personal interest; and that the responsibility and efficiency of Committees of this House in general would be promoted by diminishing the number of members composing them.

"2. That with a view of attaining these objects, the number of members composing Committees on opposed private Bills be reduced to seven.

"3. That such seven members be appointed by the Committee of Selection, after the second reading of such Bills But that, previous to such appointment, the Committee of Selection do ascertain from each of such seven members that he is willing to serve, and that he is, neither through his constituents nor himself personally, interested for or against the Bill in question; and that, in case he is unable to serve, or is interested as aforesaid, the Committee of Selection do appoint some other member to serve in place of him.

"4. That the Committee of Selection appoint no member to serve on more than one such private Bill Committee at a time.

"5. That the number of members composing Select Committees be likewise reduced to seven, except on special cause shown to the satisfaction of the House for extending the number to more than seven.

"6. That previous to the naming of any such Select Committee, the member who moves for its appointment shall communicate with the Committee of Selection, in order to avoid, as much as possible, the appointment of members to serve on such Select Committee who may already be fully occupied by a private Bill Committee, or by other Select Committees."

The plan proposed by Mr. Ewart is similar to that adopted with success in the House of Lords, and has, we believe, the further recommendation of a Committee of the Lower House, appointed specially to inquire into the subject. In this case, as in most others, a good deal might be said on both sides. There can be no doubt that by restricting the number of members to a narrower limit, more business might be transacted, but then, (*pace* the immaculate purity of honourable members,) there would be some danger of having an improper measure passed through Committee by a combination between three or four individuals. Again, there is no question that local members sometimes vote in favour of schemes that may chance to be popular with their constituents, without much consideration as to their real merits; while, on the other hand, there is considerable force in the argument, that by shutting out these persons from a voice in decisions affecting the interests which they represent, you to a certain extent defeat the objects for which they have been sent into the House. To meet this last objection Mr. Ewart proposes, that members whose constituents may be interested in a Private Bill, should be allowed to appear as witnesses or counsel, but not as judges in their own cause. On the whole, we are inclined to think that Mr. Ewart's plan would be an improvement, if accompanied by other very necessary reforms in Private Bill practice.

The main ground upon which the resolutions were rejected, appears to have been a wish to give the system lately adopted a farther trial—a system which it was affirmed by Mr. Labouchere had produced a material change for the better in the conduct of the private business of the House. We can only say, "bad is the best."

To show how little interest was felt in so important a question, it is only necessary to state, that the number voting *for* the resolution was 22, *against* it 24, or in all 46 out of 658 legislators! In the division immediately preceding this [on the business of the House], the number that voted was 161. More than two-thirds must therefore have left the House in the interim.

—o—

A BIRMINGHAM correspondent states that Captain C. Moorsom, R.N., late one of the Secretaries to the London and Birmingham Company, has been unanimously chosen a Director of the Birmingham and Gloucester Railway by the Directors. "Such," says our correspondent, "was the anxious wish of the shareholders that he would accept office, that a memorial was got up in a few days and presented to him signed by the holders of nearly one-fourth of all the shares in the Company in the locality of Birmingham alone. On Tuesday the gallant gentleman accepted office preparatory to becoming Chairman, and from his previous long experience in Railway Management, his habits of discipline, and his *zeal for economy in every department*,

Digitized by Google

the shareholders regard his accession with great pleasure and confidence."

—o—

In the House of Commons on Wednesday night, it was resolved:—

"That this House will not receive any petition for private Bills after Friday the 12th day of February next.

"That no private Bill be read the first time after Friday the 19th day of March next.

"That this House will not receive any Report of such private Bill after Friday the 28th day of May next."

—o—

It is understood to be finally arranged by the Post-office authorities, that the transit of the London and Northern and Western mails to Worcester, by the Birmingham and Gloucester Railway, shall commence this day week.

—o—

The late Accident on the Birmingham Railway.—In the Court of Queen's Bench on Thursday, Sir William Follett moved for a rule to show cause why the inquisition taken in this case should not be set aside. There had been an accident occasioning the death of two persons, and the jury had found one party guilty of murder, and had returned a verdict of *felo de se* with regard to himself; and yet, with respect to both, had levied deodands on the engine. He moved this case now, and desired to await the judgment of the Court in the case of the ship *Tyrian*, argued on the previous day, in which precisely the same question as to the regularity of the inquisition had been raised.—The Court granted the rule.

—o—

Bristol and Gloucester Railway.—We have authority to say, that the report which has lately appeared in several Bristol and other newspapers, as to an indictment against this Company for "not obeying an order of Sessions," having been removed into the Court of Queen's Bench, is wholly erroneous, no such proceedings having ever been instituted against this undertaking.

RAILWAY OFFENCES AND OFFENDERS.

We learn from the *Sheffield Mercury* that two men, named William Russell and Charles Swithing, servants on the North Midland Railway, were brought up before the Rotherham magistrates charged by the Company with wilfully neglecting and omitting to make a certain signal, contrary to their instructions, whereby certain carriages might have been impeded and the lives of passengers endangered. A witness proved that on Saturday, Russell being a gauger of a certain number of men employed on the line, was ordered to take up a block of stone to which the rails were fastened, near to Canklow, and to replace it before the next train arrived. Before doing so, it was his duty according to his instructions, either to go himself or send another person a distance of half a mile to put up a certain signal to warn the next train. He, however, did not either go or send any other person. In his defence, Russell said that two of his men having been taken away, he could not have sent one of the two he had remaining to hoist the signal, and have got the block replaced before the next train arrived. He, therefore, thought it best to replace the block as soon as possible, without the signal being made. *The magistrates convicted him in the full penalty of 10l.* As it appeared that no blame attached to Swithing, the charge against him was dismissed. The conviction was a most proper one, and our only regret is that in cases of this kind pecuniary mulcts should be at all resorted to. *Personal* punishment would be far more effective.

A few days ago James Sullivan and Robert Doonham were taken before E. G. Maynard, Esq., justice, and each fined 5*l.* with 15s. costs, for leaving two unloaded coal waggons in such a position on the North Midland Railway as to obstruct the train and endanger the lives of the passengers. It appeared that the waggons belonged to the Clay Cross Colliery Company and had been left at the points about a mile on the Chesterfield side of the tunnel. On the 7 o'clock mail train coming from London, the engine came into collision with one of the waggons, which it smashed. The train was delayed some time, but fortunately none of the passengers were injured. The engine and tender sustained some damage. In default of payment the men were *committed to the House of Correction for one month each.*

The cases of trespass since our last notice have been exceedingly numerous. The following are the principal convictions as recorded in the local papers:—

"On Monday last Mr. Edward Frank, auctioneer, and Henry Page, tailor, were summoned before the magistrates at Darlington, charged under Lord Seymour's Act, with walking on the Stockton and Darlington Railway. They were ordered to pay the costs, 3s. each, and cautioned not to repeat the offence."—*Yorkshireman.*

"George Southwould and William Greenwood, of Hebden-bridge, were on Thursday taken before J. Taylor, Esq., at Todmorden, charged by Mr. Henry Woollven, Inspector, with wilfully trespassing on the Manchester and Leeds Railway at Hebden-bridge station, and convicted in the penalty of 20s. and costs, in default of which they were committed to Wakefield for one month each."—*Halifax Guardian.*

"Charles Bullock and Jos. Rodgers, of Wath, were charged with having, on Saturday, wilfully trespassed upon the line of the North Midland Railway. It appeared from the evidence of the inspector of the railway police, that on Saturday evening, between 7 and 8 o'clock, he observed the two defendants getting over some high fencings opposite the station at Masbro'. As a train was about starting each way from the station, they were desired not to get over the fence to the station as they might endanger their lives. They however persisted, and were taken into custody by the railway police.—Mr. Joseph Badger, who appeared for the defendants, contended that they had a right upon the line, inasmuch as they had tickets which they had taken at the Sheffield station to go to Swinton, and had come down by a Rotherham train to the Holmes, intending, as was commonly done, to go forward by one of the North Midland trains. The magistrates convicted Rodgers in the penalty of 20s., and Bullock in the penalty of 10s., including the costs."—*Sheffield Mercury.*

"Last week James Ancosts, of Hasland, near Chesterfield, was brought before the magistrates at the latter place for a breach of the regulations of the North Midland Railway. It appeared that Ancosts got into one of the carriages at the Chesterfield station without a ticket, and was conveyed to Eckington. For this offence he was convicted in the penalty of 1*l.* besides costs, which amounted to a pound more. The landlord of the Woodman at Church Tenton was brought up at the Court-house, Leeds, and fined in the mitigated penalty of 10s. and costs, for a trespass on the same railway, in climbing the walls and attempting to get into a second-class carriage without a ticket, he being too late to obtain one."—*Derbyshire Chronicle.*

In our number of last Saturday we made some comments upon the decision of Mr. Traill of Union Hall Police-court, in the case of *Banks* a switchman on the Greenwich Railway. The *Examiner* of the following day took precisely our view of the case:—

"If (says our contemporary) the object of the proceeding was to show that the Directors would punish their servants for negligence endangering the public safety, the effect has been precisely the opposite of the design, for it appears that a man may endanger the public safety by his negligence without any punishment, the magistrate coolly abdicating his duty, and telling the Company—'I prefer leaving the case to you;' and the representative of the Directors acquiescing in this evasion, instead of pressing for judgment.

"Mr. Traill is of opinion that the infliction of small penalties would be a bad precedent; but does he think that complete impunity is a less evil precedent?

"Mr. Traill preferred leaving the punishment of the offender to the Company. Mr. Traill forgot that it was not a matter of preference, and that he had a duty to perform; but was it not possible for Mr. Traill to have done his duty to the extent of his power, and to have recommended the Company to do its duty also? Might he not have said, 'I can only impose a fine inadequate to the offence, but it is for the Company to make up for what I cannot do by doing what it can do for the completer punishment of a negligence that might have caused the destruction of many lives.'

"But Mr. Traill declares his determination to inflict the highest penalties for proved negligence. He will not impose small fines, but he will be very terrible when large ones become applicable. And why did he not make a beginning of his resolution, and inflict a high penalty in the case before him? Did Mr. Traill mean to say that the negligence was not proved? If it was not proved, what ground had he for declining to inflict a small fine? If the case was sufficiently proved for a small fine, it was surely sufficiently proved for the largest fine imposeable on the class of offence.

"On the railroad of justice how often do we thus see the switches neglected, and the train thrown off the line!

"The representative of the Company has hardly figured, in this affair, to more advantage than the magistrate. When he was told with such nonchalance, by Mr. Traill, that he would prefer leaving the punishment of the offender to the Company, surely the agent should have told the magistrate that the Company had thought differently when it had resolved to send the case before the magistrate for adjudication, and that it was its duty to call upon the magistrate to do his duty.

"*The scale of penalties for railway offences is undoubtedly most preposterously inadequate; but a magistrate has not therefore the right to decline administering the law. His duty is imperative, and he cannot be permitted to avow his preference for declining the performance of it.*"

Doncaster and North Midland Railway.—A Company has been formed for the purpose of connecting the town of Doncaster with the North Midland line, by means of a short railway, nine miles in length, diverging from the North Midland, near the Swinton station, and following the valley of the Dun by Conisbrough to Doncaster. The estimate of the traffic shows a net income of 10 per cent. on the capital of the Company, which is fixed at 200,000*l.* Mr. Robert Stephenson and Mr. Frederick Swanwick are appointed engineers, and Messrs. Mason and Collinson, and Mr. H. Vickers, are the solicitors to the Company. On the list of the provisional committee we observe the names of several influential Directors of the Sheffield and Rotherham and North Midland Railways. The undertaking has, on the whole, been started under the most favourable auspices, and promises to confer important advantages on the town of Doncaster and the populous district through which it is intended to pass.—*Midland Counties' Herald.* [See our advertising columns.—Ed. R. T.]

SOME LOST CHAPTERS OF ANCIENT EASTERN HISTORY.

[*Found in exploring the Ruins of Rogulancum.*]

Chapter the Sixth.

1. Then the Roggs and Demroggs sought by many fine speeches to make Bozrah believe that they meant none of all the evil things imputed to them.

2. But Bozrah heard and believed not.

3. Still they urged him much, saying that they put their trust in him alone, and in the high esteem in which he was held at Court, for making their peace with their Sovereign Lord the King.

4. At which Bozrah was moved, and said, 'Aha! Who were they said I was but as the fly on the chariot wheel?'

5. Now there is a sailing near the wind which is not sailing in the teeth of the wind; so is there a denial which is not a denial.

6. And after this manner was Bozrah prevailed with to swear.

7. Yea, that the Board of Governors were proceeding according to the best of their judgment and discretion, and to the means at their command to make the Iron Way towards the Orient Sea.

8. Slowly, in sooth, yet steadily and surely, even as the needle pointeth to the Pole.

9. Yet swear he would not, that they had no design of stopping short at the Kuhldezak, or of making a profit to themselves only of that which the King designed for the benefit of his people, or of making rich by half measures and false weights.

10. Neither would Jesui.

11. Nor Edcrop, nor Rogg, nor Demrogg, nor Frererogg, nor Kurashi, nor David, nor Dikon, nor any other of the Roggs and Demroggs.

12. Not Malahaleel even.

13. But there was one Jonbi, the chief of the artificers employed on the Iron-way, who being required by the Governors to bear witness in the matter, testified

14. That all that the Edict of the King commanded to be done was very possible to be done.

15. That what the Governors had not yet done they might do thereafter.

16. That if it pleased them to adhere to the course laid down for them in the Royal Edict, they need not depart therefrom.

17. And other things of a like incredible sort, such as chief artificers and ghosts from the dead only are wont to testify.

18. And the King calling together certain trusty and well-beloved persons of his Court, referred unto them the depositions of Bozrah, the Chief of the Governors, and Jonbi, the chief of the artificers of the Iron-way, in order that they might pass judgment thereon.

19. Who summoning the parties before them,

20. There appeared on behalf of the mal-content Magogs certain able and learned Scribes of the names of Sirjohan, Kelhi, Kreswelhi and Omali.

21. And on behalf of the Board of Governors a certain other Scribe called Poloki, a third Astyanax, and a fourth Phariseer.

22. And Sirjohan the Scribe being first heard, did tear the depositions of Bozrah and Jonbi to very tatters.

23. "What meaneth this Chief Governor and chief swearer Bozrah by talking of going *towards* the Orient Sea? Why trifle thus with our Sovereign Lord the King? Why sweareth he not that they are resolved, as they are bound to do, to go to the very shore thereof? Why, but that truth forbids?

24. "'As the needle,' he saith, 'pointeth to the Pole,' even so steady and sure are they. And herein of a marvel there is sincerity in his words, for as the needle pointeth to the Pole yet reacheth it never, so do these men point only to the Orient Sea.

25. "And what meaneth this chief artificer Jonbi by all that so solemnly he averreth? Is it so doubtful that a straight line is not a crooked one, that men of skill like this must be brought to swear it?"

26. After whom Poloki arose; but though an eloquent and a bold man, and of much experience in defence both of the just and unjust, yet broke he down under the badness of the cause which he defended.

27. Then Kelhi and Kreswelhi and Omali spake much of the evil meditated to be done to the King's people, and of the contempt shown by the Roggs and Demroggs for the King and his authority.

28. Astyanax in despair of all other defence, complained that the Magogs had rushed to arms without the usual formalities of War.

29. But the Commissioners of the King observed, that now that the battle was ended, it was somewhat too late to talk of preliminaries.

30. Phariseer said nothing.

31. And then the Chief of the Royal Commissioners pronounced their Judgment in the matter.

32. Which Judgment declared that the complaints of the men of the tribe of Magog were just and reasonable, and that the Governors of whom Bozrah was the chief, were acting in contempt of the King, his crown and dignity, and to the great injury of his people.

33. Wherefore the King ordered a Decree to go forth absolutely commanding the Governors to complete forthwith the task committed to their charge, as they should answer in their several persons and possessions to him their Sovereign Lord.

EASTERN COUNTIES' RAILWAY COMPANY.

From my Corner, High-street, Shoreditch,
23rd January, 1841.

DEAR MR. EDITOR,—The Liverpool Dictators brought up with them to the monthly meeting yesterday a cut and dry edict, for an entirely new organization of the Board, and *registered* it was of course, without more to do. Since the Board ceased to meet oftener than once a month, the business of the Company has been superintended by two Committees, one of Finance and the other of Engineering; but the edict concocted at the Jobbers' Hole, in Lord-street, extinguishes at one blow both Committees, and substitutes for them a Supreme Executive Committee of six, who are to sit permanently if need be, and to manage or mis-manage as the case may be, all business of whatever description in the intervals between the monthly meetings. Now who do you think are the six members of this new Supreme Executive Committee? Mr. "Pooh Thompson" Bosanquet, Mr. Rathbone, Mr. Hodgson, Mr. Hood, Mr. Gibbes, and Mr. Sam. Anderson! What an aggregate body it must be in point of wisdom, talent, integrity, and high standing in the world, of which this is a chosen sample! And how happy the thought of having only two Liverpool men upon it—as if all Lord-street did not know well enough at whose service, for all purposes, are the votes of their four distinguished colleagues! A brainless rhymster, a professor of animal magnetism, a Change-alley lawyer, and a Sam who is anything but—what—a rare lot! Such as it is, however, one would have thought that as the poor devils are to work for nothing, they would have had something to say to "that 'ere trifle" of six guineas each, which Messrs. Rathbone and Hodgson are said to pocket so unconscionably every time they come to town, before they d—d themselves irretrievably by consenting to act with them. But no. The feeling which manifested itself on this head at the late Birmingham conference, had no place here. Neither Mr. Rathbone, nor Mr. Hodgson, nor Mr. Cropper made any attempt to exculpate themselves from the foul charge; and there was nobody of spirit enough to tell them that to extract payment from the poor Eastern Counties' Company for travelling and feeding expenses never incurred, is an incomparably shabby thing—and, doubtless, *something more*. Here, however, let me not forget to record that Mr. Duncan Dunbar has resigned in utter disgust with the Liverpool men and their doings; for, had he been there, it could not have been said that there was not one at least present with spirit enough to say anything.

The failure of the Norwich mission has been a source of bitter mortification, and of much and unfeigned concern. Nothing now for it, they say, but a stout battle in Parliament. There is still enough money in the locker to pay the expenses of another campaign, and as the success of the East-Anglian will be the ruin of the Eastern Counties' line, it must be opposed at all hazards. Yet—such thrice sodden fools are they—that instead of taking their stand on the old Eastern Counties' line for which the Act of Parliament was obtained, and the House of Commons' Report in favour of that line, and all the evidence on which that Report was founded, they mean to rest their case on the abandonment of all that line beyond Colchester, and on the vast superiority of their new pet, (Oh! rickety, rickety pet!) Kelvedon and Sudbury line! Surveyors and levellers are now actually out, preparing the necessary plans and sections of that line, for lodging in March next. *To Sudbury* only, however, be pleased to observe; for further at present they do not propose to go. All beyond is to be provided for by one or other of those "prudent extensions," so complacently spoken of in the "Circular," the *unnamable* beauties of which you lately gave, as the illustrious "Thompson" would say, "to immortal fame."

There was some talk at the Norwich meeting of the Northern and Eastern engaging to make the part between Bishop's Stortford up to Cambridge, if the East Anglian people would only finish as many miles on the other side, from Cambridge towards Norfolk. Let the East Anglians beware of what they have to do with the Northern and Easterns. The tricksters here boast of having the Northern and Eastern Company bound fast, under hand and seal, not to sanction or promote, either directly or indirectly, any line which may operate prejudicially to that of the Eastern Counties', and this I believe to be the fact. The Northern and Eastern cannot of course prevent the East Anglian, or any other line, joining them at Bishop's Stortford; neither could they be expected to be very sorry if they did; but to give direct and open assistance is another affair.

The still losing state of the traffic on the line is a subject of much comment and cogitation. What face to put upon the matter at the coming general meeting—how to coax back the "dear thinking public" to risk their lives and limbs once more—and how, if things get no better, they may best escape from making bad worse—are the knotty points which at present agitate and embarrass our wiseacres. The removal of the Norwich and Yarmouth coaches from the line, has been already noticed in your columns. Since then the omnibuses which used to ply between Colchester and the Brentwood station have been also taken off—"entirely discontinued," as the proprietors advertise. The passengers preferred going by those coaches which did *not* avail themselves of the railway, and so the omnibus adventurers had no alternative but to cut also.

The recent death of Captain Brett, the Superintendent, from cold caught on the line, is much lamented. He was a most gentlemanly person and a most efficient officer; but had held his appointment

Digitized by Google

for too short a time to permit of the benefits contemplated by many, from his steady and vigilant habits and very courteous demeanour, being realized. There is a talk, now, of transferring the duties of the Superintendent to Mr. Hall, and thus giving him something to do besides corresponding with the Jobbers' Hole clique—but before doing so would it not be well to inquire, what it was, and who they were, that drove the traffic away?

I subjoin the names of the six Directors who go out at the next meeting, but are re-eligible; but you had better not publish them till you ascertain whether they are ficially announced or not. Do let us see, if you please, how far, in rendering nugatory the elective privileges of their constituents, these Liverpool Dictators are of their own accord disposed to go.

I am, dear Mr. Editor, your faithful friend,

Q.

THE WORKING MEN'S CONFERENCE.

To the Editor of the Railway Times.

"O! wud some power the giftie gie us,
To see oursels as ithers see us,
It wud from mony a blunder free us,
And foolish notion."

BURNS.

Mr. EDITOR,—In your last number you gave a report of the proceedings of the General Conference of Railway Directors held at the Queen's Hotel, Birmingham, on the 19th instant, at which with a cordiality by no means surprising, though for its gravity rather entertaining, they unanimously agreed that "by far the greater part" of all the late frequent and melancholy accidents were "referable to the neglect and disobedience of orders on the part of railway *servants*." Strange to say, at the very time these magnates of the railway world were talking themselves into this convenient and comfortable way of thinking in the great room of the Queen's, there was a meeting holden at the Tap of the same Hotel, of Delegates from the working men of the principal railways on the same momentous subject, at which meeting, with a coincidence in impartiality and unanimity not a little remarkable, they cast the greater part of all the blame on their *masters!* Which party, or whether either is in the right, I shall not presume to say; but having obtained from the Secretary of the Working Men's Conference a report of their proceedings on the occasion, I forward it to you on the confidence that, in conformity with your usual custom of hearing both sides on all important questions, you will give it a place in your columns.

I am, Sir, your obedient servant,

A LOVER OF FAIR PLAY.

Birmingham, Jan. 25, 1841.

THE WORKING MEN'S CONFERENCE.

ON Tuesday last the 19th inst., a general meeting of Delegates from the working men of all the principal Railway Companies in England, was held at the Tap of the Queen's Hotel, Birmingham, for the purpose of considering the causes of the late lamentable accidents on railways, and the best means of preventing their recurrence. The attendance was extremely numerous, and included nearly every engine-driver, platelayer, and switchman of railway eminence. Probably no meeting was ever held where so many hard heads and rough hands was present. The individuals assembled could not have represented less than the guardians of 50,000,000 lives. Mr. Abel Handy of the Stockton and Darlington Railway was unanimously called to the chair. The utmost cordiality, we are happy to say, prevailed, and the strongest desire was expressed by all present to adopt every possible means of accomplishing the proposed object. Those who had had the longest experience of railways stated their conviction that by far the greater number of accidents which had occurred were referrable to gross mismanagement on the part of railway Directors and Managers; and that while some few casualties must be expected to occur in any mode of locomotion by which such immense numbers of persons are conveyed as on railways, it must be to an improved constitution of railway Boards, and to greater skill, judgment, and attention on the part of Directors and Managers that future exemption from accidents must be looked for. In those sentiments every working man who delivered his opinion entirely concurred. The deliberations of the meeting lasted for several hours, and at last the following resolutions were unanimously passed:—

Resolved,—1. That this meeting deeply deplore the numerous accidents which have lately occurred on railways, but are of opinion, that they are chiefly to be ascribed to causes wholly beyond the control of the working men on the different railways.

2. That among these causes the meeting feel called upon particularly to point out to the attention of their employers, of the public, and of Parliament, the following—the use of four-wheel engines instead of six-wheel—of five feet bearings instead of three feet—of cast-iron wheels—of fixed axles—of carriages without breaks—and of buffers without springs—with the ordering of all which things the working men have nothing to do.

3. That this meeting is also of opinion that other frequent sources of mischance and disaster, are—a want of system in the dispatch of trains—want of judgment in the distribution of the carriages of which such trains consist—and want of a clear and definite system of signals—all which are likewise matters with the ordering of which the working men have nothing to do.

4. That this meeting, with every disposition to respect those who are in authority over them, cannot but ascribe the many glaring defects in the existing arrangements of most Railway Companies to a prevailing deficiency in knowledge and capacity on the part of those who are at the head of their affairs, and to the notorious fact that those next in authority under them, are oftener indebted for their appointments to private favour and affection—sometimes even to election influence—than to their superior fitness to execute the important duties entrusted to them.

5. That this meeting think it further extremely objectionable, and likely to be the cause of much laxity of management, and consequent frequency of accidents, that of the Directors, Managers, and other superior officers of railways, many reside at great distances from the railways they profess to manage—some are never to be seen upon them at all except as occasional passengers on their own affairs—and others have so many different public concerns of different kinds to attend to, that they can be of little or no use to any.

6. That the talents, acquirements, experience, business habits, integrity, and general fitness of Directors and Managers, as well as of Engineers, Secretaries, clerks, and other officers, on the correct performance of whose duties of direction and superintendence so much of the public safety depends, are matters so essential to the security of railway travelling, that this meeting earnestly recommend to all Railway Companies immediately to institute a strict, searching, and impartial examination into all these points, and at once to dismiss from office every individual who occupies the place of a better.

7. That while, on the one hand, this meeting would desire to see every man who renders useful services, adequately and indeed handsomely remunerated, they cannot, on the other, help deprecating the lavish expenditure, which they daily witness, of the money of the Companies, in salaries and allowances to persons who do nothing, and are often, they fear, fit for nothing.

8. That in the opinion of this meeting, there are generally too many Directors, and that were there no more gentlemen on each Railway Board than are really wanted, and capable of rendering useful service, the number of Directors on most railways might, in all probability, be greatly reduced—when those who do all the Director-work, could be better paid than they are, and the work would assuredly be much better done.

9. That while in the higher departments of most railway establishments there are more hands than enough, and many grossly overpaid, this meeting are convinced, from painful experience, that the number of engine-drivers, stokers, and other hands, engaged in working the trains is by far too small, and that they are, all of them, without exception, overworked and underpaid.

10. That the best guarantee for good conduct on the part of guards, engine-drivers, stokers, and other working men on railways is, in the judgment of this meeting, to be found in the melancholy certainty there is before them, that in nine cases out of ten they must answer with their own lives for any accident, whether it be caused by their own negligence, or by that of others.

11. That the meeting have taken into their serious consideration the expediency of one Director accompanying each engine, in addition to the engineman and fireman usually employed, and they are of opinion that such a measure, by making the Directors responsible in their own persons, in the same way as the working men are in theirs, for all neglect or incapacity on their part tending to the loss of life, would greatly diminish the number of railway accidents, and tend more than anything else that could be suggested, to produce an immediate and thorough reform in the whole railway system.

RAILWAYS IN GERMANY.

To the Editor of the Railway Times.

SIR,—As the influence of your valuable journal is by no means confined to this country, and as its columns are indeed always open to matters of railway history, I wish to offer a few remarks to the public through them, concerning some railway schemes which are at present agitating North Germany; more especially as it is intended, if possible, to induce English capitalists to support these undertakings.

I have now before me the Prospectus of a Company, to be formed for the construction of a railway between Altona and Kiel. A very notable scheme! This document commences by observing the importance of connecting the Baltic with the North Sea, and the kingdoms of Denmark, Sweden, and Russia with Germany and Southern Europe by means of a railway; all which is very good and correct. But when it asserts that the most favourable termini for this railway are Kiel, because it is a port on the Baltic, and Altona because it is situated on the Elbe, *near* Hamburg, the "principal German seaport," I demur at once, and assert on the other hand that it requires a pair of very Danish eyes to perceive the advantage of this arrangement. You must know, Sir, that Altona and Kiel are two Danish towns which have very little trade with each other; and this railway is a very ingenious robbery scheme. These towns have, for some time, looked with covetous eyes at the large trade of Hamburg and Lubec, and not having been able, as yet, to draw away the business of these ancient emporiums of Northern trade, have at last hit upon the idea of making a railway, concluding of course that all passengers and goods will leave the old inns and quays and come to their new ones. I must give the concoctors of the scheme credit for their ingenuity, as far as their conclusions go; but unfortunately the Hamburg and Lubec capitalists do not agree with the Altona and Kiel speculators, and consequently the latter cannot lay their hands on any of the former's money. You would naturally suppose, Sir, that the Altona and Kiel merchants would try to induce others to subscribe, by subscribing largely themselves; but *(mirabile dictu)* out of 18,500 shares, they could not dispose of 1500, in the first four days of opening the Share-list; though the Committee in Altona musters to the number of 11, and that in Kiel to 9; so that, in fact, 20 Provisional Directors could not dispose of 1500 23*l.* shares amongst themselves, to say nothing of the other wealthy inhabitants of these important towns. Oh! where are the wealth and enterprise of Altona and Kiel! But to be grave on the subject. The history of the affair is simple:—The late King of Denmark was opposed to railways as being innovations; his present Majesty, seeing the necessity of keeping up with the advances of the age, and being

Digitized by Google

jealous of the prosperity of two neighbouring independant towns, patronized, last year, a scheme for making a railway from Altona to Kiel, with a branch to Gluckstadt. Mr. Buck, the engineer of the Manchester and Birmingham railway was summoned over "to report upon the best line for a railway between Altona and Kiel," which I have no doubt he has done to the best of his ability. But it is impossible to make a good article from bad materials. It has been found necessary to rise from Kiel for 1¼ mile with a gradient of 1 in 162. In Mr. Buck's report (which has been published) it is stated that an assistant engine will be necessary here. There is afterwards a gradient of 1 in 278 for 2 miles. At Altona the passengers' station is to be 20 feet below the streets; and the goods branch line is to descend to the Elbe through a tunnel, with a gradient of 1 in 30, to be worked by a stationary engine. A new quay is to be formed on the Elbe shore. These works are through, and on sand. The estimate for the whole work is 420,000*l.* It should be remarked that Altona has no harbour at all;—Hamburg has one, though it is not large; but it will soon possess a very fine one.

To be brief, Hamburg and Lubec are the great emporiums of trade of the northern part of Europe; their merchants are rich and enterprising; six years ago it was proposed to construct a railway between these towns, which scheme was well supported by capitalists, but was overthrown solely by the hostility of the late King of Denmark. This railway would be in every respect superior to the proposed Altona and Kiel line; for it would be 22 miles shorter, being about 36 miles instead of about 58 miles long—it would have no gradients so steep as those abovementioned—it would be constructed at *half* the expense—it would unite much more important towns—it would preserve the long established line of communication—and it would be very well supported in Germany, which the Altona and Kiel line *is not* and will not be. Let the English capitalists beware!

I remain, Sir, your obedient servant,

W. N.

London, Jan. 27th, 1841.

P.S. Should you approve of my attempt to enlighten my monied countrymen on the merits of such schemes, by inserting this letter, I will give them hereafter some useful information respecting a certain main trunk line in North Germany, in behalf of which a demand has already been made on their pockets.

EAST ANGLIAN RAILWAY.

To the Editor of the Railway Times.

SIR,—It is with great satisfaction that I have read in your paper the report of the meeting at Norwich on the 7th instant.

Being much interested in the success of this measure, and observing that the line from Stortford to Cambridge is abandoned by the Northern and Eastern Company, and that Mr. Rastrick strongly recommends that the whole line should be one concern, I beg leave to suggest, whether an enormous expense might not be avoided by leaving Audley End and the very valuable property to be purchased between Newport and Cambridge on the right from London, and taking a line which may be found between Newport and Triplow, and which would not exceed the other in distance, would pass as large a population, and through lands not of much value to purchase; it would interfere besides with no gentleman's park or valuable property, would pass within five miles of the wealthy town of Royston, and open an easy communication with Herts and Beds, and many of their towns, through a fertile, flat, and very extensive district. The interests and influence of Lords Hardwicke and Dacre would also be most probably beneficially affected by it.

I am your obedient servant,

29th January, 1841. E. F.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I regret that my engagements during the last week deprived me of the opportunity to forward you a reply to a communication signed "Alpha," which appeared in your number of the 9th January, arraigning the accuracy of a calculation of the dividends which would be paid on the shares of the Great Western Railway Company at the then price of 25*l.* premium upon an assumed total cost of 6,500,000*l.*, at various supposed rates of gross weekly revenue from 15,000*l.* to 9,000*l.* per week—which calculation you honoured me by inserting in a previous number, as received from a "known correspondent," and on this account, Sir, albeit having no inclination to continue any controversial discussion, I feel it due to you, as well as to myself, to vindicate its accuracy; leaving it to your readers to exercise their own judgments as to our respective claims on their confidence.

For convenience sake I will reply to "Alpha's" objections, *seriatim*—1st, He objects that I have inserted in my hypothetical cost of the railway, an item of 250,000*l.*, "remaining to be borrowed on 3rd capital," whereas he informs us that "the Company have neither the intention nor the power shares." Of course if "Alpha" be not himself a Director, which I do not imagine to be the case, he can only infer the absence of intention, from their assumed lack of power. Now, Sir, will he allow me to remind him, that the power to raise the third capital at all is very generally considered to have been an usurped power, and one which, if it had not been the interest of all parties concerned not to investigate its exercise narrowly, would otherwise have been found supported on a very slender legal basis. I cannot, therefore, agree with him, that it is quite so improbable as he supposes—that if the power to raise a third capital with only an *implied* Parliamentary authority, was assumed, that the Directors, if impelled by their necessities, might not just as easily stretch their prerogative a little further, and in analogy with the loans of one-third they raised on their former capital, borrow a similar proportion on their third as on the first and second capitals. But allowing, for argument's sake, that "Alpha" is correct on this point, it will only result that I have allowed 750,000*l.* as a probable sum necessary for the completion of the line, instead of 500,000*l.*, as in my former calculation; and this brings me to "Alpha's" second objection, viz.: that I assume a further capital of half a million as necessary, without any data whatever. Now, Sir, I never pretended that this was anything but an hypothetical assumption, leaving it to you and your readers to determine the *quantum valeat*. But as "Alpha" appears such a determined foe to hypothesis, will he allow me to suggest to him, that while upbraiding me he has fallen into the inconsistency of himself copying my evil example, for his calculation is founded just as much on hypothesis as mine is—for it is quite as gratuitous an assumption on his part, that NO further capital will be required, as is mine that a further capital will be required; but as it appears to me, with this difference in my favour, that mine is founded upon the experience derived from other Companies in similar stages of their construction; while his rather indicates a sanguine temperament, throwing experience overboard, and making his "wish a father to the thought." On this part of the argument, however, I have been so well anticipated by your correspondent "Observer," in the same number in which "Alpha's" letter appeared, that I need not occupy more of your valuable space, but content myself with referring "Alpha" to the last clause of "Observer's" letter, which has quite convinced me. Judging from the experience of the London and Birmingham Company, I think I have rather under than over stated the item "probable further amount of capital required." But, now to come to "Alpha's" third objection, which in reality is its most important feature, since in it he has actually argued himself—or, if it would not sound uncourteous, I might have said mystified himself—into the belief, that my calculation by charging the 100*l.* share as paid in full, instead of consolidating all the shares into 100*l.* shares, averaging 67*l.* 4s. 6d. paid on each (to adopt his somewhat quaint phraseology), "has thrown my whole calculation about one-third out of the square, and makes the dividends one-third less than they should be." I hope "Alpha" will forgive me for hinting a strong suspicion that he has discovered what is vulgarly termed, "a mare's nest." It is, indeed, a matter of surprise to me, how so acute an arithmetician as he appears to be, should have fallen into such a mistake—for mistake it evidently was. To make this apparent at a glance, I will repeat in a more simple form my former estimate of cost.

25,000 original shares, 65*l.* paid..	1,625,000	0	0	
25,000 half shares at 50*l.*.....	1,250,000	0	0	
37,500 fifth shares at 4*l.*.....	150,000	0	0	
				3,025,000
LOANS.				
Borrowed one-third of 1st capital	833,333	6	8	
Ditto ditto 2nd ditto	416,666	13	4	
To be borrowed or called on 3rd ditto.....	600,000	0	0	
Hypothecated calls 35*l.* per share on 1st capital.....	875,000	0	0	
Probable further capital required	750,000	0	0	
				3,475,000
				£6,500,000

or in brief, Capital supplied by subscribers	3,025,000
Loans made and to be made	3,475,000

Now let "Alpha" bear in mind that the object of my calculation was to show what income per cent. the purchaser of a Great Western share at the then market price of 25*l.* premium might calculate on deriving from his investment at various assumed amounts of revenue;—he tells me, that I ought to have consolidated all the various denominations of shares, and reduced them into a smaller number of 100*l.* shares. Now this might have proved my ingenuity, but certainly at the expense of the utility of my calculation, as unfortunately this said thing, yclept "consolidated share," has no real existence but in "Alpha's" imagination;—and I fear he will find it much more easy to give to this "airy nothing" a name, than "a local habitation" in Wetenhall's Stock Exchange Price List. With all due submission, therefore, to him, I still think I was right in preferring an entity to a nonentity; but to come to the supposed error of one-third against the Company. He is quite right in his observation, that in my estimate of the cost of 100*l.* share, I have charged it, although 65*l.* only has been paid, as if paid in full; but then it appears to have escaped him that while on the one hand I have debited the purchaser with 35*l.* per share, included in the above amount of loans under the head "hypotheticated calls," yet on the other hand I have practically given him credit for a similar (indeed for a larger) amount, for in my fifth column, instead of charging the account with interest on above amount of loans, 3,475,000*l.*, I have only charged interest on 2,000,000*l.*; and a moment's consideration of this fact will, I think, convince "Alpha" of the error into which he has fallen. I much regret, that as his object in giving his calculation was by way of contrast to mine, he had not adopted my plan of making the price of the share at 25*l.* premium, instead of at par, the comparison of the results would in that case be more easy, and would have approximated much more nearly than a difference of one-third, and this would have tended to disabuse "Alpha" of his error, without the necessity of any exposure of it on my part.

"Alpha's" last objection is,—that I have estimated the expenses at a per centage of 40*l.* or 50*l.* per cent. on the gross revenue, instead of a novel practice which he contends for, viz., a fixed charge of 2000*l.* per mile, irrespectively of the fluctuating amount of gross receipts. Now, although he endeavours to fortify his position by the past experience of the Great Western Railway, I feel perfectly certain that had I the materials at hand to which he refers, which unfortunately is not the case, I should discover some error on his part quite as flagrant as his "one-third out of the square," and I speak thus confidently from observing the uniform experience of all the principal railways hitherto in operation. I will refer for instance to the

Digitized by Google

Manchester and Liverpool, the Grand Junction and the London and Birmingham. If "Alpha" will refer to the whole series of their half-yearly reports, notwithstanding the gradual and large increase of revenue, yet the expences have maintained the same relative proportion per cent. to the gross revenue, and have not as "Alpha" would infer, diminished *pari passu* with the increase of revenue. Now of course this can only be true within certain limits, (though not perhaps easily defined) and therefore "Alpha's" mode of testing, as he terms it, "the fallaciousness of such a mode of reckoning" by assuming a preposterously low and a preposterously high amount of revenue is grossly, though I admit unintentionally, unfair. All I need add, is that the Directors in their original prospectus, adopted this same method and assumed 50 per cent as the expence on passenger, and about 70 per cent on goods traffic, The expences too of the first six months of last year, as shown by the official report, eight-ninths of which was for passenger traffic, gave about 48½ per cent., so that in assuming 40 and 50 per cent., I feel I am not chargeable with any unfairness.

Having now passed in review all "Alpha's" objections, I must respectfully take my leave of him, content to abide the judgment of your numerous readers. I will only add my request, that should "Alpha" determine upon a rejoinder that he will not suppose me either wanting in respect to him—or convinced by his argument, should I let it pass, as my numerous avocations do not leave me sufficient leisure to continue the controversy.

I am, Sir, your obedient servant,

OMEGA.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—Allow me to offer a few observations in reply to a letter signed "Observer" in your paper of 9th instant.

It is worse than trifling to attempt to confute facts by mere surmises, and little can be gained in the elucidation of truth by "supposing this and supposing that." I allude to the tenth, and the last paragraphs in "Observer's" letter. But now to the point.

"Observer" says, "'Veritas' is singularly unfortunate in his comparison of the early traffic of the Great Western line, in stating that the Birmingham line was open in April, 1838, its full length, 112 miles, instead of which ('Observer' continues) it was not open till September 1838, (adding) and so the triumph of the comparison of 'Veritas' is brought to nought, a comparison (he concludes) only calculated to mislead."

Let me ask "Observer," to give a faithful reply to the following facts:—

I stated in your paper of the 26th December, 1840, page 1120—"The Birmingham line took in one week in April, 1838, when opened 112 miles all through, *including the coach fare between Denbeigh Hall and Rugby*, 4,300*l.* This was the average weekly receipt of the month of April.

"The Great Western receipts for the week ending 13th December, 1840, on 63 miles, London to Farindon, and 12 miles between Bristol and Bath, together 75 miles, were 4,761*l.* being 461*l.* in favour of the Great Western."

I repeat, the Birmingham *did open* "112 miles all through," *coaching*, as I already stated, "between Denbeigh Hall and Rugby in 1838." It was in September, 1838, that the line opened all through with locomotives.

Let me ask "Observer" now, Who is it that gives statements calculated to mislead? Who is it that is so singularly unfortunate in his comparisons?

In the face of this, "Observer" says, I do not attempt to controvert his statement of the preponderance of the traffic that *must* ensue from his 14,915,182 *available* railway travellers on the northern lines, over the 3,879,251 on the Great Western line. Is not the excess of the Great Western traffic, in one week, of 461*l.* on 75 miles, beyond the Birmingham receipts on 112 miles, for one week, the plainest controversion that can be offered?

Let "Observer" be so good as to state, about how many of the 14,915,182 available passengers (*by official returns*) for the northern lines are actual travellers.

As to "Observer's" calculation of six millions of available railway travellers from Ireland for the northern lines,—that this number should cross St. George's Channel to travel on the Birmingham line, is about as likely as that 15,000,000 of Americans should cross the Atlantic to travel on the Great Western line. I will venture to say, that where one pound is spent in railway travelling by the poor weavers, spinners, and labourers of the north (which almost entirely comprise "Observer's" 14,000,000), 10*l.* will be spent by the wealthy inhabitants of Clifton, Bath, Cheltenham, Oxford, &c.

Can "Observer" be in earnest when he assumes that the inhabitants of such places as Bideford, Barnstable, Taunton, Exeter, &c., will travel to Falmouth or Plymouth, there to wait for the hour of arrival and the hour of departure of the large coasting steamers, and thence to proceed by sea to Southampton, enduring the trouble and vexation of embarking and disembarking, bad weather, sea sickness, loss of time, and having again to start anew from Southampton to London, when they can make the journey direct by the Great Western line?

"Observer" states, it has *appeared to him*, that about one-third of the passengers leave the Great Western train at or before reaching Slough. These are *the vague surmises that are calculated to mislead*. In reply, I give a table of traffic for four weeks in December, 1840, showing the number of passengers, and money taken at the different stations, which will prove what the traffic is on the part of the line to which "Observer" alludes.

TABLE.

Name.	To December 6. Passengers.	To December 6. Receipts.	To December 13. Passengers.	To December 13. Receipts	To December 20. Passengers.	To December 20. Receipts.	To December 27. Passengers.	To December 27. Receipts.
Paddington	4805	£1265 8 8	4802	£1308 10 5	4456	£1537 17 8	6057	£1870 5 8

Wootton Bassett Road	not open.	not open.	not	not open.	251	168 0 0	596	451 6 6
Total	11043	£4609 1 3	12315	£4831 7 3	10854	£4301 13 7	13923	£3629 12 3

"Observer" admits, that the rate of actual traffic on the entire line of the Great Western will amount to 9,440*l.* per week; yet, "though his calculations of traffic have been much too favourable," he has forgotten that every line of importance yet opened has doubled its traffic in two or three years. Why the Great Western should not increase in the same proportion, "Observer" does not take the trouble to consider.

"Observer" very kindly volunteers his advice as to investing in Great Western bonds, in preference to shares. With many thanks for such an unasked for favour, let me request "Observer" to give me (before I avail of his advice) a frank and plain answer to the contents of this letter.

I have only further to remark, that the statement of your known correspondent, which "Observer" extols as "the excellent table," has been proved in a letter in your paper signed "Alpha," to be totally incorrect.

VERITAS.

[A *very short* rejoinder must satisfy "Observer," and there the discussion must positively close for the present.—Ed. R. T.].

GREAT WESTERN DIVIDENDS.

To the Editor of the Railway Times.

Sir,—I address you as guardian of the railway interests, the successful exposer of wrong, the arbiter of justice, to call your attention to a scheme which is said to be on foot to divide unequally the Great Western receipts. Let your awakening trump sound the alarm, and the scheme may be rendered abortive.

It is reported that the Directors and large Proprietors of the Great Western Railway intend to *recommend* that an unequally large dividend shall be paid to the holders of OLD shares; and that those who have been in the *secret* for some time have, of course, sold their half-shares and fifth-shares at a handsome premium. I know more than one instance where half-shares have been bought, under the expectation that the dividends would be *as* the amount paid up, which one would suppose to be the honest course; for if a person—a holder of old shares—have taken the half-shares, which were his due, and retains them, he gets his just proportion of the dividend. If he on the contrary, have *sold* his halves, he has already received a good dividend in the premium, and as an honest man he ought to protect the interests of the party who has paid him this premium.

If A.—a holder of old shares—retains his *halves*, and the dividend is *pro-rata* per amount paid-up, he gets as much as he would get however unequally it were divided. But if A. has sold his halves to B. at a premium, surely B. is entitled to *at least* his equal proportion of the dividend.

I trust the scheme here alluded to has never been seriously entertained, but if it has been, or is, let the proprietors of half-shares and fifths be on the alert.

The prevention of *abuse*, as of disease, is the best cure.

Your's respectfully,

EQUAL JUSTICE.

Manchester, Jan. 26th, 1841.

PROSPECTS OF THE MANCHESTER AND CREWE LINE.

To the Editor of the Railway Times.

Sir,—Your correspondent, "Candidus," has chosen to put forth a very flattering, and, according to his view, perhaps, a very *candid*, statement of the prospects of this undertaking, inviting an impartial inquiry into its merits by any party who may doubt the soundness of his estimates.

I will indulge your correspondent with my very opposite view of the case, giving in contradistinction to his *assumptions*, the *facts* upon which I ground my opinions, and then leave those who are interested (which I am not) to judge between us.

The cost of the Manchester and Crewe line I put down at 1,900,000*l.* including the Branch to Macclesfield, because the Directors have already called for and spent 1,200,000*l.*, and taken power to borrow or raise 700,000*l.* more, which I feel quite sure they could not have done if the whole had not been wanted.

Digitized by Google

The Macclesfield branch may only cost what "Candidus" states, and I take it as such, the amount whether spent there or on the main line being immaterial, since the branch can never bear its own expenses of working, and is only intended as a feeder to the main line—to fulfil the obligations of the Act of Parliament—*and if possible to prevent the formation of a rival line along the Valley of the Churnet.* It must therefore ever be an incubus and drain upon the main undertaking of 30 miles, which with the costs of its feeder will stand in no less than 60,000*l.* per mile according to "Candidus," and 63,000*l.* by the Directors' estimate and mine.

So much then for the moral *certainty* of the cost of the line, without stopping to enquire how much it may possibly be exceeded.

Now for the revenue—which "Candidus" has *assumed* at 240,000*l.* per annum; or at the rate of 4,600*l.* per week, or 153*l.* per mile, per week!!

By the two last half-yearly reports of the Grand Junction Company, it appears that the entire gross traffic on that line for 12 months (viz. from July 31, 1839, to the end of July, 1840) has been 434,171*l.* for 115 miles, which, including Manchester, Liverpool, the North of England, Scotland, and Ireland gives about 8,350*l.* per week, or 73*l.* per mile, per week!—and by the evidence before Parliament (as admitted by "Candidus") the traffic accruing from Manchester and its environs was shown to be about (but not quite) one third of the whole, or say 2,800*l.* per week, or 24*l.* per mile. But it must be borne in mind, that at the time this evidence was extracted from the books of the Grand Junction Company, nearly the whole of the Leeds and Yorkshire traffic passed through Manchester, which now goes by the North Midland Railway *via* Derby, and neither the Lancaster and Preston, nor North Union Railway had been opened, which have since given a great accession of traffic to the Grand Junction line, so that it is probable that if an investigation of the traffic were now made, it would be found that the proportion drawn from Manchester would not amount to one-fourth, in place of one-third, of the whole.

But as I am not disposed to dispute about trifles, I will take the portion claimed by "Candidus," including Stockport, of one-third or 24*l.* per mile, which will give on 30 miles (the main line) 720*l.* per week, or a gross revenue of 37,440*l.* per annum, and for the Macclesfield branch of ten miles one-half or 12*l.* per mile, making the total revenue for these forty miles of railway, 41,000*l.*, the capital being 1,900,000*l.*!

To any person who has read and *believed* "Candidus'," figures, those which I am now writing, may appear to be at first sight almost incredible, and he will wonder where the people can be found so blind to their interests, as to subscribe two millions of money to such a project. Nevertheless *that* fact is before him, and if he will take the trouble to enquire, he will find those I now give him (and they are of easy proof or refutation) equally certain. If he is not entirely convinced by my figures, but still under the delusion of those of "Candidus," let him propose to himself this problem:—

If a railway costing 22,500*l* per mile (that of the Grand Junction) and having a weekly traffic of 73*l.* per mile, yields a return of 14 per cent. per annum, what ought to be there turn from one costing 63,000*l.* per mile, and having a traffic of only one-third the amount of the former?

Why, *ceteris paribus*, the answer would be about 4½ per cent., but as the per centage and expences for conducting a small traffic are always greater than on a larger one, and as there will be interest to pay on the borrowed capital—if parties can be found bold enough to lend their money on such a security—at the rate of 5 per cent. per annum, I must leave it to "Candidus" to *assume* what will be left for the proprietors!

Let the sceptic also look at the revenues of various lines now in operation—the North Midland, the Midland Counties, the Derby and Birmingham, the Gloucester and Birmingham, the Northern and Eastern, the Eastern Counties, &c., all in their day puffed forth with equally alluring baits as that of "Candidus," and once bearing high premiums on their stock, but now, alas, having only the hook left. Call after call, but where are the dividends? None of these lines (with a solitary exception) are earning so much as my allowance for the Manchester and Crewe (24*l.* per mile), and some of them under 20*l.* The North Midland alone has a revenue of about 30*l.* to 32*l.*; and if Leeds, York, Hull, and the populous districts behind them furnish only a return of 32*l.* per mile, is it not fair to infer, that 24*l.* is a full allowance from the town of Manchester, there being nothing behind it? I do not believe that Liverpool alone furnishes over 24*l.* per mile of the Grand Junction revenue, but that the rest is made up from Ireland and Scotland.

For "Candidus," therefore, to assume a nett revenue of 121,000*l.* for a line of *thirty miles* when the parent stock (Grand Junction) only yields with *treble* the traffic 230,000*l.* for *one hundred and fifteen miles*, carries absurdity on the face of it; and the inference deducible (though nothing is stated), that a large profit will be made out of the *arrangement* with the Grand Junction Company, is almost as fallacious. That *some* benefit will be derived by the Manchester and Crewe Company from that arrangement, I am willing to believe, and the *only profit* towards a dividend must, as I have shown, arise from that source, as the Manchester and Crewe *per se*, and unaided by the Grand Junction, could not pay its way; but to suppose that the Grand Junction Chairman has been so *liberal* to his competitors of Manchester, as to grant them the use of a portion of that line on such terms as shall afford a profit of 121,000*l.* (or one-tenth of the sum), is, indeed, to believe that the "moon is made of green cheese." As a Grand Junction proprietor, *I know* the thing to be *impossible*, and let me further give "Candidus" this hint, that (although for the sake of argument, and to give the Manchester and Crewe the full advantage of "Candidus's" assumption of one-third the Grand Junction revenue, I have presumed the whole Manchester traffic to be diverted *via* Crewe,) *arrangements are now in contemplation, and to a certainty will be carried out, for running trains as at present to Warrington, to meet those from Liverpool to Birmingham, and vice versa*; and as the Crewe Company cannot possibly afford to run more than two or three through trains daily, a very large portion of the traffic, both of goods and passengers, will continue to be carried by the present route! This will be done without the aid of the Grand Junction Company, were they inclined to oppose it; but they know their interest too well, and are now laughing in their sleeve at "Candidus's" and his friends' calculations of a dividend out of their revenues!

If "Candidus" be sincere in what he states let him reflect on what is here written, and be thankful for the warning; but if he has other objects than to elicit truth, I trust the inquiry which he has courted will frustrate them. He may rest assured, that in the boasted "arrangements" which the sapient Directors of the Crewe line flatter themselves on having concluded with their friendly Junction Chairman, they have not caught "a weazle asleep," and that the day is not far distant when he will take ample revenge on the promoters and supporters of the competing Manchester lines—conceived in envy and jealousy, promoted by misrepresentation, executed in ignorance and outrageous extravagance, and resulting, as they assuredly will, in disappointment and ruin to the deluded and unfortunate proprietors.

VERB. SAP.

Liverpool, 27th January, 1841.

MANCHESTER AND LEEDS RAILWAY.—We understand the Directors of this railway are making arrangements for running their own omnibuses between Bradford and Brighouse. No extra charge will be made, but passengers will be booked for Manchester, for 8*s.* 6*d.*, which is the usual charge from Brighouse to that town.—*Leed's Inteligencer.*

CARRIAGE OF GOODS ON THE GRAND JUNCTION RAILWAY.

MESSRS PICKFORD AND CO.,

To the Directors of the Grand Junction Railway Company.

GENTLEMEN,—On the 13th October last, we wrote to you as below:—

"As the Grand Junction Railway Company claim powers under their Acts of Parliament which we conceive have never been granted to them, the questions in dispute must now come before a court of law. We will give every facility to forward the proceedings, and request the Grand Junction Railway Company to do the like.

"The alteration in the mode of carrying on the traffic which we have placed in the hands of the Company since the 30th September last, has created confusion and additional expense, both to the Company and ourselves: and, so far as it appears to us, with the sole object of injuring our business, and driving us from the road.

"Upon this subject we will not enter. If the legislature has granted powers, and they are used in an arbitrary and tyrannical manner, however troublesome this may be, the public must submit. Of the policy of such proceedings there may be some doubt.

"Our solicitors are Messrs. Baxendale, Tatham, Upton, and Johnson, 7, Great Winchester street, London; and to them we would refer the solicitors of the Grand Junction Railway Company."

To this letter we received no reply; and we again wrote on the 17th, as follows:—

"If we are committing any breach of the law, which we will not admit, let the question be set at rest. Our desire is, as we before stated in our letter of the 13th, to forward, through our solicitors (as we asked the like from you), proceedings to ascertain the legality or otherwise of our conduct, in a court of law.

"Our desire is to give and receive the least trouble, and we must hope that the Company will be actuated by similar feelings."

This brought the letter from you dated October 21, which we also annex.

"*Messrs. Pickford and Co.*

"GENTLEMEN,—Having laid before the Directors at their meeting to day, your letter of the 17th, in which you state your wish that the questions therein mentioned may be determined, by reference to a court of law, I am instructed to inform you that Mr. John Swift, of Union Court, Castle-street, in this town [Liverpool], is the law clerk of the Company; and that he will attend on behalf of the Company to any legal proceedings which you may think it desirable to institute in this matter.

"I am, Gentlemen, your obedient servant,
(Signed) "J. R. CHORLEY."

In your letter to us, published in the *Railway Times* of the 6th instant, you say,—"as you have thought it proper to publish your letter of December 30th, the same will be done with respect to this," after which the Directors think, that any further discussion of the matter at issue had better be reserved for another tribunal."

On Thursday, 21st instant, the rule *nisi* for a mandamus, which we had obtained, came before the Court of Queen's Bench for argument. Upon this occasion you took advantage of a mere form, and the rule was discharged without costs. The result is, that the questions at issue between us are left as far from final adjustment as they were when we applied for the rule.

The decision of the Court rendering it necessary for us to make a demand upon you in a more formal manner, we sent a letter through our Solicitors to their agent in Liverpool, Mr. Peter Wright, requiring, in what we believed to be the proper manner, that we should be placed in all respects upon the same terms with Messrs. Chaplin and Horne, and other parties. Mr. Wright called in consequence upon Mr. Chorley, at the Grand Junction Railway Office, with this letter, and we quote his account of the interview from an affidavit afterwards sworn by him.—

"Peter Wright, of Liverpool, in the County of Lancaster, gentleman, maketh oath, and saith, that he did on this twenty-second day of January instant, personally wait upon John Rutter Chorley, the Treasurer to the Grand Junction Railway Company at their office in Liverpool aforesaid, and told him, that he, this deponent, was desired on behalf

Digitized by Google

of Messieurs Pickford and Co., to deliver to him the said John Rutter Chorley, the demand in writing, which deponent then held in his hand. That the said John Rutter Chorley refused to take the same, and said he would hold no communication with any person whatever on behalf of Messieurs Pickford and Company, and would answer no questions put to him, but that if any communication was addressed to him the said John Rutter Chorley as treasurer, in writing, he would give a reply—that Messieurs Pickford and Company had behaved so ill to the Company, that they deserved no courtesy. And this deponent saith, that in reply thereto, he, this deponent, stated to the said John Rutter Chorley, that as the demand was in writing it came within his observation, and therefore ought to receive a reply, and deponent further stated, that in performance of his deponent's duty, it was necessary that he should ask the said John Rutter Chorley some questions. That the said John Rutter Chorley then rose from his chair, and stated that he would give no answers, and that if deponent persisted, he had no alternative but to leave the room, but that as he had before stated, he would answer any written communications left at his office. And this deponent further saith, that he did thereupon immediately state that he would read the questions from a written paper, and that he, the said John Rutter Chorley should have a copy thereof, but the said John Rutter Chorley said "the instant you begin to read I will leave the room." That deponent then asked the said John Rutter Chorley, whether he really meant to leave the room if deponent persisted, and the said John Rutter Chorley replied he would, and this deponent further saith, that he did leave the original demand in writing, signed 'Pickford and Co.,' upon the desk at the right hand side of the said John Rutter Chorley, on this twenty-second day of January instant.

(Signed) "PETER WRIGHT.

"Sworn at Liverpool aforesaid, this twenty-second day of January, one thousand eight hundred and forty one.

Before me,

(Signed) "THO. HUNTER, a Com., &c."

Since this, we have received a letter from Mr. Chorley, a copy of which we subjoin:—

"*Messrs. Pickford & Co.*

"Grand Junction Railway, Liverpool,
"January 23rd, 1841.

"GENTLEMEN,—Your letter of the 21st, addressed to the Directors, has been received at this office, and will be laid before them at their next weekly meeting.

"I am, your obedient servant,

(Signed) "J. R. CHORLEY."

The case, therefore, stands thus:—You are assuming and exercising *to the great detriment of our business*, powers which we are advised do not legally belong to you. We are endeavouring to get the matter put into such a shape, as that your assumed rights may be tested in court of law. One word from you will do this. The whole of the delay that has been and still is interposed, is of your interposing, and yet the question is not brought to issue.

The public must judge between us. We are not going to dilate upon the expense and annoyance, or trouble, which these harassing delays entail upon us. We will not enlarge upon the numberless vexatious impediments which are thrown in our way, and till this question is decided, will we fear continue to impede us. We will not say one word of the propriety of attempting to destroy a rival establishment by such means. Nor would we have gone even as far as we have, were it not asserted in the public prints, that the Grand Junction Railway Company have accomplished their object, "in getting carriers off the line by at last ridding themselves of Pickford and Company, in a way that is unworthy a respectable body of men." The latter clause of this sentence, it is not for us to comment on; but with regard to the former, we must in self-defence, state publicly, that we still remain carriers upon the Grand Junction Railway, and that to an extent which affords no slight test of the direction in which the current of public opinion flows in this matter—so far as it has been brought to bear upon it at all.

We do this in a letter addressed to yourselves, and we couple it with a short statement of the facts under which we continue on your line, because we think these last ought to be generally known, and because this appears to us the method of stating them most likely to challenge contradiction, and therefore affording the surest guarantee for their entire accuracy.

We are, Gentlemen, your obedient servants,

(Signed) PICKFORD & Co.

THE SUBSTITUTE FOR TURNPLATES.

To the Editor of the Railway Times.

SIR,—Allow me to inform "A Railway Engineer," whose plan for superseding the use of turntables on railways, under certain circumstances, appeared in the last number of the *Railway Times*, that the contrivance is by no means new. Precisely the same idea has been suggested by several individuals, and a description of it was published in the 802nd number of the *Mechanics' Magazine* for December 22, 1838. The thing is so exceedingly simple, that it is no wonder it should be *invented* over and over again.

Yours respectfully,

W. B.

London, January 26, 1841.

THE IRON TRADE.—A quarterly meeting of the ironmasters and others connected with the staple trade of this district took place the week before last, and the reports were of a very favourable character. Several extensive orders are in progress of execution and the prices manifested a tendency to advance.—*Aris's Birmingham Gazette.*

RAILWAYS IN IRELAND.—At a Meeting of the Noblemen, Landed Proprietors, Bankers, Merchants, and others interested in the prosperity of Ireland, held at the Royal Exchange, Dublin, on Thursday, 21st January, 1841,

The Right Hon. Sir JOHN KINGSTON JAMES, Bart., Lord Mayor, in the Chair,

The following resolutions were unanimously adopted:—

Proposed by the Archbishop of Dublin; seconded by the Earl of Mountcashel, and

Resolved, That one of the greatest public benefits which can be conferred by any government upon any country, is to provide for all classes of the community the means of safe, expeditious, and cheap internal conveyance and intercourse.

Proposed by the Duke of Leinster; seconded by the Rev. the Provost of Trinity College, and

Resolved, That the establishments in Ireland of an extended and comprehensive system of railways, under the immediate controul of the State, by affording to this portion of the empire these important advantages, must materially promote its future improvement and prosperity.

Proposed by the Earl of Charlemont; seconded by High Sheriff Browne, and

Resolved, That in the opinion of this meeting, the establishment of any such extended and comprehensive system of Railways in Ireland is not likely to be effected by private capital or enterprise.

Proposed by Colonel Conolly, M.P.; seconded by Peter Purcell, Esq., of Halverstown, County of Kildare, and

Resolved, That by placing this great national undertaking wholly in the hands of Government, not only would the selection be secured of such lines as would be calculated to extend the advantages of Railways impartially to every part of the country, but in their construction such a degree of economy would be attainable, as would altogether be beyond the reach of private capitalists. Parliamentary and law expenses would be materially diminished, professional assistance would be extensively and usefully obtained from various public departments; owners of property would be satisfied with a much less amount of compensation, where a work of the kind was undertaken solely with a view to the public good; while the capital necessary for such an undertaking would be obtained at a much lower rate of interest, than by individuals, on any description of private or personal security; and under circumstances not calling for the high rate of annual return, which persons, permanently investing their property in such an undertaking, would undoubtedly expect.

Proposed by John O'Connell, Esq., M.P.; seconded by Colonel Cregihton, Crum Castle, Lieutenant and Custos Rotulorum of Fermanagh, and

Resolved, That it appears equally manifest, that in the future maintenance and direction of such a system of Railways, the Government would possess a vast superiority over private capitalists. A Central Board of Management would necessarily be not only more efficient, but more economical; whilst its general effect would be to establish a system of uniformity, as well as of strict regularity and responsibility in all its details and subordinate departments, not to be attained under separate Local Boards, the entire and permanent controul of the whole system affording the Government at the same time an unlimited facility in introducing every improvement, and carrying out every alteration which future circumstances might call for.

Proposed by the Hon. Frederick Ponsonby, of Clogheen, Deputy Lieutenant King's County; seconded by W. Torrens M'Cullagh, Esq., and

Resolved, That the result of the economy, attainable in these various ways by the Government, would necessarily be a reduction of the charge for the conveyance both of Goods and Passengers, to an extent which it would be impossible to arrive at under any other system.

Proposed by Sir Percy Nugent, Bart., of Dourn, Deputy Lieutenant of Westmeath; seconded by Charles Bianconi, Esq., of Clonmel, and

Resolved, That in recording our acknowledgments for the benefits which have accrued to the people of Ireland from the loans (limited as they have been) for the extension of public works in this country, it is satisfactory to us to be able to state, that the moneys advanced for this purpose, during recent years, under the controul of the Board of Works in Ireland, have been repaid, not only without loss, but actually with profit to the State. And it appears to us, that the revenues to be derived from the intercourse upon a general and comprehensive system of Railways, would afford ample security for any advance to be made on the credit of Government for this national work.

Proposed by Christopher Fitzsimon, Esq., Deputy Lieutenant Dublin; seconded by Colonel Blacker, and

Resolved, That we refrain from referring in detail to the various and manifest advantages which must accrue to the people of Ireland, and to the empire, from the success of the measure we advocate—to its effects in promoting agriculture—in extending manufactures—in increasing the revenue—in establishing the most rapid and closely connected communication between the most distant parts of Ireland and the seat of government; in enabling the Government to select the harbour or harbours best suited for the Post-office communications with the Western World; and, more especially, in enabling the country at the present moment, by the new sources of employment which would be thus afforded, to sustain the pressure of those burdens for the maintenance of the destitute poor which are now in progress of being imposed upon us; in respect to all which, we feel assured that the more fully the proposed measure is considered, the more entirely will it be found deserving of encouragement and support.

Proposed by Mr. Richard Franklin, Mayor of Limerick; seconded by James Malony, Esq., of Kiltanon, Deputy Lieutenant Clare, and

Resolved—That the movers and seconders of the resolutions which have now been passed, be appointed a Committee (with liberty to add to their number), for the purpose of preparing and forwarding petitions to both Houses of Parliament, founded on these resolutions, to collect funds to pay the necessary expenses, and to take such other measures for the furtherance of the important objects of this meeting as shall appear to them advisable and necessary.

Proposed by the Duke of Leinster; seconded by Colonel Conolly, M.P., and

Resolved—That the thanks of this Meeting are justly due and are hereby given to James Pim, Esq., jun., for the untiring zeal and ability with which he has advocated and promoted the objects of this meeting.

J. K. JAMES (Lord Mayor), Chairman.

The Lord Mayor having left the Chair, his Grace the Duke of Leinster was called thereto.

Proposed by the Earl of Charlemont; seconded by Peirce Mahoney, Esq., and

Resolved—That the most cordial thanks of this meeting be respectfully offered to the Right Hon. the Lord Mayor, for his promptitude in calling this Meeting, and for his dignified and courteous conduct in the Chair.

LEINSTER, Chairman.

THE HULL ADVERTISER.—Established half a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England; while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser	73,000
Hull Packet	10,000
Hull Times	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.

The HULL ADVERTISER is published every Friday morning, in time for post, at the office, 26, Lowgate.

PROSPECTUS OF THE DONCASTER AND NORTH MIDLAND RAILWAY, connecting Doncaster with the North Midland and Sheffield and Rotherham Railways.

CAPITAL—£200,000 in Shares of £20 each. DEPOSIT—£3 per Share.

PROVISIONAL DIRECTORS
(With power to add to their number).

Isaac Morley, Esq., Mayor, Doncaster.
Mr. R. Milner, Doncaster
Mr. J. E. Morey, Doncaster
Mr. Thomas Johnson, Doncaster
Mr. A. W. Goodwin, Doncaster
Mr. George Parkinson, Doncaster
} Members of the Town Council.
Mr. John Maw, Doncaster.
Mr. Wm. Vickers, Sheffield
Mr. G. W. Chambers, Rotherham
} Directors of the Sheffield and Rotherham Railway.
Mr. Francis Parker, Masbrough, Director of the North Midland Railway.
Mr. Thomas Wilson, Kilnhurst.
Mr. William Bradley, Sheffield.

ENGINEERS—Mr. Robert Stephenson; Mr. Frederick Swanwick.

PRINCIPAL SURVEYOR—Mr. Alexander.

SOLICITORS—Messrs. Mason and Collinson, Doncaster; Mr. Henry Vickers, Sheffield.

BANKERS.

Doncaster
Sheffield
Leeds
} Yorkshire District Bank.
London—Messrs. Glyn, Halifax, Mills, and Co.

The North Midland Railway being now opened throughout its entire length, continuing the chain of railway communication from York and Leeds to London, also to Birmingham and the West of England, a fitting time seems to have arrived for connecting the town of Doncaster with the main line, which is proposed to be effected by a railway of something short of nine miles in length, diverging from the North Midland Railway near the Swinton Station, and following the valley of the Dun by Conisbrough to Doncaster.

The population of the town of Doncaster (about 11,000) alone justifies its being united with the grand trunk railway, independently of other considerations arising from its markets, from the races which annually attract their tens of thousands of visitors: and from its position as the natural and only outlet between the manufacturing and mining districts of Sheffield, Rotherham, Silkstone, and Barnsley, and the agricultural district south of the Humber.

Doncaster forms the entrepot of a large and highly important agricultural district. Its corn market (for which additional accommodation is about to be provided) has been long and deservedly celebrated: and, by this measure, will be brought within easy reach of the millers and factors of distant towns, who, as yet, have not been able to avail themselves of that market.

By this means Doncaster will also become closely connected with the town of Sheffield; and that this connexion will be important, may be inferred from the fact, that of the vast quantities of iron, grain, and grocery, consumed in Sheffield, almost the entire supply passes through Doncaster.

The price of coals at Doncaster is high, considering its comparative proximity to the Rotherham, Silkstone, and Barnsley coal fields. This is occasioned by the cost of carriage, the price at the pits being less than one half of the selling price at Doncaster. The proposed railway, there is little doubt, will reduce the price by at least 3s. per ton. The consumption of coals in Doncaster alone, being 80,000 tons per annum, the annual saving to the town would be considerable, and be sensibly felt, particularly by the more humble class of the population. The whole agricultural district, east of Doncaster, will participate in the benefits of this reduction, coals being the almost invariable back-carriage of the corn waggons coming to the market.

The lime quarries of Wormsworth and Conisbrough will be brought into more active operation; more especially by a much increased demand in the districts adjoining the northern division of the North Midland Railway.

Doncaster will be brought within a short journey from the undermentioned towns:—

	Population.		Time at station.
Rotherham	11,000	in	0h 30m.
Sheffield	110,000	..	0 45
Barnsley	17,000	..	0 40
Wakefield	26,000	..	1 0
Leeds	160,000	..	1 30
York	26,000	..	2 0
Hull	60,000	..	3 20
Chesterfield	12,000	..	1 15
Derby	28,000	..	2 15
Nottingham	75,000	..	3 0
Total	526,000		

Thus bringing a population of upwards of 500,000 people within an average journey of about an hour and a half of the markets and the races of Doncaster. Manchester will become only 3½ hours distant, and Liverpool and Birmingham 5 hours.

As the Manchester and Leeds Railway falls into the North Midland near Wakefield, the proposed "Doncaster and North Midland" line will become the natural and direct route by which the malt of Doncaster, Tickhill, Bawtry, &c. will find its way to Manchester, the present routes by water being exceedingly circuitous and tedious.

This line will be an important tributary to the North Midland, and Sheffield and Rotherham Railways, and will receive the co-operation and support of both those Companies, having been already favourably alluded to in the Reports of their Directories. This circumstance, coupled with that of the Board of Direction of each of these Companies being represented in the Provisional Committee of this undertaking, affords a guarantee to the public, that every facility, arising from harmony of arrangement and unity of operations (so essential in the working of conjoining lines of railway) will be given to the passage of this Company's trains.

The following is a statement of traffic expected upon the railway, deduced from recent actual observation taken upon the several communications by land and water with the town of Doncaster, and which will be verified before Parliament:—

—	Present Traffic, Fromaccidental Returns.	Estimated Traffic on the Railway.	Rate. s. d.	—	Revenue. £.
Passengers	165,736	327,472	1 0	....	16,373
	Tons.	Tons.		£.	
Goods	139,984	26,449	2 4	3084	
Iron, steel, and manufactures	51,376	22,568	2 2	2444	16,138
Grain	53,820	28,616	2 2	3100	
Minerals (Coal & Lime)	544,440	128,752	1 2	7510	
	Head.	Head.			
Cattle	35,828	8,944	0 6	....	223
Parcels, Gentlemen's Carriages, Mails, &c.	....	....	..	....	1,000
					33,734
Deduct 40 per cent. for expenses					13,493
Net Income (being 10 per cent. on capital)					20,241

Plans have been deposited and notices given with a view to an application to Parliament in the next Session. The country is favourable for the construction of a railway: the general inclination of the valley of the Dun being very slight. The cost of stations (usually a very heavy item in railways), and especially so on short lines) will in this case be very inconsiderable:—The circumstance of this railway being connected with two lines already at work, virtually giving to this Company the benefit of the stations at their termini. It is also exceedingly probable that economical arrangements, mutually advantageous, may be made with one of the Companies alluded to, for working the traffic on this line in connexion with their own, yet leaving this Company entirely independent.

The proposed Capital of £200,000 includes the supposed cost of engines, carriages, and outfit necessary to set the railway to work, and as a *double* line:—or, if a *single* line only should be executed in the first instance, (with land for a *double* line,) and the power should be supplied by another Company, as before alluded to, £150,000 is estimated to be sufficient.

Applications for Shares to be made in the subjoined form, and to be transmitted (prepaid) to the Solicitors of this Company at Doncaster, or at Sheffield; at the Sheffield and Rotherham Railway Office at Sheffield, or at the Offices of the North Midland Railway Company, Albion street, Leeds, or No. 6, Warnford-court, Throgmorton-street, London.

N.B.—Applications for Shares are requested to be sent to the Solicitors as soon as possible.

FORM OF APPLICATION.

I request to become a Subscriber for Shares of £20 each in the proposed "Doncaster and North Midland Railway;" and for the same, or such portion of them as shall be allotted to me, I undertake to pay the Deposit of £3 per Share, and to sign the Parliamentary Contract and Subscriber's Agreement, when requested. Dated the day of 1841.

THE RAILROAD QUARTERLY JOURNAL.

Contents: The Railway Accidents during the year 1840; the Railway Oligarchy; the Greenwich Railway; Paying Dividends from Capital; Liabilities of Railways; Railway Bye-laws; Rival Lines; Resident Railway Servants; South Western Railway.

"We like exceedingly the searching, honest, and fearless spirit with which he has entered on his task.... We gladly recognise too in the work a very extensive and familiar acquaintance with Railway subjects, great acuteness of observation, and not unfrequently much originality of suggestion."—*Railway Times.*

"This first number is calculated to make a highly favourable impression as to the ability of the conductor of the 'Railroad Quarterly Journal;' and the facts and reasonings which it embodies are of permanent importance, both to the public and to those more immediately concerned in the transactions of railroads, by whom it will no doubt be appreciated as it deserves to be."—*Newcastle Courant.*

London: Simpkin, Marshall and Co.; and may be had of all booksellers and newsmen.

On the 2nd of February will be published,

RAILWAY TRANSIT, or the Means of ensuring Safety in Railway Travelling. A Letter to the Right Hon. Henry Labouchere, M.P., President of the Board of Trade.

By FRANCIS ROUBILIAC CONDER, Civil Engineer.

Published by John Weale, Architectural Library, High Holborn.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising thereirom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,
THOMAS WOOD, Secretary.

LONDON and BRIGHTON RAILWAY COMPANY, Incorporated by Act of Parliament, 15th July, 1837.—At the Half-yearly General Meeting of the Company, held pursuant to Advertisement, at the London Tavern, Bishopsgate-street, on Wednesday, Jan. 27, 1841.

JOHN HARMAN, Esq., in the Chair.

The Advertisement convening the Meeting was read.

The Register of Proprietors having been produced by the Secretary, the Common Seal of the Company was affixed thereto by the Chairman, in the presence of the Meeting.

The Report of the Directors was then read by the Secretary.

The following resolutions were unanimously passed:—

Resolved,—That Mr. Faithfull do explain the nature of Mr. Isaac Lyon Goldsmid's case.

Resolved,—That the Report now read be received and adopted, and a copy sent to each Proprietor.

Resolved,—That the following Directors who go out of office under the provision of the Act be, and they are hereby re-elected—viz., John Harman, John Cattley, John Hodgson, Henry Moreton Dyer, Esq., and Lieut.-Col. Moody, R.E.

Resolved,—That the declaration of forfeiture of Twenty-seven Shares, numbered 2,243 to 2,258, 8,962 to 8,967, and 24,655 to 24,659, made under Minute of Board of 19th June, 1840, on which the seventh call has not been paid, be and is hereby confirmed.

Resolved,—That the explanation given by the Directors in respect of Mr. Isaac Lyon Goldsmid's case is highly satisfactory to this meeting.

Resolved,—That the thanks of this meeting be given to Mr. Rastrick, for his very highly satisfactory Report.

JOHN HARMAN, Chairman.

Resolved,—That the thanks of this Meeting be given to the Chairman and Directors, for their unremitting attention to the interests of the Company.

THOMAS WOOD, Secretary.

London and Brighton Railway Office,
10, Angel court, Throgmorton-street, 27th Jan.

NEWCASTLE AND NORTH SHIELDS RAILWAY.—At the Annual Meeting of the Proprietors of the Newcastle and North Shields Railway, held at the Company's office, Pilgrim-street, on Thursday, the 21st instant—

MW. BELL, Esq., M.P., in the Chair,

The Report of the Directors of the Company, with a Statement of the Accounts, having been read,

It was resolved—

On the motion of R. W. Swan, Esq., seconded by H. Ridley, Esq.

That the same is approved of and adopted, and that they be printed, and a copy sent to each shareholder.

On the motion of J. C. Jobling, Esq, seconded by Nathaniel Hindhaugh, Esq.

That the following Shareholders be re-elected Directors for the ensuing year, viz.—Matthew Bell, Esq, M.P., John Hodgson Hinde, Esq., M.P., Nathaniel Grace, John Potts, Richard Spoor, Thomas Barnes, George Cruddas, Christian Allhausen, Thomas Hodgson, Mark Lambert, Matthew Hudson, John Jobling, James Lowndes, John Gibson, and John Straker, Esquires.

On the motion of Charles Rayne, Esq., seconded by J.C. Jobling, Esq.

That the best thanks of the Company be given to the Chairman, Vice-Chairman, and Board of Directors, for the unremitting zeal and attention shown by them in forwarding the interests of the shareholders during the past year.

Moved by Nathaniel Grace, Esq, seconded by H. Ridley, Esq.

That the thanks of the Company are especially due, and are given, to Richard Spoor, John Potts, James Lowndes, and Thomas Hodgson, Esquires, the Managing Directors, for their great devotion to the welfare of the Company.

Mr. Bell having left the Chair—

On the motion of J. H. Hinde, Esq., M.P., seconded by R. P. Philipson, Esq.

That the thanks of the meeting be given to the Chairman, for his able conduct in the Chair.

ROMAN CEMENT. — CONTRACTORS, BUILDERS, and others, are respectfully informed that any quantity of this article, of the best quality, may be obtained at George H. Newton's Manufactory, Wilmington Works, Groves, Hull.

G. H. N. can undertake to furnish Contractors for Public Works with a regular supply of Cement, upon the best terms, having supplied from his late Works in Derbyshire and Staffordshire, some of the heaviest Railway Contracts in the kingdom.

SOUTH-EASTERN RAILWAY.—To CONTRACTORS FOR FENCING.—The Directors will meet at their office, No. 10, Coleman-street, London, on Tuesday, the 2nd day of February, 1841, at half-past One o'Clock in the afternoon precisely, to receive Tenders from parties willing to contract to fence off the line of Railway with Post and Rail Fencing, from the Cranbrook and Maidstone turnpike road, in the parish of Staplehurst, to Grove Bridge, on the turnpike road leading from Ashford to Hythe, in the parish of Sellinge, being a distance of 20 miles or thereabouts.

The Specification and Conditions of Contract may be seen on application to Mr. P. W. Barlow, the Resident Engineer, at the Railway Office, Tunbridge, and at the Office of Mr. Thomas Thurston, Land Surveyor, at Ashford, on and after the 1st day of January, 1841.

The Directors will not consider themselves bound to accept the lowest Tender, nor will any Tender be received after One o'Clock on the day appointed for receiving the same.

By order of the Directors,
J. S. YEATS, Secretary.

Railway Office, 10, Coleman street,
23rd Dec. 1840.

SOUTH-EASTERN RAILWAY COMPANY.—Notice of Call.—The Directors having this day made a CALL of FIVE POUNDS per Share, from the Subscribers to, and Proprietors of, this undertaking, and directed that the same be payable on Monday, the 15th day of February next, at either of the undermentioned places, viz.:—

London—Messrs. Glyn and Co., bankers, Lombard street.
Liverpool—Messrs. Moss and Co., and Messrs. Barned and Co., bankers.
Manchester—Messrs. Jones, Loyd, and Co., bankers.
Leeds—Messrs. Beckett, Blayds, and Co., bankers.
York—The Union Banking Company.
Dover—Messrs. Fector and Co., and Messrs. Latham and Co., bankers.
Ashford—Messrs. Jemmett and Co., bankers,
Cranbrook—Messrs. Wilmshurst and Co., bankers.
Tunbridge and Tunbridge Wells—Messrs. Peeching and Sons, bankers.
The Country Branches of the London and County Banking Company.

The Proprietors are hereby required to pay the same accordingly.

Dated this 19th day of January, 1841.
T. W. TYNDALE,
Chairman of the Board of Directors.
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street, London.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—Notice is hereby given, that the Half yearly General Meeting of the Sheffield, Ashton-under-Lyne, and Manchester Railway Company will be held on Wednesday, the 17th day of February next, at twelve o'clock at noon, at the Albion Hotel, Manchester, in the county of Lancaster.—Dated this 13th day of January, 1841.

JOHN PARKER, Chairman.
WILLIAM SIDEBOTTOM, Deputy Chairman.
CHARLES THOMSON, Clerk and Secretary.

15, Piccadilly, Manchester.

SHEFFIELD, ASHTON-UNDER-LYNE, and MANCHESTER RAILWAY.—Notice is hereby given, that the BOOKS kept at this Office for entering the memorials of the Transfer of Shares in the Sheffield, Ashton-under-Lyne and Manchester Railway Company, will be CLOSED, in pursuance of the Act of Incorporation, from the 8th to the 17th of February next, both days inclusive.

By order of the Board,
CHARLES THOMSON, Secretary.

15, Piccadillly, Manchester, January 13th, 1841.

BRISTOL AND GLOUCESTER RAILWAY.—CONTRACT FOR WORKS, WICKWAR TUNNEL.—NOTICE is hereby given, That the Directors will receive at their Offices, Exchange Buildings, Bristol, on or before 12 o'clock on Monday, February 8th, Tenders for the construction of the Wickwar Tunnel, and works connected therewith.

Drawings and Specifications of the Works will be exhibited at the Company's Offices, Exchange Buildings, Bristol, on and after Wednesday, 30th December inst.

The Directors will not consider themselves bound to accept the lowest Tender, and they expect the several parties to attend at the Office at One o'clock on the 8th February.

ROBERT FLETCHER, Secretary.

Bristol, December 22, 1840.

TAFF VALE RAILWAY.—The Directors are now ready to receive TENDERS FOR LOANS of money, in sums of not less than £250, upon the security of loan notes, to be issued under the Company's Seal, bearing interest at the rate of 5 per cent. per annum, payable half yearly, entitling the holder to receive mortgage debentures of the Company, deliverable in the month of February, 1843, or 1845.

Tenders may be addressed to the undersigned, at the Company's office, Cardiff; or to Messrs. Glyn, Hallifax, Mills and Co., Bankers, London; Mr. Wm. Mallard, 27, Small-street, Bristol.

JOSEPH BALL, Secretary.

Taff Vale Railway Office, Cardiff,
January 18, 1841.

SHANNON COMMISSION.—TO CONTRACTORS AND BUILDERS.—The Commissioners for the Improvement of the River Shannon hereby give NOTICE, That the Plans and Specifications of the several Works to be executed on the River Shannon for the several Piers and Landing Wharfs at the undermentioned places below Limerick, viz.:—

Querin ..... County Clare,
Kilrush ..... County Clare,
Kildysart ..... County Clare,
Killeery ..... County Limerick,

And for the Wooden Bridge across the river opposite Plassy Mill, in the county of Limerick, are ready for inspection, at their office, Dublin.

The sites of the proposed Works will be pointed out, upon application to W. H. Owen, the Commissioners' Engineer, at Limerick: and any further information may be obtained from Thomas Rhodes, Esq., the Commissioners' principal Engineer, Custom House, Dublin.

Security will be required for the due performance of the Contracts.

The Commissioners do not bind themselves to accept the lowest, or *any*, Tender.

A separate Tender will be required for each work.

Sealed Tenders, addressed to the Secretary, marked in left-hand corner, "Tender for (what proposed)," to be delivered on or before the 15th day of February next, after which day no Tender will be received.

The Commissioners are also prepared to receive Tenders for the Supply of Twenty Wrought Iron Buckets and Links for Dredging Vessels. The drawing or pattern of same can be seen at the Commissioners' Office, Dublin.

By order,
(Signed) EDWARD HORNSBY, Secretary.

Shannon Commission Office, Custom House, Dublin,
8th January, 1841.

TUCK'S HERMETIC ENVELOPES, on an entirely new plan *(Manufactured by Machinery, and registered pursuant to Act of Parliament)* offer advantages possessed by no other Letter-cover yet devised. The Postage Stamp Label is affixed to the Envelope in such a manner as to serve at once to seal and frank the Letter.

Separate Waxing or Wafering rendered unnecessary.

Time in making up and dispatching less than the before introduction of the Penny Postage system.

All envelopes hitherto made on the old plan may be easily opened without breaking the seal, their contents read or abstracted, and the envelope re-placed in its original state, so as to defy detection. But this cannot be done with the HERMETIC ENVELOPES, which renders them invaluable for the enclosure of Bills of Exchange, Remittances, Confidential Communications, Legal and Official Documents, &c.

May be had at the Office, 122, FLEET-STREET, in quantities of not less than 250 of various sizes, in neat paper boxes, from 10s. to 15s. per 1000, and of all Stationers in the kingdom.

*** Orders also received at 138, Aldersgate-street.

This day is published,

TUCK'S MAP OF THE RAILWAYS THROUGHOUT ENGLAND AND WALES TO THE CAPITAL OF SCOTLAND, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the RAILWAY TIMES Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster-row; Hyde & Co., and G. Bell, Fleet-street; Mann, Cornhill; and by all Booksellers and Newsmen.

Just published,

TUCK'S ROLLER CALENDAR for the Year 1841.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda, indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board-Room, Counting-House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d. The Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Published at 122, Fleet-street, and sold by all Stationers and Booksellers.

Just published,

THE RAILWAY CALENDAR FOR 1841, illustrated with an elaborate and splendidly executed MAP of the RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information; besides answering every purpose of a general Almanack.

Price 1s. 6d.—In Case for the pocket, 4s.; mounted on canvass and rollers, 4s.—In neat frame, 5s. 6d.

Published at 122, Fleet-street; and sold by all Booksellers and Newsmen.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Director of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament) of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly; or at the office of Slater and Heelis, Princess-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.

HAWKINS'S EVERLASTING PEN, made of Gold, tipped with the natural alloy, which is as much harder than Rhodium as Steel is harder than Lead: will endure longer than the Ruby; yields Ink as freely as the Quill; is as easily wiped, and if left unwiped is not corroded.

Six Years and Three Quarters constant use of this elegant Pen has not produced sensible Wear.

Invented by JOHN ISAAC HAWKINS, Civil Engineer, an manufactured under his Direction.

Sold wholesale at his Office for British and Foreign Patents, Quality-court, Chancery-lane, London (office hours, 10 till 4): and retail by Farthing, 42, Cornhill; Houghton, 162, New Bond street; Roake and Varty, 31, Strand; W. Lund, 57, Cornhill; Jackson, 23, Cannon-street, City: in Edinburgh, by Sanderson and Son, 32, St. Andrew-square: in Newcastle-upon-Tyne, by Currie and Bowman, 33, Collingwood-street: in Birmingham, by Osborn and Sons, Bennett's-hill: in Liverpool, by T. Dismore, Bold-street: in Manchester, by Allen and Raphael, 28, Nightingale-street: and in Glasgow, by R. Weir, 44, Queen-street.

A Writing Pen to fit into an ordinary handle	£1	0	0
A ditto in a handle for the pocket	1	5	0
A ditto with Mordan & Co.'s ever-pointed pencil	1	10	0
ditto, ditto, with reserve of leads	1	14	0

December, 1840.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford-on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—

From the
SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

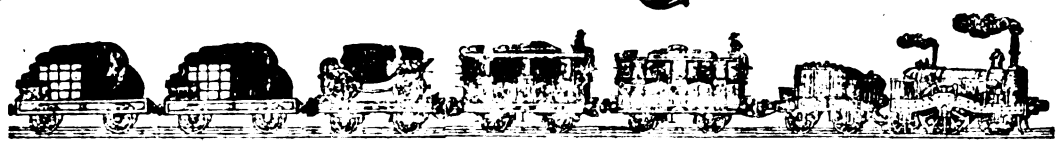
Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver 10s. 6d. each pair.

Omnibuses to and from every train—Fare 6d.

ANDREW SMITH'S PATENT WIRE ROPE. WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire-drawers, Birmingham.
Robertson and Co., 12, Gore Pinfold, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.



The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every exectation. It has been used n Shipping Five Years.

NORTH KENT RAILWAY, Office, 42, Lombard-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

GRAND JUNCTION RAILWAY.

—At a Special General Meeting of the Proprietors of the Grand Junction Railway Company, duly convened, and held at the Cotton Sales' Room, Liverpool, on Friday, January 29th, 1841,

JOHN MOSS, Esq., in the Chair.

The Advertisement convening the Meeting having been read, with the Directors' Report, as follows:—

REPORT.

The accounts for the half-year ending December 31st, 1840, which have been laid before the meeting, exhibit a continuance of the prosperity which the Directors have had the satisfaction to report on former occasions. In the receipt from every branch of income, there is an increase as compared with the corresponding part of 1839 except in the carriage of live stock, which is rather less, while the ratio of expenditure to receipts is again considerably lower. The receipts were,

	Last Six Months of 1840.	Last Six Months of 1839.
From Coaching....	£188,620 15 5....	£187,476 8 5
,, Goods	40,934 2 1....	35,220 10 0
,, Live stock ..	3,008 10 11....	3,607 5 8
	£232,563 8 5	£226,304 4 1
And the expenses..	99,627 1 7....	107,880 10 5

This saving is principally in the important item of locomotive power, the comparative outlay being for the last six months of 1839, on a receipt of 226,304*l.* 4s. 1d.—38,511*l.* 7s. 5d.; and in the corresponding period of 1840, on a receipt of 232,564*l.* 8s. 5d.,—29,433*l.* 10s. 1d., or an actual diminution of expense, on a receipt larger by 6,000*l.*, of more than 9,000*l.* This result, connected with the advancing efficiency of the engine department, proved by the greater regularity of the trains, and the rarity of failures or detentions will be gratifying to the proprietors, and reflects credit on Mr. Baddicom, the superintendent of the locomotive department.

While adverting to the events of the past half-year, the Directors may congratulate the proprietors on the exemption of the Grand Junction Railway from unfortunate casualties or accidents affecting life or property, at a time when some untoward occurrences on other lines have been made the ground of much exaggerated anxiety on the subject of railway travelling.

The evidence thus afforded is, at the present moment, of great value: as it proves that judicious regulations, strictly enforced, may be relied upon for the preservation of a degree of security greatly exceeding the average safety of other modes of travelling.

The opening of the Chester branch has taken place since the last general meeting; hitherto the traffic on this line has not been considerable, but the arrangements now completed for the conveyance of merchandise from Chester, from the 1st proximo, and the advancing season, may be expected to add materially to the income at Chester, both from this source and from passengers.

The valuation of stocks at the close of 1840 shows an increase in the carriage and waggon department as compared with the previous half-year's account, after charging the cost of all the new articles purchased of 1,510*l.* 8d. This result has been produced by a considerable outlay on the waggons and coaches, which for the last six months has been supplied from the current income. In the locomotive stock on the other hand there is an apparent decrease of 2,184*l.* 2s. 1d., in part arising from the generally reduced market price of engines, to which reference has been made on the present occasion; the efficient value of the stock, there is reason to believe, is at least as high as at any former period. The balance of the whole is 674*l.* 1s. 5d., to the Dr. of the half-year's income.

A further reduction in the rates of carriage for goods has been made since the last general meeting, the result of which has been an increase in the quantity, as well as in the money receipt from this traffic. It is expected that the great advantages which the Company have now secured to the public will continue to attract a still increasing and profitable business. On this subject the Directors think it proper to state, in consequence of assertions to the contrary, which have been hazarded, that the terms on which the merchandise business of the Company is now conducted, although more reasonable than any before offered to the public, are such as to afford a fair remuneration to the Company; and that, in deciding on the successive reductions which have taken place, as the Company's means of accommodation increased, they have been guided by a conviction, that the prosperity of the undertaking would be promoted by the increase of traffic created by such inducements. The result, they have reason to think, has fully justified their calculations.

The additions which have been lately made to the passenger fares and which have not raised them to a rate as high as is charged on other lines in connection with this railway) have been deemed expedient, in consequence of the subtraction by other lines of part of the traffic on which the calculations of income, originally submitted to Parliament, were founded. It was not expected, on the opening of the Grand Junction line, that any such measure would be required, but it appeared to be called for as a means of protection to the Company's property, when the admitting, by Parliament, of new competitors had altered the circumstances on which the Company's original calculations of profit from lower charges were founded.

The net income, after deducting all expenses, exclusive of the amount of the interest of the unliquidated debt now charged on the quarter shares at 5 per cent. on the stock, and equal to 12s. 6d. per share, is 137,481*l.* 11s. 2d. This will enable the proprietors to declare a dividend at the rate of 6*l.* 10s. per 100*l.* share, and in proportion on the paid up amount of the half shares, and on the quarter shares lately created. From this the balance of stock of 674*l.* 1s. 5d. having been deducted, there will remain 680*l.* 14s. 4d. to be carried to the current half-year. And this the Directors accordingly now recommend to the meeting. The amount of the net receipt from Sunday travelling is equal to 12s. 6d. per 100*l.* share.

In conclusion, the Directors will only express their confident hope, that the proprietors will be satisfied with the results now submitted to them, and with the prosperous condition generally of the undertaking, which has now justified, by the successful operations of more than three years, the promises originally held out to its promoters.

(Signed) JOHN MOSS, Chairman.

It was unanimously resolved—That the Report and Accounts, as now read and laid before the meeting, be approved; and that they, together with the Chairman's observations and the correspondence with the Post office, be printed and circulated amongst the proprietors in the usual way.

That a dividend after the rate of 6*l.* 10s. per cent. on the 100*l.* shares, and on the 25*l.* shares, and on the paid up portion of the 50*l.* shares, be, and the same is now declared and made out of the net profits of the half year, ending 31st December, 1840, (the proper amount of interest being deducted as respects the unpaid 25*l.* shares) and that the same be payable on and after the 11th of February next, in the usual manner.

JOHN MOSS, Chairman.

The Chairman having left the chair, the thanks of the meeting were unanimously voted to him

The dividend, as above ordered, will be payable at the office, Lime street, Liverpool, between the hours of Eleven and Two, on and after the 11th February; or the amount will be made payable at Messrs. Barclay and Co.'s, London; or will be remitted to the country in a bill at a month, at the proprietor's option. And the dividend of parties who have given their orders will be paid in conformity with those orders.

The above accounts audited and found correct, Liverpool, January 26, 1841.

N. D. BOLD,
LEWIN MOZLEY,
Auditors.

The Observations addressed by the Chairman to the Meeting were as follows :—

With the Report just read to you, I trust you will feel satisfied ; and I will only beg your permission to make a very few remarks in addition to it.

The public attention having lately been so much (and as I think experience has proved, so unreasonably) excited on the subject of railway accidents, I am gratified to have it in my power to state, as regards our line, that in the year 1840 we have carried 485,668 persons without one loss of life or serious injury to a single passenger, or to any engineman, conductor, guard, or fireman in charge of them. We have also carried 65,289 tons of goods, and 4,741 horses, besides bullion to a very large amount; whilst the total sum paid for loss of or damage to luggage, horses, and goods, has been 399*l.* 0*s.* 8*d.* only.

These facts I give as the answer of the Grand Junction Directors, and Executive, to the numerous charges in the public papers, accusing Railroad Officers and Directors with carelessness and negligence as respects the passengers and property carried on their respective lines.

The Directors have always thankfully received any suggestions offered to them, either for the prevention of accident or the promotion of public convenience, and they consider it their duty to adhere to that practice; for if good result from one out of ten of the different plans brought forward by different individuals, the advantage will amply repay for the time lost in the consideration of the other nine. The Board therefore would, I am sure, authorise me to invite suggestions from all quarters. At the same time, however, it appears to me, that greater confidence may be placed in a few general and plain regulations (applied to the present system of railway working), if strictly and invariably insisted upon, than in new experiments and in more rigid rules, which must under some circumstances be waived or relaxed. We have a series of Rules laid down, invariably insisted on, and read over to the different men at stated intervals, besides being printed and distributed amongst them for reference at all times.

We have so arranged our Trains that there is in all ordinary cases, that is to say, in all cases possible to be provided against, an interval of twenty miles between any two following trains, which gives ample time in case of accident to the first train, for one of the guards in charge of it to go or send back along the line, so as to advise those who are in charge of the following train, of the impediment which it will meet with, and so to prevent collision. In these, and in other ways, we have exerted ourselves, and I think I may say with some success, to insure safety to the passengers along our line.

You are aware that the Post-office have required us to take the Mails at a greater speed over our line than is required on other railways; under these circumstances, which appeared to the Directors to justify such an application, at that particular time, and seeing the great excitement which a large portion of the public press had succeeded in exciting against Railways and Railway Directors, we thought it right in November last, to ask the Post-office Authorities for permission to take some increased time in the carriage of the mails over our line during the winter, and particularly in foggy weather. Certainly I cannot pretend to say that we have had any apprehension ourselves, but it appeared not unreasonable that those who required from us a greater speed than from others, should at least share with us the responsibility, if any, consequent on our compliance with their demands. We received a reply, which I feel some degree of pride in laying before you, as it comes from the best authority on such a subject—an opinion as to the comparative safety of railway and coach travelling, which is strongly confirmative of that which your Directors had often insisted upon in their Reports. If it be the wish of the meeting, our letter to the Postmaster-General shall be read also, as we have no wish to shrink from the responsibility of having made such an application, under the very peculiar circumstances of excitement at the time. As, however, I have another word or two to say to you, I will beg to conclude before having the letters read.

As many of you may not have at hand the different statements of our former half-yearly net receipts, I may be excused for stating, that our last half year's net income exceeded any former one by the sum of 15,000*l.*, and that we now pay to our proprietors the sum of 32,845*l.*, as follows, *in addition to any former half year*:—£8,125 to the Chester and Crewe; £17,624 on 17,624 new Quarter Shares, created to liquidate the bond debts of the Company; £7,096 payment on the £10 called up on the Half Shares last half-year; total £32,845.

Considering these new and additional payments, you will not be surprised at our not being able to give you more than 6¼ per cent. out of the net revenue of the past half-year. If any one feels disappointed at this, allow me to call his attention to the fact, that in addition to the £6 10*s.*, he gets a dividend of £1 on each of his new Quarter Shares; in other words, he gets upon every Share he held in June last a dividend of £7 10*s.*, if he retains his Quarter Share, and if he has sold it, he has in his pocket its value, say £30, besides £6 10*s.* on his old share for the half-year.

That our half year's gross receipts have not increased as much as many of us had expected, I think we may fairly attribute in a great measure to bad weather, bad times, and great (though unnecessary) alarm as to safety in railway travelling.

Allowing for these drawbacks, I trust you will agree with me, that we have cause to be perfectly satisfied with our last half-year's working, as showing the increasing prosperity of our undertaking; and although there may be, and no doubt will be, some items of our present receipts lessened by the opening of new lines, yet I feel confident that new sources of traffic, and the gradually increasing trade and population of this country, will be found to make ample amends for what we may thus be deprived of.

In July last her Majesty the Queen Dowager having done us the honour to travel on our railway, and sent £35 to be distributed to such charitable purposes as the Directors might approve; we availed ourselves of the opportunity to establish a fund (which we called the Adelaide Charitable Fund) for general charitable purposes, and we propose to add to it the sums left in our hands from time to time by those proprietors who decline to take money arising from Sunday travelling, as also all Fines received on the road and levied upon our own servants; from these sums together, the Directors have been enabled to distribute during the late severe weather the following donations:—to the Infirmaries £100; District Provident Society £100; Strangers' Friend £100; District Provident Society £50; Dispensaries £60; Ladies Orphan School £50; total £360. Any sums (whether arising from Sunday travelling or otherwise) which any of the proprietors may hereafter prefer to place at the disposal of the Directors, they will consider it a very pleasing part of their duty to distribute with the rest of their fund; of which I may mention that Mr. CHORLEY is the Treasurer.

Copy of Correspondence referred to in the Chairman's Address to the Meeting.

Liverpool, November 12, 1840.

To LIEUT.-COL. W. L. MABERLY,
&c. &c. &c.
General Post-Office, London.

SIR,—The Directors of this Company have instructed me to address you concerning the speed at which the existing requisitions of the Post-office render it necessary to run the principal trains on the Grand Junction Railway.

The disasters which have lately occurred on other railways, and the severity with which their management has been publicly blamed for such accidents, whether arising from matters within their power to control or not;—added to the general disposition which is now manifested to attach a criminal responsibility to the Directors of these useful undertakings, whenever a misfortune, even of the most accidental nature, takes place; have naturally given to the Directors of this Company a new anxiety respecting the concern entrusted to their charge: and made it important to them to prevent, at whatever cost, every risk of casualties which they can in anywise control, and avoid all responsibility with respect to such risks, which is not in justice chargeable to them.

Under this impression the Board have had their attention directed amongst other matters to the high rate of speed at which the Grand Junction trains now run, as a circumstance which may in some cases increase the liability to accident, and may therefore, for the reasons above mentioned, be restricted with advantage. It is true that hitherto no accident of a fatal or even of a serious nature has taken place on this railway, nor any which can be clearly assigned to this cause:—and as the precautions adopted are daily becoming more strict and watchful, the Directors would not, under such any circumstances, have felt it necessary to propose any alteration in this respect. They would have trusted that the general advantage derived from expeditious travelling, and the care taken to prevent accidents, would, in case any unfortunate casualty were to happen, be reasonably weighed; and that they would not be condemned as the authors of such accidents; seeing that these are happening with every care, and without inciting invidious censure, in all extensive concerns where machinery is employed. The recent tenor of animadversion which has been exclusively applied to railways, although the accidents which have excited it bear no comparison with others which occur daily without a word of comment, has convinced the Directors that they are not to expect any reasonable allowance for their proceedings; and that it is due to themselves, and to the property under their care, to take every means in their power to remove the occasion of such indiscriminate censures. It is beyond a doubt that the risk of accident to railway trains is to some extent increased by an increase of their speed. The shock caused by any slight inequality in the rails, the derangement of any part of the machinery that may give way, and the effects of these upon the engine and carriages, are undoubtedly more seriously felt at a rate of 30 miles per hour than 20. In case of any obstruction being on the line, whether from another train, or from any other cause requiring the engine to be stopped, the engineman, when the signal is made to him, cannot so soon stop his train when its rate of velocity is at the highest. These are casualties which have to be provided against at all times, but especially during the dark foggy weather and short days of winter, when signals cannot be discovered so early as in clear day light. Against whatever possible risk may result from them the Directors are anxious to guard; and to this end, in addition to the general precautions which have hitherto been so successful on the Grand Junction Railway, they are prepared to reduce, during the winter months at least, the speed of the trains. They do not profess to believe that the risk which it is sought to prevent is considerable, but from the reasons above explained, they are not willing to take the responsibility of incurring even this amount of risk, if it can be avoided by any regulation of theirs.

I am therefore instructed to beg that you will inform me, for their guidance, if the Post-office will during the winter months increase the allowance of time for the trains which carry the mails, so as to admit of a reduction of speed. According to the present Post-office time-bill, taking into account the necessary stoppages, the speed required exceeds 30 miles; and in cases where any delay has arisen on the line, in order to make up the time a still greater velocity has to be attempted. As the principal trains on this line are those which carry the mails, and as the present rate of travelling, viz., four hours ten minutes down, and four hours 30 minutes up, was introduced in compliance with the Postmaster-General's order of May, 1839, the Directors are under the necessity of applying for the sanction of the Post-office, to enable them to effect the object proposed; and I am accordingly instructed to make the present application with this view, requesting to be favoured with your reply on the subject for the information of the Directors.

I have the honour to be, Sir, your very obedient servant,
J. R. CHORLEY.

General Post-office, 30th Nov. 1840.

J. R. Chorley, Esq., Grand Junction Railway Office, Liverpool.

Sir,—I am commanded by the Postmaster-General to acknowledge the receipt of your letter of the 12th instant, and to state, for the information of the Directors of the Grand Junction Railway Company, that his lordship is perfectly satisfied with the manner in which the Post-office service has been performed by the Grand Junction Railway, and that according to the best opinion he can form upon the subject, he considers the accidents have been few in comparison with those which would, in all probability, have occurred, had the same service been performed by mail coaches, accelerated as they have been in late years to the utmost degree of speed of which they are capable.

Under these circumstances the Postmaster-General is unwilling to withdraw from the important towns of Liverpool and Manchester the great benefit which they have experienced from the increased speed at which the mails now travel over the Grand Junction Railway, and as such a measure would not only be injurious to those towns, but would most seriously affect the interests of Ireland, he is not prepared to acquiesce in the propriety of diminishing the rate of speed; more especially as he has every reason to believe that the Company will have no difficulty in continuing to carry on the service with as much regularity and security to the public, as has hitherto marked their general management, so far as relates to the Post-office department.

I am, Sir, your obedient humble servant,
(Signed) W. L. MABERLY, Secretary.

GRAND JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly Meeting of the Proprietors of the Grand Junction Railway took place on Friday, the 29th of January, at one o'clock, at the Cotton Sale-room, Liverpool. The attendance was numerous, the room being filled in every part. JOHN MOSS, Esq., Chairman of the Directors, presided, and, on his taking the chair, the Secretary read the notice calling the meeting, which was for the purpose of declaring a dividend to the shareholders, and on other special business.

The SECRETARY then read the Report for the half-year ending 31st December last, which will be found in our advertising columns.

At the conclusion there was a loud burst of applause from the proprietors.

The CHAIRMAN then rose, and addressed the proprietors. His observations will be found attached to the Report.

The SECRETARY then read a copy of the correspondence which passed between the Company and the Post-office authorities, referred to in the Chairman's address, from which it appeared, that Colonel Maberley refused to allow the trains carrying the mails to travel at a decreased speed of from 30 to 20 miles an hour, his opinions of the judicious management of the Company's trains being so high that he did not apprehend any danger of life or property. (See above).

Mr. L. HEYWORTH moved the adoption of the Report, and paid a high compliment to the Directors for the sound judgment and strict economy which they had invariably exercised in the management of the Company's affairs. He particularly commented on the sound, conscientious and just view they had practically evinced in abstaining altogether from recommending the meeting to empower them to use the Company's funds for any purpose alien to the direct object contemplated by their Act of Incorporation, even though that object should be one appealing individually to the best feelings of humanity and benevo-

Digitized by Google

lence. He rejoiced that instead of wishing to arrogate to themselves the office of being almoners to the whole Company, and thereby drying up those prolific sources of individual benevolence which pour forth innumerable streams, and swell to their aggregate amount the charitable funds that support our dispensaries, hospitals, and other noble and benevolent institutions, they had in order to meet the demands from these charities, had recourse to a distinct fund, created by private philanthropy, fines levied on the servants of the Company,* and sums left at the Company's disposal by parties repudiating Sunday travelling. He earnestly hoped that this disinterested example on the part of the Grand Junction Directors, would be followed by the Directors of other lines. The only thing he had to regret in the Report, was, that silence was still observed in regard to the reported agreement between them and the proposed "Extension Railway Company;" he deprecated any agreement between the two Companies, first, because such an apparent coalition might seem to countenance or encourage a party in the prosecution of a scheme for the constructing of a parallel duplicate railway, which could only afford a remuneration on the outlay from the traffic already provided for by existing lines, than which no speculation could be more absurd (as common railway experience had now satisfactorily exploded the fallacy of supposing that traffic could be abstracted by one railway from others, without fatally injuring the value of all, and seriously—both in point of traffic to the proprietors and usefulness to the community—damaging the advantages of the public by extra cost of, and diminished opportunities of, travelling) and next because, whatever might seem to be the immediate advantage which the Grand Junction Company would derive from such agreement, one thing was certain, that should the proposed duplicate line from Rugby to Stafford be ever made, the cost of travelling to London must be augmented, to meet the consequently increased outlay of capital and expenses of maintenance, and as this would have a tendency to curtail the amount of travelling, it could not do otherwise than eventually mar the future prospects of the proprietors of this as well as of the London and Birmingham line, and all other lines of railway whose traffic this delusive scheme, if carried into execution, would interfere with. He then called the attention of the Directors to the great inconvenience imposed on the community in the western districts of the West Riding of Yorkshire and the eastern towns of Lancashire, who wished to travel by the Grand Junction Railway to London. The several lines centreing in Manchester not being united and not forming a continuous line, caused several removals of luggage, to the great annoyance of the London travellers, who preferred, therefore, to meet the trains down the Todmorden Valley, and take the more circuitous route of the North Midland and Midland Counties' Railways; and he requested that their good services might be employed with the several Manchester Companies to induce them to effect a junction of their lines in that town.

+Mr. CHORLEY replied, that they (the Grand Junction Railway Company) had already entered into an arrangement with the Company named, but that arrangement was of a beneficial character.

Mr. HEYWORTH objected that any arrangement should have been entered into, as it must ultimately prove prejudicial to their (the Grand Junction) interest.

The CHAIRMAN replied, that the arrangement entered into was such which could only benefit their (the Grand Junction Railway) Company in case of the application of the Extension Company to Parliament being carried. Would Mr. Heyworth recommend this Company, under existing circumstances, and seeing what Parliament did last year, to expend 10,000*l.* in opposing them! The arrangement entered into had been universally carried at the Board.

Mr. HEYWORTH strongly objected to giving the Extension Company any encouragement either in one shape or other. He concluded by moving the adoption of the Report and the passing of the accounts and that the same be published.

Mr. JOHN EDWARD TAYLOR seconded the motion, and suggested that the remarks of their worthy chairman and the correspondence with the Post-office authorities should also be published.

An objection was partially raised to the publication of the letters.

A proprietor (we understood Mr. ALSTON spoke in favour of the correspondence being fully brought before the public, and said it was an absurdity to think of keeping it back; this was a public meeting, and they must be aware there were more than one "chiel among them takin' notes."

The Clerk of the Company then read the resolution, that a dividend of six and a half would be paid on the 100*l.* shares on the 11th of February.

Mr. HEYWORTH (as we understood him, for we did not distinctly hear) suggested that the dividend should be paid immediately.

A PROPRIETOR observed that he thought it was their bounden duty to give publicity (the country being paralized with the accounts given in the public prints of railway accidents) to the fact, that more than half a million persons had travelled on their line, within the last six months, without a single accident.

Mr. COGLAN suggested the advantage, if practicable, of the dividends being paid in all cases upon a specific day, and that as early as possible.

It was shown by several auditors of the accounts, that the day named (the 11th of February) was the earliest possible time upon which the dividend could be paid.

Thanks were given to the chairman, and the meeting separated.

* Is not this a part of the Company's funds?—ED. R. T.

+ What follows is extracted from the *Liverpool Journal* of Saturday last.—ED. R. T.

DUKE OF CORNWALL HARBOUR, AND LAUNCESTON AND VICTORIA RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the Proprietors of this Company was held on Thursday at the London Tavern, Bishopsgate-street. JOHN RAMSBOTTOM, Esq., M.P., in the Chair.

The position of this Company, in reference to its late Secretary, Mr. George Ross, has already been so fully explained that it is unnecessary to enter again into detail.

It appears that the Directors and Mr. Ross, having brought cross actions in a court of law, the judge recommended a reference which was assented to by the Company's counsel, very much it is said against the wishes of a great majority of the proprietors. This reference is still unfinished, and the meeting, after the transaction of some formal business, was accordingly adjourned to the 8th of April, by which time it is hoped that matters will be brought to a final settlement, so as to pave the way for the final abandonment of the project, which is already virtually defunct.

BOLTON AND PRESTON RAILWAY—COMPANY GENERAL MEETING.

THE Half-yearly Meeting of the proprietors of this railway, was held at the Swan Hotel, Bolton, on Wednesday afternoon last; John Hargreaves, Esq., sen., Chairman of the Board of Directors, took the chair. Mr. Peter Sinclair, the Secretary of the Company, read the report, by which it appeared that the line as far as Nightingale bridge, near Chorley, 9¼ miles is now completed, and will be opened on Monday next for the conveyance of passengers, &c., from Manchester and Bolton to that place, and thence by coach to Chorley and Preston. The funds were in a satisfactory state, and when the report had been read a number of questions were put by the proprietors, and answered by the Chairman, the Secretary, and Mr. Adie, the Engineer. The Chairman said that 190,000*l.*, the capital, had been paid up, as required by the Act of Parliament, and the Company were now in a situation to borrow 126,500*l.* by way of loan, bearing interest, to carry out the purposes of the line. A resolution empowering the Directors to obtain loans, under that section of the Act of Parliament, was then unanimously agreed upon. The five retiring Directors—John Hargreaves, sen., Ben. Hick, C. Briggs, R. S. Barlow, and John Cross were re-elected. A vote of thanks having been given to the Chairman the meeting separated.—*Manchester Courier*, Jan. 30.

THE BRIGHTON RAILWAY BOARD AND MR. I. L. GOLDSMID.

A CORRESPONDENT requests us to publish the following clause from the London and Brighton Railway Act, as applicable to the case of Mr. Isaac Lyon Goldsmid, which was so fully detailed in our last Number:—

"And be it further enacted, that the said Company shall, and they are hereby required to *make* and *maintain* a depot upon the lands of Isaac Lyon Goldsmid, Esq. to the north of Furze Hill, and northward of the premises occupied by the Rev. Doctor Everard or near thereto, with all convenient and proper approaches, erections and conveniences as may be necessary to make the said depot complete for the use of *passengers*, *goods* and *merchandise*, on the said Branch line from Brighton to Shoreham, so that the same shall be finished at the same time as the said Branch Line, and that the said depot shall be made at such convenient spot as the said Isaac Lyon Goldsmid shall appoint, and which appointment shall be made by the said Isaac Lyon Goldsmid within one calendar month after being required thereto by or on behalf of the said Company, *and that when the said depôt shall have been made*, the said Railway Company *shall cause the same to be kept open and used for such purpose*."

NORTH LANCASHIRE JUNCTION RAILWAY.

WE are glad to find that the plans for the projected railway are in considerable forwardness, and will be lodged in March. The country through which it is likely to pass is very favourable for its formation, and there is every probability the expense of making it will be moderate. It will open a direct communication between the eastern and western coasts of Yorkshire and Lancashire, besides supplying an easy access to most of the principal railways in England, including the Manchester and Leeds, the Great North of England, the Manchester and Sheffield, the North Midland, the Birmingham and Derby, the North Union, the Grand Junction, the London and Birmingham, the Midland Counties, &c., &c. It will proceed through districts densely populous, and boasting of some of the most extensive and thriving trading establishments in the United Kingdom. It will provide a cheap and expeditious transit for passengers and goods from nearly all parts of Yorkshire and Lancashire, into almost every part of England, and from nearly all parts of England into those counties; and will create new outlets for the disposal of the natural products of the soil, cattle, corn, iron, limestone, coal, flags, &c., &c. It will greatly facilitate and increase our commerce with Ireland. It will in effect, shorten the distance to the sea-coast, and vastly augment the number of visitants to Blackpool, Lytham, Fleetwood, and other bathing places, from the interior of Lancashire, as well as from Huddersfield, Halifax, Leeds, and other populous places in Yorkshire. It will make a journey to Harrowgate from this neighbourhood expeditious and easy, instead of being, as at present, tedious and wearisome. It is impossible, in short, to enumerate within the limits of a paragraph, a tithe of the benefits likely to arise from the present opportunity of completing the great trunk of railway which will connect the German ocean with the Irish seas. We sincerely hope that the public will encourage an undertaking that will secure so many advantages by an outlay comparatively so small, as about 14,000*l.* or 15,000*l.* a mile, the probable expense of the work. A committee has been formed to wait upon the landowners and others, and to collect subscriptions for defraying the charges of the survey, and a prospectus will be issued as soon as the committee are in possession of the requisite data. Any subscriptions that may be now entered into will be returned on the formation of the company, or may be considered as payments on account of shares, at the option of the contributors.—*Blackburn Standard.*

YORK AND NORTH MIDLAND RAILWAY COMPANY—GENERAL MEETING.

[Specially reported for the *Railway Times.*]

YESTERDAY week the tenth Half-yearly Meeting of the proprietors of this Company, was held at the spacious offices, connected with the new station in Tanner-row, York. The attendance of shareholders was very numerous. George Hudson, Esq., Chairman to the Directors, presided.

The CHAIRMAN opened the business of the day by calling upon Mr. Baker, the Secretary to read the advertisement convening the meeting, which was done accordingly. He then said he could not refrain from congratulating the shareholders upon holding their meeting for the first time in their new station. Every person who had seen it, had expressed himself highly gratified at its convenience and elegance, and they as proprietors might also express their gratification at its cheapness. Not only was it one of the most beautiful, but it was also one of the cheapest stations that had hitherto been erected. (Hear, hear.) The Report which would be laid before them would go so fully into a detail of the various matters connected with the Company, that he should not anticipate it by any observations of his own. He should, however, be happy as soon as the report was read, to give any explanation that might be called for by any shareholder present. By the Company's Act of Parliament, a certain routine of business was laid down, and the first was that they should proceed to the election of three Directors, in the place of those retiring by rotation. They were J. Barstow, Esq., James Richardson, jun., Esq., and James Walker of Sand Hutton, Esq. With respect to Mr. Walker, he had to state, that he had received a letter from him, in which he tendered his resignation. That gentleman had never attended the meetings of the Board of Directors, but as they had always been sufficiently numerous, they had not deemed it necessary either to require his attendance, or to request him to resign. As Mr. Walker had sent in his resignation, he proposed that it should be accepted; otherwise as he was a large shareholder, the Directors had intended to have proposed his re-election. Now that the line was formed and in operation, the duties of the Directory was considerably diminished, and in the Bill which they were now applying for, a clause was introduced, limiting the number of Directors to nine. This plan would be acted upon by the North Midland and other Railway Companies, who, he believed contemplated reducing the number of their Directors from twenty-one to thirteen; indeed he believed it was a general and wholesome practice to effect such a limitation on the completion of railway lines. The manner in which the accounts were kept, and the fact that the books were open to the searching investigation of every shareholder, were a guarantee that there could be no opportunity of jobbing if the proprietary would only look after their own interests. The Board recommended the re-election of Mr. Barstow and Mr. Richardson, and in the place of Mr. Walker, they begged to nominate a gentleman who held a large number of shares in the Company, and who had taken great interest in its welfare—he alluded to George Stephenson, Esq. It was true this gentleman was formerly their Engineer, but he had now ceased to be so. He recollected this gentleman coming forward when their shares were at a very low ebb; he not only took a large number of shares himself, but he was also at the trouble to go to Manchester, Liverpool, and other places, where capitalists in railways principally reside, and use his influence to advance the interests of the Company. He held now, he believed 120 shares, and he was sure that Mr. Stephenson would consider it a compliment if they were to elect him a Director—at all events no one was more deserving of it.

Mr. Alderman MEEK—You state that Mr. Stephenson has ceased to be the Engineer of this line?

The CHAIRMAN—Yes, since August last.

T. TUKE, Esq.—And is not in any other way deriving emoluments from services to the Company?

The CHAIRMAN—Not in any way.

T. LAYCOCK, Esq.—Then he is, of course, eligible.

The CHAIRMAN—He has lately sent us down some beautiful coal, which will be a great acquisition to the neighbourhood, and a benefit to the Company. We have now not only the west country coal at a low price, but also a superior article from Mr. Stephenson, for those who can afford to purchase it.

Mr. Alderman MEEK—Say from you and him; let us have the whole truth. (A laugh.)

The CHAIRMAN—Well, I hope we shall be able to pay you a very handsome sum for the carriage of it. He then proposed that T. Barstow, Esq., James Richardson, jun., Esq., and George Stephenson, Esq., be elected the three Directors. This was agreed to unanimously.

A resolution was next passed authorizing the common seal of the Company to be affixed to the registry of shareholders.

The CHAIRMAN said, the next business was the reading of the Report, and the statement of the accounts. And in order that the shareholders might know correctly the cost of the whole line from its commencement to the present period, he had ordered that a statement should be prepared, showing the cost of the several contracts, the price of land, and other particulars, and he had no doubt on a comparison with the cost of other lines, it would be greatly in favour of this Company.

Mr. BAKER, the Secretary, then read the following:—

REPORT.

The Directors have great pleasure in meeting the proprietors of the York and North Midland Railway for the first time in the Board-room of their permanent station within the walls of the city of York.

The building was so far completed as to enable the Directors to commence using it in the first week of the present year, and from the short experience they have had, they do not hesitate to state that the two Companies, at whose expense and for whose use it has been erected, will possess a passengers' station not excelled by any in the kingdom for convenient arrangement and suitable adaptation to all the requisite purposes, whilst the taste and skill displayed in its architectural design and construction are universally admired, and the execution of the various works is highly creditable to all the parties employed in them.

Your Directors conceiving that Railway Companies best consult their own advantage when they afford every possible accommodation to the public, have lately entered into an agreement with the North Midland, the Leeds and Manchester Companies for the erection of a handsome and commodious station at Normanton. The building will be placed on the North Midland line, at about equal distance from the points at which that line is joined by the line from York and the line from Manchester, and as it is intended for the mutual use of the passengers travelling on all those lines, the expense is to be defrayed equally by the three Companies.

In stating, for the first time, the produce of six months' traffic on the whole of the line, your Directors confidently anticipate that their Report will be satisfactory to the proprietors. The gross amount received for passengers and merchandise traffic during the half year ending the 31st December last, is 24,128*l.* 12*s.* 5*d.*, and the amount of the expenses paid on account of the working of the line during the same period, including the interest of money owing on debentures, is 10,378*l.* 12*s.* 7*d.*, leaving a balance of 13,749*l.* 19*s.* at the disposal of the Company.

Your Directors recommend that a dividend be declared of 35*s.* per share, to be payable on and after the 12th day of February next. The surplus of 2,024*l.* 19*s.* 10*d.*, together with a former surplus of 505*l.* 5*s.* 2*d.* will remain to the credit of the traffic account to meet depreciation of stock.

On their last half yearly Report your Directors expressed their opinion that the resources of this line could not be considered to be much more than half developed until the Great North of England and Leeds and Manchester Railways should be brought into operation. This opinion they still maintain, and it is therefore the more gratifying to find that, notwithstanding the opening of these lines has not yet taken place, the amount received for traffic on the York and North Midland line during the last half year, produces a average of upwards of 900*l.* per week. With this result your Directors are entirely satisfied, and they cannot doubt that the proprietors will participate in the same feeling. The proprietors will not be surprised to learn that not only has the sum of 30,000*l.* which the Directors were empowered to borrow on it on personal security, been wholly expended, but that a very considerable addition has been made to that debt. It has, indeed, now become quite obvious that the capital of the Company will require to be much larger in amount than has been hitherto contemplated. This, however, appears to your Directors to be by no means a subject of regret, because it is occasioned chiefly by the necessity which has arisen, that the Company should provide for the work of a vastly larger quantity of traffic both in the passenger and merchandise departments than could have been anticipated, to which the working of the Leeds and Selby line of course greatly contributed.

Another cause of the necessity of an increased expense in stock for the carrying establishment is the peculiar character of the line—forming cross roads from east to west, and from north to south; the York and North Midland Railway comprises probably more numerous points of junction with other lines than any railway in the country. To obtain this additional capital, and also accomplish some other objects, including the making of better approaches to the station, and authorising the Company to take the lease of the Leeds and Selby Railway, an Act is intended to be applied for during the present sessions; but as a special meeting will be called after the Bill is printed, for the purpose of submitting its provisions to the shareholders, it will be unnecessary now to go further into detail on the subject.

So short a time has elapsed since the Company took possession under their agreement with the Leeds and Selby Railway Company, that your Directors deem it unnecessary to say more with reference to that undertaking than that they continued to be fully persuaded of the sound policy by which the measure was dictated, and the important advantages which will accrue from it to this Company.

The subject to which your Directors have recently felt bound to direct their most anxious attention is the adoption of measures for promoting the safety of railway travelling. A general meeting of deputations from all the Railway Directors in the kingdom was held at Birmingham on the 19th instant, with a view to the promotion of some general code of regulations. At this meeting, which was attended by the Chairman and another Director of this Company, certain resolutions were agreed to, and the system of management hitherto used was put in a train for undergoing the most vigorous examination.

Since the lamentable collision at Milford Junction in November last, the fatal results of which your Directors most deeply and sincerely deplore it is satisfactory to reflect, that upon the York and North Midland line not a single passenger has received the slightest injury, and your Directors indulge in the hope, that by increased vigilance on the part both of managers and servants, as well as by the adoption of every practicable safeguard that ingenuity can invent or experience suggest, the recurrence of alarming accidents will be prevented and railway travelling be rendered more secure than any other mode of conveyance.

A General Statement of the Revenue Account from the 30th June to the 31st December, 1840.

The CHAIRMAN then said, now that the Report had been read, he should be most happy to give any further explanation or information. There were two or three circumstances which had occurred to him during the reading of the construction expenses to which he would advert, particularly as he perceived Mr. Robert Stephenson present, who knew the expenses of other lines of railway. Supposing they reckoned their whole capital required to amount to 600,000*l.*, this would show that their line did not cost above 21,000*l.* per mile, including engines and every other expense, a cost he believed considerably less than that of any other line in existence. The cost of the land was only 1,750*l.* per mile, while by the Report of the North Midland Railway, the cost of that line, he believed, was about 5,000*l.* per mile, and on the London and Birmingham it averaged, he believed, 8,000*l.* per mile. If they included the large sums which they had paid for compensation, the cost of land would be found to be about 2,200*l.* per mile. Then in the engineering department they had an item of 10,500*l.*, whilst on some other lines, certainly of greater magnitude, he had seen the cost stated at 80,000*l.* (Hear, hear.) It was extremely gratifying to find that the expenses of working the line were very low, and he was satisfied that in a short time they should pay such a dividend as would not be exceeded by any other railway company in the kingdom. From various causes stated in the Report it would be necessary to raise a larger capital than was originally subscribed for, but this would soon be provided for. By the Act of Parliament which they had now applied for, a provision would be introduced, authorizing them to issue half-shares, and then every shareholder would have the opportunity of taking a half share for every whole share he might hold.

Mr. COATES—If I am right in my calculations, there appears to be an increased cost in working the line of from 10 to 15 per cent.

The CHAIRMAN—No; this is clearly a mistake. The expense is as low as on any previous half year.

Mr. COATES—I understand it to amount to 45 per cent.

The CHAIRMAN—No; it is clearly less—it is only about 28 per cent. Of course the payment of interest on the bonds ought not to be included, which probably Mr. Coates has done. I shall be very glad if the expenditure always keeps so low as it is at present, but if it increases, of course our income will also increase.

Mr. ROWNTREE inquired whether in the statement of the expenditure, any sum or proportion of the rent paid to the Leeds and Selby Railway Company was debited to them, as he supposed that the receipts arising from passengers who would otherwise have gone on that line were included.

The CHAIRMAN—The accounts of the Leeds and Selby line, both receipts and expenditure are kept wholly distinct from our own.

Mr. MEEK said, although not a Director, he was aware that the accounts of the two lines were kept separate. He was perfectly satisfied that the agreement for taking the Leeds and Selby line on lease would be a great convenience, inasmuch as it brought both lines under one Direction.

The CHAIRMAN said, that the receipts on the York and North Midland line this week were 1,020*l.* and a fraction, being the largest which they had had to report. (Hear, hear.) In this sum were not at all included their receipts for the traffic on the Leeds and Selby line.

Mr. LAYCOCK wished for some information as to the probability of the leasing of the Leeds and Selby line being a profitable undertaking.

The CHAIRMAN said, the opinions of the Directors were already known upon that subject, and as they had only had possession for five or six weeks, it was as yet impossible to test the accuracy of that opinion by experience.

Some conversation then ensued upon this subject, and also with respect to the mode of conveying goods from Leeds to Hull. At its conclusion,

Mr. Alderman WILSON inquired what was the arrears upon shares?

The CHAIRMAN.—About 5,000*l.*

Mr. Alderman WILSON.—Is there any prospect of getting it in?

The CHAIRMAN.—It will very soon come in. Of course if they do not pay up, they cannot receive their dividends.

Mr. Alderman MEEK.—And they will have to pay 5 per cent. interest upon all unpaid up capital.

The CHAIRMAN—They will.

It was then proposed that the Report now read be adopted, printed, and circulated amongst the proprietary.—Carried.

Mr. LAYCOCK thought it would be desirable to go more into detail with respect to the expenditure. There were a number of items jumbled together, which men like himself could not understand.

The CHAIRMAN thought they could not have the items more fully detailed—as, for instance, under the head of engineering, they had for repairing and cleansing the engines, and for Engineers' salaries. Now, this could not be more explicit, unless they were to give the names of the parties who received them.

Mr. LAYCOCK—It appears the cost of repairing and cleansing the engines, and Engineers' salaries, are all in one sum. I do not want to divide the meeting, but I think it ought to go more into detail.

The CHAIRMAN said, for his own part he had no objection to such a course, but thought it would be an invidious and an inconvenient course to publish the salary of every individual in their service, especially as every shareholder was at liberty to examine the books.

Mr. TUKE said, the accounts were open to the shareholders, who had every opportunity of acquainting themselves with the details.

Mr. COATES said, this brought to his mind another subject. He was astonished that the Directors had not introduced into the Act for which they were now applying, a clause providing for the appointment of auditors.

The CHAIRMAN said, this was the first time he had ever heard of such a suggestion. The accounts were always audited by three or four of the Directors, and any book was open for the inspection of the proprietary. If Mr. Coates doubted the competency of the Directors, he had better move a resolution to that effect.

Mr. COATES said, he was quite aware the accounts were audited by the Directors, and if auditors were appointed, he had no doubt that the results would be the same; but, still he considered they would be acting in a more business-like manner were they to appoint auditors.

The CHAIRMAN said, if Mr. Coates were not satisfied with the accounts, it was competent for him to move that three persons should come and audit them, without an Act of Parliament, and he (the Chairman) should be happy to put such a resolution.

Mr. COATES said he was not dissatisfied, and complained of the manner in which the Chairman treated him. If they looked at other large Companies—for instance, at Insurance Offices and Joint-stock Banks—they saw that the accounts were regularly audited.

Sir JOHN SIMPSON put it to Mr. Coates, whether if he had any confidence in the Directors he would persevere in such an opinion.

The CHAIRMAN read a certificate that the accounts had been duly audited, and found correct, by Thomas Backhouse, John Natham, George Dodsworth, and James Richardson, junior, and he wished to know whether four gentlemen could be found more competent to the task. In joint-stock banks the books were, as a matter of necessity, kept from the bulk of the shareholders; but in this Company, every person holding a share had a right to examine every account, and call for every voucher.

Mr ROWNTREE considered a resolution to appoint auditors perfectly useless. Every shareholder was an auditor, whilst the effect of a resolution such that suggested by Mr. Coates, would take from the shareholders that privilege, and constitute a third party between them and the Directors. (Hear, hear.)

Mr. COATES said, it was not convenient for every shareholder to come and examine the accounts.

Mr. ALD. NATHAM said, the accounts could not be examined in that satisfactory manner by two or three persons coming once or twice a year, as they were now by the Directors, who examined them weekly. If Mr. Coates thought the Directors improper persons, they ought to turn them out.

Mr. BACKHOUSE bore testimony to the great regularity with which the accounts were kept. They required to be a little more classified, which would in future be done.

Mr. Ald. NATHAM said, Mr. Backhouse had paid the greatest attention to the accounts—even the fractional part of a labourer's day's wages went under his scrutinizing eye. He believed that if his friend Mr. Coates had the accounts to examine, he would be puzzled.

The CHAIRMAN read a statement, showing the increase in every article of merchandise as compared with that of the corresponding six months.

S. TUKE, Esq., then rose and said, as one of the shareholders, he begged to state that they were deeply indebted to the Directors for the manner in which they had managed the concerns of the Company, and he considered the true security for the proper conduct of their affairs, was in the proprietary preserving to themselves the right of inspecting to themselves the books whenever they were dissatisfied. And whenever any of them suspected that the Company's affairs were mismanaged, he trusted that they would come and examine into the grounds of their suspicion. He should not have been present that day, but he was anxious to call the attention of the shareholders to another subject than any which had come before them. It was well known that great undertakings of this kind could not be conducted without a certain portion of accident befalling the labourers and other persons in their service, and in general these accidents befel that class of persons who were unable to afford to pay for proper medical attendance, and who consequently became fit objects for admission into the hospital. It had happened that during the formation of their line, several workmen, or persons connected with the railway, had had to apply for the advantages of the York County Hospital, and it had been found that the present provision afforded by that excellent institution were insufficient for the wants of the extensive district with which it was connected, particularly in connection with the wants caused by the railway. It had, therefore, been proposed at a meeting of the Governors, that an enlargement or improvement of the infirmary should take place so as to enable them to supply beds for 1000 invalids. Now he came to the shareholders of this railway—partners in a large and profitable Company—to ask them to allow the Directors to appropriate a certain sum of money for the benefit of the York County Hospital. And when all the circumstances were taken into consideration—when it was recollected that a large number of persons who had received misfortunes had been received into that hospital, he trusted the shareholders would be disposed to appropriate a sum of money towards effecting the improvement in that establishment. After one or two other observations, Mr. Tuke moved that the Directors be authorised to appropriate a sum of money not exceeding 200*l.* to the funds of the York County Hospital.

Mr. Alderman MEEK seconded the motion which on being put was carried unanimously.

Mr. ROWNTREE said, he wished to make a remark or two respecting the approaches to the station. They had just voted a sum of money in order to procure proper medical advice to any person who

Digitized by Google

might be accidentally injured on the railway, which he would only say was a matter of justice; but he was sure they would all agree with him that it was better to prevent the recurrence of accident than to pay for it when it had occurred. Any one who viewed the approaches to the station would, he felt confident, agree with him that it was most dangerous and inconvenient, and upon one occasion he had to wade nearly up to the knee to reach it. One day last week he returned to York by railway, and on passing down North-street he really expected that some accident would have occurred. Near to his friend Sir John Simpson's establishment, eight coal waggons were standing, and the road was so covered with them, that a carriage which was proceeding from the railway was unable to pass. In a short time a number of omnibuses and hackney-coaches with passengers advanced from the station, and the result was, that neither the one or other could pass without the most imminent danger. Now it was not creditable that this state of things should continue; and although he was aware that application was to be made to Parliament for power to enable the railway Company to improve these approaches, still he threw it out as a hint to the Directors, in case it was found inconvenient at present to effect these improvements, whether some arrangement might not be come to with the owners of property between Tanner-row and Micklegate, so that this danger might in a great degree be obviated. He considered the approaches highly discreditable.

Mr. BARSTOW—The cure for it will be a bridge at Lendal. (Hear, hear.)

Mr. TUKE inquired whether the Act of Parliament would compel the Company to bear the whole expenses incurred in effecting these improvements.

The CHAIRMAN—Certainly not.

Mr. TUKE would not object to the Company contributing a handsome sum towards improving the approaches, and thus benefiting the city; but he should decidedly object to the expense being wholly borne by the Company.

The CHAIRMAN said, all the Directors at present wanted was the sanction of the shareholders to go to Parliament for a Bill. When they obtained that Bill they would not involve the proprietary in one farthing expense until they received their sanction. It was formerly intended by private individuals to erect a bridge over the Lendal ferry, and the reason why the design was not proceeded with was because the city council did not possess the power to authorise the building of a bridge.

A vote of thanks was then proposed by Mr. MEEK to the Chairman for his able conduct in the chair, and to the Directors for their valuable assistance. This was seconded and carried unanimously.

The CHAIRMAN briefly returned thanks, after which the meeting separated.

GENERAL RAILWAY CONFERENCE.

Rules and Regulations proposed to be observed by Enginemen, Guards, Policemen, and others, on all railways.

ORDERS TO ENGINEMEN AND FIREMEN.

1. No locomotive steam-engine, except in case of some extraordinary necessity, shall pass along the wrong line of road, that is to say, on the right hand line as it moves forward, but shall in all cases observe the same rule of the way as on the turnpike roads, by proceeding along the left-hand line. And every engineman and fireman shall keep a good look-out all the time the engine is in motion. And no person, except the proper engineman and fireman shall be allowed to ride on any locomotive steam engine or tender without the special license of the Directors, or of the Engineer or Manager of the railway.

2. In case of accident, if any engine shall be unavoidably obliged to pass on the wrong line of road, the engineman shall always send his assistant or some other person, back beyond the nearest stopping place, or shunt, before the engine moves backward, to warn any engine coming in the opposite direction; and if dark, the man who goes back in advance of a returning engine shall take a light, and make a signal, by waving the same UP and DOWN to any coming engine to stop; and the engineman of the engine moving on the wrong line shall make constant use of the steam-whistle, and must not move in the wrong direction further than to the nearest shunt, and being arrived there, shall proceed instantly to remove the engine off the wrong line of road.

3. All engines travelling in the same direction shall keep half a mile at least apart from each other; that is to say, the engine which follows shall not approach within half a mile of the engine which goes before.

4. No engineman shall, at any time, or under any circumstances, leave his engine or train, or any part of his train, on the line of way, without placing a man in charge of the same, to cause the proper signals to be made to prevent other engines from running against them.

5. Enginemen having charge of goods or luggage trains shall always exert themselves to keep out of the way of coach trains, by shunting, if necessary; and, if doubtful of getting out of the way of a coach train, shall direct gatemen and platelayers to make signal to coach trains that a luggage train is before them.

6. No engine, carriage, or waggon, or train of carriages or waggons, whether loaded or unloaded, shall (except only in case of absolute necessity, to prevent accident or collision) stop upon the line of any highway, so as to interrupt the passing along such highway or public road, whether the same be at or near to any of the stopping places on the railway or not.

7. No engine shall be allowed to propel before it a train of carriages or waggons, but shall in all cases draw the train after it, except when assisting up an inclined plane, or in case of any engine being disabled on the road, when the succeeding engine may propel the train *slowly* as far as the next shunt, or turn-out, at which place the said propelling engine shall take the lead.

8. In the event of the road being obscured by steam or smoke, (owing to a burst tube, or from any other cause,) any engine or train coming up shall not immediately pass through the steam or smoke, but the engineman shall stop at a sufficient distance to prevent a collision, and shall ascertain that the way is clear and safe before attempting to proceed.

9. If a coach train be stopping to take up or set down passengers, on the road, or for any other cause, luggage trains are not allowed to pass it, while so stopping, on the opposite line; and if the engineman of a *coach train* sees another coach train stopping on the road, he must slacken speed as he approaches it, and blow his whistle, to give notice to passengers belonging to the stopping train that another train is about to pass them.

10. In going down an inclined plane, every engineman having charge of a luggage train shall take care that he has full and complete control over the speed of his train, by pinning down, or causing to be pinned down, his waggon breaks, fewer or more, according to the size or weight of the train, whether there be a luggage breaksman with the train or not. And in case of accident for want of this proper control over the speed, the engineman shall be held responsible. And the policemen at the top of the inclines shall, and are hereby charged to, assist in pinning down the breaks, when desired so to do by the engineman of the train.

11. RULES TO BE OBSERVED DURING A FOG OR IN THICK WEATHER.

Whenever a coach train stops at any of the stations or places for taking up or setting down passengers, (during a fog or in thick weather), the gateman or policeman of the station shall immediately run 400 yards behind the train, or so far as may be necessary to warn any coming engine, in order to prevent its running against the other; and all enginemen shall slacken speed in foggy weather, and proceed at a slow pace at an ample distance from, and as they approach, each of the stations and stopping places, in order that they may have the complete control of and be able to stop thei engines and trains, without risk of running agains any train which may happen to be waiting at such station or stopping place. And in case any engine (whether with coaches or luggage waggons, or without) shall stop in foggy or thick weather in any part of the road where there shall be no gatemen or policemen, and where there shall be no platelayer to render assistance, the fireman shall immediately run back 400 yards, or so far as may be necessary, to warn and stop any other engine coming in the same direction.

In foggy weather, enginemen are cautioned to make frequent use of their steam whistle when they approach any station; also, whenever they are obliged to stop on the road, or when, from any cause, they are obliged to go slower than usual, in order to prevent accidents from trains which may be following on the same line.

12. ORDER TO GATEMEN AND POLICEMEN.

All policemen and gatemen are required, when a luggage train approaches their several stations, and before she comes up, to go on the line and inspect both sides of the train, to ascertain whether any of the loading (particularly bags of cotton or wool, have slipped so as to *overhang* the waggon more than when first loaded; and if such be the case, to make immediate signal for the *train to stop*, in order that the loading may be put right and fastened on again before the train proceeds.

N.B. All enginemen, firemen, guards, policemen, gatemen, and others to whom the foregoing Rules may apply, are held responsible for their strict execution and observance; and they shall report to the Directors, or to their immediate Superintendent, any servant of the Company who shall refuse or neglect to comply with the Regulations hereby ordered to be observed.

CODE OF SIGNALS RECOMMENDED TO BE OBSERVED ON ALL RAILWAYS. 1841.

BY NIGHT.

The *white* light, stationary, indicates that all is right, but if waved *up* and *down*, is a signal to stop; if waved *to* and *fro*, sideways, to proceed cautiously.

The *red* light, stationary, is a signal *always to stop*; if on a moving train, it is a caution to all following trains to keep the required distance.

BY DAY.

The *red* flag, or ball disc, is the signal always to stop.

The *blue* flag, or ball, is to stop second class coach trains or luggage trains, for the purposes of traffic.

The *black* flag is used by platelayers, to indicate that the road is undergoing repair, and that trains must pass slowly.

It is to be understood, that any flag, or hat, or lamp, of whatever colour, waved up and down, is a signal *to stop*.

REGULATIONS AS TO SIGNALS.

1. Every train on the railway shall show a red bull's eye, or reflector lamp, on the last carriage or waggon; and the guards of the coach trains, the breaksman of the luggage trains, and the engineman of an empty engine, or, with a waggon train without a breaksman, shall see to, and be held responsible for, the execution of this order; and if a coach, or truck, or horse-box, or waggon, be attached to or detached from a train on any part of the road, the guard, or breaksman, or engineman shall immediately change and replace the red bull's eye, or reflector lamp, so that the same may still be in the *rear* of the last carriage or waggon in the train, showing backward.

2. Every engine tender must carry a lamp, so fixed as to admit of being turned round, exhibiting a *white* light forward, and a *red* light backward, in whichever direction the engine may be moving.

3. Every gateman or policeman shall light his gate or station lamp at dusk, and shall have his hand-lamp constantly trimmed and burning, and ready to give such signals as may be required.

Digitized by Google

4. If a coming engine or train be required to stop to take up passengers, a *blue* light must be shown in the gate-lamp; otherwise the common *white* light.

5. If a train approaches when a previous train has passed through, only a few minutes before, the gateman shall signify this circumstance to the engineman by the waving of his hand-lamp *to* and *fro*, sideways, which means that caution is required, on which signal all enginemen are required to go slowly and keep a good look out.

6. But if a gateman, owing to some accident, or any extraordinary cause, wishes to stop an engine which is approaching he must show his *red* light, and must also wave his hand-lamp *up* and *down*, up to the height of his head, and then down to the ground, till the engine comes up; and all enginemen are required to stop at either of the signals being given; and a gateman must make this signal to an approaching engine, if a previous engine has passed through his gate only one or two minutes before.

N.B. The *red* flag, or ball, must be used in the day, in the same manner as the *red* lamp by night.

Rockets or *blue* lights are extraordinary signals, and when an engineman sees them he must immediately stop to ascertain their cause.

ENGINE WHISTLE.

7. When *one long whistle* is given, it is a signal to gatekeepers, policemen, and others in front, that an engine is coming, and this signal is to be used on approaching public roads, during a fog, or when a first class train approaches a station where a second class train is stopping, and generally as a caution when required, for persons on the line to keep out of the way.

But when an engineman wishes to make signal to the guards, or breaksman, *on the train* that they are to put on their breaks and stop, he must give a *quick succession of whistles*, making an interrupted tremulous, or vibrating sound; and all guards or breaksmen, whether with coach or luggage trains, hearing this signal, *must immediately* hold hard on the break, or breaks, under their charge, so as to stop the train *as quickly as possible*.

After the above proceedings, the Chairman having intimated that very numerous communications had been received, suggesting new mechanical arrangements and professed improvements; a discussion took place on the subject, after which it was

Moved by John Entwistle, Esq.; seconded by John Harman, Esq., and unanimously adopted—

"That while the Delegates here present are most anxious to consider every suggestion, promising practical improvement, yet they are of opinion that this meeting is not the proper tribunal before which the merits of numerous complicated plans and arrangements, many of them probably requiring the test of experiments, can be calmly considered and decided on.

"GEORGE CARR GLYN, Chairman."

It was then moved by Charles Lawrence, Esq., seconded by Charles Russell, Esq., and carried by acclamation—

"That the cordial thanks of the meeting are due to Mr Glyn, for his able and impartial conduct in the chair."

RAILWAY STOCK IN 1840.

THE following is extracted from the annual circular issued by Mr. James Watson, stock-broker, Glasgow, our intelligent agent in that city:—

It will be recollected, that at the close of 1839 (the date of the last annual circular), the market was depressed by a stagnation in trade and monetary pressure, proceeding, in a considerable degree, from the deficient harvest. The market is at present also affected by a scarcity of money, occasioned chiefly by the late unsettled state of foreign politics; but this scarcity is becoming gradually less felt, as the aspect of the latter improves.

A considerable advance took place in the spring of last year; and the middle of February prices were higher. An improvement *this* year (1841) is generally anticipated, as the prospects are more cheering than at this period last season. The payment of the half yearly dividends due at this time on Government securities, and the satisfactory accounts from China, have operated favourably on the market, and a considerable advance has taken place within the last few days on all English stocks. Scotch shares are also firm. The fear of money matters being again deranged by foreign loans, has very much subsided, the surplus capital of the country being well taken up by projects at home, and public confidence having been of late much shaken in foreign funds.

Of the forty-five joint stock companies mentioned in the annexed list, twenty-one advanced in price, seven have remained stationary, and seventeen have declined since last year.

It will be observed, that the decline has chiefly taken place on the shares of the older established companies, which were looked to almost entirely for investment; and may be accounted for more from the additional outlets for capital offered to the public by the formation of new companies and by railway loans, than from any want of success in their business.

The advance on the shares of the banks recently established has been considerable.

The new companies established during the year, consist of two banks and two marine insurance companies.

It will be observed, that the Scotch railways have in general advanced, especially the mineral lines, where large and increasing dividends are paid.

Great fluctuations have taken place throughout the year, in the value of English railways; and prices have advanced or declined, as much from the ease or tightness of the money market, as from their intrinsic value. Numerous lines have been opened during the year. The heaviest proportion of the calls has been paid; the sum invested now amounting to upwards of fifty millions, including loans. The calls remaining to be made on the unfinished lines amount to about five millions, which will be called for very gradually, while the returns to be received from the lines in operation will this year be considerable. I annex,—

1st, A list of the principal lines which have been in operation for more than twelve months.

2nd, Those opened partially, or opened their entire length, within the last twelve months.

And, 3d, those now forming, and of which no portion has yet been opened.

On the first, there has been a steady increase in traffic and value, with the exception of the Greenwich; of the second and third, a correct estimate can hardly yet be formed; but if we may judge from what has occurred in the former, the results will be in general favourable.

Comparative View of the Prices at 8th January, 1840, and 8th January, 1841, of the principal English Railways which have been in operation for more than twelve Months.

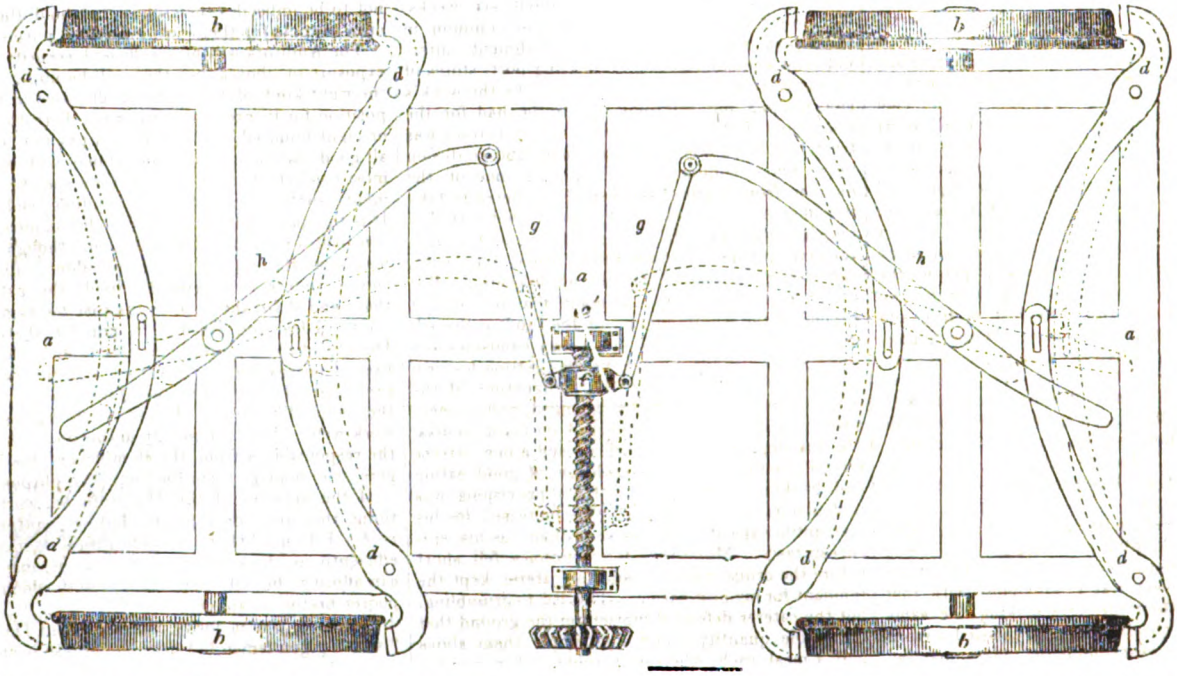
CROMFORD AND HIGH PEAK RAILWAY.

[From the *Derby Mercury*.]



THE application of the locomotive engine to the purposes of Railway transit has been so successful, and become so universal, as fully to establish its superiority over every other mode previously in use; and justly so, as whether we consider it with reference to its cost, its regularity and despatch, the perfect ease with which it is controlled, or its never-tiring energies, we are compelled to acknowledge, that no power with which we are yet acquainted, can for a moment be placed in comparison with it; and that no Railway, to which it is by any means applicable, can ever be considered complete without its powerful aid. We were not at all surprised, therefore, that an attempt was made in the beginning of last year by the enlightened engineer, Mr. Leonard, who has long and successfully superintended the working of this line, to induce the proprietors to employ steam instead of animal power. Great and important were the difficulties to be overcome in the adoption of such power on that line; namely, the *sharpness* of the *curves*, and the rails being made of *cast iron*, limited the *weight*, and by consequence the powers of an engine. This, with

Digitized by Google

the *expressed* opinion of a great engineering *authority* against the success of the plan, threw a considerable damp over the proposal; but, notwithstanding every obstacle, we have the pleasure of stating, that an engine is now plying with triumphant success over the most romantic part of the line. The first attempt was made with the engine about a fortnight since, several of the proprietors accompanying the engine. The space traversed was from the top of the second inclined plane to the great limestone quarries of Middle Peak, when the speed and *safety* of the engine was fully tested. It moved over the sharpest curves with considerable velocity, and without the *slightest tendency* to run off the rails. The writer, on this day week, had the pleasure, with some friends, of being pushed along by the engine over the plane alluded to, which commands one of the *finest* prospects in this country, and passes *close* under the magnificent Stonnis or Black Rocks, which are to the left of the plane. The engine has been at work during all last week, sometimes drawing from forty to fifty tons. The intention is to construct, as speedily as possible, two more engines to work the *two* 12 *mile levels* between Hopton and Buxton, at a rate of from 10 to 12 miles per hour, so as to enable the Company to transport goods and passengers to Whalley-bridge in a few hours, instead of two days, which it now usually takes. Great credit is due to the skill and enterprise of Mr. Leonard, under whose directions this engine was constructed, a short account of which we will give, as it may not altogether be unacceptable to those who are interested in such pursuits.

We have already alluded to the difficulties grappled with; the acuteness of the *curves*, and the equally formidable one of the weakness of the rails, being cast-iron, calculated only for weights not exceeding six tons per waggon. This necessarily confined the *weight* of the engine to about the same. The difficulty of passing the curves has been surmounted by using smaller wheels than usual (three feet in diameter) placed with their centres as *near* to each other as was considered consistent with preserving a *sufficient base*, the soles being at the same time turned a little circular. To keep within the limited *weight* required rather more contrivance and skill in the construction and arrangement of the various parts so as to combine with the utmost degree of lightness the requisite strength proportionate to the *strain* to which each part is subject, hence the engine is divested of every thing superfluous, and the various parts are so arranged as mutually to assist each other. The boiler is of the ordinary tubular construction, and presents no novelty except that of being made *wholly* of wrought iron, *tubes included*. The engine differs in some respects from others in the cylinders, being placed OUTSIDE the FRAMING, and on a level with the centre of the wheels. By the first part of the arrangement the great objection, a *cranked axle*, is avoided; and by the second, the rocking motion, which invariably takes place in engines which have their cylinders placed at an angle with the line of draught, is completely obviated. In other respects it offers nothing peculiar as compared with other engines beyond extreme simplicity of construction, except, perhaps, the use of *one fixed* executive, instead of *two*, to each engine, as is usually the case, and the ease with which it is made to work in either direction. The cost will not much exceed the original estimate of 400*l.*, which is saying something when speaking of *estimates*. The weight of the engine is about 5¾ tons.

DAVIES' DESIGN FOR A RAILWAY CARRIAGE BREAK.

THE recent frequent occurrence of accidents on the several lines of railway, has called loudly for remedial measures, and forcibly attracted public attention to the various weak points, and sources of danger, to which this mode of travelling is liable. An immense amount of talent has consequently been directed to all the details of the railway system, and there is good reason to hope that within a very short time great improvements will result, and practical means adequate to prevent the recurrence of accident, or at least to avert its consequences, will be universally adopted.

Among the most imperfect of the mechanical details, we may notice the breaks, the defectiveness or unworthiness of which has induced great carelessness as to their employment. In some recent cases of accident it appeared that not a single carriage in the train was provided with these essential appendages.

With a view to improvement in this particular department, the simple and ingenious system of breaks, of which the engraving on the opposite page will at a glance convey the idea, has been produced by Mr. David Davies, of Wigmore-street, Cavendish-square, inventor of the Pilentum and other favorite pleasure carriages, and well known as the extensive carriage builder to the Great Western Railway Company. His break is superior to any contrivance for this purpose which has hitherto been published, and may be described as follows:—*a a* represents the underside of the framing of a railway carriage; *b b* are the four wheels; *c c* are breaks on the extremities of eight long levers, whose fulcra are at *d d*; *e e* is a shaft carrying a quick threaded screw, working in fixed bearings, and furnished with a bevil wheel *e*, for connecting it with a vertical shaft and handle, led off to any point at which it may be convenient for the breaksman to be stationed; f, is a traversing nut, attached by the connecting rods *g g* to the two cross levers *h h*. There are two mortices in each of the cross levers, through which the break levers pass; these levers are connected by a pin on the extremity of one lever sliding in a slot in an iron plate on the end of that opposite to it, so that any motion conveyed to the one, is simultaneously communicated to the other.

Motion being given to the screw *e e*, the traversing nut *f* is drawn towards the bevil wheel, which causes the several levers to assume the position shown by the dotted lines, which will occasion the breaks *c c* to press against the circumference of all four of the wheels with immense force, reventing their rotation, and converting the carriage into a perfect sledge. This combination of the mechanical powers is so favourable to the developement of power, that with such an arrangement it would be almost possible to crush the wheels. In all the breaks we have hitherto seen, there has always been a violent thrust between the wheel and the carriage, or between two of the wheels, tending to bend or break the axles; in the present plan there is not the slightest strain upon the axle, the gripe being exerted on the two opposite sides of the wheel, and the force that might be thus applied with perfect safety, would be sufficient, if applied in the usual manner, to cause an inevitable rupture in the machinery. Although the action of this break is rapid, it is by no means so sudden as to entail any evil upon that account.

In illustration of the power of such a system of breaks, let us suppose that each of the breaks *c* presents a surface of only three times the area of the bearing surface of the wheel upon the rail, and that the total weight of the carriage is ten tons; it follows then that if each of the eight breaks were pressed against the circumference of the wheel with a force of little more than eight hundred weight, rotation of the wheels would be effectually pre-

Digitized by Google

vented. When it is further seen that this small force is exerted through the medium of a screw, acting upon a system of levers most advantageously disposed for the multiplication of power, it will be evident that the application of a few pounds to the break handle would instantly arrest the progress of the wheels. One or two carriages so stooped would soon annihilate the momentum of the longest train, and enable it to be "brought up" within so short a distance as greatly to reduce the liability to collision or other serious accident. We understand that all the railway authorities who have inspected Mr. Davies' plan, have expressed their unqualified approval of it and their strong conviction of its great utility.

RAILWAY MANAGEMENT.

To "Railway Shareholder."

SIR,—Should any one feel disposed to accuse either of us of vanity, in our endeavours at railway improvement, the best possible answer will be—vanity is a quality belonging to an animal entity. We are neither of us entities, and although you have occasionally appeared to consider the "anonymous" a weak point, further reflection will convince you that, for all really useful purposes, it is a strength. All that is requisite is mental qualification; nothing personal enters into the question. We have no "whereabout," we are "voices, and nothing more," and by our words, and not by our circumstances or positions, must we be judged. It is our province to *examine*, and judge thereon, stripping away all adventitious circumstances which obscure the view of truth. And this we could not do so freely if we were exposed to enter into personal contests, or defences. Ask our Editor what has been the result of his experience as to the relative value of personal and anonymous correspondence. If I mistake not he will tell you, that the character of the subject matter has, in almost all cases, been enhanced by the anonymous. The *person* makes a speech, the *mind* makes a report. The first is more or less on stilts, an observer of forms; the last is free and unrestrained, an abjurer of forms. If the anonymous descends to personality—I do not mean criticising person's acts—he must be very cautious, or very witty, to avoid losing influence. He fights with unequal arms, and the Saxon spirit of the multitude is ever prone to shout, in the expressive vernacular "Go it, little one!" The love of "fair play" is an inherent quality of an English crowd. But I am straying out of bounds.

We are both agreed on one point—efficient working Managers, well paid and responsible. You would have them mere servants; I would have their *interest* made in every way synonymous with that of the Company, their interests making the same progress. I have observed that no salaried servant is ever satisfied, however high the salary may be. He always looks out for perquisites. He acquires the habit of regarding his salary as a paid rent, an estate of which he is sure, and his mind is at work with stimulus at an odd fifty or a hundred beyond, and for the sake of this small sum he will peril the large one. This is a very common case, and for my part I do not wish the desire of increase to stop, because it is healthy human progress. Mischief in a child is the germ of energy in a man, badly directed, or left to run waste. If an unemployed child were inactive, it would be a sign of sluggishness, and the salaried officer of a Company having nothing but consecutive labour to do, without the hope of progress, would become sluggish also; and if not sluggish, his energy would be directed towards making profits in which the Company would not be interested—say, per-centages on tradesmen, &c. It is of no use to say this is improper. It is done, and will be done to the end of time. It is misdirected energy. Put it into the right channel; make it work simultaneously for the benefit of the individual and the Company, and you will turn it to the use Providence designed it for—progress. No individual can be found to give concentrated energy to the service of a crowd in pecuniary operations, unless his profits increase in proportion. Are there no instances to be found of Directors making indirect profits at the loss of the Companies, far greater than their shares alone would entitle them to? What is this but saying, in other words, "We are cleverer men than you of the herd, and if you get 5 per cent. for your money without trouble, it is as much as you ought to have; you might have 10 with better management, but we should only get 10 in common with you; at present we get 20 indirectly, and as you would not agree to give us the 20 directly, we'll keep you down at 5." Now, as Messrs. "the herd" will never do anything themselves, by their "own sprack wit." I maintain that it would be wise in them to give the 20 per cent. directly, and thereby be allowed to get the 10, and hold out, moreover, the inducement to the Manager or Director, of 25, so soon as they themselves might reap 12½. Man naturally hates dirty ways, and will never resort to them when he can get fair play; and the skilful man, who can by his energy make a business produce 10 per cent. where he found only 5, ought to be highly paid—the more especially when the parties are very numerous, and a small contribution from each will suffice. I will give you a practical instance of the working of this principle.

During the late war, a line of battle ship stationed in the Mediterranean did duty half in port and half out, with cruising intervals of about six weeks. The mipshipman's mess, as but too common in those days, was a most unruly establishment—alternate riot and starvation. On leaving port, stores of all kinds were profusely laid in, and by the week's end, nothing but salt junk was to be had for the remainder of the cruise. Caterer after caterer was tried, but there was no management, and confusion grew worse confounded. At length one of the number, from north of the Tweed, proffered to take the office in consideration of being vested with dictatorial authority. It was agreed to, and his management prospered wonderfully; order, regularity, and plenty, existed through the whole cruise. But somehow the discovery was made that he had not expended the whole amount of the funds collected, in short, that Sandie had put a very handsome per centage into his own pocket, besides getting his own keep *gratis*. Great was the indignation of the *generous* body to which he belonged, and unmeasured was the vituperation heaped on his *meanness*. He was deposed from his office, and a new caterer elected, famous for his knowledge of good eating and drinking. The quality of his provisions was undeniable, but the expenses were increased, for his mercantile capacity was not so brilliant as his epicurean taste. Moreover, the delicacies fell short before the cruise was out, and the caterer kept the remnant for his own eating. This led to grumbling, but the caterer defended himself on the ground that the whole quantity would not supply them above half a meal each, whereas it would suffice *him* for the remainder of the cruise. They would have submitted to this, but when they discovered that he had all along been drinking better wine than he gave them—with purpose aforethought—they at once made a revolution, devoured all in common, and then fed on salt junk.

Again they made port, and in process of time another cruise came round. A midshipman's council was held, and a stormy debate ensued. The upshot was, that they found they had been better off under the management of Sandie than under any other management, and they prayed him once more to assume the caterership, to farm them all round, and make what profit he pleased. They virtually admitted that it was not *generosity* on their parts to take up the time of an individual for their own benefit, without compensation, while they indulged in laziness, and that it was not *meanness* in him to turn his mercantile acuteness to account, and relieve a widowed mother from a portion of the charge of his maintenance, and all this through the process of making the whole of the members of the mess better off, and at a cheaper rate, than could otherwise be accomplished.

This is an illustration of the utility of making the interest of the public servant a motive with him to do his duty well. The thing to guard against was, the temptation to make too large profits. The security against this was the numerous body whose personal comforts would have been pinched, and the inevitable immediate outcry resulting from it.

You must reconsider this matter, and give some very sound reasons why it would be impracticable to pay servants rateably with profit, before I can consent to forego the experiment. I suppose the case to be precisely that of the salaried partner of banking house, who has his maintenance secured, but has to depend on his energies for all beyond. The Managers must be well paid, that is quite clear, or you will not command the most efficient men; but if they be sure of their fixed high payments, the affair will sooner or later degenerate into a sinecure, done by deputy, as you predicate of highly-paid Directors.

I quite go with you the length of your reform in cutting down the twenty-four Directors to eight. The responsibility will be narrowed. But are these Directors to be eight autocrats of eight divisions, or are they to act in concert; and more than all, are they to be amateurs, connoisseurs, or professionals? Where is the security that they will be of a distinct class and order from the present imbeciles, and consequently the tools of the Managers? I trust those Directors will forgive me, who happen not to be imbeciles themselves, but hold the imbeciles as tools for their own individual purposes.

The Auditors will be a sufficient security for the exposure of abuses, but they will be no security for the right kind of talent being disposed in the best position for its exercise. Be your Directors eight or eight hundred, you will find in practice that for all good results one single individual will be found most competent to *choose men* for a specific department, another individual for another, and so on. It is the quality of being able to choose men, which constitutes the general or ruler; and though twenty may sign the appointment, one alone will really choose, unless they agree to divide the patronage share and share about, as is the case on some railways. I fear you will find in practice that if one Director directs more than one branch, the good uses of energy will be thwarted and the evil uses protected. From Committee Managements I augur the same difficulties. I have never known them work well. They are merely authorities who take the responsibility from the shoulders of the Managers, who manage them for their own purposes.

If the services of the Directors be worth any thing, they are worth paying for—a *quantum meruit*. I do not believe in rich people working so efficiently as those who are poorer, because, they can afford to be idle and lose money, which their poorer brethren cannot.

In calling the majority of the present Directors "walking gentlemen," I used the phrase in theatrical parlance—fine gentlemen doing nothing but walk in and out to touch salaries and allowances. The walking you allude to, *bona fide* inspection, would make intelligent Directors most valuable. "It is the eye of the master makes fat the steed"—and the same supervision would be highly useful to the fire-steeds.

I have no doubt that many of those who advocate large payments and salaries in opposition to gratuitous services, have strong desires to obtain for themselves and friends the salary without the service. They wish the salary to be gratuitous, and not the service. But this makes nothing to the question of fitting payment for efficient service. In the case of Auditors even, I think a certain payment should be awarded, say such as you propose for Directors, 150*l.* per annum, to prevent their task being an expense to them. They must give time and labour to be efficient.

I think you do not put the question fairly, in asking if there be "more virtue at Washington than at St. Stephen's?" I take it that as regards virtue, they are much upon a par. It is melancholy to reflect that in either country the epochas of the highest public names should have been those of the strongest public antagonism. Hampden and Pym, and Elliot, and Washington, Jefferson, and Franklin, came when the time called for them to

Digitized by Google

save human progress from ruin, but the race of such men has disappeared from public life. They cannot thrive amidst a mere money-hunting crowd. With a few individual exceptions, I can find nothing either at Washington or St. Stephen's that is not the mere representative of a dishonest class interest, ready to sacrifice all the rest of the community to its own Juggernaut. Public virtue, in the high sense of the word, appertains to neither, as a public body. "The heart to conceive, the head to contrive, and the hand to execute"—brain, courage, skill, honesty, and individual manhood—where are they? Where is the large wisdom which should grow out of this high union of the noblest human qualities; which should merge all party in the welfare of the many; which should draw the highest of all rewards, the approbation of a conscience tested in its operations by the most searching intellect? Alas! class interests cannot produce this stately growth!

Pardon me for the warmth your own remark elicited. The spirit yearns for better things than have fallen on these degenerate days, and hope at times gives shadowy glimpses of them.

You do not mean "virtue" in the high sense of the term, but mere honesty in bargain keeping. I answer, then, unqualifiedly, that the three white-washed domes at Washington cover more representative honesty than the long booth on St. Stephen's site. The Anglo-American representative is the mere delegate, the mere steward, the mere mouthpiece, of those who elect him. He does his duty strictly by their passions and prejudices, without a will of his own. If he chooses to be independent he goes out. The English representative, who buys his place and is not paid, pays himself either by selling his vote or by gratifying his prejudices. "Virtue! a fig's end"—where a 100,000*l.* are given for a seat. An hundred thousand pounds! Such a sum would breed up a race of schoolmasters fit to form a propaganda of national education. No man fitted to be a nation's ruler would thus wantonly waste such a sum for the gratification of individual vanity. He could wield with it far more power without than within St. Stephen's long booth.

I am not arguing that the American system is better than the English one in its present working—merely that the American constituents have their value—their bargain. But I apprehend that the time will come when men shall be more enlightened, that they will choose philosophers and not advocates to make laws for them. Provision must be made for such philosophers as have not been born with silver spoons in their mouths, for you will concede that it would not be well to leave them to work at mechanical trades for a living, and there is as yet no patent process for breeding philosophers in classes. Nature chooses to be erratic in her operations. It would not be well to shut out the philosopher because he happened to inherit an estate, but it would at least be wise to put on a par with him the philosopher born without one.

The same kind of reasoning I apply to railways. It is by no means certain that the fittest men are to be found amongst the richest, and it will not be wise to exclude capacity. The union of skill, capital and perseverance is requisite to insure success. If a railway were a mere process of routine capable of being most efficiently conducted under certain fixed unalterable rules, mere drudges only would be required; but is it so? Even the business of a banking house which would seem to be one of the most routine processes, requires original thinking, and much more a railway. As yet a railway is an experiment; an experiment in machinery; an experiment in profits; and much hard consecutive original thinking will be requisite ere a standard be attained on which to construct a code of rules. And when that is done prosperity will still depend on individual skill employed in certain portions. The mere business, once arranged, will require no original thought. In sailing a ship the scientific part is a matter of exact calculation; the manipulation of the sails to make the most of every varying wind requires constant skill and attention.

In proposing to have a Government officer to sit at each Railway Board, I did not intend to give him power, but merely knowledge, as a counsel returned for the public interest. We must never forget that the public are a party, and the best way to keep the public satisfied will be to have no secrets of trade. Devise some better mode of satisfying the public and I shall be quite satisfied.

Your proposition to have the roads open to the trial of improvements is good so far as it goes. It is an imperative claim of the public; on the highways all the world is free to make improvements. The railways are private property and all improvers are at the mercy of the Managers. "You shall not make a trial on my line unless you choose to pay me a heavy toll," is the virtual state of the case. You clog your permission with "under the inspection of the engineer." You must make some provision that "the wrong be not made to appear the better reason" through the medium of percentages.

Your plan of throwing aside the farce of great names as engineers of lines for the purpose of keeping them in repair, I cordially approve of. This respect for the mere sound of a name is an indication of extreme ignorance. It is the pupil of the Engineer who executes the original work under the direction of his teacher, and therefore the pupil must be competent to replace any damages. In many cases, the Engineer of great name is a mere jobber, without practical skill. He hits on a line, and hires surveyors, engineers and contractors, who possess the special knowledge he lacks and of which he frequently cannot even judge. The proper name for such a person really would be, COMPILER OF RAILWAYS.

Your idea of leaving all improvements to be made by separate manufacturers will not do. In railway improvements all parts should work together to form a harmonious whole, and unless a master mind indicate this, the whole will be patchwork. Like the man-monster in Frankenstein, each part may be symmetrical, but the whole will be incongruous. The separate improvers will each strive to crush the others. Twenty people will have twenty things all good in their way, but not suited to each other.

The Secretary, under that name, I object to. Call him what he really is, a Director, and there will be no deceit, no false pretence. He is a remnant of the vicious system of provisional committees on which the railways were first commenced, and which have been continued. The successful speculating adventurers have formed an oligarchy, under whose rule the shareholders are plucked, as remorselessly as though they were a nation won by the sword. Let the Secretary keep all his salary, by all means; no breach of faith on any pretence. But let him assume the position of a servant of the Company who pay him, and no longer remain a servant of the Directors—really their irresponsible manager.

With regard to security being taken from those who occupy positions of trust, I think there cannot be two opinions. Whether they have the charge of money or other property it is the same thing. The shareholders ought to insist upon it, and I dare say will, if they once "screw their courage to the sticking place."

As to the cash balances, if interest can be made of them either by exchequer bills or in any other mode, without too much risk in rises and falls, why should it not be done? Why should railway shareholders be the only traders, making no profit of their surplus capital? The how I do not pretend to show, but the principle is clear.

If the balances be deposited with a private banker, we will suppose that banker to have an interest in it. Why should he not give security as well as a treasurer or cashier, or storekeeper, or any similar officer.

Joint-stock banks are undoubtedly more safe than private bankers. Eight hundred partners are better security than three or four; therefore a joint-stock bank would be better than a private bank, and they would give interest on all deposits in proportion to the amount.

But apart from the question of interest, why do not the Companies take the best security by banking with the Bank of England, if the question be merely the safe custody of the funds?

But in all cases faith must be kept. There are, I believe, some railways in which bankers have agreed to become large shareholders in consideration of having the custody of the surplus funds; and in such case it might be a serious loss to them to lose the business. Where this may be the case, it is for the shareholders to consider their own honour, and how far they are compromised by the original bargain of the projectors. Honour above all things!

But, at all events, the shareholders must rise against their conquerors and taskmasters—they must make themselves a free and independent community. To do this they must have auditors, whom they themselves can pay, but not paid by the Directors; and such an election of Directors as will break up all class interest. Above all, *auditors, uncontrolled by the Directors, and with full powers to examine into every transaction and to report thereon.*

Let the shareholders rest assured that all the *rats* will leave the building so soon as the *ferrets* are fairly unloosed upon them.

I am, Sir, &c.

EXAMINER.

January 18, 1841.

THE MANCHESTER AND BIRMINGHAM RAILWAY.—"MANCHESTER MANAGEMENT."

To the Editor of the Railway Times.

SIR,—Truth, they say, lies in a well, and your correspondent "Candidus," on the Manchester and Birmingham Railway, will excuse me if I express my opinion that he seems disposed not to invade her abode. Imputing to him no intention to mislead, I fear I can trace in his "candour" the mystifying hands of those brother Directors whose skill seems to consist in the ability with which they have *hitherto* lulled their shareholders.

Your correspondent, I hope, will neither take fright at this my preface, nor believe that I am wanting in the "temper" he so highly applauds, should I proceed unceremoniously to submit to you and him, a practical test of some of the statements in which he has indulged.

He is, then, "very sorry" to state that the line to Stockport (5¼ miles) has cost 470,000*l.*, a sum huge enough truly, (though, for our comfort he tells us, smaller than the outlay on some of the metropolitan lines!) but not so huge, I fear, as the reality. The Directors (your favourite Mr. Sharp), told us at the September meeting that the outlay up to that time had been 842,467*l.* Now, if we deduct from this amount the 470,000*l.* admitted by "Candidus" to have been spent on the Stockport line, and 157,745*l.*, the cost of obtaining the Act, &c., we have still unaccounted for 214,722*l.* *at that time spent.* To set against this, we have the payments for land, Mr. Sharp having stated that all the land from Stockport to Crewe (say 26 miles) had been purchased, and that it had cost about 3,000*l.* a mile. This will give us 78,000*l.*, which deducted from the mysterious sum above named, still leaves us in the dark as to 136,000*l.* then spent, to say nothing of the 5*l.* call (equal to 150,000*l.*) since paid. I am aware that one of the contracts beyond Stockport was in progress at the time this statement was made, but its extent is by no means such as to have absorbed the whole of this money. What then has become of it?

Again, Mr. Sharp (the "Managing" mouthpiece) told us in September that the line to Crewe was estimated at 20,500*l.*, exclusive of stations, which would be "very light." Four months only have elapsed, and even in the hands of "Candidus" the estimate has already grown to 25,000*l.* To be sure this is only the dislocation of one figure, and the magic wand of a Director can easily turn 20,500 into 25,000*l.*!

Digitized by Google

Again, only some five weeks ago the Directors, asking leave to borrow 700,000*l.* further, evaded all inquiry as to the cost of the line—*because* the Macclesfield branch had not been let, and it was therefore "impossible" to form any estimate. "Candidus," however, whom I venture to salute as a Director, has all this ready, albeit, impossible of attainment a month ago; so that our lamentations and wailings have not been wholly unheeded. To be sure his conjectures and his figure-estimates are rather queer ones, for, having admitted that the line to Crewe is to cost twenty-five thousands per mile, he in the same paragraph *naively* says that "our Engineer," forming his judgment of the expense of the land from the prices that we have already paid, and computing the cost of the works upon a similar scale with those between Stockport and Crewe, has estimated our outlay at 22,000*l.* a mile—(albeit, the line to Macclesfield is among the heaviest of our works), thus demonstrating in the most conclusive and satisfactory manner that from data identically similar, a skilful Engineer, aided by a "Managing" Director, has no difficulty in arriving at conclusions utterly different.

So much for "our" Director's estimate of cost. I dare not trespass upon you at such length as would be required to sift his estimates of return. But I admire the solemn innocence with which he *tells* us that "we (happy we!) are *precluded* by the terms of our agreement with the Grand Junction Company," from incurring any cost in working the line from Crewe to Birmingham, except the wear and tear of engines.

Glad tidings for the shareholders; but subject, I fear, to this proviso that (as report goes) the vaunted agreement has not been ratified, and that the Grand Junction Company, I am sure, will not so falsify the character they have gained, nor be so cruel as to "preclude" the Manchester and Birmingham Company from incurring any expense they can possibly thrust upon them!

Here, then, I leave "Candidus." He has said too little for the satisfaction of those he addresses—too much for the case he would fain make out. Truly I may appeal to him in the old phrase—"*Si quid novisti rectius istis*, 'Candidus' *imperti, si non*"—I cannot hope he will adopt the rest of the sentence, and I omit it.

Whilst I have my pen in my hand, I may add, that I fear your strictures on "Manchester Management" are but too applicable to those in whose hands this concern has so long been blanket-tossed. I do not need to travel beyond their acts in this Company to convict the Directors of incompetency; but if I did, and if your own estimate of "Manchester Management" in general needed confirmation, I think we could have none better than would be afforded by a candid reply to these suggestions:—

How many of the Directors of this Company are or were Directors of the Manchester and Liverpool District Bank?

How many of them are or were Directors in the Commercial Bank? Establishments, both of them, well known to fame.

Of how many hapless Companies—Cemetery Companies, Plate-glass Companies, Insurance Companies, Water Companies, Railway Companies—are they "Directors?"

Whether, in some instances, it be not to an extent sufficient to make up for a man a snug little income, out of the "Directors' allowance?"

Whether the "Managing" Directors of the Manchester and Birmingham Company do not take from the Company's funds *annually* a larger sum than the whole amount of their share-interest in it?

Will any body assist me to solve these problems?

Your obedient servant,

A SUFFERER.

Rochdale, January 26.

P.S.—By the way, touching the Directors (towards whom I entertain no disrespect, except that I believe the majority of them to be utterly incompetent for their offices, and that I think they *rather* over-do the "Managing" department), I may mention, as a curious circumstance, and one indicating the extent of their innocent simplicity, that one of their body is actually a member of the Midland Counties' Board—the deadliest enemy of the twin scheme—the Extension. I believe him to be an honourable man, but none but a Manchester Board of Directors would try such an experiment in Direction, as that of choosing a colleague from the ranks of their enemy.

RAILWAYS IN GERMANY.

LETTER II.

To the Editor of the Railway Times.

SIR,—There are, at the present time, many important railways either open or in course of construction in central Germany. Those from Madgeburgh to Leipsic, from Leipsic to Dresden, and from Vienna to Brunn, are already rewarding the enterprise of their promoters. Those from Berlin to Stettin, a Baltic port, to Frankfort on the Oder, and to Coethen on the Magdeburg and Leipsic railway are being constructed. But there are yet no good means of communication between the important kingdoms of Prussia and Saxony, and the principal German port from which vessels can sail for the Atlantic, Pacific, and Indian oceans, and the wealthy countries which border the North Sea. The port to which I allude is the free city of Hamburg. There is but one other port which can put forward any claims to rivalry, and that is the free city of Bremen; but the superior geographical position of the former has long since decided in its favour the claim to be the chief German seaport. The present means of communication between Hamburg and the interior of Germany are two chaussees or mail-roads, and the rivers Elbe and Havel. Of the former, that to Berlin is a very splendid road, and is very well laid out; the other is a good road, but circuitous, as it goes by way of Celle, Hanover, and Brunswick to Madgeburg; but the rate of travelling on these roads does not exceed 4½ miles per hour; —of the latter, the navigation is precarious and uncertain, and lasts little more than half the year. The want of a railway, therefore, between Hamburg and the interior of Germany is undoubted. Then the question arises, "Will it be better that the main line should go from Hamburg to Berlin, the capital of Prussia, and thence by means of the Berlin and Coethen railway reach the different sites of German wealth and manufactures; or go from Hamburg to Magdeburg, and thence by means of the Magdeburg and Dresden railways reach the same spots?" The first observation that would be made on inspection of the map would be, that the former is very circuitous, and the latter nearly direct. But the fact is, both lines must be made. Both lines have interests peculiar to themselves, and Hamburg itself is quite as anxious to secure railway communication with Magdeburg as with Berlin.

I have now before me a "Berlin and Hamburg Railway Prospectus." This is rather a singular document. It does not propose to form a Company at present, but to raise the sum of 50,000 Prussian dollars (7,500*l.*), for the purpose of making preliminary examinations and negotiations. One paragraph states that, "The Provisional Committee have already received promises of *unqualified support* from Governments through whose territory the railway will pass. They have received offers of territory, wood, and pecuniary contributions from the Commune of the Interior, as well as from foreign authorities; in particular the Grand Duchy of Mecklenburg Schwerin has promised to concede to the Company, without cost, all territorial domain with-the Duchy, required for the railway and the stations, subject, of course, to the rights of third persons." Yet they say, "*if* the Committee shall determine to establish the Company," due notice will be given in the London journals. And the committee, not being able to raise funds for the preliminary purposes of this really important undertaking amongst the princes, nobles, and merchants of Prussia, has appointed agents in London at one extremity, and Breslau at the other, for the purpose of collecting subscriptions, and only offers the *chance* of a return for the money! It is true that the Danish Government has granted permission to examine the country; but *not* true, that it yet gives any further support to the project. In the above quoted article, the Duchy of Mecklenburg Schwerin is put forward very prominently; but it is not there stated that the Grand Duke has attached a condition to his assent, which, if persisted in, will prove the grave of the undertaking. The condition is, that the railway shall be carried round by Schewerin, which to any one acquainted with the position of that city and its 13,000 inhabitants, and the country around it, is evidently a monstrous absurdity. Should any English capitalists be induced to support this survey scheme, I must warn them to be on their guard with the Provisional Committee; for though the Berliners are very desirous of pecuniary assistance from England, they are very jealous of any English interference. I must also mention a case. Last summer subscriptions were collected in London to defray the expenses of preliminary examinations for a "Hanoverian Railway" from Hanover to Harburg. On the 28th ult. a meeting was held to thank his Majesty of Hanover for reimbursing a large proportion of the sums subscribed, the project having been abandoned after the survey was made. Hear and beware.

Now a word or two on the other project, viz. a Hamburg and Magdeburg railway. I confess, if only one of these two railways is to be formed, that this one appears to me to be by far the most important to England as well as to Germany. It would form a link in the chain of direct communication between the North Sea and the Adriatic—Hamburg being the northern end of the chain—Magdeburg, Leipsic, Dresden, Prague, Brunn, and Vienna, intermediate places, and Trieste the southern end. It would be constructed, too, at a comparatively small cost; for after crossing the Elbe at a place called Stove, 15 miles from Hamburg, and passing a town called Luneburg, it would run up a fine and easy valley to the summit of the high land, round the base of which the Elbe takes so wide a sweep, and then would run almost entirely on the present surface of the country to Magdeburg. Yet with this splendid prospect in view, and with the certainty of cheap construction for the road, the Hanoverian Government is pursuing a narrow and selfish policy, and one which, if persisted in, will prove the ruin of *this* scheme. It insists, first, that a most useless branch line shall be made from Stove or Luneburg to Harburg, a miserable little town, situated opposite to Hamburg, which owes its mere existence solely to the neighbourhood of Hamburg; and, 2ndly, that the line shall leave the fine valley I have mentioned, and go over a rough country to Celle and Brunswick; thus making an unnecessary circuit of 40 miles between Hamburg and Magdeburg. It is certain that neither Hamburg nor England would subscribe to such a scheme. It is now reported that Hanover and Brunswick have concluded a convention by which the former is prohibited from allowing of any railway which does not pass by Brunswick. If this be true, the deathly influence of such miserable and narrow-minded policy will soon be felt by those countries, for they will have no railway at all. I have reason to believe that if the different Governments would consent to the construction of the direct line, the Hamburgers would consent to a branch to Celle; leaving it to some future time to continue this on to Brunswick.

There is no doubt that in the course of the spring, the different projects that are afloat will assume a tangible shape; and then English capitalists may be quite sure, they will hear of their German friends in some very intelligible manner. Again, I say, let them beware of what they are about.

I remain, Sir, your very obedient servant,

W. N.

London, February 2nd, 1841.

SIR,—The mechanical definition of a carriage bearing wheel in its most perfect form, is, a cylindrical roller revolving round an axle parallel to the horizon, which should be the plane of the road, the face of the roller being at a right angle with that plane. Thus, when in motion, every part of the periphery would travel at the same rate of speed on a straight line, and, supposing the roller to be truly cylindrical and accurately centred, supposing the periphery also to be incompressibly hard, and the surface of the plane to be equally hard, and a true level, the impinging part would be a mere line, and the rolling motion would be absolutely devoid of friction and concussion; the pressure being always equal in amount in proportion to the weight.

Could railway engineers produce in ordinary practice this geometrical accuracy, there would be no need of elastic agency in any part of the roller or of the load borne by it.

But, inasmuch as no human art hitherto discovered has been able to produce such results in ordinary practice, friction and concussion to a very considerable amount are generated, between the roller and the plane on which it rolls, increasing in compound proportion with the speed. The movement is not a simple pressure of surfaces, but a series of slides and leaps, producing abrasion, and destroying the cylindrical form if the roller be at all plastic—fracturing the roller if it be rigid and brittle.

It therefore becomes necessary to call in another agency to counteract these mischievous effects. Elastic resilience is the agency provided by nature in the foot of the horse for a similar purpose, and elastic resilience must be provided in the foot of the carriage, viz. the roller.

But this elastic resilience must be so disposed, that the periphery of the roller may never alter its true circular form either momentarily or permanently, or a considerable impediment to free rolling motion will be generated, equivalent to a constant succession of small elevations in front of the roller.

Therefore the elastic resilience must be disposed between the rigid periphery and the central axle, and the diminishing distance between the periphery and the centre will in such case be equivalent only to a slight diminution in the diameter of the roller. The axle may momentarily alter its position as regards the centre of the roller, but the periphery of the roller will not alter its form as regards the plane on which it rolls. And the amount of the disturbance of the axle will be very slight, and instantaneously replaced.

The term "roller" has been used to designate a wheel used singly. If a pair of rollers be used one at either end of an axle, each revolving independently of the other, they may be called, a pair of wheels.

But if a pair of these rollers be connected by a shaft, so that one cannot revolve independently of the other they will then constitute a single roller. Such is the case with the greater part of railway wheels, which, though so called, are in reality rollers.

It is a quality of a pair of wheels revolving on one axle independently of each other to be capable of travelling at different speeds, so that the axle which connects them may always radiate to the centre of any curve, around which the wheels may be passing, with an amount of friction due only to the breadth of the periphery of each wheel. Supposing the periphery to be a knife edge, the impinging part would be a mere point, and in such case the curvilinear friction would be all but annihilated.

But if the two rollers be firmly fixed on a shaft, they will not possess the quality of travelling at different speeds, and therefore, supposing them both to be of equal diameter, they can only roll on a straight line without friction.

If they be not of equal diameter they will form a cone, and can only roll without friction, on a curved line, equivalent to the difference in their diameters.

Therefore, supposing the two rollers, or rather the two ends of the roller connected by the shaft to constitute a cylinder, any departure from a straight line must be attended with an amount of friction due to the whole length of the shaft.

This torsion strain must at times be very considerable, and have a tendency to twist the shaft and damage the wheels.

Therefore a much stronger wheel or roller is requisite, when the shaft is a fixture, than when a pair of wheels revolve independently on their connecting axle.

Before entering upon the discussion of existing railway wheels, it will be well to consider the qualities of wheels used upon highways.

That which is apparently the strongest, is the iron wheel of Theodore Jones, called the suspension wheel. Yet this wheel is never found in use at the hardest work—it is found at the *heaviest* work as to carrying burdens, but always in slow motion. It is not the load carried, but the rapidity of movement which constitutes the severest test. In its periphery, this wheel is undoubtedly strong—stronger than any other wheel, for the tyre has not merely no strain of tension on it—it is not merely at rest—it is actually supported and bound by the spokes—held together as it were. But this tension on the spokes, produced by the tight screwing of the nuts in the nave, is fatal to the durability of the wheel at high speeds. It is loaded before it is put under a burden, with a weight proportioned to the tension, and a succession of light rapid blows are thus rendered equivalent to the strokes of sledges. The elegant and light appearance of this wheel would long ago have secured it a preference on railways, had it been fitted for speed. Rigidity is the cause of its destruction. It is absolutely devoid of all elastic resilience. For slow movements less resilience is required, and therefore in that work it maintains its place.

It is an established fact, that light wooden wheels of the ordinary make, will frequently undergo harder work than wheels of a similar kind which are much heavier. The reason is, that the construction of the light wheel, though apparently the same as that of the heavy one, varies considerably from it.

The form of the light wheel will be found on examination to resemble a dome, that of the heavy wheel, on the contrary, will resemble a cone. A well shaped spoke resembles in section an archer's bow, broad at the back or convex side, and narrow at the front or concave side. A pair of spokes opposite to each other, inserted into the nave, correspond to a bow with its hand piece, and with the shrinking on of the hoop tire, they are shortened endwise, and forced into an arching form. Thus the wheel forms an elastic dome, the periphery being a rigid circle, sometimes too rigid, for although the spokes yield, the circle of felloes are sometimes sufficiently incompressible to burst the tyre. Those who wish to obtain the easiest carriage apply the wheels thus domed to an axle parallel with the ground, the result being that the spokes never stand upright, but at an angle with their length, and thus their elastic action is well developed over bad roads, and eludes the effects of concussion.

The wheel which has heavy unyielding spokes, is the most likely to burst its tyre, as it is a rigid cone, or nearly so. If it be applied to the carriage with the spokes vertical to the ground, the carriage will be very uneasy, and the wheel will rapidly wear out.

The action of the elastic wheel will be similar to that of a man who jumps on his toes. The action of the rigid wheel will be similar to that of a man who jumps on his heels.

But unless the wheelwright possesses judgment to determine the exact amount of elasticity required, he may err in making a wheel too flexible to maintain its form, so as to strain to pieces. Wood does not possess the perfect elasticity of steel, and is apt to change its form permanently. Thus, if the felloes which form the periphery be of insufficient depth, they will sink beneath the repetition of blows between the spokes, and the wheel, losing its circular form, will present a figure of as many flat sides as there are spokes.

Such a wheel, in rolling, would produce as much concussion to the vehicle over a perfectly level plane, as a road of the same irregularity would produce with a perfectly cylindrical wheel.

It has generally been esteemed a desirable object so to frame wheels, that while the lower spokes sustain the load by compression, the upper ones may equally sustain it by tension. There appears to be no good reason for this, but the contrary. It would be making the spokes work in opposite directions alternately—an infallible mode of crippling them. A steel spring will break if thus worked, all the particles being subjected to alternate tension and compression. This will be best illustrated by examining the kind of bow which archers designate a back bow. This is comprised of two varieties of wood. The inner concave side, which is compressed, is formed of an elastic brittle wood, such as lancewood. The outer or convex side is formed of ash, or some other wood, the quality of which is toughness. If the action were reversed, the brittle wood being placed outside, and the tough wood inside, the result would be, breakage of the former, and collapse of the latter.

In the well made wheel, all the spokes are forcibly held in a curved form by the tyre, with a constant tendency to become straight. If the blow on the ground momentarily shortens the lower spokes, by causing the lower part of the periphery to approach the centre, the upper spokes instantly become straighter, and the thrust from the centre is equalised on all sides of the arched periphery.

It is manifest, therefore, that the two principles of compressure by the tyre from without, and tension by the spokes from within, cannot exist simultaneously. The one or the other principle must be determined on, in the construction of a wheel. If the tension principle be resolved on, it must be united with some portion of elastic resilience, and all idea of support from the lower spokes must be abandoned.

There is no doubt that it would be possible to construct a durable wheel on this plan, but it would require great nicety of calculation, and a large number of experiments. It would, moreover, involve great cost. The construction of an extension spring is far more difficult, than that of one acting by compression.

In constructing an elastic wheel to act by compression, less difficulty is involved. The principal object to be sought for is, to distribute the pressure as equally as possible over the lower half of the diameter, which is the only portion that can be made directly available. The upper half will not take any pressure, but it will help the lower half indirectly, thus; when the lower part is struck on the ground that portion between the periphery and the centre should yield to avoid the shock. In this case the upper part will expand and help its quick action, acting as it were like a muscle to lift the foot from the ground.

The simplest mode of regarding a wheel is to consider the spokes as the legs of the carriage, and the periphery as the foot. To join the leg to the foot an ankle is necessary, and if the ankles of the wheels be insufficiently strong, a similar result will take place to that which occurs with the "weak ankles" of animals.

The tyre may be regarded as the shoe. A horse's shoe is fastened on with just sufficient strength to prevent its getting loose. The strake tyre, which is strictly analogous to the shoes of a horse, cannot be kept fast at high speeds, and moreover a hoop tyre is found essential to support the periphery of ordinary wheels. It must therefore be put on with just as much tension as will effect this, and any tension beyond this will be mischievous. In wooden wheels, properly made, there is very little tension in the tyre, the tightening being caused by the elastic reaction of the compressed wood, which does not cause a strain on the fibres of the iron.

Assuming that the compression or supporting, as distinguished from the suspension wheel, is the most eligible—indeed the only practicable one in our present state of knowledge as applicable to railways;—the principles which should govern the mechanical construction will be as follows:—

1. An equal pressure from the centre towards all

Digitized by Google

parts of the periphery, so distributed as to ensure the preservation of the circular form of the tyre.

2. Such an amount of elastic resilience between the centre and the periphery as will afford compensation for the shocks the wheel may be exposed to, and thus prevent breakage, or alteration of form.

3. That the wheel may not be strained by tension or compression of its parts, but that every portion may be at rest, save so much compression as may be necessary to secure the tyre, and which compression should take effect upon the elastic portion.

4. That the periphery be truly circular, and equidistant from the centre.

5. That the periphery be capable of easy separation when worn or damaged.

6. That the outer crust of the tyre be as hard as is practicable, short of brittleness, for the sake of reducing the rolling friction to the minimum.

7. That the periphery be as nearly cylindrical as circumstances will permit; because, if a coned wheel runs on the edge of a rail, the pressure will be great—if it bears over the whole surface of the rail, the friction will increase in the proportion of the difference of diameter between the face and the back.

The two last conditions do not apply to the driving wheels of engines.

It now remains to analyse how far the existing wheels comply with these conditions. They are numerous, and some varieties may have escaped my observation, but all kinds will fall under one or other of the following category,—

1. Simple cast-iron wheels.
2. Simple wrought-iron.
3. Compound cast and wrought iron.
4. Compound wood with cast iron.
5. Compound wood with wrought iron.
6. Compound wood with wrought and cast iron.

The forms of simple cast-iron wheels are various. Their solitary advantage is, low cost at the outset; but I believe their peripheries are rarely, if ever, turned, and therefore they cannot be truly circular. Some of them are cast solid, *i.e.* in a continuous frame of nave, spokes, and felloe. In this case the metal is not at rest, because the shrinkage in cooling is greater at some parts than at others; thus compression and tension exist together, counteracting each other, and under these circumstances a repetition of vibrating blows will produce fracture. To alleviate this it is customary to divide the nave into three parts by strips of sheet-iron inserted in the mould. This allows the metal to be more at rest, by permitting the spokes to shrink towards the periphery. But it then becomes necessary to hoop the nave with wrought iron, so that it ceases to be a simple cast-iron wheel. The periphery is mostly made conical, for the purpose of relieving the mould. This kind of wheel is fit for nothing but very slow motion. Continuous vibration produces fracture, as there is not elastic resilience through sufficient space.

The only wrought-iron wheel I am aware of is that of Messrs. Bourne and Bartley, in which spokes, nave, and tyre all form a continuous piece welding. This wheel has no felloe, properly so called. Fig. 1 represents its mode of construction, the tyre being broken away. Two separate iron crosses are first forged, with a boss in each centre, to form the nave. These two crosses are then welded at their points into a ribbed tyre, one behind the other, and intersecting, as shown by the dotted lines.

This wheel must be exceedingly strong, if the welds be all sound. Tyre, spokes, and nave are all at rest, not being either under compression or tension. Therefore, there is no probability of the tyre bursting, but there is a possibility of its flattening by blows on the rail, unless made of great depth, as the support is not continuous, but at eight points, which thrust alternately in opposite directions at an angle with the face of the wheel. This is not mechanically sound in principle, and were the wheel constructed of very light scantling in proportion to its work, so that it were liable to strain, the result would be mischievous. The difficulty of repair would also be considerable, in case of the flange wearing or a new tyre being required.

The simplest form of wheel, made of wrought and cast iron combined, is the common cast-iron wheel with a wrought tyre compressing it. It is brittle, and fit only for very slow work.

The next is the solid disk wheel, manufactured, I believe, by Mr. Hick, of Bolton. It is formed of a pair of disks of plate-iron, hollowed in the centre like a pair of shields, and perforated to receive a flanged central boss of cast-iron to which the disks are rivetted. A wrought tyre with a rib, clips the edges of the disks all round, the rib being between them, and all three are rivetted together.

This wheel fulfils the condition of equal pressure over the whole of the tyre, to preserve its circular form, and all parts are at rest, subject to neither tension nor compression. It will, moreover, possess a slight lateral elasticity, though utterly rigid in the direction from the periphery to the centre. In case of wear of the tyre, the only mode of repairing it would be to turn it down flat, and apply another tyre over it. It must be an expensive wheel to make, and a serious objection to it would probably be, the drumming noise when running at great speeds. This, however, might be partially relieved by filling the hollow part with closely-packed sawdust. As it is a better wheel than many others in common use, and has no broad spokes to fan the air, it is probably the expense which has kept it out of use.

Fig. 2 represents Losh's wheel of combined wrought and cast iron, shown without its outer tyre. The single spoke explains its form of construction. Eight of these spokes being laid side by side form a continuous arch in their external curvature, their ends abutting against each other. In this position, the central boss is cast upon them and unites them all together. The outer tyre being shrunk on, the wheel is complete. This wheel, from its great simplicity, must be of cheap manufacture. It fulfils the condition of equal pressure on all sides between the centre and the periphery, the feet of the spokes being in a continuous arch, but the principle of the arch precludes the condition of elastic resilience. This involves another fault—great tension on the tyre unless much care is taken, in which case it will burst—and if there be too little tension it will work loose. The sharp angles in the spokes also require great care in bending to avoid fracture. The fault of this wheel, independent of its extreme rigidity—which involves occasional fracture or hammering out of the tyre in width—is, that its weakest point is where it requires the greatest strength, viz., the centre. Thus, supposing the axis shaft to be held firm and the two wheels to be twisted forcibly in opposite directions, if the shaft did not give way the breaking point would be at the cast-iron boss, from which the spokes would draw out, or the boss be fractured—the spokes yielding at their outer angles. It would appear at first sight that this wheel would be slightly elastic, owing to the curved form of the spokes; but this cannot be, or the wheel would be very rapidly destroyed, as the spokes would all be subjected to alternate tension and compression, which would produce breakage in the angles, where the action would be most violent.

Fig. 3 represents Hague's wheel, also without its outer tyre. This wheel is constructed with spokes of a truss form laid in a circle, and the central boss is cast on them in the same mode as Losh's. The outer end of each spoke is formed into a tenon, fitting into a mortise in a solid iron ring or felloe, which constitues the whole a continuous frame. Thus far all portions are at rest, neither subject to tension nor compression. If the rivets of the spokes project slightly above the surface of the felloe ring, and the outer tyre be shrunk upon them, it will be relieved from the extreme tension which would ensue over the surface of the solid arch if it rested throughout on that, and would therefore be comparatively at rest.

This wheel must be more expensive to make than Losh's, as it is a frame requiring manipulation. It will possess no elastic resilience, but it will be much stronger than Losh's at the central boss, the spokes acting as trusses. A defect is, that the spokes have a very small foot to them, and it is to be presumed that the wheel has been found to work flat between the spokes, as a considerable improvement has lately been made in them, by increasing the depth of the felloe ring by two ribs rolled in it. This wheel might easily be rendered slightly elastic, by curving the spokes, and making the ends or tenons loose in the felloe ring, instead of rivetting them. But in such case the outer tyre would need to be very heavy, to preserve its circular form; and there would be no gain of lateral elasticity to relieve the wheel from blows against the flange. The star form of the spokes has a more elegant appearance than Losh's.

Fig. 4 represents the T spoke wheel without its tyre. This construction is a modification of Losh's, but far inferior. There is a saving of iron, but a loss of strength, and considerable expense in manipulation. The joints between the spokes must rapidly become flat places, doubling inwards, and there is no elastic resilience whatever. The central boss has very little firmness, and a slight tension would twist it out. The only advantage it has, is, that it would be impossible to put on the tyre with any mischievous tension, as the spokes would crush beneath it.

Fig. 5 represents Bramah and Fox's wheel without the outer tyre. This is the most elegant in form, and very simple in manufacture. The spokes have no angles, and are bent without strain into a simple horse-shoe form. Being laid in a circle, their flat sides abut against each other, and form a perfect arch, bonded together by the central boss, which is cast on them; the outer ends are semicircles, which abut on a solid felloe ring, and to which they are rivetted: a rib on the ring dovetailing into a hollow in the spokes. Over this the outer tyre is shrunk.

This wheel has an advantage over Losh's in the form of the spokes, which have no angle, while the central boss is firmer, owing to the strength of the spokes in the direction of the strain; but there is no elastic resilience, and there is a slight defect in the want of sufficient foot to the spokes, which only bear at a point, or line. If the felloe ring were rolled with hollows, corresponding to the circles of the spokes, or the feet of the spokes were slightly flattened, it would be a great improvement, giving sufficient foot to sustain the pressure. Unless this wheel be tyred upon slightly projecting rivets, there seems no good reason why the tyre should not be as liable to burst as Losh's, inasmuch as the felloe ring is a solid arch, but the practical fact seems to be, that in the occasional failures to which all wheels are subject, those of Losh are more liable to burst a tyre, and those of Bramah and Fox to shorten the spokes, and get loose. There seems little doubt that the form of Bramah and Fox's spokes has a tendency to save the tyre from tension. We yet want data, to know whether the felloe ring undergoes any shortening by the compression of the outer tyre of railway wheels. The outer tyre is an inch and a quarter in thickness, exclusive of the flange, while the felloe ring is only about five eighths of an inch. The compressing power of the outer tyre must therefore be considerable.

Fig. 6 represents Hawks's wheel, also without the outer tyre. This wheel is inferior to the others before described, but superior to the T spoke wheel. The spokes are not rivetted, but bear on the outer tyre. The centre is weak. The abutting joint of the felloe ring is weak also, and the spokes are apt to collapse.

Fig. 7 represents Hawks and Haddan's wheel, also without the outer tyre. This wheel is contrived with considerable judgment, as regards the form of the spokes. They truss the centre very firmly. They support each other laterally, so as to prevent the torsion of the periphery around the centre, and they have sufficient size of feet to secure them from crushing on the ring. Their defect is the sharp angles at which they are bent, though less sharp than Losh's. Were the angles changed to curves of small diameter, the spokes would be much improved as to strength. The felloe ring is secured

Digitized by Google

to the spokes by bolts, or rivets. All parts are at rest, and the strength is well disposed from the centre to the periphery to sustain pressure. The tyring of this wheel is subject to the same difficulties as the others. If it bears over the whole surface of the felloe ring, it may burst by tension, but if it be tyred on the projecting rivets the strain will be relieved. A very considerable improvement on this wheel, and also on Bramah and Fox's, would be to omit the felloe rings altogether, and fill in the interstices with dry wood, so as to make the circle complete. The outer tyre being then shrunk on, there would be a slight development of elastic compression beneath it, to keep it tight without subjecting it to mischievous tension.

Fig. 8 represents Cottam's wheel, in which there is no felloe ring, the outer tyre being a solid weld with the wrought iron spokes, which are of the same form as those in Hague's wheel, but differently disposed, the flat sides being to the face of the wheel instead of the edge. The rim is first formed solid, with two deep ribs running round the centre of the inside, so that it is a solid periphery strong enough to sustain its circular form even without the aid of the spokes, which are welded in between the ribs; the central boss is cast on the spokes as usual.

There is considerable ingenuity displayed in the construction of this wheel, but it must be expensive to manufacture. The solid weld compensates for the absence of foot to the spokes, and the centre is perfectly firm against torsion by the spokes abutting against each other. All parts of the wheel—tyre, spokes and nave, are perfectly at rest, being neither under tension nor compression. And the periphery, by its great depth is self-supported, with but little aid from the spokes. A slight portion of elastic action is developed laterally to relieve the flange when striking the rail, but otherwise it is perfectly rigid. But if the periphery becomes worn it will be weakened by re-turning, and when much worn it must be tyred in the common mode. A tyre shrunk on so rigid a body would require very great care to prevent the risk of working loose on one hand or bursting on the other.

I am not aware of any other railway wheels of combined wrought and cast-iron, and therefore turn to the next variety,—compound wood with cast-iron.

The object of using wooden wheels on railways is twofold; first, to get rid of concussion by elastic resilience; secondly, to diminish noise, by the interposition of a medium which absorbs vibration. For this purpose, the greater the mass of the wood, the more effectual it will be. But it is necessary to consider in what mode the elastic resilience of wood is most developed. The structure of wood consists of a number of stringy fibres of indefinite length bonded together by a species of vegetable glue. These fibres are probably tubes similar to hair, and serve for the conveyance of sap. If wood be very forcibly compressed in the length of the fibre, its length will be diminished, and it will not regain its length by elastic re-action. But if it be afterwards plunged into boiling water it will recover its length. It is probable, therefore, that one part of the length of the tube is forced over the other, in the manner of a telescope or a stocking partly turned inside out. In the process of tyring an ordinary wood wheel, the total length of the felloes will be found diminished if the wood be light and the iron heavy, and the pressure be in excess. But though wood is nearly non-elastic in the length of its fibres under compression, the case is far different across its fibres. Every tube would appear to form an elastic arch capable of elastic resilience. If a piece of wood be soaked in water it increases its bulk across the fibres considerably, but scarcely alters its form in the direction of the length of the fibres. A familiar illustration of this principle may be found in the common mallet of the carpenter, in which nearly the whole of the momentum is available in the direction of the fibres when striking a blow, but which blow will descend with very diminished force if the mallet be used in the direction across the fibres.

The rule obtained from these facts is, that wherever wood is used for the purpose of obtaining elastic resilience, it should be across, and not in the direction of the fibre. Moreover, as sound is conveyed best in the direction of the fibres, if it be desirable to dissipate sound, the blow should be received across the fibre.

It now remains to examine the different kinds of wooden wheels applicable to railways.

The only wheel of component wood and cast-iron, is Dirck's, shown at fig. 9. The whole of the iron is a solid casting, with slits in the central boss to allow for the contraction of the spokes in cooling. But instead of the common flange and periphery, a channel three inches and a half in depth is cast round the whole circumference, leaving the inner side of the channel projecting to form the flange. This channel is filled with blocks of wood the length of the fibres being placed vertical to the centre. The depth of the blocks is three inches and a half, and they are all accurately fitted against each other like the keystones of an arch. They are retained in their places by rivets passing through them and through the two sides of the channel. In the diagram, the front side of the channel is removed for the purpose of showing the blocks.

This wheel will doubtless run with very little noise, as there will be no impinging of iron on iron, but of wood on iron. This advantage would be increased by a greater mass of wood being used, and the liability of the wood to fracture at the rivet holes would be decreased. Those who are familiar with the smooth working of wooden cogs in machinery will fully appreciate the advantage of this wooden tyre in preventing jar. But there is a distinction between the action of a cog and a roller; the use of a cog is as a lever fulcrum which may admit of slight compression without disadvantage, whereas the slightest compression of the surface of a tyre is a great evil. The softer the tyre the greater will be the amount of compression. If the blocks were reversed, and the direction of the fibres were at right angles to the centre of the wheel, the evil would be increased, even supposing that durability could be insured. This will be easily understood by supposing a bladder to be thoroughly distended with air, in which case it would roll freely on a flat surface. But withdraw a portion of the air so as to render it flaccid, it will rest constantly on a flat side, and will require considerable force to move it. An approximation to this principle must exist in all wooden tyres. The inventor states—alluding, I presume, to the driving wheels of engines so constructed—"that they have sufficient adhesion to the rail, without dropping sand to assist them in this respect, as practised when iron wheels are used."

This would seem to confirm the opinion before expressed, that a partial flattening takes place, which is an advantage for a driving wheel, but a disadvantage for a bearing wheel. The inventor goes on to say, "The wood by use becomes exceedingly close and firm, acquiring a surface not easily distinguishable from metal in appearance." Of this there can be no doubt. Metal can be ground and polished by a piece of wood charged with emery, and the revolution of the wood tyre saturated with unctuous matter would gather up all extraneous particles of sand or dust, and especially the finer particles of iron rubbed from the rails and wheels by the constant sliding. The inventor says, that "the wood tyre does not undergo that wear which might be expected from the friction it has on the rail when the breaks are applied." It must be evident that something must wear when sliding friction is produced, and if the wheel does not wear, the rail must. The probability is that the wheel is armed with a cutting surface of hard particles indented into the pores of the wood. The re-turning the surface must be rather troublesome, sharp tools being requisite for wood. It is likely that this wood tyre may be durable, unless upon rails which have very uneven joints or are exposed to gravel or pebbles. Such inequalities must print the surface of the tyre and render it uneven.

It is proposed, when required, to substitute wrought-iron for cast-iron in this wheel, which would be a great improvement. The wheel would be expensive to make, but easily repaired.

Fig. 10 represents Parkin's wheel, which is of the same character as the last in principle, with a variation in details. It is compound wood, cast-iron, and wrought-iron. The iron frame is similar to that of Dirck, with the flange in the solid. On this are laid a series of wooden blocks, with their fibres vertical to the centre, and their sides supporting each other like the stones of an arch. The inner side of the blocks abut in a shallow channel. To secure them a flat circle of wrought-iron is laid upon the whole, and bolted through the blocks to the cast frame.

This wheel has an advantage over Dirck's in the greater mass of the timber, which is from eight to nine inches in depth, and the mode of screwing the blocks seems to be equally strong. The wrought-iron circle can be brought close to the edge, if required for security. But it partakes of all the defects of Dirck's wheel as a bearing wheel, and all its advantages as a driving wheel. With the great amount of surplus friction at present existing in all railway wheels, arising from the faulty principle of carriage construction, it is possible that the difference of draught would not be so great as would be found were the mechanical construction of the carriages reformed. An estimate may be formed of the real difference, by drawing an ordinary carriage alternately over a pavement of smooth flag stones and a boarded floor.

Fig. 11 represents Adams and Buchanan's wheel of compound wood, wrought, and cast iron; which differs in principle from all the foregoing. It is represented with its outer tyre on. The centre is formed of a pair of disks of cast-iron, swelling out in the centre to form the boss, tapering inwards where they are bolted together, and swelling out again at their periphery, to form a channel for the insertion of wooden felloes, the fibres of which all lie in a direction across the centre of the wheel. A reference to fig. 12, which shows the central cross section, will make it clear, and it will be seen that the hollow between the disks would form a very large oil chamber, if the wheel were intended to revolve on the axle. These felloes are laid in a circle around the centre thus formed of the two disks, and their ends are firmly dowelled together, but without touching, a space of one-sixteenth to one-eighth of an inch being left between each, between which may be inserted a thin slip of soft deal or felt, or other highly compressible material, the object being only to close the joint, as a cork closes a bottle. On this first circle of felloes is laid a second circle, intersecting all the joints, much as bricks are built up in a wall, each upper felloe having two dowels in the lower side, which secure it to two separate felloes beneath. The ends of the upper circle are dowelled together the same as the lower ones. The dotted lines indicate the method. The wheel being thus far formed and pressed together, is placed in a lathe, and the periphery is turned to a true circle and faced. It is then placed on a moveable grating, over a well of running water, and the outer tyre, expanded with the proper degree of heat, and previously stretched to an exact gauge, being put round it, the whole is immersed in the water, so that no burning, and only a very slight charring of the wood takes place. It was at first supposed that it would be necessary to resort to some chemical preparation to prevent the wood from burning, or to apply a thin tyre first, but such proved not to be the fact. The ordinary heavy railway tyre can be applied without any difficulty. If any difficulty existed, the simple plan would be to cover the surface of the wood with a band of sheet iron previously to applying the tyre.

Fig. 13 shows a mode in which a centre of cast metal with wrought spokes may be substituted for the cast disks, the spokes being formed of a flat bar of iron bent into the form of an anchor. The shortness of the spokes would give strength to prevent torsion in the centre. Or, if it were desirable, the two disks might be formed of wrought iron stamped to the form required, with an iron boss cast into

Digitized by Google

them. They might thus be a little lighter. The disks are about twenty inches in diameter, and it will be seen that their form is such as to produce equal shrinking of the metal in cooling. Where the diameter is smallest the boss thickens it, and compensates for the increased diameter of the periphery. And the curvilinear form of the discs will slightly flatten, if there be a strain on that part in shrinking in the tyre.

All portions of this wheel are at rest save the felloes, which are from six to eight inches in depth, and present an equal elastic resistance and resilience on all sides, to the compression of the tyre—just sufficient to keep the tyre firm. Therefore, as the tyre compresees a yielding body, it is not exposed to mischievous tension. as is the case when it compresses the ordinary iron wheel. Thus the iron centre is strengthened by the compression of the tyre on the elastic felloes, and the true circular form of the tyre is ensured, for a blow on the exterior will not take effect to flatten it, but the impinging force will pass through and be dissipated in the elastic medium. A violent blow on any part of the periphery would be distributed over one-half the diameter of the wheel, and if we suppose the lower felloes to be compressed, *i. e.* the distance to be shortened between the periphery and the centre, a corresponding amount of expansion would at the same time take place in the upper half of the diameter. It will be seen that the two rows of felloes do not form an arch, and therefore they will not resist compression, by the action being lengthway on the fibres, but on the contrary, they will give and take, because the pressure is entirely across the fibres in the direction of their elastic action. In addition to this, the wheel will possess a slight degree of lateral resilience, when the flange strikes the rail, as the operation will be to compress and expand the fibres in opposite directions, diagonal to the plane of the wheel. A third circle of felloes may be applied to increase the elastic resilience, and diminish the ring of the centre.

This wheel will run with very little noise, as the vibration will be dissipated amongst the mass of wood fibres, and not extend beyond the tyre. In this particular the wheels of Parkin, and also of Dircks will have an advantage, as there is no ringing substance in contact with the rail; they will also have the advantage as regards their application to the driving wheels of engines, to ensure grip on the rails; but as regards bearing wheels, the wheel of Adams and Buchanan will be far superior, on account of its harder periphery. It will neither burst its tyre, nor lose its circular form, and it will break its shaft before it can be affected by torsion in the centre.

In short, the same principle obtains in this wheel that is so advantageous in laying rails—a continuous bearing on timber, which gives equal pressure, and elastic resilience. A wheel with spokes is analogous to an edge rail, placed on chairs, and if it be resolved to continue the use of spoke, or pier wheels, the same process must be resorted to that has taken place with the edge rails—the scantling of which has been nearly doubled. The defect of all the iron wheels—those of Cottam, and Bourne, and Bartley excepted—is, insufficient depth of felloe to ensure a permanent circular form. Were the tyres made half their present weight, and the surplus iron distributed in a deep loose rib, placed within their circumference and secured to the spokes; these wheels would be much improved with the same weight of metal.

These wheels are all represented of the ordinary three feet size, If it be desired to construct a continuous bearing wheel of four feet or four feet six diameter, the simple mode would be to take the ordinary wheel of Losh, Bramah, Hague, or Haddan, without the tyre, and, applying the felloes externally, hoop them up with a tyre of the desired size. It is not necessary that the wheel should be solid all through; but it is necessary that the depth should be such as to preclude all permanent alteration of form by percussion. It must be obvious that with a continous bearing and elastic resilience a less thickness of tyre may be used, and the wheel reduced in weight.

The only other wheel of compound wood, wrought and cast iron, is that used on the Liverpool and Manchester Line, which is composed of a cast iron centre, with mortices in which to insert short wooden spokes, surrounded by a circle of wood felloes. These are braced up with a thin iron tyre, on which the outer tyre is struck as usual.

This wheel has the advantages of running quiet, but must be very expensive to keep in order. The weakest part is at the insertion of the spokes in the nave. They do not hold in, but merely abut. Any torsion strain on the wheel, either laterally or in the direction of the circumference, must tend to crush their abutments, and thus render the wheel loose. The spokes can have no elastic resilience in the direction of their length, and what little ought to arise from the depth of the felloe is lost by the foot of the spoke being confined to a small spot, instead of the thrust being distributed over a large surface.

In my next communication I propose discussing the question of axle arrangement and wheel cones.

I remain, Sir, yours obediently,

WILLIAM B. ADAMS.

REFORM OF RAILWAYS—EXPENDITURE ON ENGINE REPAIRS.

To the Editor of the Railway Times.

Sir,—There is a very important item in the expenses of railways which your correspondents have overlooked in their communications relating to economy of management in these undertakings. I wish both as a railway proprietor and a manufacturer, to call the attention of the Directors of railways, more especially the great lines branching out of London, to the fact that these Companies pay to the workmen employed in the repairing shops from 7½ to 12½ per cent. more wages than is generally paid by private individuals, to the great loss of the shareholders, and to the injury of engine-makers and other trades employing men of that class. I know not on what principle turners and fitters should be receiving 5s. 8d. to 6s. per day when there is an abundant supply of such labour at command, whilst in many other trades in which greater mechanical skill is required, with greater bodily labour, the remuneration is much less. It is really quite ridiculous that a man should receive 6s. per day for standing at a lathe whilst the machinery is doing the work; and the operative is not required to use the slightest exertion of intellect, and having drawings or similar pieces of work before him, no more judgment is required than any boy of ordinary capacity would acquire in two years practice. It is the fact that these men are receiving from 25 to 50 per cent. more per annum for their time than many of the clerks who have great responsibility, whilst the workmen have none, and who, when discharged for misconduct from one shop, will often get employment in a few hours in another, but should a poor clerk be so unfortunate as to commit himself, it may be his ruin.

There would be some satisfaction to railway proprietors in paying such exorbitant wages if the workmen derived any benefit in receiving them; but I am sorry to say, and I speak guardedly, and in consequence of great experience, that (as a body) the high wages do much harm; it causes the men to lose a great deal of time, and the Companies are frequently obliged to work at night in consequence, when they pay 25 per cent. more wages after the regular hours, and often 50 per cent., and all the surplus money the men earn goes to the beer-shop or gin-palace—relaxing the energies of the men, and rendering them unfit to perform their duties. I have been accustomed to employ large numbers of mechanics in various branches, and I regret to say that the working engineers (as they are called) are amongst the lowest and most dissipated. I would suggest as a remedy for all this, that the Directors of Railway Companies should establish as a standing rule that 32s. per six days of 10 working hours should be the highest wages paid in their repairing shops, except to the leading hands or foreman; and I am confident they will get more work done, and that the *families* of the workmen will be benefitted, whilst, at the same time, it will facilitate the arrangements of the superintendents, and will in some cases increase the dividend from 1½ to 3 per cent. Railway Companies should also take a number of apprentices, and let them be taught to work the engines as well as to learn how to repair any defects that may occur in the machine they might at some future time have under their charge. The present race of engine-drivers are not mechanics, and but a degree or two above ordinary labourers.

I am, Sir, your obedient servant,

A MECHANICAL ENGINEER.

January 25th, 1841.

LOOK-OUT GUARD ON RAILWAY TRAINS.

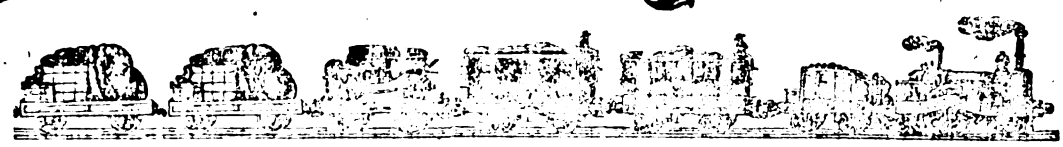
To the Editor of the Railway Times.

Sir,—The great meeting of Directors lately held at Birmingham, has decided against the proposal to employ a look-out man on the trains. They state that, in their opinion, such an appointment would divide responsibility and create confusion. These seem to be the only reasons they assign. But with much deference may it not be observed, that this is a parallel case to that of steam vessels in which the Captain places himself on a gangway extending across the ship from one paddle-box to the other, from which elevated situation he can descry in season every object of danger, and issue his orders accordingly, to "stop her," "back her," "ease her," and the like? The engineer and pilot strictly obey his slightest intimations, and the safety of all is secured thereby. The Captain's sole business for the time is "to look-out." On the same principle a look-out-guard might (it is submitted) be placed in a seat constructed for him on the roof of one of the railway coaches. His exclusive office should be to look out for danger, and give notice accordingly to the engineer. This he might do by means of a tin-pipe extending along the roof, and of which one end should be close to the guard, the other to the engineer. By such a contrivance, acting like a speaking trumpet, he would be instantly heard by the engineer even in the most blustering weather, or during the greatest noise arising from any cause. This, instead of "division of responsibility," would be "division of labour," and of the most useful kind. The engineer should look to his engine, and to that only, which will be quite as much as he can effectually attend to. Experience has shown, that he cannot in fact keep a look-out, and that in many of the collisions his attention has been engaged at the time by the necessary care of the engine, was to prevent him from seeing what was in his way.

The look-out-man would be of course the captain of the train, and him the engineer must obey.

I am, Sir, your obedient servant,

C. D.



29th January, 1841.

Fire in a Railway Carriage.—Wednesday morning a fire broke out in one of the trucks of Messrs. Carver and Sons, carriers on the Manchester and Leeds Railway, and goods to a considerable amount were destroyed. The truck formed part of the first morning train from Leeds, and the fire was discovered when it got about five miles from that town; but not in time to save the property, which consisted of stuff goods and fine woollen cloths, of the weight of five tons, and consequently of great value. The accident is supposed to have been occasioned by the falling of a spark from the engine chimney.—*Halifax Express.*

London: Printed by John Thomas Norris, 137 and 38, Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, February 6, 1841.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 162. Vol. IV.—No. 6.—Part II.] SATURDAY, FEBRUARY 6, 1841. [Price, with Part I., 1s.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY COMPANY.—TO SCRIPHOLDERS.—Company's Offices, Bond-street, Manchester, January 29th, 1841.—Notice is hereby given,—That the time limited for the deposit of Scrip Certificates by the present holders, being the purchasers thereof, has been extended to SATURDAY NEXT, the 6th day of February, after which day no such scrip will be received for deposit, nor will the holders thereof be entitled to the benefit of any share or interest in the funds of the Company in respect of the same; and all out-standing Scrip Certificates will thenceforth become, in the hands of purchasers, void and of none effect.—By order of the Provisional Directors.

RICHARD FOSS, Secretary.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages under the powers of their Act of Parliament of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly; or at the office of Slater and Heelis, Princes-street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.

NORTHERN AND EASTERN RAILWAY.

Notice is hereby given,—That the next Half-yearly Meeting of the Proprietors of this Company will be held pursuant to the Act of Parliament, on Thursday, the 18th day of February, instant, at two o'clock precisely, at the London Tavern, Bishopsgate-street, at which meeting, the confirmation of the forfeiture of certain shares, upon which the 7th and 8th Calls have not been paid, and which shares have been duly forfeited by Resolution of the Board of Directors of the 10th September, 1840, will be proposed.

WILLIAM CRAWSHAY, Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, 2nd February, 1841.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS.—The Directors of this Company are prepared, under the powers of their Act, to receive Tenders for the Loan of Money on security of their undertaking, and of the Rates and Tolls arising therefrom, the sums of not less than £300, and for the terms of three, five, or seven years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at Messrs. Smith, Payne, and Smiths. The Tenders are to express the sums, and terms of years for which the same are proposed to be lent, and to be addressed to the Secretary, at the Company's Offices, 10, Angel-court, Throgmorton-street.

By Order of the Board of Directors,

THOMAS WOOD, Secretary.

ULSTER RAILWAY COMPANY.—In compliance with a Resolution of the Directors, this day entered into, I hereby give Notice, That they have made a Ninth Call, for the Sum of £2 10s. Sterling, on each and every Share of the Company's Stock. Payment to be made on or before the 1st day of March next, to the Northern Banking Company, Belfast, or any of their Branches; to Messrs. Boyle, Law, Pim, and Co., their Agents in Dublin; or to Messrs. Brown, Shipley, and Co., Liverpool.

Dated at the Ulster Railway Office, Belfast, this 7th day of January, 1841.

JAMES GODDARD, Chairman of Directors.

In tendering the Money as above, it will be necessary to state the number of each share on which the instalment is paid.

Interest at the rate of five per cent. per annum will be allowed to the first of March on all sums paid of this call in advance.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 2a, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Now ready, in 1 vol. quarto, 600 pages and 17 splendidly executed engravings of the various Classes of Locomotive Engines and Carriages, a Railway Map of the United Kingdom, &c., &c., price £1 11s. 6d.,

THE RAILWAYS OF GREAT BRITAIN and IRELAND. By FRANCIS WHISHAW, Civil Engineer, Member of the Inst., of Civil Engineers.

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"Rich in the number and beauty of its illustrations but particularly valuable on account of the original and authentic information which it contains."—*Midland Counties' Herald.*

"This is, in all respects, a most valuable and useful work."—*Liverpool Mercury.*

"So rich and varied a mass of information."—*Gardener's Gazette.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"Most unique and perfect in the comprehensive view it affords."—*Mining Journal.*

London: Simpkin, Marshall, and Co.

RECIPROCATING SYSTEM OF RAILWAYS.—By this system the most complete Railway, with the best appointments, including engines, carriages, &c., calculated for any amount of traffic, may be effected at from £10,000 to £16,000 per mile according to the nature of the country to be traversed, and the expected amount of traffic. By this mode *accidents* by *collision* are rendered next to *impossible*.

FRANCIS WHISHAW.

Gray's Inn, and Hampstead, Middlesex, January, 1841.

GEOLOGICAL MAP OF CENTRAL AND WESTERN EUROPE.—Mr. WEALE, after a long preparation, has now completed for publication a large GEOLOGICAL MAP of England, Wales, Scotland, Ireland, France, Germany, Switzerland; portions of Italy and the Austrian and Prussian States. Corrected to the present time. By W. S. HUGHES, F.R.G.S. Finely coloured, price £1 10s; mounted and varnished on rollers, or folded in a case, price £2 2s.

*** The Geological features of these countries offer much research to those who seek information on minerals and the precious metals.

59, High Holborn.

PREVENTION OF DAMP.—The Parisian Bitumen Paving Company have at various times announced to the public the perfect preventive they have obtained by a particular mode of manufacturing their Bitumen against the running of water through roofs, and the complete dryness to cellars, &c. thereby secured. They think it right at the present time to bring the matter more prominently before the public, and they can confidently say that the Bitumen as made by them will fully answer in every respect, and moreover that it has been altogether unaffected by late severe frosts.

J. DICKINSON.

Mill Wall, Poplar. Secretary and Superintendant.

SOUTH-EASTERN RAILWAY COMPANY.—Notice of Call.—The Directors having this day made a CALL of FIVE POUNDS per Share, from the Subscribers to, and Proprietors of, this undertaking, and directed that the same be payable on Monday, the 15th day of February next, at either of the undermentioned places, viz.:—

London—Messrs. Glyn and Co., bankers, Lombard street.
Liverpool—Messrs. Moss and Co., and Messrs. Barned and Co., bankers.
Manchester—Messrs. Jones, Loyd, and Co., bankers.
Leeds—Messrs. Beckett, Blayds, and Co., bankers.
York—The Union Banking Company.
Dover—Messrs. Hector and Co., and Messrs. Latham and Co., bankers.
Ashford—Messrs. Jemmett and Co., bankers.
Cranbrook—Messrs. Wilmshurst and Co., bankers.
Tunbridge and Tunbridge Wells—Messrs. Beeching and Sons, bankers.
The Country Branches of the London and County Banking Company.

The Proprietors are hereby required to pay the same accordingly.

Dated this 19th day of January, 1841.

T. W. TYNDALE,
Chairman of the Board of Directors.
J. S. YEATS, Secretary.

Railway Office, 10, Coleman-street, London.

THE LONDON STOCK AND SHARE LIST, published every Saturday evening. Terms, £1 1s. per annum. Postage, 9s. extra, payable in advance.

This List contains the closing prices of each day's actual transactions upon the Stock Exchange, from Monday to Saturday inclusive. The length in miles, miles opened, number of shares, amount per share, amount paid up, last calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom. The present nominal value, and every other essential particular of the principal Insurance Companies, Joint-Stock Banks, Bridges, Docks, Institutions, Canals, Gas-Light Companies, Water Works, British and Foreign Mines, and other Miscellaneous Joint-Stock Companies, North American Securities, Government Funds, Foreign Stocks, Course of Exchange, Bank of England Averages, Private and Joint-Stock Bank Circulation, Grain Averages, Remarks upon the Money Market, &c. This List is got up in a most convenient form for binding, is peculiar for its lucid arrangement, and contains more matter than any other similar publication.

The same Proprietors also publish THE LONDON DAILY STOCK AND SHARE LIST, in which is given the ACTUAL DAILY TRANSACTIONS upon the Stock Exchange to 4 o'Clock, p. m. Published every evening. Terms, £5 5s. per Annum. Postage, 5os extra, payable in advance.

They likewise publish A DAILY LIST OF NOMINAL QUOTATIONS, containing the "Jobber's" NOMINAL PRICES of the leading Railway Shares, Consols, and Spanish, at the commencement of the day, 10 o'Clock, a. m. and at the close of the market, 4 o'Clock, p. m. Published every evening. Terms, £2 10s. per Annum. Postage, 30s. extra, payable in advance.

These Lists have been established nearly 12 months, under the patronage of the most eminent Members of the Stock Exchange, Bankers, and other Capitalists interested in Public Securities, and are attended to by parties who have access to the best information, and are practically acquainted with the markets.

Orders for the regular supply of the above Lists to be forwarded to the Proprietors, J. S. TRIPP & Co, 12, Copthall court, London.

PATENTS AND BUSINESS IN FRANCE. The notice on French Patents, advertised to appear after the present Session of the Chamber of Deputies, will now be incorporated in the sixth edition of Mr. OKEY'S work on the COMMERCIAL and CIVIL INTERCOURSE of the subjects of GREAT BRITAIN and FRANCE, which is now in the Press, and will appear as soon as the author's avocations will permit.

35, Rue du Faubourg, St. Honore, Paris.

NORTH KENT RAILWAY, Office, 42, Lombard-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

REPORT OF THE OFFICERS OF THE RAILWAY DEPARTMENT.

To the Right Honourable the President of the Board of Trade.

In compliance with your instructions that we should report to you upon the measures which our experience of the working of the railway system under the Act of last session for regulating railways, has suggested as necessary to give efficiency to the supervision of railways vested in the Board of Trade, we have the honour to report as follows:—

The objects which an effective supervision ought to embrace may be classed under three heads:—

I. Statistical.

II. Protection of public interests.

III. Providing for public safety.

A reference to the provisions of the Act for regulating railways, 3 and 4 Vic., c. 97, and to the Reports of the Select Committee on Railways, upon which that measure was founded, shows that the attention of the Committee and of the Legislature was chiefly directed towards the first and second of these objects, and that the third, which experience has since proved to be the most important, was, comparatively speaking, overlooked.

With regard to the first two points, the principles upon which a government supervision of railways ought to be based were fully considered by the Select Committee, upon the authority of whose reports we may consider it as established.

1.* That railway companies using locomotive power possess a practical monopoly for the conveyance of passengers on their several lines of railway, and that under existing circumstances this monopoly is inseparable from the nature of these establishments, and from the conduct of their business with due regard to the safety of the public.

2.† That this monopoly is the result of circumstances contemplated neither by the Legislature nor by the Companies themselves, the extensive powers contained in their Acts of incorporation having been obtained under the impression that the interests of the public were sufficiently secured by fixing a maximum rate of tolls, and providing for free competition in the supply of locomotive power and other means of conveyance.

3.‡ That under these circumstances, the legislature is bound to provide that the public interests shall not suffer from the mistaken view taken in the infancy of the science of locomotion, and that for this purpose the powerful monopolies, in whose hands a large and increasing portion of the internal communication of the country is placed, should be subjected to the supervision and control of the Board of Trade.

4.§ That as an important part of this duty, the Board of Trade should collect and register statistical information on all points of general interest connected with the railway system.

5.‖ That with a view to the protection of the public against any abuse of their irresponsible powers on the part of these monopolies, the Board of Trade should have the power of ascertaining precisely what the system is which is enforced towards the public on every railway, and of disallowing any part of it which appears obviously arbitrary or objectionable, and also of enforcing the observance of all provisions beneficial to the public contained in railway acts.¶

These points being fully established after mature inquiry by the Reports of the Committee on Railways, it will be sufficient for us, with reference to this branch of the subject, to show in what respects the Act of last session fails of accomplishing the objects recommended by the Committee, and what additional enactments appear necessary in order to give them effect.

** With reference to the other branch of the subject, viz. providing for the public safety, little evidence was gone into before the Committee, and in their Report they expressly state that they postpone the expression of any opinion on the subject from the belief that more satisfactory information would be obtained by the Board of Trade. This information has been obtained more speedily than the Committee could have anticipated, in consequence of the rapid succession of alarming accidents which have occurred since the date of their inquiry.

The steps taken by the railway department of the Board of Trade in requiring returns of all accidents upon railways, and instituting inquiries into those which, from their nature and magnitude, seem calculated to throw light upon points of general importance, have placed us in possession of a number of facts with regard to the causes of danger upon railways, and the means of providing for the public safety, the result of which we now proceed to state as the ground upon which we recommend an application to Parliament for additional powers, with a view to the protection of the public.

The following is a list of accidents attended with personal injury occurring in the course of the public traffic, which have been returned to the Board of Trade between the passing of the Act for regulating railways and the date of this Report.

Accidents attended with Personal Injury, occurring in the course of Public Traffic, from 7th August, 1840, to 25th January, 1841.

Date.	Name of Railway.	No. killed.	No. injured.	Nature of Accident.	Cause of Accident.
Aug. 7	Hull and Selby	5	9	Iron casting fell on the line and threw the train off	1. Misconduct of servants. 2. Defective arrangements.
,,	South-Western	...	Several passengers severely.	Collision with goods' waggon left on the line	1. Misconduct of servants. 2. Defective arrangements.
11	Ditto	...	Several	Collision at a station by a train running into a preceding one	1. Misconduct of servants. 2. Defective arrangements.
15	Newcastle and Carlisle	1	2	Connecting rod of engine broke	Mechanical.
19	Ditto	...	3	Broken axle	Mechanical.
,,	Eastern Counties'	4	6	Train went off the line	1. Misconduct of engine-driver. 2. Defective arrangements.
,,	Edinburgh and Dalkeith	...	1	Collision with omnibus at a crossing.	
31	Grand Junction	...	2 or 3	Train off the line, owing to the tire of an engine wheel breaking	1. Mechanical. 2. Defective arrangement.
Sept. 2	Bolton and Leigh	1	...	Run over at a crossing	Want of gates.
7	Hull and Selby	...	3	Train ran against the station house	1. Unskilfulness of engine-driver. 2. Defective arrangement.
8	North Midland	...	Several passengers	Collision with a crane left on the line	1. Carelessness of workmen.
11	Ditto	2	2	Luggage train overturned from neglect to set "points"	2. Defective arrangement.
13	Eastern Counties'	1	5 or 6	Collision at a station by one train running into a preceding one	1. Carelessness of ehgine-driver. 2. Defective arrangements.
,,	North Midland	2	5 or 6	Train off the line; broken axle	Mechanical.
14	Midland Counties	...	1	Collision at Rugby station	1. Carelessness of drivers. 2. Defective arrangement.
24	Brandling Junction	...	...	Collision with a cart at a crossing	
Oct. 15	Bolton and Leigh	...	1	Collision owing to defect of break	Defective arrangement.
17	South Western	1	A great number, believed upwards of 60.	Collision at Nine Elms station	1. Misconduct of servants. 2. Defective arrangement.
,,	Canterbury and Whitstable	1	...	Train ran into station from descending an inclined plane without a rope	1. Misconduct of servant. 2. Defective arrangement.
25	Great Western	1	4	Train ran against the station at Farringdon	Drowsiness, or sudden illness of engine-driver.
Nov. 3	Durham and Sunderland	...	2	Collision with coal waggons	Defective arrangement.
8	Midland Counties	...	8	Train ran off the rails owing to excessive speed and bad state of the line	1. Misconduct of engine-driver. 2. Imperfect state of line.
11	York and North Midland	2	2	Collision by a luggage train running into a preceding passenger train at a station	1. Want of caution in engine-driver. 2. Defective arrangement.
12	London and Birmingham	2	...	Collision with an engine, owing to the break down of a luggage train	1. Mechanical 2. Misconduct of engine-driver. 3. Defective arrangement.
15	Eastern Counties	...	4	Collision by Northern and Eastern train running into preceding Eastern Counties train	1. Misconduct of servants. 2. Defective arrangements.
18	Slamannan	...	1	Collision with contractor's waggon.	
Dec. 2	Birmingham and Derby	1	3	Collision with a truck on the line	1. Misconduct of contractor and servants. 2. Defective arrangement.
16	Lancaster and Preston	1	...	Collision with a ballast-waggon	1. Misconduct of servant. 2. Defective arrangement.

* Third Report, 1840, p. 8. † Second Report, 1839, p. 6. Third Report, 1840, p. 3-4. ‡ Third Report, 1840, p. 7.

Accidents attended with personal Injury, occurring in the course of public Traffic, &c.—continued.

Date.	Name of Railway.	No. killed.	No. injured.	Nature of Accident.	Cause of Accident.
23	Newcastle and Carlisle	...	1	Engine thrown off the line	1. Misconduct of servants. 2. Defective arrangements. Mechanical.
1.	Hull and Selby	...	2	Breaking of an axle	
1841. Jan. 6	Garnkirk and Glasgow	...	Several passengers.	Train ran off the line, believed owing to the breaking of an axle.	
8	Midland Counties	2	2 or 3	Collision between mail train and a luggage train which had been stopped by a pipe freezing in the engine	1. State of the weather. 2. Defective arrangement.
13	London and Birmingham	...	5 or 6	Collision at Rugby station.	1. Carelessness of servants. 2. Defective arrangement.
14	Monkland & Kirkintilloch	...	2	Collision.	
20	Birmingham & Gloucester	1	...	Train ran off the line, owing to a slip of earth upon the rails.	

This list is confined to accidents of a public nature, and excludes the numerous cases of accidents which have occurred to servants of the Company under circumstances not involving danger to the passengers or public, and also of accidents which are attributable to carelessness or misconduct on the part of the person injured. It is exclusive also of accidents unattended with personal injury, respecting which we have no power of calling for returns. The term "defective arrangement" has been used in stating the cause of the accident, not as necessarily implying neglect on the part of the Company, but simply as stating the fact, that the accident is one which under an improved system of arrangements might have been prevented.

The following results appear from this list:—

1st. Out of 35 railway accidents which have occurred in the course of five months, 21 are attributable among other causes to "defective arrangements."

2nd. Eighteen are attributable to "misconduct of servants;" and

3rd. Six are attributable to mechanical causes, among which the breaking of axles occupies a prominent place.

With reference to these results, the following observations suggest themselves:—

1. The inherent danger of railway travelling is very small, and even under the present system less than that of other modes of conveyance.

2. It is not, however, by reference to comparative, but to absolute safety that the question must be considered. The public have a right to expect that the maximum degree of safety which the nature of the case admits should be attained without reference to the safety of other modes of travelling. This is the more necessary, as railway accidents, when they do occur, are frequently of a frightful character, and calculated to cause a panic in the public mind, which materially diminishes the benefit which the country would otherwise derive from this improved mode of conveyance.

3. The maximum degree of safety is far from being attained in practice, as appears from the fact that a great majority of the accidents above referred to have arisen from causes not in any respect inherent to the nature of locomotive travelling, and which might have been avoided by the adoption of a better system of arrangement.

This will appear more evident from a detailed statement of what has actually occurred in the case of the 11 accidents which have been the subject of personal investigation by inspectors appointed by the Board of Trade. These accidents, which from their importance and the degree of public attention they have excited may be called the "leading railway accidents," are the following:—

Hull and Selby, two accidents.
Eastern Counties, three accidents.
North Midland.
South-Western.
London and Birmingham, two accidents.
York and North Midland.
Midland Counties.

HULL AND SELBY.

First Accident, 7th August.—A passenger train from Leeds to Hull was augmented on its arrival at Selby by a truck loaded with an iron casting and other iron work, which was placed next the tender. After proceeding for some distance the casting fell from the truck across the rails, by which means several carriages were forced off the line, and five persons killed. Lieutenant Colonel Sir F. Smith reports, that had the casting been properly secured the accident could not have happened, and that it is quite clear that there was unpardonable neglect in the parties whose business it was to attend to such matters at Selby.

He further states, that the following arrangements ought to be invariably adopted with a view to the prevention of similar accidents in future:—

1st, That whenever "goods" are conveyed by the same train as "passengers," the "goods waggons" should be constructed in all respects with as much care and precision, and with equally good materials, as the "passenger carriages," and should in all cases have a substantial framework enclosing the "goods," so as not to trust entirely to the security of "lashings."

2nd. That it should be the duty of the foreman of the "goods department" to deliver to the chief clerk at the station a written report of his having personally examined all the carriages or trucks laden with merchandize, and found them secure, without which the train should not be suffered to proceed.

It is obvious that if these recommendations had been enforced the accident could not have occurred.

Second Accident, 7th September.—The engine-driver of a passenger train on approaching the Hull terminus detached his engine, and left the train to proceed by its own impetus to the passenger platform. The impetus proved to be too great, and the train ran against and broke through the end wall of the station, seriously injuring several persons by the concussion. Sir F. Smith states in his report, "it is evident that this accident is attributable to two causes—first, the want of experience, judgment, and prudence of the engine driver: second, to there being no break to any of the carriages of the train." To this may be added, that the arrangement of bringing trains up to the terminus by their own impetus is always improper; and that by a different arrangement, similar to that adopted by other companies, and which has since been adopted by the Hull and Selby Company, of stopping the train at a short distance from the terminus, and pushing it slowly in, all danger is obviated. With reference to this accident Sir F. Smith recommends:—First, that no person should be allowed to drive a locomotive engine for passenger trains who has not proved his competency for that duty before some properly constituted board. Second, that, as a general rule, no train should be permitted to leave a station without being provided with one or more breaks; that passenger trains should have at least one break to every third carriage, the last carriage of the train being a break carriage, upon which a guard should be constantly stationed. Third, that every carriage, waggon, truck, or horse-box, should have buffer springs.

It is evident that if the Board of Trade had the power of enforcing these recommendations, accidents of such a nature as that last described could not by possibility occur.

EASTERN COUNTIES.

First Accident, 19th August.—A train going down the Brentwood incline ran of the rails; four persons were killed and six severely injured. From Lieutenant Colonel Thompson's report, and the evidence taken before the coroner's inquest, the following points appear fully established:—

1st. The immediate cause of the accident was owing to the misconduct of the engine-driver, Foster, in going down the Brentwood incline of 1 in 100 at an excessive speed.

2. The regulations of the Company to ensure that a safe rate of speed should never be exceeded on this part of their line were insufficient.

The plane in question is two miles and 308 yards in length, with an inclination of 1 in 100, and the force of gravity alone is sufficient to overcome the resistance due to a velocity of from 20 to 25 miles an hour.

It having been admitted by the officers of the Company that this rate of speed should not have been exceeded upon this part of their line, the proper course would appear to have been to issue a strict regulation, enjoining the engine men invariably to shut off the steam in descending this plane; and this course has been recommended by Lieutenant-Colonel Thompson, and subsequently by Sir F. Smith. The Directors, however, now maintain that such a regulation would have been improper, as it is better to keep on a small portion of steam in descending this inclined plane, in order to keep the connecting chains of the carriages distended and the train steady. This is not found necessary in the practice of other railways, where inclined planes of greater inclination are descended every day by the force of gravity, regulated by the action of breaks.

Be this, however, as it may, it is evident that whatever mode of descending the plane was adopted, it was the duty of the Directors to enforce the most precise and rigid regulations respecting the rate of speed. This does not appear to have been done; the printed instructions to the engine-drivers merely state "that the speed must be regulated in all cases according to the gradients of the line, agreeable to the instructions given."

These instructions seem to have been left to verbal communication, and no pains taken to enforce their observance.

From the evidence before the coroner's inquest, it appears that a verbal order had been issued that the steam should always be shut off in descending the Brentwood incline, while from the same evidence it appears that this order was habitually disregarded. One of the witnesses examined, Francis Thornton, an engine-driver in the employment of the Company, stated that he had received orders from Mr. Helsham and Captain Richardson, the superintendent of the line, "not to use steam in descending this incline;" and Mr. Braithwaite, the Company's engineer, also stated "that the steam of every engine was ordered to be spent out before reaching the incline, as there was sufficient gravity in itself to carry a train down." The same Francis Thornton afterwards states "that he never descended the incline without steam but once in his life;" and from the evidence of the other servants of the Company who were examined, the common practice appears to have been to descend the incline with steam on, and at a considerable velocity.

It also appears that Foster, the engine-drivet, who was killed by the accident, had on several occasions during the period of six weeks for which he had been employed on a train-engine received reprimands from the engineer and superintendent of the Company for driving at an excessive speed.

This accident illustrates two of the principal sources of danger upon railways.

1st. The want of a sufficiently precise system of printed regulations.

2nd. The want of a sufficiently strict system of discipline among engine-drivers and other servants, upon whose attention and obedience so many lives depend.

Both of these sources of danger might be in a great measure obviated by giving the Board of Trade a supervision over all regulations which bear upon the question of the public safety, and by establishing a system of licensing engine-drivers.

It is obvious that the accident in question could hardly have occurred if a printed order, regulating the rate of speed and the shutting off of the steam on the Brentwood incline, had been given to the engine-drivers, and they had been thoroughly aware that any infringement of this order, whether followed by an accident or not, would bring upon them a certain punishment in the loss of their licence.

Second accident, 14th September.—A passenger

Digitized by Google

train of the Eastern Counties' Railway was run into while stopping at the Bow Station, by a special train which had left the terminus at Shoreditch five or six minutes after it. One passenger was killed, and four were injured.

The causes of this accident were—First, misconduct on the part of the engine-driver of the second train, in not keeping a proper look out when he knew that another train was a short distance before him. Second, defective arrangement on the part of the Company.

With regard to the first cause, it affords a striking proof of the importance of licensing engine-drivers, and enforcing a strict system of discipline. In this case the engine driver escaped with no heavier punishment than that of being transferred from one department of the Company's service to another. With regard to the second cause, as the first train had to stop at two stations, before arriving at the point where the Northern and Eastern line branches off, which is three miles and a half distant from the Shoreditch terminus, it was clearly improper to allow a second train to start within five or six minutes of it.

The regulations of the Company for preventing collisions were also insufficient, merely prescribing "that when an engine follows another on the same line of rails, the driver of the engine following shall keep at the distance of at least 500 yards from the first engine." Had the system in force upon the London and Birmingham, and other railways been adopted, by which, when a train stops at a station, a signal is exhibited, positively prohibiting the approach of any other train until a certain time has elapsed after the preceding train has departed, it is obvious that this accident could not have occurred; nor could it easily have occurred if a proper regulation had been enforced as to the intervals of time between starting different trains.

Third accident, 15th November—An Eastern Counties train was run into at the Bow Station by an engine of the Northern and Eastern Company; two of the carriages were dashed to pieces, four passengers injured, and several narrowly escaped by jumping out.

The circumstance was as follows, as appears from Captain Melhuish's Report to the Board of Trade, and from the investigation before the magistrates. The ten o'clock Eastern Counties train left the Shoreditch terminus at four minutes and a half after ten, and was followed at fourteen minutes and a half past ten by a return engine of the Northern and Eastern Company. The first train stopped at the Devonshire-street station, which is one mile and a half distant from the terminus, and on arriving at the Bow station, which is about a mile further on, stopped again, and let out a passenger. It started, but before proceeding many yards, stopped once more to take up two passengers, who were seen running after it from the station. In the mean time the Northern and Eastern engine came up, and ran into the preceding train.

Without discussing the comparative degree of culpability that attaches to the servants of the two Companies, which is a matter in dispute between them, it is evident that there was misconduct on the part of the engine-driver of the Northern and Eastern Company in proceeding at too great a speed, and not keeping a proper look out, and of the guard of the Eastern Counties' train in delaying the train to take in passengers after having been regularly started by the police sergeant at the station. The arrangements on the Eastern Counties' line were also defective in the following points:—1st, The want of a definite and invariable rule to regulate the starting from the terminus. It was admitted by Mr. James, the inspector, whose duty it was to start all trains and engines, that a *quarter of an hour* was the least period which ought to elapse after the departure of a train before a return engine should be allowed to start; and that the strict observance of this rule was the more necessary as there were two stations at which some of the trains stopped within the portion of three miles and a half common to the Northern and Eastern and Eastern Counties' Railways. He admits, nevertheless, that he did not make an invariable rule of starting *all* return engines, and that there was no uniform and recognised signal by which to regulate their departure. In the case in question, the engine which caused the accident was allowed to start five minutes before the proper time, upon the inspector's *impression* that there could be no danger as he had warned the driver to proceed carefully. Second, want of a proper system of signals at the stations. Third, want of proper arrangements for insuring punctuality, and preventing succeeding trains from approaching each other too nearly.

With respect to these the same remarks suggest themselves as those already made with reference to the similar accident of the 14th September.

These accidents, also fully bear out the opinion of the Select Committee on Railways, stated in their Report (Second Report, 1839, p. x.) "that when the same line of rails is to receive trains arriving from two or more separate lines of communication, the risk of accidents is greatly increased, and that where such junctions are permitted, the safety of passengers require that all the circumstances of the case should be carefully investigated."

NORTH MIDLAND.

Accident, 13th September—A train ran off the rails, occasioning the death of two passengers, and serious injuries to several others. The breaking of an axle of the foremost passenger-carriage was the immediate cause of the accident, but the more remote causes are involved in considerable doubt. On the one hand it is asserted that the accident was occasioned solely by the breaking of the axle, owing to its being constructed of bad materials, and this view was taken by the jury at the coroner's inquest. On the other hand, Sir F. Smith, looking at the fact that the carriage in question had travelled on that day upwards of 60 miles, without any symptoms of imperfection in the axle, considered the breaking of the axle as the *consequence* and not the *cause* of the train going off the rails, which he attributed to the non-removal of a pair of temporary "points" which had been placed at the spot where the train ran off, for the purpose of admitting some contractor's waggons engaged in carrying ballast.

This view, if correct, suggests the propriety of enforcing as a general rule, the following recommendation contained in Sir F. Smith's Report.

"That, for the safety of railway travelling, the principle should as far as possible be adopted, of leaving no work to be performed upon a line after it is open to the public, excepting such ordinary repairs as will from time to time become necessary. Also, that after the opening of a line, no temporary switch should be allowed, and that such switches as may be requisite should be in charge of a policeman, and be of a permanent character, and under no circumstances should be placed AGAINST the direction of the train."

It also appears probable that the accident in question was, if not caused, at least aggravated by excessive speed, which confirms the propriety of the recommendation suggested by other accidents, of inducing railway companies to adopt strict regulations, in order to prevent the maximum speed thought prudent upon different portions of their line from being exceeded.

The frequency of accidents arising from the breaking of axles suggests the importance of adopting every means of preventing this cause of accident; and although it would not, consistently with our views, fall within the legitimate province of government supervision to interfere in questions of an experimental nature, there can be no doubt that the precautions which experience has found to be necessary ought to be generally enforced.

LONDON AND SOUTH WESTERN.

Accident, 17th October—The half-past one heavy train from Southampton was run into at the Nine Elms terminus, by the three o'clock fast train. One passenger was killed by the collision, several were severely injured, and a large number, believed to be as many as 60 or 70, received contusions.

The accident was investigated by Sir F. Smith on the day after its occurrence, and appears to have been occasioned,

1st. By the criminal misconduct of two servants of the company, Greenaway and Turner, charged with the duty of arranging the switches and attending to the signals at the Nine Elms terminus. The evening being foggy and dark, the lamps at the station had been lighted, and it was the duty of the man Turner to arrange the switches near the signal lamp for the heavy train, and turn the red light as a signal to warn the fast train, which was then almost due, not to approach the station. Instead of doing this, he ran to arrange another pair of switches which were under the charge of Greenaway, who it appears had been absent the whole day without leave and without his absence being known to any of the superior officers of the Company.

While Turner was absent from his post in order to do Greenaway's duty, the fast train arrived, and, seeing no signal, ran straight to the terminus, and came into collision with the heavy train, from which the passengers had not had time to alight.

2. By defective arrangement.

It is evident, in the first place, that a man charged with a duty of vital importance for the public safety, could not have been absent for a whole day without leave, and without his absence becoming known, if proper regulations as to discipline had been laid down and systematically enforced.

In the next place, it is clear that misconduct on the part of the signal men could not have occasioned the accident, if proper arrangements had been in force for insuring punctuality in the running of the trains.

In the case in question, the heavy train left Southampton five minutes after time and arrived at Nine Elms thirty-three minutes after time; the fast train left Southampton four minutes after time and arrived at Nine Elms eleven minutes before time, having gained twelve minutes upon its proper time between Woking and London.

The arrangements for insuring punctuality are stated by Sir F. Smith in his Report, and appear extremely defective. The only check adopted for insuring attention to the time-tables consisted in a report of the journey, called the "guard's journal," specifying the time of arrival at and departure from each station, which was often prepared at the end of the journey from memory or pencil memoranda. The engine-drivers were not all provided with watches or with proper time-tables; and Sir F. Smith states that he found it by no means unusual for them to be ignorant of the time at which they ought to arrive at each station.

No proper system of signals along the line was adopted for warning trains which followed preceding trains at too close an interval.

Under these circumstances, it does not appear surprising that accidents from collisions should have occurred on the South Western Railway. The accident in question was not the first which had taken place from the same cause; and no longer before than the 11th August an accident of a similar description had occurred, by which several passengers were injured.

This accident fully confirms the necessity of enforcing by Government authority the recommendations previously stated with reference to the two accidents from collisions upon the Eastern Counties' Railway; and the fact of the existence upon one of the principal metropolitan railways of such a defective system of arrangement in regard to the most necessary precautions, affords the best proof that Government interference is not uncalled for.

It is only fair, however, towards the South Western Railway Company, to state that they have since adopted a very improved system of regulations, which embody most of the recommendations suggested by the Board of Trade.

YORK AND NORTH MIDLAND.

Accident, 11th November.—This was another case of collision owing to a luggage train overtaking and running into a passenger train while it was waiting at a station. The accident occurred at a place called Taylor's Junction, where passenger trains from York, Leeds, and Selby meet four times a-day, and where no fewer than 23 passenger trains stop or pass in the course of the 24 hours; an amount of traffic requiring, as Sir F. Smith observes in his Report, not only the most perfect arrangement on the part of the managers, but the utmost vigilance and energy on the part of the servants of the Company to insure safety.

The circumstances under which the accident occurred show how far these conditions were from being complied with. The passenger train started from Leeds at four minutes past six o'clock in the evening, having three stations to stop at before arriving at Taylor's Junction. The luggage train started eight or nine minutes afterwards, having no stations to stop at. Neither the speed of the passenger trains nor the speed nor time of departure of the luggage trains appear to have been fixed, and the arrangements respecting the latter were left to a person unconnected with the passenger traffic. No notice was given to the guard or engine-driver of the passenger train that a luggage train was to follow. No proper system of signals was organized along the line to warn the driver of the luggage train that he was approaching too near to the preceding train. At the important station of Taylor's Junction the only night signals in use were hand revolving lamps; and the duty of exhibiting them was left to the three porters who had to assist the guards in arranging for the remainder of the journey the trains which meet at this central point. The consequence was that, no signal being displayed when the passenger train stopped at the station, and the tail lamp, which is generally hung at the bottom of the hindermost carriage, being obscured, as appears most probable, by some person standing before it, the driver of the luggage train approached without slackening his speed until within about 200 yards of the station, when the porters, hearing the noise of the engine, displayed for

Digitized by Google

the first time a red light. Every exertion was then made to stop the luggage train, but it was too late. The accident, however, appears to have been aggravated by the circumstance of the breaksman, who rode on the fourth waggon of the luggage train, being improperly placed in such a situation as to be unable to work his break, and also by some of the carriages of the passenger train not being provided with buffer springs.

The recommendations contained in Sir F. Smith's report upon this accident are in many respects the same as those already suggested with reference to the cases of collisions upon the Eastern Counties and South Western Railways, viz.:—

1st. To regulate the starting and times of arrival and departure at the different stations of all trains, whether passenger or luggage, by fixed time tables, and to make the station clerks and guards responsible for their enforcement.

2nd. Not to allow any train to pass or leave a station within ten minutes of a preceding train, during which time a red light should be displayed by night and a red signal by day.

3rd. That no station of importance should be without a revolving signal lamp placed in a conspicuous situation, and entrusted to a responsible person who has no distracting duties to perform.

4th. That a second tail lamp should be placed in a situation where it is not liable to be obscured.

5th. That all carriages should be provided with buffer springs.

These precautions would, it is evident, have effectually prevented the possibility of such an accident as the one in question.

Sir F. Smith refers in his Report to the difficulty presented in insuring punctuality where the same continuous line of communication is formed by different railways, as in the case of the York and North Midland, North Midland, and Midland Counties', and suggests the necessity of empowering the Government to make general regulations in such cases, in order to insure the punctuality which is essential for the safety as well as the convenience of passengers.

LONDON AND BIRMINGHAM.

Accident, 12th November.—This was a case of collision between a luggage train, and an engine which had been employed in conveying orders relative to another luggage train which had broken down owing to the fracture of an axle.

The primary cause of the accident was the criminal misconduct of Simpson, the driver of one of the engines of the second luggage train, in disobeying the signal made to stop. The secondary cause, defective arrangement on the part of the Company.

As much difference of opinion has been expressed upon this subject, we think it better to confine ourselves to the following points, which appear clear:—

1st. The luggage trains of the London and Birmingham were not worked by time tables, and consequently no adequate check existed to prevent excessive speed, and to make known instances of over-driving. Had this been done, it seems probable that the luggage train in question would not have been travelling at a rate of speed which added greatly to the chances of accident, and that the character of Simpson, who appears to have been habitually a reckless driver, would have been better known and would have led to his dismissal.

This regulation of working luggage trains by time tables was recommended by Sir F. Smith in his Report, and has since been adopted by the Company.

2nd. Simpson had been previously reported for the offence of disregarding signals, notwithstanding which he was retained in the Company's service as an engine-driver.

This circumstance affords a remarkable instance of the backwardness of Railway Companies in enforcing that strict system of discipline which is essential for the public safety, and places in a strong point of view the advantage that would result from the adoption of the recommendation of licensing engine-drivers.

MIDLAND COUNTIES.

Accident, 8th January, 1841.—A luggage train was stopped upon the line, at a place about a mile distant from Derby, in consequence of the pipe which conveys water from the tender becoming frozen, and rendering one of the engines attached to the train useless. The engine-driver of the other engine took the "dead" engine into Derby, where he went for assistance, but, not finding a pilot-engine ready, he returned and took as many of the waggons as his engine was capable of drawing and returned again for the remainder. He had hardly got into motion with the last portion of the train when the mail train, which was then due, came up, and the tail lamp not being visible at a distance of above 40 or 50 yards, owing to the dense fog which prevailed, ran into the preceding train. The engine-driver and fireman of the mail-train were both killed by the shock, and the guard was severely injured; the passengers fortunately escaped without injury.

The cause of the accident was the mistake of Wale, the breaksman of the luggage train, who had been sent back with a red light, by Bonham the engine-driver, to warn the mail train, but who unfortunately mistook the whistle, which was sounded by Bonham when about to start, as a signal of recall, and left his post in order to rejoin his own train. It appears clear that this was contrary to the intention of the engine-driver, who, by the regulations of the Company, is placed in command of the train, and who gave repeated orders that Wale should go back far enough along the line in order to prevent the possibility of the mail train running into them. At the same, however, as he gave no definite orders to Wale not to rejoin his own train, and as Wale had received no instructions whatever from the Company on being appointed to the situation of breaksman, the accident could not be attributed to any criminal degree of misconduct on his part, but may rather be cited as affording a strong instance of the necessity or some system for enforcing generally upon railways a well-considered code of written instructions, prescribing the course to be pursued upon all occasions of danger which can be foreseen and provided for. It is evidently too much to expect from men like Bonham and Wale the presence of mind to provide, upon the spur of the moment, for every contingency, and the judgment always to decide right in cases of difficulty. In the present instance no especial degree of blame can be imputed to the Midland Counties' Company, for their printed instructions to engine-drivers, &c. were as perfect as those of most other Companies, and it is believed that hardly a single instance can be found of the contingency by which the accident in question was occasioned being provided for.

The Midland Counties' Company have, since the accident, very properly issued a printed regulation to the effect, "that in case of the stoppage of a train or engine on the line, the engine man shall direct the under-guard or breaksman, or, if neither be with him, the fireman, to go back to the nearest station or policeman, to give the signal at least 800 yards from the obstruction, to stop any train coming on the same line, the person going back to take a signal with him to enable him to stop a train, and on no account to return until he has met with some party to make the necessary signal."

There can be no question that this, or a similar regulation, ought to form part of the code of all railway Companies; but, in the absence of any central authority empowered to interfere for the purpose of recommending, and if necessary of enforcing, regulations approved by experience, the public have no security for its adoption upon any railway, except that where its necessity has been forced upon the attention of the Directors by the actual occurrence of an accident.

LONDON AND BIRMINGHAM.

Accident, 10th January, 1841.—Two carriages which had been detached at Rugby from a Birmingham train, in order to proceed by the Midland Counties' Railway, were run into, while in the act of being pushed across the up-line of the London and Birmingham Railway, by the mail train from Birmingham. Several passengers were considerably injured, but fortunately no lives were lost, although the carriages were overturned and much shattered by the collision.

The accident may be attributed partly to defective arrangement on the part of the Company, in not having previously issued a regulation which has since been very properly adopted, and which ought to be enforced wherever the junction of a branch line renders it necessary to cross a main line; viz, that all trains arriving upon the line which is crossed shall stop before coming to the junction, and not pass it until a signal of safety is made.

The more immediate cause, however, of the present accident was the conduct of two policemen; one stationed at the "points," by which the Midland Counties' carriages were passed across the up-line, the other about 300 yards further down the line, to warn any train approaching from Birmingham; who neglected the obvious precaution of seeing that their respective signals were properly responded to before concluding that all was right. This precaution, however, formed no part of the printed or written regulations of the Company, and the evidence was contradictory as to the general practice upon the line, and the verbal instruction which the policemen in question had received.

The accident, therefore, must be considered as strongly illustrative of the observation made with reference to the Midland Counties' Railway, of the indispensable necessity of providing beforehand, by a well considered code of printed regulations, for all contingencies which can be foreseen as likely to arise, and of placing in the hands of some central supervising authority the power of enforcing these regulations as part of the uniform system to be adopted upon all railways.

In concluding this review of the railway accidents which have been the subject of investigation by the Board of Trade, we think it only fair to the Railway Companies upon whose arrangements we have had occasion to remark, to add, that in a majority of instances they have evinced great readiness in adopting the recommendations of the Government inspectors, and that the officers entrusted with the management of the different lines have shown a great desire to introduce improvements, and prevent the recurrence of accidents.

RECOMMENDATIONS FOUNDED ON THE FOREGOING EVIDENCE, AND REASONS FOR THEM.

The powers given to the Board of Trade by the 3 and 4 Vic., c. 97, are totally inadequate to enable it to carry into effect the measures which, from the evidence above stated, appear indispensable for the public safety. The only powers given by the Act which have any reference to the protection of the public safety are the following:—

1st. A power of requiring returns of all accidents attended with personal injury to be made within 30 days from the date of the requisition; 3 and 4 Vict., c. 97, s. 3.

2nd. A power of appointing inspectors to enter upon and examine any railway, and the stations, works, buildings, engines, and carriages belonging thereto; s. 5.

3rd. A power of directing prosecutions in any case in which it shall appear that any of the provisions of Railway Acts have not been complied with, and that it would be for the public advantage to enforce their performance; s. 11.

The power of requiring returns is evidently insufficient even for the limited purpose of obtaining information of accidents which have occurred. The period of 30 days given by the Act for making the return, is alone sufficient to render it inoperative, and the limitation to accidents, attended with personal injury, is very objectionable, as accidents unattended with personal injury may be equally important as throwing light on the causes of danger and the means of prevention, and may occasion serious inconvenience by interrupting the public traffic. For the still more important purpose of enabling the Board of Trade to obtain the information respecting regulations, signals, time-tables, and other details of management upon different railways, which is indispensable with a view to any effective supervision for the prevention of accidents, the Act does not attempt to provide, and by expressly defining the returns which the Board is empowered to call for, excludes by implication all which are not enumerated in the Act.

Whatever information upon these essential points we have been enabled to obtain, we owe to the courtesy of individual Companies and their officers, a resource upon which it would be obviously unsuitable for a Government department to depend, the more especially as the temptation to concealment is strongest in those cases in which it is most essential to obtain information.

The Select Committee on Railways having in their Report expressly recommended "that the Board of Trade should have the power of calling for any returns financial or statistical, which it should consider necessary for the performance of its duty," it is surely not too much to ask to be entrusted with the requisite powers of obtaining the information which is indispensable for the discharge of the most arduous and important part of our duty, viz., providing for the public safety.

We accordingly recommend that in any Act which may be introduced in the course of the approaching session, a clause should be inserted, empowering the Board of Trade to call for returns of all accidents attended with personal injury, or occasioning an interruption in the public traffic, and also such returns respecting the arrangements for conducting the public traffic as the Board of Trade may consider necessary, with a view to providing for the public safety. This power, with that of inspection, would be sufficient to give us access to the requisite information. The possession of this information, however, would be insufficient, unless our powers of acting upon it are extended. The only positive power given by the 3rd and 4th Vict., c. 97, is that above mentioned, of directing prosecutions to enforce the provisions of Railway Acts, a

Digitized by Google

power which is useless for the purpose of enforcing the regulations and precautions which experience has pointed out as essential for the public safety. As the Act stands at present, the Board of Trade has no power of enforcing any one of the recommendations contained in the Reports of its inspectors, however obvious and necessary for the public safety. Although the Directors and officers of the different Railway Companies whose lines we have have had occasion to inspect, have, generally speaking, shown great readiness to attend to the representations of the Board, this has not been uniformly the case, and instances have occurred which are sufficient to show the impossibility of exercising any effective supervision, unless provided with the requisite powers of enforcing our recommendations.

With regard to the nature and extent of these powers, the proper distinction appears to us to be, that the Government should not attempt to interfere in questions of an experimental nature, which are still subjects of discussion, and admit of a fair difference of opinion among practical men; nor should it attempt to regulate matters of detail, so as to take the management of the railways out of the hands of the parties immediately responsible, viz.:—the Directors and their officers.

On the other hand, the Government should have the power of enforcing whenever it is found necessary the observance of all precautions and regulations which are approved of by experience, and are obviously conducive to the public safety. For instance, upon such points as the comparative advantages of six and four-wheeled engines, the best construction and mode of laying down rails, the best form and construction of wheels, axles, &c., and other points of a similar nature, upon which the practice of the best conducted railways differs, and the opinion of the most eminent engineers is by no means decided, it would be premature for the Government to interfere until experience has solved the questions which may still be fairly considered as doubtful. But with regard to other points, such as the propriety of introducing upon every railway such arrangements respecting time tables and signals as experience has shown to be necessary for preventing collision, of establishing a proper and uniform code of regulations for engine-drivers, guards, and other servants placed in a responsible situation, and for maintaining strict discipline; and generally of introducing upon ALL railways, whatever has been adopted and proved to be conducive to safety by the practice of those which are considered to be the best conducted; no difference of opinion can exist, and if the principle of Government supervision be admitted at all, it cannot find a more legitimate field for its exercise.

The same distinction applies to the case of opening new railways. It would be impossible for the Government inspector, upon a short inspection, to pronounce an opinion upon questions of construction, so as to share the responsibility of the engineer under whose superintendance the works were conducted. On the other hand, the Government inspector is fully capable of judging whether the works are sufficiently completed, and whether the arrangements for working the line are of such a nature as to present no obvious and unusual danger to the public in the event of its being opened at the time proposed.

The present Act establishes the principle of a Government inspection of railways previously to their being opened for public traffic; but if this principle is to be maintained, it is indispensable to give the Government power to prevent the opening of the railway in case the conditions considered as essential for the public safety are not complied with. As matters stand at present the Government has the responsibility without any of the power which ought to accompany it. The public naturally look to the Government inspection as a guarantee that the line is in a fit state to be opened, while, in point of fact, the line may be opened in defiance of the representations of the Government and its inspector. The present Act is also defective in not obliging Companies to give notice of the day when their railway will be ready for inspection, as well as of the day when it is proposed to open it. Great inconvenience has been experienced from this cause, as from the anxiety of Railway Companies to open at the earliest possible moment, the inspection has either been fixed so late as to afford no time for considering and acting upon the inspector's Report, or if fixed earlier, the works have been found incomplete.

We recommend, therefore—

1st. That no railway or portion of railway should be opened for the public conveyance of passengers until one month's notice shall have been given to the Board of Trade of the intention of opening, and 10 days' notice that the railway is sufficiently completed for receiving the public traffic in safety.

2nd. That in case of an unfavourable report from the inspector appointed by the Board of Trade upon any essential point connected with the public safety, a power should be given to the Board of Trade of postponing the opening, from time to time, for periods not exceeding one month.

With reference to the exercise of this power, it should be a general rule never to sanction the opening of a railway until the works of construction are so far completed as to allow the permanent way to be devoted solely to the purposes of the public traffic, and of the ordinary repairs requisite for keeping the line in order, nor until the establishment for conducting the public traffic is placed in all essential respects upon an efficient footing.

With regard to the provisions which should be introduced into the new Act for the purpose of enabling the Board of Trade to exercise an effective supervision over railways after they are opened, with a view to provide for the public safety, it appears to us impossible to define in any Act of Parliament the exact nature and limits of this supervision, and to provide beforehand for every case which may arise in practice.

The principle which we think ought to regulate the exercise of this supervision, has been already stated, viz. that it should be confined to the enforcement of such rules and regulations as are approved by practice, and obviously conducive to the public safety.

The following also may be stated as an outline of some of the principal regulations which we think ought to be enforced:—

TIME TABLES, &c.

1. That all trains employed in the public traffic, whether of passengers or goods, should be worked by time tables, properly constructed with reference to the gradients, &c. of the line, and specifying the time of arrival and departure at each station.

2. That in the construction of these time tables, it should be a general rule that no train is to start within less than 15 minutes of another, or to succeed another upon any part of the line at an interval of less than 15 minutes.

3. That no engine, waggon, truck, or any description of carriage whatever, not forming part of the regular trains, should be allowed to enter upon the line of rails devoted to the public traffic, without a pass ticket issued by a responsible officer of the Company.

4. That it should be a general rule not to allow any ballast train or waggon to remain on the line within half an hour of the time when a train is due, nor to allow return engines to approach within 15 minutes of a train.

5. That every engine-driver and guard should be furnished with time tables, and also with printed instructions, specifying, among other things, the maximum speed upon different portions of the line, and the rules as to signals, &c., which are to be invariably adopted.

6. That the conductor, or head guard of every train, should be bound to keep a journal, specifying the times of arrival at and departure from each station, and the causes of acceleration or delay; and that the chief clerk at each station should also note the time of arrival and departure of each train, and be responsible for not allowing any train to leave his station before the proper time.

CONSTRUCTION.

1. Every description of passenger carriage shall be provided with buffer springs.

2. The last carriage, and at least every fourth carriage, in trains by which passengers are conveyed, to be provided with a proper break.

ESTABLISHMENT.

Under this head it is impossible to state beforehand the precise nature of the regulations which it might become necessary to make from time to time, as the power vested in the Board of Trade ought to be considered merely as a check upon the possible circumstance of any Railway Company reducing its establishment below that found necessary by experience upon well regulated lines.

It may be sufficient to state that the general principle of enforcing nothing of an experimental nature ought to be strictly adhered to, and that Companies ought not to be called upon to increase their establishment unless clearly insufficient for conducting the public traffic in safety, according to the practice of other railways similarly circumstanced.

DISCIPLINE.

Under this head our task would be confined to enforcing as part of the general code of all railway companies, the regulations adopted upon the leading lines for maintaining the strict discipline among servants, which is essential for the public safety.

Among these may be mentioned the practice adopted by several railway companies, of printing the provisions of the General Railway Act which relate to the punishment of misconduct on the part of servants, with the instructions to engine-drivers, guards, policemen, &c., accompanied with a statement of the Company's determination to enforce them rigidly on all occasions. Also a general regulation, that all servants of the Company shall be bound to report cases of misconduct which come to their knowledge.

SIGNALS.

1st. That all railways should adopt, as nearly as circumstances will permit, an uniform system with regard to signals; *red* in all cases denoting danger, and *green*, caution.

2nd. That every station should have a fixed signal-post and revolving lamp, signal man who has no distracting duties to perform.

3d. That it should be an invariable rule to exhibit a red signal when a train stops at a station, and for a period of not less than 10 minutes after it has left or passed a station or entered a tunnel, and a green signal for five minutes longer.

4th. That no engine or train should be allowed to travel after dark along the line without proper head and tail lamps, and a proper supply of hand signal lamps.

We mention these as instances of the principal regulations which we think ought to be generally enforced, but, as we said before, it is impossible to enumerate all the measures which may be found necessary, and to anticipate all the precautions which a more extended experience may suggest.

We recommend, therefore, that a general power should be given to the Board of Trade of issuing regulations for enforcing upon railways in general, or upon any railway in particular, such arrangements and precautions as from experience appear necessary for the public safety. We are aware that such an indefinite power is apt to be looked upon with jealousy, but we see no alternative between assuming it, and fettering the action of a supervising authority, so as to render it practically of little use. The principle of Government supervision necessarily implies confidence in those to whom it is intrusted. If the legislature is afraid to intrust discretionary powers to public and responsible officers who have no conceivable motive for abusing them, this is an argument not for tying up their hands so as to deprive them of the power of doing good, but for dispensing with supervision altogether. In the present case, also, it must be remembered that an effective supervision for the prevention of accidents is as beneficial for the railway Companies themselves as for the public, and that it is especially for the interest of the best conducted railways to have the precautions which they themselves adopt generally enforced. Indeed, from what we have seen in our intercourse with the Directors and managing officers of many of the principal railways in the kingdom, we are convinced that a supervision exercised on the principles, and confined to the objects above stated, would be regarded with anything but apprehension or distrust, and that we should find the Railway Companies generally willing and anxious to co-operate with us in the common object of insuring the greatest amount of safety to the public.

Should the legislature think proper to grant to the Board of Trade this power, it is evident that it ought not to be fettered by a proviso similar to that inserted in the 3rd section of the 3 and 4 Vict., c. 97, compelling it to issue the same regulations in like manner and at the same time to all Railway Companies. As a general rule, the regulations should of course be, as far as possible, uniform; but there are many cases in which regulations proper on one railway would be improper on another, and there are also particular cases (as, for instance, those of railways having a common terminus, and using a portion of the same line in common) in which it might be necessary to make regulations more in detail than would be necessary in other lines. The best check upon any abuse of these discretionary powers would be a proviso that no order or regulation should be issued by the Board without a minute stating the reasons for its adoption, the production of which might be any at time called for by Parliament.

We now come to another important recommendation, the necessity of which has been strongly impressed upon us by experience, viz., that all engine-drivers should undergo an examination, and be licensed. When it is considered what a vast amount of life and property are absolutely dependent upon the skill, presence of mind, vigilance, disposition, and good conduct

Digitized by Google

of this class of men, it does not seem too much to insist on every possible guarantee that none but fit persons shall be employed, and that persons guilty of serious acts of disobedience or neglect, shall not be retained in a situation of such responsibility.

That some additional security is required in this respect is sufficiently evident from the fact above stated, that of 36 accidents which have occurred in the course of the public traffic, 18 are clearly attributable to the misconduct of servants, as the primary cause. Of the leading accidents that have been described in detail, five, viz., the second accident on the Hull and Selby, the three accidents on the Eastern Counties, and the first accident on the London and Birmingham, were mainly caused by inexperience, recklessness, or wilful disobedience of orders, on the part of engine-drivers.

It would be unreasonable to expect that these causes of danger would be entirely removed by any system of licensing and examination, but it certainly seems fair to suppose that they might be materially diminished. One great advantage would certainly be gained, viz., that the necessity for prompt and implicit obedience to orders would be much more strongly impressed on the minds of engine-drivers than it is at present. A great defect of the present system is, that owing to the facility with which engine-drivers discharged from one railway get employment upon others, it is exceedingly difficult for the Companies to enforce the strict system of discipline which the nature of their duties require.

Either owing to this, or to other unexplained causes, it certainly appears that railway Companies generally have shown reluctance to exert the powers placed in their hands by Lord Seymour's Act for the punishment of misconduct on the part of their servants. In several of the instances above alluded to, in which accidents occurred in the course of public traffic owing to the misconduct of servants, the offenders have escaped with a degree of impunity which cannot fail to be productive of the worst consequences. The system of licensing would provide an effectual remedy by making a strict and undeviating attention to character and conduct the necessary condition of obtaining and retaining employment.

The adoption of such a system, in conjunction with the system introduced on the London and Birmingham, Great Western, North Midland, Grand Junction, and other principal railways of giving premiums for good conduct and taking measures for promoting the mental improvement and physical comforts of engine-drivers, would, there is every reason to believe, soon raise their character to a standard which would afford much greater confidence and security to the public.

With regard to the nature of the examination, it appears a fair subject of doubt whether any high degree of mechanical knowledge is requisite on the part of engine-drivers, and could be attained without sacrificing qualities of more importance for the discharge of duties which require great capabilities of enduring exposure and unremitting attention to a limited range of duties. However this may be, it appears better, in conformity with the principle already stated of abstaining from interference in questions of an experimental nature, to confine the examination to those points upon the necessity of which no difference of opinion can exist.

For instance, there can be no doubt :—

1st. That an engine-driver should be able to read his instructions, and should fully understand them.

2nd. That he should have a competent experience and practical knowledge of the ordinary duties necessary for the management of an engine.

3rd. That he should know what course to adopt in any of the emergencies which can be foreseen as likely to arise in the course of his employment.

4th. That he should be able to produce an unimpeachable character for sobriety, steadiness, attention to orders, and general good conduct.

These may be looked upon as conditions which the public has a right to expect, and which ought to be introduced generally at the earliest possible period; at the same time, however, it must be borne in mind that great discretion will be necessary in the first instance, especially with regard to engine-drivers already in the employment of Railway Companies.

With regard to the details of the system of licence and examination we should recommend :—

1st. That it should commence at a period of three months from the passing of the Act, and apply to all engine-drivers employed in the course of the public traffic.

2nd. That all candidates for licences should be brought forward by Railway Companies.

3rd. That the examination should be conducted by not less than two persons nominated by the Board of Trade, one of whom, as a general rule, should be the engineer of the Company by whom the candidates are brought forward; the final decision of each case resting with the Board of Trade.

4th. That the licence should be kept by the Company by whom the engine-driver is employed, and a badge given with the licence to be worn conspicuously.

5th. That the Board of Trade should keep a register of licences, and have power to cancel or suspend licences.

6th. That if an engine-driver leaves his situation, or is dismissed, notice should be given by the Company to the Board of Trade, and the Company should be bound to keep the licence and badge until instructed by the Board of Trade whether to cancel, suspend, or give them up to the engine-driver.

7th. In cases of emergency the Board of Trade should have the power of dispensing with the penalty for employing unlicensed persons as engine-drivers.

STATISTICAL.

We now come to the question of statistical information. The Committee on Railways considered it indispensable that the department entrusted with the supervision of railways should have the means of obtaining full information on all points connected with the working of the railway system, and they reported the following Resolution to the House :—

"That it is the opinion of this Committee that this Department should have the power to call for any returns, financial or statistical, which in the judgment of this department may be necessary for the performance of its duties."

By the 3d and 4th Vic., c. 97, sec. 3, the power of calling for returns is limited to certain returns therein enumerated, viz. :—"Returns of the aggregate traffic in passengers, according to the several classes, and of the aggregate traffic in cattle and goods respectively, as well as of all accidents attended with personal injury; and also a table of all tolls, rates, and charges, from time to time, levied on each class passengers, and on cattle and goods conveyed on the railway." And it is further provided, "That such returns shall be required in like manner and at the same time from all railway companies, unless the Board shall specially exempt any company, and shall enter the ground of such exemption in the minutes of their proceedings."

The information which would be furnished by these returns, if literally complied with, is extremely limited, and comprises nothing which is not already voluntarily given to newspapers, and published for the information of shareholders at every half-yearly meeting.

The subjoined forms of returns, which we have issued, contain several particulars, such as the average charge per mile on passengers and goods of different classes, distinguishing toll from charge for locomotive power, which will furnish the ground-work of much valuable statistical information.

No. 1.

Carriages.....								
Passengers' luggage on which a charge is made.								

For Table 2, see next page.

Independently of the doubt which may exist whether all the particulars in the above forms are warranted by a strict construction of the Act, it is evident that much more is required in order to make the railway department of the Board of Trade such a register of statistical information as was contemplated by the Select Committee on Railways.

Among the principal objects of statistical inquiry may be enumerated—

1st. The methods of construction adopted upon different railways.

2nd. The cost of construction analysed into its different elements.

3rd. The cost of keeping the permanent works in repair.

4th. The methods of working adopted upon different lines, especially with reference to the nature of the engines, carriages, wheels, axles, and other important particulars, respecting which difference of opinion exists among practical men.

5th. The cost of working analysed into its different elements, and especially every particular calculated to throw light upon the cost of locomotive power.

6th. The amount and nature of the accommodation afforded to the public, including, as an important item, the rate of speed, the degree of regularity, and the arrangements with other lines for forwarding passengers and goods.

7th. The result of experiments tried upon different lines.

It is for the legislature to decide whether the acquisition of accurate information upon these and the various other topics of statistical inquiry necessary in order to throw light upon the working of the railway system constitutes an object of sufficient national importance to justify their adoption of the resolution of the Committee above referred to. Our duty is discharged in pointing out the limited nature of the powers conferred by the present Act, and the necessity of giving the railway department the more extensive power recommended by the Committee, if it is wished to render it efficient for the purpose of collecting and registering statistical information.

for regulating railways may be classed under two heads—

1st. Enforcement of the provisions of Railway Acts.
2nd. Revision of bye-laws.

For the former object the provisions of the present Act (3 and 4 Vic., c. 97, s. 11 and 12) appear sufficient; and although from the ample and indefinite nature of the powers given to Railway Companies, it does not appear likely that the public interests will often suffer from any attempt directly to infringe upon the provisions of their acts, there can be no question that the power given to the Board of Trade is highly useful as a check, and ought to be continued.

With regard to the remaining power of disallowing bye-laws, this is necessarily of a very limited nature, being confined to "bye-laws, orders, rules, and regulations, which impose penalties for the enforcement thereof upon persons other than servants of the Company."

In a majority of cases no such bye-laws or regulations exist. Of 77 Railway Companies to whom a circular was addressed, calling upon them to make returns of their bye-laws, in terms of the Act, 43 have either made no return, or made a return that they had no bye-laws within the meaning of the Act.

Of the remaining 34 the bye-laws and regulations relate almost exclusively either to matters of little practical importance or of local detail. Most of those which inflict penalties are proper in themselves, and sanctioned by the precedent of provisions of a similar nature contained in the Acts of other Railway Companies; as for instance, bye-laws imposing penalties upon smoking, improper conduct, intoxication, wilful damage to the Company's property, and attempts to defraud.

In all these cases the mal-administration, if any exists, must depend, not on the bye-law itself, but on the manner in which its provisions are carried into effect, over which the Board of Trade has no control. In the same way with regard to the booking of places and collection of tickets, the only subject of really practical importance which is brought under the jurisdiction of the Board of Trade by the returns in question, the regulations imposing penalties afford little information as to the system actually adopted upon any particular railway. At the same time we feel bound to state that no complaints have been addressed to us since the railway department came into operation, and that we have no evidence before us to show that the power of imposing penalties by bye-laws has been oppressively exercised.

The bye-laws and regulations which have been returned to the Board of Trade appear in many instances open to objections on the ground of informality and technical defects; but as the power of disallowance given by the Act appears to us to be intended for the protection of the public in matters of practical importance, and not as a means of indirectly taking the enactment of bye-laws into our own hands, we have not thought it advisable to exercise it where no more substantial objection appeared than the want of uniformity and correctness.

We are fully aware that it is objectionable that the public should be subjected to a different code of bye-laws upon every different railway, and that it is desirable to introduce more uniformity into the form as well as the substance of these regulations; but we think it better to attain this object gradually and by the co-operation of the Railway Companies themselves than by straining the power of disallowance given by the Act. Indeed, from what has been already stated, it is evident that the Board of Trade could do but little with its present powers towards the enforcement of an uniform system of regulations upon all the railways of the kingdom, since more than half the number are relieved by the provisions of their several Acts from the necessity of making bye-laws at all, and therefore do not come in that respect within the jurisdiction of the Board. The first step towards the introduction of an uniform system must be the enactment of a general Railway Act, consolidating the scattered provisions of the different Acts of incorporation which relate to similar objects, and defining clearly the objects and nature of the sub-legislative powers given to Companies and the obligations imposed upon them in regard to their exercise.

In the mean time, unless the legislature should think fit to extend the duties and powers of the Board of Trade with regard to the supervision of the arrangements of Railway Companies by which the public interests are affected, the power of disallowing bye-laws must be considered as little more than a check upon the possible but improbable case of any Railway Company abusing the power of inflicting penalties entrusted to it by the legislature, so far as to make regulations which are obviously improper and oppressive.

In several cases it seems desirable that this supervision should be extended to arrangements and regulations of much more practical importance to the public than those which nominally inflict penalties; as for instance, to the arrangements made respecting the public traffic by different Railway Companies using a portion of the same line in common, or different railways forming together one continuous line of communication; but these are questions for the consideration of the legislature, and respecting which, having, in the absence of any power of calling for statistical or general information, no additional evidence to offer, we should not think ourselves justified in adding anything to the recommendations contained in the Reports of the Select Committee on Railways.

There is, however, one defect in the clauses relating to bye-laws so obvious, that it only requires to be stated in order to procure its correction. The power of disallowance given to the Board of Trade is intended to supersede the bye-law jurisdictions of justices of the peace, courts of quarter session, and all other tribunals, which are expressly repealed by the 10th section of Lord Seymour's Act. The wording of the sections, however, which confer this power of disallowance does not correspond with the language generally employed in the sections of the different Railway Acts which provide for the confirmation of bye-laws by justices, &c. The London and Birmingham Act, for instance, provides for the publication of "all bye-laws, orders, and rules which are of a public nature, and relate to or affect other persons than the servants of the Company," and requires all such bye-laws to be submitted to one of the judges of Her Majesty's Courts at Westminster for confirmation. The 7th, 8th, and 9th sections of the Act for regulating railways confine the jurisdiction of the Board of Trade "to bye-laws, orders, rules, or regulations, which impose penalties for their enforcement upon persons other than the servants of the Companies;" so that as regards bye-laws which affect the public, but do not expressly impose penalties, there may be a doubt whether the effect of the Act has not been to give to Railway Companies a greater degree of irresponsible power than they before possessed. This should be provided for, by substituting in the sections of the Act which create the bye-law jurisdiction of the Board of Trade words commensurate with those employed in the provisions of the London and Birmingham Railway Act above quoted, and of other Railway Acts.

The reasons already stated induce us to abstain from offering any suggestions respecting the many ways in which the legislature might avail itself of the existence of the railway department, with respect to Bills in their progress through Parliament, and as a means of introducing modifications, alike advantageous to the public and to the Companies, in the rules and standing orders which, in the absence of any disinterested tribunal, to which discretionary powers could be entrusted, it has been found necessary to enforce.

Such ulterior objects, however important in themselves, may, we conceive, be properly left for the consideration of the legislature, and we are unwilling to mingle them with the more immediate and pressing object which we have in view at present, viz., the introduction of such a legislative measure as will give the Board of Trade the requisite means of exercising an effective supervision over railways, with a view to providing for the public safety.

FREDERIC SMITH,
S. LAING.

Railway Department, Board of Trade,
25th January, 1841.

REGULATION OF RAILWAYS.

In the House of Commons on Thursday, Mr. Labouchere moved for leave to bring in a Bill for the better regulation of railways. The object of the Bill was to provide increased safety for persons travelling on railways. After what had occurred during the last few months on railroads in this country, it became incumbent on the Government to ascertain as far as possible some means of obviating those frightful accidents, and of appeasing the public mind on the subject. In consequence of this these accidents were made the subject of minute investigation by the railway branch of the Board of Trade, constituted under the Act of last session, known as Lord Seymour's Act, and the measure now proposed by him was adopted on the recommendations contained in the report on that department. That report had been laid on the table of the House some days since, and as the matter which it contained was doubtless familiar to every Hon. Member, he (Mr. Labouchere) should not then enter into them. The sole object of the Bill he proposed, was, as he had said, to increase safety in travelling on railroads; and to effect this it was necessary that the Government should be invested with very large powers. It was undoubtedly the opinion of many most competent persons that interference on the part of the Government with public companies was very objectionable, and he had no hesitation in admitting that injudicious meddling might only aggravate the evil sought to be remedied. He thought it was highly desirable that interference should be as little resorted to as possible, and only in extreme cases; that the responsibility should not be diminished on the part of the railway directors, and that the functions of these natural guardians of the public on rails should not be lightly affected. But it was undeniable that there were some points on which it was absolutely necessary that the Government should interfere; and as a proved evil was in existence to provide a remedy for it on the part of the public. A great deal of panic had been excited and a great deal of exaggeration used in respect to the accidents on railways, and he (Mr. Labouchere) had no hesitation in saying that, on the whole, he considered there was no safer mode of conveyance known.

Digitized by Google

Taking into view, however, the frightful nature of the accidents that had occurred, and the impression of them they had made on the public mind, the Government were bound to take every possible step to diminish the chances of their recurrence and to reassure the public. He rejoiced to be able to state that he had come to the conclusion that, even though the amount of accidents on railways was small compared with the immense traffic, that amount might still be greatly diminished. He hoped, in short, soon to see railway travelling rendered as safe as any other description of travelling whatever. The great difficulty he had to deal with in framing a measure to effect this object was the acknowledged principle in trade of non-interference on the part of the Government with private enterprise: but then the evils affected the public and called for a remedy. To interfere effectually it became necessary to apply to Parliament for very large powers of a general nature; and these powers the Bill he proposed embodied. The responsibility of exercising them with a sound discretion rested wholly on the Government. [The Right Hon. Gentleman then read some extracts from the report of the railway branch of the Board of Trade, purporting to define the powers necessary for Government to possess, for the purpose of effectually protecting the public against accidents on railways. Those powers were, generally —to enforce time-tables—to establish signals—and to introduce regulations for the assertion of strict discipline among the servants of the railway companies. The report deprecated all interference with attempts of an experimental nature on the part of Directors.] He (Mr. Labouchere) would take only two of these points to prove the necessity for interference on the part of the Government. One of these was time tables. It was well known that the trains on all railways were worked by time tables: and he was happy to say that on most of those railways which ran into one another these tables coincided, but on some they did not, and the consequence was several dreadful accidents on these lines. This was a clear case for interference. Again, with respect to signals. On some lines the signal of danger was a red light, on others a blue. Now, an engineer from one getting on the other was very likely to become confused, and hence, also, many of the frightful occurrences which had recently taken place. It was to remedy these that the powers asked for were sought, but at the same time, he admitted that they should be exercised with great caution and with the least possible degree of interference, consistent with the public safety. There was another point, too, to which he (Mr. Labouchere) attached much importance. It was, that all engine drivers on railways should be duly licensed by an establishment to be created for that purpose. It was preposterous that the drivers of public vehicles on the streets should be unable to ply their trade without a license, while engine drivers, on whom depended so much life and property, should have no limitation except the means of employment. It was therefore, proposed in the Bill that a registry should be kept—that no driver should be licensed without proof of his qualification, and that he should be deprived of his license for misconduct. A great many accidents occurred from the misconduct of drivers, from their recklessness, or drunkenness, or ignorance; these would be obviated by the plan proposed in the Bill. At present a driver who may be discharged from one railway for gross misconduct, was often taken on another. This would not be the case if a system of licenses existed; and thus many most fearful occurrences would be avoided. There were various other minor points in this Bill, but as they were all based upon the report he should not advert to them.

Colonel SIBTHORP did not rise to oppose the introduction of the Bill, but to express his aversion to the whole system of Railways. He looked upon them as public fraud and private robbery—(Hear, and laughter)—the schemes of idle speculators and gambling jobbers. He regretted that the Bill contained no compulsory clause giving provision to the thousands who had been ruined by railways. Not one in ten of the frightful accidents that occurred on them was made public. They were, in his opinion, dangerous and delusive to the public, and ruinous to innkeepers and postboys. And although he admitted that some immediate remedy was necessary for the fearful evils they had entailed on the country, still he was so jealous of any meddling with them on the part of her Majesty's Government—whom he had no faith in—that he much wished the matter had fallen into other hands. (A laugh.) The Right Hon. Gentleman had spoken of licenses. Was it for the purpose of protecting the public that this scheme was proposed, or of adding a few pounds to the melancholy, forthcoming budget of the Chancellor of the Exchequer? (Laughter.) He hoped that the House would insert a clause in the Bill compelling the Railway Directors to pay the full amount they had promised for property that these Acts now gave them power over, and for which they withheld compensation, because he believed that in a very short period all these airy schemes would be bankruptized, and the country recur to a more rational mode of travelling—that is to say, in a chaise and pair, or otherwise. (Laughter.)

Mr. EWART concurred with the principle of the Bill so far as centralisation—which he took to be its object—went: but he deprecated all unnecessary interference with railway roads as injurious rather than serviceable. He maintained that the number of accidents on railways was proportionably less than in coaches. With respect to the plan of licensing, he differed from the Right Hon. Gent. as to its efficacy. It should be borne in mind that our whole system of stage coaches had been admirably conducted without the system of licensing, which was recommended by the Commissioners, and he therefore doubted whether that recommendation was at all necessary. He agreed with the Commissioners in thinking that further powers should be given, so as to enable them to obtain information with regard to all accidents, not limiting it to accidents accompanied with serious injury, and that they ought to have notice before the opening of any railway. These were powers which were demanded by the public, and which no reasonable Railway Company would refuse. Another recommendation of the Commissioners was that all these acts of interposition should be submitted to Parliament, with the reasons appended to the regulations made; that was due to the public and to Parliament. It was worthy of notice that those were the best railways which had stood the longest. On the London and Manchester line an accident now scarcely ever occurred, and yet above a million of passengers passed along it in a year. The London and Birmingham Railway, too, had by time become so much more complete that the accidents were much less numerous, and he had then in his hand a return from the Grand Junction Railway Company, stating that half a million of passengers had been conveyed along that line during the last half year, and there had been no accident; 1,200 horses, and about 6,000 tons of goods, had also been carried by that railway during the same time, and a very trifling sum only had been paid by the Directors for injury done to the horses or goods. He was satisfied, however, that great advantage would accrue to the public if his Hon. Friend formed his office into a kind of central board for the issuing of regulations, instead of assuming great powers of interference and control, which were inconsistent with the success of all private speculations of this sort.

Lord STANLEY said, that little favourable as he was to the general policy of her Majesty's Government, he was not inclined to view their proceedings on this subject with that jealousy which seemed to be felt by Hon. Gentlemen behind him. (Hear, hear.) Indeed, from the manner in which his Hon. Friend had introduced the subject to the House, it was pretty clear that he did not anticipate objection from that side of the House; for, though he had favoured them with a few facts, he had directed the whole of his argument to those Hon. Gentlemen who generally supported the Government. ("Hear, hear," and a laugh.) Most of the observations which he wished to make on this subject had been anticipated by the Hon. Member for Wigan. He entirely concurred with that Hon. Member, and he hoped that the Hon. and Gallant Member behind him would derive some consolation in that state of despair in which the only hope that presented itself to him was the general bankruptcy of all the Railway Companies in the country. ("Hear, hear." and a laugh.) He hoped he would derive some consolation from the undoubted fact, that, in proportion as more traffic came upon a railway, and the persons connected with it had greater experience, so proportionately the danger to life and property diminished in an extraordinary degree. On the Liverpool and Manchester and Grand Junction Railways, on which the traffic was immense, and which had been first opened, not a single accident with danger to life or limb had occurred in the last year—(Hear, hear)—and he had no doubt that all railways might be brought to the same state of perfection; but in the mean time it was of importance that the Government should exercise a vigilant control over those that were in their infancy. No more important recommendation appeared on the report of the commissioners than that which proposed that additional powers should be given for prohibiting the opening of railways without inspection on the part of the Government, because after an immense expenditure of capital, it was natural that the directors of a company should desire to be earning as early a return as possible; that desire led to the opening before it was safe to commence the traffic, and he had been told that in one case, notwithstanding a positive report of the [illegible] that the railway was in an unfit state [illegible] had persisted in opening it. ("Hear, hear," Colonel Sibthorp.) It was unanimously that these railways must, more or less, [illegible] nopolies in the hands of the directors; [illegible] therefore, not only a justification, but a [illegible] the interference of the Government for the protection of the public. He wished now to ask [illegible] his Honourable Friend, or the Chancellor of the Exchequer, as to the directions which were now given with regard to letters carried by railway mails. It happened the other night that he was summoned up rather in haste by the Southampton Railway; they arrived at Basingstoke at two in the morning; the snow was deep on the ground, but there was no obstruction on the railway; the train, however, was detained an hour and a half; and upon inquiry, he ascertained that the detention was in consequence of a general order, which was to the effect that, though there was no impediment on the railway, as the Exeter and Andover mails had not arrived, the train was to be detained with all the passengers until they came up. The consequence was not only great inconvenience to the passengers, but his Right Hon. Friend knew very well that on a railway, upon which there was much traffic, there must be great danger, if at the direction of any one a mail train might be delayed without notice one hour and three-quarters beyond its time. (Hear, hear.) He noticed this circumstance, not for the purpose of blaming any one; but, as it had come under his own observation, he wished to call the attention of the Government to it, and to ask whether there was any objection to state what were the general orders with regard to the detention of mail trains. He hoped that there were no orders which could lead to such serious inconveniences, even for the sake of maintaining the regularity of the mails.

The CHANCELLOR of the EXCHEQUER said that he had not been able to receive any answer from his Noble Friend as to what were the directions given on the subject, but he believed they were very general, and that a large discretion was left with the Railway Companies themselves; but he begged to remind the Noble Lord that the mail trains were engaged by the Government upon the payment of large sums, not for the conveyance of passengers, but for the conveyance of the mails; and though he regretted that the Noble Lord had been obliged to stay an hour and a half at a very cold station—(A laugh)—he must say that passengers who went by mail trains must be prepared for delay in such cases, as they had been before under the mail coach system. As to the danger of the delay, he believed that his Noble Friend, upon inquiry, would find that there was no possibility of accident at the time when this train was detained.

Lord STANLEY said that he had not thought of stating it as a personal inconvenience, because, in fact, it was none; but when his Right Hon. Friend stated that passengers by mail trains must be prepared to wait, he should recollect that all the mails from Southampton that morning were kept back at the same time; and as to the paramount importance of conveying the mails regularly, after waiting an hour and three-quarters, they did at last set out without them. He could not, therefore, be satisfied with the answer of the Right Hon. Gentleman. (Hear.)

Mr. PLUMPTRE begged to enforce upon the House the propriety of prohibiting railway travelling on Sundays.

Mr. WARBURTON hoped that the House would not entertain such a proposal, and so cut off all communication on that day for persons who could not afford to travel by postchaise. (Hear, hear.)

Leave was then given to bring in the Bill.

REGULATION OF RAILWAYS.

A PAMPHLET on this all-absorbing topic has just made its appearance from the pen of F. R. Conder, Esq., a gentleman whom we are proud to number among our correspondents.* It is in the form of a letter to the Right Hon. the President of the Board of Trade, and will be found to embody a great variety of very valuable suggestions (evidently the results of observation and practical experience), which are well deserving the attention of Railway Executives.

* "Railway Transit, &c., by Francis Roubiliac Conder, C. E." John Weale, High Holborn. pp. 32.

Digitized by Google

After taking a rapid glance at the origin of railways, and contrasting the doubts which less than twenty years ago disturbed the most eminent men of the profession as to the practicability of journeying on a railway at a greater speed than some twelve miles an hour, with the actual results of the present day, Mr. Conder adverts to the duty incumbent upon Government, and the legislature who called them into existence, to regulate the use of these gigantic undertakings.

"As internal communication (says he) has always engaged the attention of Government—as one regular, safe, and universal system is required for such traffic, which, in the existing state of affairs, is never likely to obtain—as the great mass of property embarked in railways, and the thousands of passengers daily transported by them, should be protected by the chief officers of finance and of police—as Parliament has granted to the Companies the vast powers they possess, and has moreover interfered in the last Session for their regulation—it is to Parliament alone that we can look for the due protection of the lives and interests of the public.

"That Parliament must again interfere, there can be little serious doubt. The outcry of those parties who would stigmatize all such interference as tyrannical and unjust, is on a par with that of those who urge ridiculous or vindictive measures, and would amerce the proprietors of lines in large deodands, for the misfortune or the neglect of their officers. Good results have already attended the Act of last Session, which, however, must be regarded as a preliminary, rather than a final measure, and which is itself obnoxious to some of the defects before adverted to; since the Government Inspectors have had to educate themselves for their new office, while performing its duties. The inadequate nature of the punishments often inflicted by the country magistracy, under the provisions of this Act, is also worthy of note."

He then proposes farther inquiry.

"Let a Committee of either House of Parliament, or, better still, a Commission composed of men who have given proof of their ability to handle the subject, (such as is presented by Mr. Frankland Lewis's award on the conveyance of the mails,) associated with three of the most eminent Civil Engineers, together with the Post-master General, and the Surveyor of the Metropolitan Roads, be appointed with power to send for persons and papers. Let them call before them the Engineers and Managers of different lines; let them investigate the different accidents that have occurred of a serious nature; and let them compare the codes of signals in use on various lines. The labours of the last Committee were directed towards the fiscal and commercial effects and prospects of railways; let the next investigation be that of the proper regulation of transit.

"The improvements made by Mr. Wheatstone on his magnetic telegraph, would be one subject for examination, with the view to the immediate introduction of that valuable invention on all lines of railway.

"The state of railway fences, the number and situations of crossings on the Level, with the protection afforded by the position of lodges, the construction of gates, and the regular attendance of police, would be a second.

"The station arrangements, both of plan and of police, including the position of switches and turnouts, with their indices, and the attendance constantly given at each point—a third.

"The construction of locomotives, tenders, and carriages, considered with reference to the rate of travelling, size of trains, and provision for using the brake—a fourth.

"The signals in use, and those recommended—a fifth.

"The responsibility of officers, and the selection of proper men for the service—a sixth, and most important.

"On a digest of the evidence thus obtained, a Bill would be introduced to the Legislature, embodying the results of science and experience, establishing uniformity of system, and protecting the public from present danger, and the Companies from much ultimate loss."

Mr. Conder next refers to what would be the duty of the Commission.

"Suggestions of the following nature might be submitted to the Commission, and, if finally approved, invested with the sanction of law. Opposition would doubtless be raised to some of them: even personal hardship might sometimes be occasioned: but feelings like these should bow to what, if not identical, are ever coincident; the safety and convenience of the public, and the pecuniary advantage of the Railway Proprietors.

"I would suggest, that each Company should be required to appoint a Transit Engineer, who should be a Civil Engineer, between five and twenty and fifty years of age,—of at least seven years' experience in his profession, and who should have absolute control over the whole line and the Stations; his department beginning where that of the Secretary terminated. He should be the organ of all communications between the Company and the Board of Trade. He should have the power of appointment and dismissal of every workman, policeman, guard, driver, and stoker on the line. As his power would be great, so would be his responsibility. In the event of any accident not clearly and utterly unavoidable, he should be called to account, and, if necessary, placed under arrest. No personal feeling should be allowed to interfere with the interests of the Company; and the first symptom of neglect or incapacity should also be the last. He should live on the line, and never be a mile from it without leave or notice; and, of course, his salary should be ample. On his appointment or his continuance in office, the Government should have a veto."

Then follow a large number of similar suggestions many of them of undeniable utility, and others which the author would recommend as fit subjects for experiment. The two following have struck us as being well worthy of attention. The former we have reason to believe is already under experiment.

"First, that to the handle of the steam-cock might be attached a brake on the driving-wheels, so that the same operation should shut off the steam, and brake the engine. Secondly, that at certain points on the line there should be placed gibbets or plugs, say always fixed at the entrance of stations, and *fixable* at every quarter mile-post, which, on the passage of any engine either by or over them, as the case might be, should strike an arm constructed on the engine for the purpose; and thus, either blow a whistle, shut off the steam, or apply the brakes (any or all), as the case might be. The mechanical details would be simply effected, and the plan might be worth trial." * *

"That the Magnetic Telegraph ought to be universally introduced on railways, there can, I think be little doubt:—a greater security in case of accident cannot be imagined. It cannot be expected that its power should be very great; yet, as the gifted inventor has stated, that it is able to ring a bell at the stations by detaching an escapement, it does not seem unreasonable to suppose that a similar escapement might be constructed in connexion with a moveable glass shade for each lamp, so that, on any accident occurring on the line, the guard of the train should proceed to the nearest point of communication with the telegraph, and, on his displaying the signal of danger, the escapements would be removed, and a red light be shown at each lamp Every train then in motion would perceive the signal, and would proceed slowly to the nearest station, where the particulars of the accident would have arrived by the telegraph before them, and the requisite precautions would be adopted. I merely suggest this plan, on the strength of Mr. Wheatstone's evidence, not having had it in my power to make any experiments on the subject."

It is scarcely fair to quote so extensively from a small work which ought to be in the hands of every railway shareholder, and therefore we shall conclude with the following brief summary given by the intelligent author himself.

"The points that I have endeavoured to illustrate, in brief, are the following: That the Government has always, more or less, protected the internal communication of the country; that, within the last fifteen years, a new mode of transit, almost independent of such control, has, in some cases, superseded the former conveyances; that, while much capital, talent, and energy have been expended in bringing this means of conveyance to its present state, it is yet far from perfect; that, in many cases it is not managed by efficient or properly educated men; and that a uniformity of system is requisite for the security of the public, and for the proper development of this vast innovation. I have ventured on several suggestions, some of which with confidence, and others with a degree of doubt. I respectfully submit to abler judgment; and I have sketched the outline of a plan, by the adoption of which it appears to me, that the railway system might be duly developed, and both the interests of the Companies and the security of the public, be most effectually protected."

The extracts which we have made, would recommend the Letter without any formal judgment of ours, but nevertheless we do recommend it very cordially. It is sound, sensible, and *practical*.

STANDING ORDERS OF THE HOUSE OF COMMONS—THE DEPOSIT OF £10 PER CENT.

In the House of Commons on Thursday, Mr. H. Hinde moved that the standing order, No. 32, relating to Railways, be read.

The order having been read, the Honourable Member proposed that the standing order respecting Railway Bills, which requires a sum equal to one-tenth part of the amount subscribed to be deposited in the Court of Exchequer, be modified by substituting one-twentieth for one-tenth. The House was aware that previous to the year 1830, of the Bills that were passed for making Railways, a considerable number was confined chiefly to the purposes of local traffic; but after the opening of the railway between Liverpool and Manchester, a great impetus was given to speculations of that nature, and in the following years several Bills were introduced into the House to enable capitalists to open railways. In the year 1832 four Bills were passed for that purpose, and in the year 1834, five Bills were passed for a similar purpose. In the year 1835, twenty-four Railway Bills had passed through that House, including the great lines from London to Birmingham, the Grand Junction, the North Union, and the London and Southampton. In 1836, the number of applications was very large, and the attention of Parliament was particularly directed to the subject, in consequence of the standing order having been evaded, and, in fact, there was strong proof before the House, that evasions had been practised to enable parties to pass the standing orders. Notwithstanding this twenty-nine orders for the formation of railways had passed the House. In 1837 the number of Railway Acts was fifteen. He admitted that many of the schemes in these three years, particularly in that of 1836, were not worthy of the support of Parliament, and were not brought under the consideration of the House in such a way as would enable them to be proceeded with. Out of the large number brought forward forty-four did pass the House of Commons; and, although there was no particular protection, there was not a single one of them could be called a bubble company, and in proof of it he could state that of the forty-four, twenty-one were at the present period actually finished, ten were partially opened, nine were in progress, and four not commenced. Two of these four were Irish Railways, and of the peculiar circumstances connected with railways in that country it was unnecessary for him to say anything. Of the other two, the Deptford pier and railway had never been commenced, and the other, the Thames Haven Railway, could not be commenced, in consequence of the delay in advancing the Eastern Counties' Railway. In August, 1836, a standing order passed the House, requiring that a longer notice should be given than heretofore, and in July of the following year the standing order was passed requiring a deposit of 10 per cent., and both these came into operation in 1838. After the passing of these two standing orders there was a remarkable decrease in the number of Bills presented to the House. In 1838 only two Acts of Parliament for new railways were passed; in 1839 only one, and in 1840 not a single Act for a new line passed the House. Surely that looked like putting a stop to them altogether; and it would appear that, in taking steps to prevent fraudulent schemes, they had prevented the carrying on of wholesome plans. Among the Bills passed within the last three years the Edinburgh and Glasgow had been before Parliament the previous

Digitized by Google

year, and therefore the standing orders did not apply to it, and another, the West Derby, had been in progress of formation by another company, and that also was exempted. The only Bill, therefore, which could be termed one for a totally new line, was one for a short line in Devonshire, near Torbay, which was not quite three miles in length, so that, in point of fact, only one Bill had passed since the standing order to which his motion referred. He did not mean to object to the March notices, although he had, in common with many others, objections to these notices, but he referred particularly to the order which required the deposit of 10 per cent. He did not believe that the standing orders relative to the March notices had had the effect of preventing these being given, because, in point of fact, in 1838, there had been 35 such notices given, in 1839, 29, and in 1840, 30, showing that these notices had not been much decreased. It might be urged, and not without reason, that the state of the money market had been one of the great causes of the small number of railway Bills brought forward, and no doubt that had operated to a certain extent; but he would remind the Honourable Members, that although British capital had not been invested to a large amount in railways at home, yet large sums had been invested by British capitalists in railways in Germany and France, and particularly that one between Havre and Paris in the latter country, besides many speculations in the United States. Having disposed of the reasons why so small a number of Railway Bills had been brought before the House within the last three years, it only remained for him now to meet the objections of Honourable Members who thought it of little importance whether railways should continue to progress or not, and to these he would use the strong argument, that British capital was being absorbed in these undertakings in foreign countries. Some time ago it might have been a question whether every large town should have a connection by railway with the metropolis, but from what had occurred of late years that was a point on which there could be now little doubt. A great number of persons were employed upon these railways, but this employment, so far from being a boon to the labouring population, would be a curse if it were to be suddenly withdrawn. Look at the operation of railways at this moment. During the last year, from February 1840 to February 1841, about 600 miles of new railway had been opened in the kingdom. On these 600 miles far more than a moiety of the labourers throughout the kingdom had been employed. It might be asked if he had the means of showing the number now out of employment, and he conteseed that he had not. The works, especially the embankments, had been subject to so much dilapidation from the state of the weather, and from the railways having been opened with undue speed, that on many lines, the same number of labourers were employed in repairing them, as had been employed during their formation. But as spring advanced, these would be through out of employment, for though there were many railways going on, with the exception of the Great Western and an other, he knew of none that were going on with spirit. These were the chief causes he had to advance in favour of a modification of the standing order; but he would point out another inconvenience, namely, the formation of railways without the sanction of Parliament. If persons found generally they could more easily make a bargain with the landowners than by submitting to the restrictions laid upon them by Parliament, depend upon it this system would increase, as saving the expense of an application to Parliament, would enable them to give greater sums to the landowners. These railways were not subject to the Act of last session for the regulation of railways, which related only to those formed under the sanction of Parliament. He would only further state, that if the House agreed to the proposition, he had had the honour to make, they would only place the standing order in that House on the same footing as that of the House of Lords. When the new standing orders relating to railways were passed, a communication was made to the other House, under the auspices of the Noble Lord then at the head of the Board of Trade to assimilate the standing orders of the two Houses, and he believed there was no difference between the Houses than that the House of Commons proposed a deposit of ten per cent., and that the House of Lords thought this too much, and would assent only to a deposit of five per cent. He thanked the House for the attention they had paid to his statement, and submitted his motion for their decision.

Mr. JERVIS seconded the motion.

Mr. LABOUCHERE said that, although he was certainly prepared to offer every opposition in his power to the motion made by the Hon. Gentleman —(Hear, hear)—the Hon. Gentleman was quite right in assuming that he did not rest his opposition on any wish to discourage the progress of railways in this country—(Cheers)—provided they were real and *bona fide* undertakings. (Cheers.) He was as much convinced as any man could be, that it was his duty to give every encouragement to the developement of the railway system; but he was well convinced that the only way by which they could guard against a practical monopoly on the part of the lines already existing, would be by lines more or less parallel, and constructed in such a manner as to offer some competition for the benefit of the public. He trusted, therefore, the Honourable Gentleman would be satisfied that if he (Mr. Labouchere) felt it his duty to oppose the motion, he did not do so from any desire to interfere with the progress of the railway system. But he really was at a loss to conceive how it could be believed that any railway undertaking could be carried on so as to afford a fair and reasonable prospect of remuneration to the subscribers if there were a difficulty in obtaining a deposit of ten per cent. (Cheers.) It appeared to him that if there were any difficulty in obtaining a deposit of five per cent. as a subscriber, he should think he had little chance of obtaining the remaining 95 per cent. This subject had often been before the House. The principle had been considered by two committees of the House of Commons, who had decided against it, in consequence of those disgraceful gambling transactions, which, under the name of railway speculations, had imposed upon the country. (Hear, hear.) It would, indeed, be with great concern, he should see the House relax their rule, which had had the most satisfactory effect in arresting the progress of schemes which were set up for no *bona fide* object, but only to induce inexperienced capitalists to purchase shares and give the advantage of temporary rises in price to the first speculator. To him it appeared impossible that any parties of character and substance could find any difficulty in obtaining a deposit of so small an amount. He thought, therefore, there need be no apprehension that parties who had projects calculated to be beneficial to themselves and the public, would find any difficulty in making the deposit required by the present regulation. (Hear, hear.) And he should feel very sorry if the House should alter the determination to which it came after so much deliberation.

Mr. WARBURTON was far from thinking the existing regulation requiring the deposit of ten per cent. at all excessive. He was convinced in all *bona fide* schemes no difficulty could be found in conforming to it. (He Mr. Warburton) had had the best opportunities of inquiring into the merits of the case, and he was satisfied that the existing regulation was the best that could be devised.

Mr. BROTHERTON wished to state a fact which he thought of considerable importance. The Liverpool and Manchester Railway Company, a year or two ago, obtained an Act for a railway to pass through the borough which he had the honour to represent, and they had contrived to introduce a clause leaving it optional to them whether they should complete the railway or not. The consequences were, that parties who had received notice that the railway would pass through their property were completely tied up from disposing of their land in any way (Cries of "Hear, hear")—and the Company had the sole power of determining whether the property should be required at any time for the purpose of the railways. (Hear, bear.) He did think that Parliament should take every precaution for having their works vigilantly and vigorously carried into effect.

Mr. O'CONNELL said, it seemed to him that the regulation, as it stood at present, was, like many others, highly favourable to the rich and to great capitalists, and that it went to increase the influence of those who were already possessed of enormous wealth, while it acted injuriously as regarded the smaller capitalist.

Lord HOWICK thought it was the interest of small proprietors that a check should be put upon those who entered into deceptive schemes, by insisting rigidly on the rule as it now existed. He was persuaded that all gentlemen connected with landed property would do well to pause before they countenanced the resolution of the Honourable Member.

The ATTORNEY GENERAL said, the modification which he (the Attorney General) wished for was, that they should require a deposit of 10 per cent. not before the Bill was introduced into the House, but before the works were begun. In that case they would be sure to have a *bona fide* undertaking that would sufficiently protect the landed interest, and which would not at the same time discourage those useful works.

Mr. FRESHFIELD could not see the benefit of changing the present law. It could only tend to encourage dealing in shares to the injury of the public.

Mr. W. O. STANLEY expressed his approval of the motion.

Mr. H. HINDE, in reply, said he felt the sense of the House was against him, but he was desirous of recording his vote, because that, at another time, when the number of railway labourers thrown out of employment would be considerable, the House would be glad to rescind this order.

Strangers were then ordered to withdraw, and the House divided, when there appeared—

For the motion 15
Against it 144
Majority against the motion —129

The following are the terms in which the motion is noticed in the official records of the House:—

"Railways,—Standing Order (page 19, No. 32) read, as follows:—'That all subscription contracts shall contain the Christian and surnames, description, and place of abode of every subscriber, his signature to the amount of his subscription, with the amount which he has paid up; and the name of the party witnessing such signature, and the date of the same respectively; and that it be proved to the satisfaction of the Committee on Petitions, that a sum equal to one-tenth part of the amount subscribed has been deposited with the Court of Exchequer in England, if the work is intended to be done in England, or with the Court of Exchequer either in England or Scotland if such work is intended to be done in Scotland, and with the Court of Chancery in Ireland if such work is intended to be done in Ireland; and that not less than three-fourths in number of the subscribers shall have paid up their shares of such deposit.'

"Motion made, and question proposed,—'That the said Standing Order be amended, by leaving out the words "one-tenth," and inserting the words "one-twentieth," instead thereof:'—(*Mr. Hodgson Hinde:*)—Question put, 'That the words "one-tenth" stand part of the said Standing Order:'—The House *divided:* Ayes 144, Noes 15."

We subjoin a list of the minority. It will be seen that most of them are interested in the proposed lines to Ireland and Scotland:—

William Bagge, Edward George Barnard, Sir John Campbell, (Edinbro'), J. Dennistoun, Edward Ellice, (St. Andrew's), Earl of Euston, William Fielden, (Blackburn), Colonel Ferguson, (Dysart), Richard Hodgson, (Berwick), Robert Ingham, Daniel O'Connell, (Dublin City), James Power, (Wexford Co.), Thomas N. Redington, Hon. W. O. Stanley, (Anglesey), Dr. Stock. Tellers for the Noes, Mr. Hodgson Hinde and Mr. John Jervis.

TO CORRESPONDENTS.

A Welshman.—*The proceedings at the meeting have more of local than general interest. We cannot possibly find room for them at present.*

Alpha, and Cousin to Common Sense, *are referred to our last number, where they will find a list of subjects that are interdicted* for the present.

G. N. E. R.—*The proposal is not at all practicable; it would lead to endless frauds.*

A Constant Reader, (*High Wycombe.*)—*It is hoped that the remainder of the sum required can be borrowed, so as to obviate the necessity of making any further call. This, of course, would be disadvantageous to the proprietors.*

Manchester and Birmingham Railway.—Candidus *cannot expect that at this busy season we should insert to day his long letter, which came to hand only yesterday. We will, however, endeavour to make room for it next week. We greatly doubt whether the flippancy which he displays will do any good to his cause, but that is his business, not our's.*

Mr. W. T. Rathbone, Mr. Edward Cropper, Mr. David Hodgson, and Mr. Richard Harrison, *are the four Directors of the Eastern Counties' Railway Company who are accused of charging that Company six guineas for every trip from Liverpool to London and back, although they travel the whole or greater part of the way* FREE.

Eastern Counties' Company. *The Directors who go out of office at the next General Meeting, but are re-eligible (however un-eligible), are Mr. Bosanquet ("Pooh! Pooh!"), Mr. Butler, Mr. Hood, Mr. Wells, and Mr. Wyllie—all Londoners or Essex men—not a Liverpooler amongst them.*

*** We publish to-day an extra sheet of the *Railway Times*, in order that we may lay before the public, at the earliest possible period, the *whole* of the "Report of the Officers of the Railway Department of the Board of Trade," of which portions only have appeared in the daily papers. Such is the pressure of other matter, that we had no alternative but to adopt this course, or to abridge the very important document referred to—a step which we are sure there is not one of our readers that would not have regretted.

THE RAILWAY TIMES.

SATURDAY, FEBRUARY 6, 1841.

We lay before our readers to-day a very important document—the most important, perhaps, to Railway Companies that has ever been put forth—we mean the "Report of the Officers of the Railway Department to the Right Honourable the President of the Board of Trade," which was laid before the House of Commons on Wednesday last. The interest attached to this document arises not merely from the momentous matters of which it treats, but from the fact that the suggestions and recommendations which it embodies will, in all probability, form the groundwork of the new legislative measure "for the better regulation of railways," which Mr. Labouchere has obtained leave to introduce. Most honourably have the officers referred to acquitted themselves of their difficult and very delicate task. From some few of their arguments and inferences we are compelled to dissent, but upon the whole, their recommendations are exceedingly judicious; and above all the tone and spirit in which they are offered deserve the highest commendation. While the grand object for which this department of the Board of Trade was called into existence, namely, the safety and convenience of the public, is never lost sight of in the Report, there is no unnecessary fault-finding with Railway Managements,—no going out of the way to discover a pretext for external interference in the conduct of the Companies' business; on the contrary, praise is freely bestowed where it is justly due, and if the inferences which are drawn from the facts brought forward are not always conclusive, there can be no question that the facts themselves are fairly stated, and the inferences unstrained. Sincerely do we congratulate the Companies that they have fallen into such hands.

The main object of the Report has, as may be anticipated, reference to the late melancholy accidents. Should any one be of opinion that *no* legislative interference is required, let him just glance at the table of accidents contained in the Report, and he will see that from the 7th of August last to the 20th of January in the present year—*an interval of less than six months*—no fewer than *twenty-eight* individuals have lost their lives through railway casualties, and at least *one hundred and fifty* been seriously injured, exclusive of "the numerous cases of accidents which have occurred to servants of the Companies under circumstances not involving danger to the passengers or public, and also of accidents which are attributable to carelessness or misconduct on the part of the person injured." We confess that this melancholy aggregate of particulars somewhat startled us, but the facts unfortunately are not to be disputed. We care not from what cause so fearful a result may have arisen—whether from "defective arrangements" or "misconduct of servants," or from any other source; but we must say, that for the Legislature or the Government to stand aloof, without at least making an attempt to prevent the recurrence of calamities so deplorable, would be gross and shameful dereliction of duty. While Mr. PORTER and his colleagues are not backward in condemning the negligence which led to some of these sad results, they do justice to the system, when they state that "the inherent danger of railway travelling is very small, and even under the present system, less than that of other modes of conveyance."

The Managers of the Eastern Counties' and London and South-Western lines are most censured of any, and assuredly not without cause. In justice, however, to the latter Company it is added, that since the fatal accident upon their line, which must be fresh in the memory of our readers, the Directors have "adopted a very improved system of regulations, which embody most of the recommendations suggested by the Board of Trade." It does not appear that the Eastern Counties' Board have been so tractable; indeed, we much doubt whether they do not hold high rank in the small minority adverted to in a subsequent part of the Report, who have *not* "evinced great readiness in adopting the recommendations of the Government inspectors," and have shewn *no* "desire to introduce improvements, and prevent the recurrence of accidents." As respects the details of these and the other accidents, and their probable causes, we refer to the Report itself, which contains the results of the investigations instituted by the Government inspectors—whose views, by the way, present a remarkable coincidence with those which have been put forth in this journal, as the various occurrences transpired.

The Report puts the principle of Government interposition in the proper light when it deprecates every attempt to interfere in questions which are of an experimental nature, or still undecided, but would enforce "the observance of all precautions and regulations which are approved by experience, and obviously conducive to the public safety." Hence we have none of the nostrums recommended which have been paraded in every possible way during the last two months; nay, nothing is said of various plans of reform of a less questionable character. The authors of the Report appear to have resolved that no suggestion should emanate from them as to the practical working of a railway, which might not commend itself at once to the judgment of every sensible man. The principal recommendations under this head are, accordingly, a more complete system of signals—a better code of regulations as to the timing of trains—improvements in the carriages—a stricter discipline among the Companies' servants—and the licensing of engine-drivers.

As regards *signals*, the suggestions of the Report are few and simple, the most important being that "every station should have a fixed signal-post, and revolving lamp, and a signal man who has no distracting duties to perform." In commenting upon the York and North Midland accident, we urged the necessity of adopting this arrangement, and on referring to the abstract of Sir FREDERIC SMITH'S Report upon the occurrence, we are happy to find that that able officer strongly advocates the same measure of precaution.

With respect to *the timing of trains*, the Report enters more into details—the point most worthy of notice in this cursory review being, that the chief clerk at each station shall note the time of arrival and departure of each train, and *be responsible* for allowing any train to depart before the proper time. Of course the driver would be responsible for too early or too late an arrival at any particular point, a premature arrival being just as dangerous as one that is improperly delayed.

The chief *improvements in carriages* recommended, are the application of buffer springs to *every* carriage, and breaks to most of them. We understand that the Directors of the London and Birmingham Company have anticipated this as well as other recommendations contained in the Report.

As to greater strictness of *discipline*, there is, confessedly, much room for improvement. The Report complains of the apparent unwillingness of some Companies to carry into effect the provisions of Lord Seymour's Act. *We* have repeatedly made the same complaint, and done our best to effect a reform, and we are happy to say not without considerable success.

The principal recommendation, however, is *the licensing of engine-drivers*, a course of proceeding to which there can be no reasonable objection, especially if the preliminary examination be conducted in the sensible and practical form pointed out in the Report. The standard of qualification is not fixed too high, the principal requisites being sobriety, steadiness, attention to orders, and general good conduct. It would manifestly be premature to enter into the discussion of details, but we cannot help expressing our total dissent from the recommendation in the Report, "that all candidates for licences should be brought forward by Railway Companies." We see no necessity at all for any limitation of this kind. Let any person be examined who chooses, and

Digitized by Google

if fully qualified receive a licence; it will then be for the Companies to employ him or not, as they may think fit. This system of licensing would tend not only to make the men more careful—and it is a noticeable fact, that of 35 accidents, 18 are stated in the Report to be "clearly attributable to the misconduct of servants as the primary cause"—but would effectually defeat the plans of those who on being dismissed by one Company for negligence or incompetency, easily contrive under the present arrangements to find employment upon some other line. This punishment of the bad, and the system of encouraging of the good, noticed in the Report with commendation as existing upon some of the principal lines, would speedily elevate the character and condition of this useful, and, all things considered, very meritorious and well-conducted body of men—particularly now that there is greater room for choice afforded to the Companies than there was at first.

Upon the other parts of the Report, we cannot at present enter fully. The deficiencies of the Act of last session are clearly pointed out. It certainly is very absurd that while the inspection of railways previous to their opening is entrusted to the Board of Trade, the Act supplies no means of enforcing the views of the inspectors; in fact it is plainly stated, that "a line may be opened in defiance of the representations of the government and its inspector." The Report suggests a remedy for this oversight, as also the means of supplying certain deficiencies in the returns, which, under Lord Seymour's Act, the Board of Trade are empowered to call for. There can be no doubt, that were the recommendation of the Report in this last respect carried out, much invaluable statistical information would speedily be collected. This however is not brought very prominently forward, nor are various other topics which readily suggest themselves as closely connected with this department of the functions of the Board.

The only *essential* point upon which we differ from the authors of the Report is, as to the propriety of committing *large* discretionary powers to the Board of Trade, or to any other Board. It is quite true, as is argued in the Report, that any extent of supervision, necessarily implies confidence in those to whom it is intrusted, and for our own parts we are not disposed to withhold it unreasonably from "public officers who (to use the language of the Report) have no conceivable motive for abusing their powers;" but at the same time we are exceedingly jealous of an undefined jurisdiction in a matter where its exercise might be so prejudicial as in railway arrangements. It may be very necessary to legislate for particular cases, and little practical mischief might arise with the limitations recommended—namely, that "no order or regulation should be issued by the Board without a minute, stating the reasons for its adoption, the production of which might be at any time called for by Parliament;" yet still we would have all the Companies served as far as possible alike, and at any rate there should be a limit beyond which discretionary authority should in no case extend, unless there were an easy and effectual appeal to some other tribunal. It may, as the Report contends, fetter the action of a supervising authority to withhold this general power, but certainly not so much so (as is alleged in the Report) "as to render it practically of little use." Even if it were so, it would be better to choose the alternative. It is quite enough to legislate for the evils that have already occurred, or that can be foreseen, without troubling ourselves about every possible contingency, and stretching a point to guard against it. Our laws are not unchangeable. If in the next or any succeeding session the new Act which is now in contemplation, should prove as defective as Lord Seymour's Act of last year, let it be amended; but do not attempt too much at once. Sufficient for the day, in this respect at least, is the evil thereof. We shall certainly oppose every attempt to institute a despotic and indefinite control over any Railway Company, however much confidence we may have in the parties to whom the carrying of it out is to be entrusted. It is bad in principle, and cannot, therefore, be good in practice.

On Thursday Mr. LABOUCHERE brought forward a Bill founded on the Report, and after some conversation (for opposition there was none) it was read a first time, and the second reading fixed for Friday next. We recommend to careful consideration the particulars of the Thursday night's proceedings, which will be found elsewhere. The tone of the speakers on both sides of the House was calm and moderate, and good cannot fail to arise from the view which was taken by all parties as to the safety of railway travelling. The speech of Lord STANLEY in particular, was characterised by great good sense. The terms in which his lordship referred to a recent delay to which he himself was subjected on the South-Western line, and the allowance which he claimed for defects inseparable from the novelty of the improved mode of transit, are worthy of his high reputation, and contrast amusingly enough with the ridiculous fury of Colonel SIBTHORP, for the particulars of whose characteristic exhibition we refer to the report. How would Railway Companies fare should a SIBTHORP, by some strange freak of folly or faction, become President of the Board of Trade?

The only thing which appears to us to be objectionable in Mr. LABOUCHERE'S opening statement, is the proposition above referred to, of taking large discretionary powers. Upon this point, however, we shall be prepared to speak more fully when we have had an opportunity of carefully considering the clauses of the Bill. In the mean time, we advise the Companies to be on the alert, so as to be prepared at a moment's notice, should occasion require, to lay their objections and remonstrances before the House.

IN our advertising columns will be found the Report of the Committee appointed by the late meeting of the county of Norfolk, to consider of "the best means of procuring, with the least possible delay," the benefits of a communication by railway between that large and important county and the metropolis. It will be found to agree in all material respects with the anticipatory version given of it in the letter of a Norwich correspondent, which we published two weeks ago. The Committee mention the plans which had been personally submitted to them by Mr. RASTRICK and Mr. BRAITHWAITE—the former for a line (the EAST ANGLIAN) from Bishop's Stortford by Cambridge and Newmarket to Yarmouth, and by the latter, for a line in extension of the Eastern Counties', from Kelvedon to Bury St. Edmund's; and then state that there had been also laid before them a Report by Mr. ROBERT STEPHENSON, on a line from Norwich to Yarmouth (different, we understand, from any yet suggested); and another from Mr. GIBBS, on a line which he proposes should branch off from his Great Northern line to York, at Long Stanton, and proceed by Ely and Brandon to Norwich and Yarmouth. The Committee decline giving any opinion on "the accuracy of the estimates either of cost of construction or probable amount of traffic submitted to them," but state that a majority of them (11 to 2, we are informed) had come to the following resolutions:—

"First, That as far as your Committee are able to form an opinion from the different plans and informations connected therewith that have been laid before them, they are of opinion that a line by Cambridge *to join the Northern and Eastern, would offer the greatest advantages to the county of Norfolk.*

"Second, *That the Committee do strongly recommend the county not to support any Company which will not undertake to carry out the whole line from Bishop's Stortford to Yarmouth.*"

The point of view in which this Report strikes us as first of all deserving of attention, is the authentic evidence which it furnishes of the intention of the parties who have at present the Direction of the affairs of the Eastern Counties' Railway, *not* to carry that line further than Colchester—*perhaps Kelvedon*. Of the existence of some such intention no one has for a long time had any doubt, but hitherto the Directors have been exceedingly careful to avoid any open avowal of the fact. Indeed, in one of their recent half-yearly Reports they were pleased "to contradict in the most distinct manner the assertions which have been made of any *resolution* having ever been passed or *determination* having been entered into by the Board to stop finally at Colchester or any other particular part"—wishing it to be believed that because they had not come to any formal resolution or determination to that effect (of which they had never been accused) that they were therefore innocent of any serious purpose of stopping short if they could, though at no time could they pluck up hardihood enough to deny such purpose in direct and unequivocal terms. But behold at length intention, resolution, determination and all proclaimed in the face of the world! The Report states that "Mr. BRAITHWAITE, the *Engineer of the Eastern Counties' Company, attended on their behalf*, to produce a plan of the line "from Kelvedon to Bury St. Edmund's"—that it had been "surveyed by Mr. BRAITHWAITE *under the directions of the Eastern Counties' Company*"—and that the plan had been introduced to the notice of the Committee by "a communication from Mr. BOSANQUET, the Chairman of *the Eastern Counties' Company*." Now, the plan of diverging from Kelvedon towards Bury St. Edmund's *on the left*, which is thus publicly put forward and promoted by the Eastern Counties' Company, implies *of necessity*, the abandonment of the line *on the right* towards Ipswich, and must equally of necessity rest all its hopes of success (if it have any) upon the abandonment of the latter.

The reader will, however, be pleased to understand by the term *Company*, wherever it is used in what we have just cited or said, a certain clique of *Directors*, who have for the present the management of that Company's affairs in their hands; for confessedly the Eastern Counties' *Company*—meaning, thereby, the shareholders at large of whom the Company consists—have never hitherto expressed, nor been called upon at any general meeting of their body to express, any opinion on the ques-

Digitized by Google

tion of stopping short at Colchester, Kelvedon, or any where else—have never sanctioned any deviation of their railway from the original Parliamentary line—and never did authorise any one "to attend on their behalf," before the Norfolk County Committee, to advocate either one thing or another. All that has been done in these respects, has been the work of the Directors alone—done at their own risk, and on their own responsibility; not, be it observed, in the exercise of any discretionary power with which they are clothed as such, but, on the contrary, in open violation of all the duties and obligations imposed on them by the Company's Act; for as Directors *under the Act*, they can exist but to carry into effect its objects and provisions; and as it is an Act to make a railway from London to Norwich and Yarmouth, by way of *Colchester and Ipswich*, they cannot possibly derive any authority under it to promote a line in the very opposite direction of *Sudbury and Bury-St.-Edmunds*. No doubt the Directors reckon on obtaining a vote of approval of all they have done from a majority of their constituents, and possibly "not without their host;" but in the meanwhile, it it undeniable that they have been availing themselves of their position and opportunies, as Directors under a particular Act, *to defeat that very Act*. Now that is such an abuse of administrative power, as no administrative body whatever ought to be suffered to commit with impunity.

When the Directors of the Eastern Counties' Railway decided, *for themselves*, on not going on with the line beyond Colchester or Kelvedon, they should have called the shareholders together, and ascertained, by some substantive question put to them, what was *their* opinion on the matter; and we cannot help thinking that such is the line of conduct which any body of men, actuated by pure motives and honourable purposes, would have pursued. But for the Directors to assume, as a matter of course, that their constituents would be of the same mind as themselves on the point, and to act on that assumption to so ruinous an extent, and so recklessly of all consequences, as they have done, is, to our minds, something very intolerable.

The Directors may have good grounds for believing that the bulk of the Lancashire proprietors, who hold, it is said, more than three-fourths of all this Company's stock, concur with them in thinking that the line should be stopped at Colchester or Kelvedon, but they cannot tell what influence the reasonings of shareholders resident in other parts, and taking a different view of the matter, might have in changing the opinions of the Lancashire proprietary, and they have no right to take it for granted that the result of a frank comparison of notes on the subject, must needs be as they desire it should. As truth is said to be omnipotent, so may we suppose it to be of might enough to prevail, even against the prejudices of the most prejudiced body of proprietors that ever existed. We admire much the intelligence and enterprise of our Lancashire friends, but we trust we may venture, without offence, to hint that one good London reason is worth a whole pocketful of Liverpool proxies. Nay, it would be doing great injustice to the Lancashire shareholders, in the Eastern Counties' Railway, were we to regard them as less open to be swayed by good reasons than other people. What we complain of is that their proxies only have been reckoned in this matter—not their judgments. The Directors, whom they have, by their votes, lifted into power have ever since made so light of them as to give them no opportunity of judging for themselves. Not only have they decided *for the Company* the point of stopping short at Colchester, but they have taken care by allowing the powers of taking compulsory possession of land beyond that place to expire, to make it impossible for the Company to go further even if they saw fit, without the help of a new Act of Parliament. That a body of Railway Directors should take a step of such vast and vital consequence as this—amounting as it does to the docking off of about two-thirds of an entire line—without the previous sanction of a deliberate vote of their constituents, specially called together for the purpose, is something new in railway history; and we trust for the honour and welfare of the railway body, that it will long remain the only disgraceful instance of the kind.

But to return to the Report of the Norfolk Committee,—let us see what the *Directors*, pretending to act for the *Company*, had to say in favour of their new line of extension from Kelvedon by Sudbury to Bury St. Edmund's. Had they made any survey of it, so as to be able to say, within economical engineering limits, that it was a practicable line? "A survey was in progress, but *not yet completed*." What did they think the cost of it would be? "About 600,000*l*."—though whether it would cost 500,000*l*. or 1,200,000*l*. they could not of course tell till their survey *was* completed. Had they formed any estimate of the traffic that might be expected on such a line? No; there was no "statement of the probable traffic" ready to produce. Had any Company been formed to take it up? No; but it would "be taken up by an influential portion" of the Eastern Counties' Company. How were the people of Norfolk to be sure of that? The people of Norfolk had Mr. BRAITHWAITE'S word for it, in the same way as not many years ago they had that gentleman's word for the fact that it was the unalterable intention of the same influential parties to carry out the line to Yarmouth *in quite a different direction*. Every inquiry made, in short, served to convince the Committee that there was no truth or sincerity in the scheme—that it was but an empty demonstration hastily got up in the eleventh hour, for the purpose of diverting the people of Norfolk from prosecuting an indicated intention of seeking a railway communication by Cambridge with the metropolis, instead of that by Ipswich, of which they had been so shamefully disappointed—that it had for its sole object to compel the traffic of Norfolk still to pass through the Colchester or Kelvedon tollgate of the Eastern Counties' jobbers, leaving all residing beyond either point to shift for themselves in respect of railway transit thither, as they best might—and that on all these accounts it was deserving of no regard whatever. The Committee have in this but done as we ventured to anticipate they would.

The plan for executing the part between Yarmouth and Norwich only, brought forward under the respectable auspices of Mr. ROBERT STEPHENSON, has every appearance of being projected in perfect good faith; but it is open to this manifest objection, that it would be but playing, at the other end of the line, the same sort of game which has been played at this—only in an honest and straightforward manner. After the London and Colchester and the Yarmouth and Norwich portions—the two best pieces of the whole line—had been thus appropriated by independent Companies, how could any third Company be ever expected to take up the comparatively barren country between?

The Committee had therefore but to choose between the two remaining plans laid before them—that of Mr. RASTRICK and that of Mr. GIBBS, both of which equally propose to accomplish a complete line of railway communication between the metropolis and Yarmouth. And in preferring the former, we think they have done wisely—since it touches, or approximates, to a greater number of important places than the other, and is, to all appearance, in a state of much greater maturity and forwardness.

But, now that you have made your choice of a line, ask the Eastern Counties' Directors tauntingly, "Who will make it? The capitalists? On what grounds? Not for amusement, certainly; nor because Suffolk and Norfolk may utter the deepest groans at suffering the deprivation of the railway system. These reasons will operate as nothing on capitalists, be they resident in London, in Liverpool, or in Norwich. A complete Railway from London to Norwich and Yarmouth will be made only when capitalists can see, with reasonable certainty, that a traffic exists, and will come on the line they may make, sufficient to produce a proper return on the capital to be invested."* All this is so true, that the vulgar insolence of tone in which it is couched does not prevent one from subscribing to it implicitly. The East Anglian line will assuredly never be made, unless it can be shown that the traffic likely to come upon it, will yield a remunerative return upon the capital required for its execution. Nay, until this is clearly made out to the satisfaction of Parliament, which is as watchful over the interests of capitalists as landowners, there will not even be an Act for it obtained. But on the other hand, if a good traffic case can be made out in favour of it—of which it seems to us idle to doubt—then, as assuredly will the money for it be forthcoming, whether the capitalists of Liverpool choose to lend a helping hand or no.

Besides, if the sufficiency of the traffic on the East Anglian line with its four principal points of Cambridge, Newmarket, Norwich, and Yarmouth, is to be questioned, what shall be said to that of the Kelvedon and Bury St. Edmunds, with the prodigiously important intermediate towns of Coggeshall, Halstead, and Lavenham? The Eastern Counties' people say that their old line by Ipswich and Eye, would not pay; yet that line would go to the doors of ten times the number of persons that could be benefitted by the Kelvedon and Bury. Of course the latter can be but ten times worse than the former; yet it is this ten times worse line which they now present for public approbation and support, and gravely tell us will be "taken up by an influential portion" of their body! We may, we think, with great propriety reply to them nearly in their own words, "Who will make it? Capitalists only. And on what grounds? Not, be assured, for your amusement merely, nor because of the deepest groans you may utter at the prospect of being deprived by the success of the East Anglian line, of all that traffic, which you reckoned so surely must flow through your Colchester tollgate? Such reasons will operate as nothing on capitalists be they resident in London or Liverpool, or in Norwich, or anywhere else they may. Laugh

at you, but help you never. Groan on, they will say, 'you have but fallen into a trap of your own setting, and must get out of it as you best can.'"

THE Report of the Grand Junction Railway Directors, which we elsewhere publish to-day, is, on the whole, very gratifying. The reduction in the expenses of working the line, the absence of accidents, and the satisfaction of the Post-office authorities with the arrangements of the Company, contrasting very strikingly with the *dis*satisfaction previously expressed in the same quarter—all these, are subjects for congratulation. We doubt, however, whether the apology for the recent raising of fares, will be thought by the public to be such as ought to content them. We are told that these additions have been deemed expedient "in consequence of the subtraction by other lines of part of the traffic on which the calculations of income, originally submitted to Parliament, were founded." Far be it from us to advocate any scale of fares that will not furnish to a Railway Company a reasonable remuneration, or to find fault with the charges of the Grand Junction Company, when compared with those of others, but we may be allowed strongly to question "the expediency" of increasing these charges at a time when, as the Chairman admits, the proprietors are receiving at the rate of 14 per cent. per annum on their capital, and when the Directors are taking every means in their power (and in the case of the Chester line, with success) to extend the Company's influence—an influence which, however beneficially exerted, is still open to the imputation of monopoly. Moreover, it does not appear very clear to us, how it should be "expedient" to raise the passenger fares, and at the same time to diminish (as in the preceding paragraph of their Report, the Directors boast they have done) the charges for goods. It seems to us that the "other lines in connection with this railway," are just as likely to subtract part of the goods' traffic as of the passenger traffic, and yet instead of being told of the expediency of increasing the charges for the former, the Directors assure us that "a farther reduction in the rates of carriage for goods has been made since the last general meeting, the result of which has been an increase in the quantity, as well as in the money receipt from this traffic;" and again that "in deciding on the successive reductions which have taken place as the Company's means of accommodation increased, they (the Directors) have been guided by a conviction that the prosperity of the undertaking would be promoted by the increase of traffic created by such inducements!" It is added that "the result, they have reason to think, has fully justified their calculations." Either, therefore, there must be some reason for the reduction in the one case which is not applicable in the other, or the Directors have acted with a short-sightedness which is not their usual characteristic. A reason *has* been assigned for the reduction of charges in the goods' department, which those who have read the letters of Messrs. Pickford, that have recently appeared in our columns, will be at no loss to conjecture, but at present we shall not enter into this question. Taking, however, the statement, as it is given in the Report, does not the apology made for the raising of the fares supply a very cogent argument against the encouragement of competing lines? Let us have competition, it is said, and railway prices, like the prices of every other commodity under similar circumstances, will fall. Has it ever been so yet? Let the Midland Counties' and Birmingham and Derby Companies supply the answer, or the Directors of the Grand Junction Company, in the paragraph above referred to. And yet these very Directors are now foremost in backing up a mischievous scheme, the very essence of which is direct and ruinous rivalry to established lines! While on this point, we would just call the attention of the intending subscribers to the Stafford and Rugby project, to the replies of the Chairman and Treasurer of the Grand Junction Company when questioned by Mr. HEYWORTH on the subject of a certain notable "arrangement." Mr. CHORLEY replied, that they (the Grand Junction Railway Company) had already entered into an arrangement with the Company named [the Extension], but that arrangement *was of a beneficial character*,"—of course to the Grand Junction Company. "The Chairman replied that the arrangement entered into was such *as could only benefit their* [*the Grand Junction Railway*] *Company*, IN CASE OF THE APPLICATION OF THE EXTENSION COMPANY BEING CARRIED. * * The arrangement entered into had been universally carried at the Board." We always had too high an opinion of the diplomatic tact of the Grand Junction Directors to believe that *they* had not made a good bargain; and we strongly suspect that the "benefit" will be found all on one side. Is this the reason of the mysterious silence which is still kept in regard to the *terms* of this far-famed "arrangement?" By the way, it would appear as if the Grand Junction Chairman had some *doubts* as to the carrying of the Extension Bill after all. Mr. JOHN MOSS is not nearly so positive on this point as Mr. EDWARD TOOTAL; we leave to our readers to say which of the two is the more likely to form a correct judgment, and to give the public the benefit of it.

We have not left ourselves space to touch on one or two other points which claim our notice. These we may refer to hereafter. In the mean time, we cannot see any cause why the Directors should take upon themselves to make the Company contributors to Provident Societies, Dispensaries, and Ladies' Orphan Schools, without the sanction of the proprietors. If they wished to establish a charitable fund with the donation so handsomely supplied by Queen Adelaide, why not limit its purposes to their own servants. It is an old saying, but not the less true on that account, that charity should look first at home. If the Company's servants are already fully cared for in regard to periods of sickness and old age, why not appropriate "the fines" to the establishment of a library, or other means of instruction and recreation combined.* Some such course has been adopted—and, we hear, with good effect—upon one of the shorter metropolitan lines. At any rate, we object to the expenditure of Railway Companies' funds upon objects which do not tend, directly or indirectly, to the prosperity of their several lines. This scheme of contributing the money of a joint-stock Company to general purposes of charity, may originate in a better motive than ostentation, but assuredly it will be ascribed to that, or some equally unworthy feeling, by nine-tenths of the public.

* It would seem, from the following sentence in the "Report of the Officers of the Railway Department" (received since the above was in type), that something of the kind is already in existence on this line, but we know not to what extent:—"* * the system introduced on the London and Birmingham, Great Western, North Midland, *Grand Junction*, and other principal railways, of giving premiums for good conduct, and taking measures for promoting *the mental improvement and physical comforts* of engine-drivers."

THE Directors of the London and Greenwich Company are not open to the charge which we had occasion to notice in another instance a few weeks ago, of keeping back the names of those of their body who retire from office in pursuance of the Act of Parliament—a charge in which too many Railway Boards are, we regret to say, implicated.* The Greenwich Directors have not only published the names of the three gentlemen upon whom the lot has fallen, but in announcing the intention of two of them to offer themselves for re-election, give also the name of a candidate who will be proposed, under their auspices we presume, to fill the seat vacant by the retirement of the third. This is a very proper course of proceeding, for it gives the proprietors full time to canvass the qualifications of the gentleman thus offered for their suffrages. What the result of such an investigation will be, is not in the slightest degree doubtful. An individual more eligible in every respect than Mr. BONAR, it would be difficult to select from the Greenwich register, and the Directors have shown much good sense and discretion in bringing his pretensions before their fellow proprietors. We trust that their example in giving timely notice of their intentions, will be followed in other Companies, as why should it not, if the true interests of their several undertakings are studied by Boards of Management, and not the filling up of vacant seats by favouritism or friendship, apart from substantial merit, or from a wish to find convenient tools in the creatures of their nomination? To take a meeting by surprise in proposing candidates for office, is a pretty clear proof that the qualifications of the parties are not such as will stand the test of rigid examination and cool reflection. It is an excellent regulation which obtains in some Companies, that no candidate shall be eligible without due notice, the only matter of regret being that such previous intimation does not always embrace the proprietors at large, but is confined to the Managing body. The rule had its origin, no doubt, in a desire on the part of Railway Boards to guard themselves against a sudden surprise, but it is no less necessary and desirable that the proprietors should be similarly protected. A Director's nominee, unexpectedly thrust upon a meeting, may be chosen without due consideration of his fitness, and so likewise may a *popular* candidate (if we may use an election term) be hoisted into office in the excitement of the moment, and under the provocatives to opposition which Railway Boards but too plentifully supply. The remedy for this unreflecting, and sometimes most dangerous, exercise of the right of choice, is to be found in the previous publication of the names of each aspirant to official dignity, and in that alone.

We should not have thought it necessary to advert further to the approaching election in the Greenwich Company, were it not rumoured that it is the intention of a small party, distinguished for little beyond empty professions of zeal for the welfare of the undertaking, and inveterate hostility to the existing Management,

* The advertisement which appears in our present number convening the February meeting of the Great Western Railway Company merely states that it is to be held "for the election of SIX Directors in the place of the same number who will retire by ballot." It is added that "the Directors retiring by ballot are re-eligible under the provisions of the Act," but nothing is said as to whether all or any of them intend to offer themselves again. If, as the wording of the notice ("*will* retire") may possibly imply, the ballot has not yet been taken, the non publication of the names is of course accounted for, but otherwise we think the Board much to blame for withholding them. The advertisement is dated January 5, just a month ago, and probably the ballot was not *then* decided, but surely the matter is or ought to be settled by this time.

to bring forward candidates of their own, whose sole aim, were they elected, would be to thwart the views of their colleagues, but whose other "qualifications" for office, if they even extend to the legal requirement of holding a certain number of shares, have yet to be disclosed. We need not inform our readers that we are far from regarding the present Greenwich Board as perfect (as where indeed is the Board that is?) but all and each of the members of the existing Direction are infinitely to be preferred to the persons whose names have been whispered about as likely to be brought forward by a clique of disappointed brawlers. Assuredly no two members of the Board could have offered themselves for re-election with better founded claims than Mr. CHILDERS and Mr. CORNEY, the gentlemen who have been ballotted out. They are, both of them, most efficient in their office, and of considerable influence in their several spheres.

It is not necessary to enter into this matter further, nor should we have said so much save to put the proprietors upon their guard. Let as many as possible of them attend the meeting on Tuesday next, and not rest satisfied with merely defeating the machinations of the schemers, but show, by an overwhelming majority, (should the question be put to a vote) the opinion they entertain of the motives and objects of the would-be Managers. Let them take care, too, that the time of the meeting is not wasted in petty squabbling from which no possible good can accrue either to themselves or their property. We need not remind them that a general meeting *ought to be* noted for something beyond mere personal attack and vindication. They should beware of not being diverted from the *real business* of the day—namely, the investigation of the state and prospects of the railway, by any irrelevant discussion from whatever quarter it may arise.

THE affairs of the York and North Midland Railway Company, as disclosed in the Report of the Directors and the proceedings at the Half-yearly General Meeting of the proprietors, which we notice in another column, appear to be in a very flourishing condition. A dividend at the rate of 7 per cent. per annum has just been declared, leaving a surplus considerably larger than remained after paying the previous dividend, and this although the capabilities of the line cannot be developed to nearly their full extent until the Great North of England and Manchester and Leeds Railways are brought into complete operation. The success of this line is the more gratifying from the fact that at one period, and that not a distant one, its stock stood very low in public estimation—another proof, if farther proof were required, that the market price of shares in an uncompleted line, is no sound test of the intrinsic merits of the undertaking. The Directors deserve great praise for the steady, straightforward course which they pursued in a season of great difficulty, and now that they have completed and brought into operation a line excellently constructed at a cost which is equalled by few and surpassed by none of the same description, they appear to be no less anxious to keep down the current expenditure, so as to secure to their constituents the full fruit of their enterprise. The addition to the Company's capital, which is now in contemplation, will not, it seems, interfere with their well-founded anticipations of a still larger dividend, since it is rendered necessary solely by the unexpected augmentation of traffic, which the opening of the line throughout has developed.

It will be seen that the question of appointing Auditors was briefly discussed at the meeting, the gentleman who brought the subject forward disclaiming all wish to insinuate anything in disparagement of the Directors or the officers under them. It was proposed to introduce a clause into the Company's Bill now before Parliament, authorising such an appointment—a course which would not have been without precedent, as we believe a clause to the same effect was inserted in a recent Act of the London and Croydon Company, at the instance of some of the leading proprietors. The suggestion was not adopted in this instance, although no valid reason for its rejection appears to have been pointed out. One gentleman argued as if the appointment of Auditors would necessarily deprive the shareholders at large of their right to inspect the Company's accounts. Why should it do so? The right of the proprietors in this respect cannot be alienated without totally changing the spirit of all Railway enactments. The appointment of Auditors is not intended forcibly to supersede personal examination by individuals, but merely to render this tedious, troublesome, and very invidious process unnecessary. Auditorship properly conducted, would give every proprietor as much confidence in the correctness of the accounts, as if he himself personally inspected them—*more* confidence perhaps, for of course it would be a far less easy task to mystify two or three persons who were in the habit of closely and regularly investigating the financial affairs of an undertaking from one week to another, than to deceive and mislead a casual, and probably unqualified, inspector. Another argument (if such a word may describe so puerile a pretence) against the appointment of Auditors was, that the accounts could "not be examined in that satisfactory manner by two or three persons coming once or twice a year, as they were now by the Directors who examined them weekly." There is no reason why the inspection by Auditors should be limited to "once or twice a year"—indeed if it were not much more frequent it would be of little use: but did not the worthy Alderman who argued thus, perceive that it is as a check upon the Directors themselves that the appointment of Auditors is contended for? The Directors, or their confidential agent, are the proper parties to audit in the first instance the accounts of the subordinate officers, to guard against malpractices on *their* part, and it is merely to give the same protection to the proprietors against Directorial mismanagement that this measure of reform is brought forward. We need not say that personal fraud need not be imputed to members of Railway Boards to justify such a proposition, for there is much—very much—besides in their financial movements that would be restrained by a salutary superintendence. Just look at the Brighton accounts which we submitted last week, and say whether any auditors worthy of the name would have sent such a statement forth, without one word of explanation, in the shameful state in which these accounts, audited no doubt by Directors, were presented to the meeting. The appeal on the score of "confidence in the Directors" which was brought to bear against the proposition at the York meeting, was unworthy of the gentlemen who made it. It is at best but like the asseverations of "respectability" made by parties who labour under a suspicion of crime—asseverations which are generally the loudest when there is least ground for them.

One thing pleases us much in connection with the Bill already referred to, namely, the intention of reducing the number of Directors. This is a very judicious measure, and will, we hope, be followed in the instance of every other line that is finished. No good purpose can be served by such a swarm of Directors as now exist, most of them moreover being merely of the *fruges consumere nati* class—men who leave the real duties of Management to others, and content themselves with sharing the reward which is due only to the small minority of *working* members.

THE motion of Mr. HODGSON HINDE for a modification of the Standing Order of the House of Commons, which requires a deposit of 10 per cent. upon railway capital, before a Bill can be introduced, was brought forward on Thursday evening, (having been postponed from Monday in consequence of "no House,") and rejected by a very large majority. We give, in another column, a sketch of the debate, from which it will be seen that the modification proposed by Mr. HINDE was the substitution of 5 per cent. for the proportion at present existing. The basis of the honourable member's argument was the fact that since the enactment of this Order, scarcely one Act for the formation of a new line has been passed, whereas immediately previous, dozens of Bills became law, session after session. The inference of Mr. HINDE was, that the paucity of new bills must have been the effect of the impediments presented by the obnoxious Order. It has, however, been no such thing. The real causes of the lack of new Bills lie much deeper. They are to be found in the return of the public to sounder and more sober views after the heat of the railway fever, and to some extent, probably, in the unnatural depression which ever follows unnatural excitement—in the disappointment of the thousands who were foolish enough to look for an *el Dorado* in every speculation of the kind,—in the caution, the over-caution perhaps, with which persons once duped by flaming representations and fraudulent pretences, look upon subsequent practitioners in the same arts,—and in various other combinations of circumstances, which the experience of the last few years has brought out. Let Mr. HINDE, if he can, name a single project of intrinsic merit which has been kept back by the operation of this Order. He cannot do so. The view taken by Mr. LABOUCHERE and other opponents of the motion is the true one. If a fair and reasonable remuneration be clearly made out, there can be no difficulty in obtaining 10 or even 20 per cent. deposit. Let Government, or any other responsible body *guarantee* an annual dividend of 8 or 10 per cent. from any railway, on condition that even 50 per cent. of the capital be at once paid up, and there would, we are satisfied, be very little delay in filling up the share-list. It is the experience of the Companies already in existence which has taught capitalists caution and prudence. MR. HINDE is mistaken in saying that *large* amounts of British capital have been invested in French, German, and American Railways, in consequence of the operation of this Order. He is wrong as to the *fact*, for no *large* amount—indeed scarcely any amount at all—of British capital has been embarked in these foreign speculations, and consequently his alleged *reason* falls at once to the ground.

Mr. LABOUCHERE'S observations on this subject were, on the whole, very sensible. We trust, however, that he has not been correctly reported, when he is made to express his conviction, "that the only way by which they could guard against a practical monopoly on the part of the lines already existing, would be

Digitized by Google

by lines more or less parallel, and constructed in such a manner as to offer some competition for the benefit of the public." Surely the right hon. gentleman, if he really did make such a statement, cannot have given the subject that careful and comprehensive examination which its importance demands, otherwise he would see that nothing could possibly be more ruinous to Railway Companies, and, *therefore*, as well as on other grounds, more injurious to the public than the establishing of competing lines, which in the first instance lead to an inefficient because unprofitable performance of duty, and ultimately to a monopoly more gross than that which any solitary Company could exert—the monopoly of combination.

We understand that Mr. Storey has resigned the office of Engineer-in-chief to the Great North of England Railway Company and has been succeeded by Mr. Robert Stephenson. The latter gentleman has gone over the whole of the works, and we are informed, has spoken in the highest terms of the substantial manner in which they have been constructed. We have already stated that the line is as yet open for the carriage of coal only, the Directors wisely postponing the conveyance of passengers until the embankments &c. have become fully consolidated. It is believed that the passenger traffic will commence early in the month of April. The success of the Company in the transmission of coal may be judged of, from the fact that in the first four weeks the receipts from this source alone exceeded 1,960*l*. The demand so far from diminishing, is, we learn, constantly increasing, so much so indeed, that the Company have some difficulty in keeping up an adequate supply. The pening of the line has already reduced the price of this necessary article.

—o—

The statement which appeared some time ago in our columns, that Mr. Tootal receives 1,500*l*. a year, for his services in promoting the Birmingham Extension scheme, is, we are assured on the best authority "utterly untrue." We regret much that we should have been the medium of giving publicity to an imputation on Mr. Tootal's motives for the zeal displayed by him in behalf of that scheme, so extremely unfounded. The statement was communicated to us by a gentleman of such high credit and standing in the railway circle, that we could not venture for a moment to doubt its correctness; and we feel well assured that, had not that gentleman himself been in some way or other deceived into a belief of it, he would have been the last man in the world to give it currency. While inserting this contradiction, which we do with great pleasure, we desire at the same time to apologise to Mr. Tootal for some asperities of language which, under the impression we had of the reality of the 1,500*l*. story, were perhaps natural and justifiable enough—but which, now that it has vanished into air, we very sincerely regret.

—o—

In the House of Commons on Tuesday evening, the following Members were nominated as the Committee on Petitions for Private Bills:—Mr. Strutt, Mr. Baines, Mr. Robert Clive, Captain Gordon, Mr. Rice, Mr. Villiers Stuart, Mr. Wrightson, Mr. George Cavendish, Mr. Compton, Mr. Handley, Mr. Brotherton, Mr. Robert Palmer, Mr. Bramston, Mr. Richard Walker, Mr. Henry Hope, Mr. George Phillips, Mr. Law Hodges, Mr. Bingham Baring, Mr. Bell, Mr. Gibson Craig, The O'Conor Don, Sir Charles Style, Mr. Aglionby, Sir John Yarde Buller, Mr. Crawford, Captain Jones, Mr. Thornely, Mr. Barneby, Mr. Chalmers, Mr. Tatton Egerton, Mr. Stansfield, Lord Worsley, Mr. Greene, Mr. Pease, Mr. Hope Johnson, Mr. Mildmay, Sir William Heathcote, Mr. Morgan John O'Connell, Mr. Lascelles, Mr. Packe, Mr. Emerson Tennent, and Mr. George William Wood.

The following members have been nominated as the Committee on Standing Orders: Mr. Estcourt, Sir Edward Knatchbull, Sir James Graham, Sir Montague Chapman, Mr. William Miles, Sir Thomas Freemantle, Mr. Wilson Patten, Lord Viscount Sandon, Mr. Pendarvis, Sir Robert Price, Sir George Strickland, Mr. Pringle, Sir Matthew Wood, Mr. Sandford, and Mr. Wilbraham.

—o—

We were right in our anticipations, that now an accident had occurred on the Birmingham and Gloucester Railway, greater care would be taken for the future. We learn from *Aris's Birmingham Gazette*, of Monday last, that the Directors have given peremptory orders for the removal of all the gravel heaps. It is a pity this was not done before.

—o—

The public will speedily have an opportunity of ascertaining how far the returns required from the different railway companies under Lord Seymour's Act can be rendered useful in the way of warning or example. On the motion of Lord Granville Somerset, copies have been ordered—

"Of all reports made to the Committee of Privy Council by persons appointed by them as Inspectors of Railways, under the provisions of the Act 3 and 4 Vic. c. 97."

"Of all Bye-Laws which have been disallowed or modified by the said Committee of Privy Council; together with any rules or regulations which may have been by them suggested for adoption by railroad companies."

"Of all Returns made to the Committee of Privy Council, of the aggregate traffic in passengers, in cattle, and in goods, on each railway, made up to the latest period, under the provisions of the Act 3 and 4 Vic. c. 97."

"Return of all accidents, attended with personal injury, which shall have occured on each railway, and which shall have been returned to the Committee of Privy Council under the provisions of the Act 3 and 4 Vic, c. 97, s. 3."

Subsequently a return has been ordered, which will throw some light upon a statement made by Lord Stanley, on Thursday evening—namely, that "he had been told that in one case, notwithstanding a positive report of the Commissioners, that the railway was in an unfit state to be opened, the Directors had persisted in opening it." The return is to be as follows:—

"Of every railway, or portion of a railway, which shall have been opened for the conveyance of passengers and goods after inspection by persons acting under the provisions of the Act 3 and 4 Vic. c. 97; specifying any railway, or portion of a railway, which shall have been reported to the Committee of Privy Council as unfit to be opened, but which nevertheless shall have been opened; and what (if any) proceedings shall have been adopted by the Committee of Privy Council, either before or subsequent to such opening."

—o—

Origin of the term "Stoker."—An intelligent correspondent is of opinion that the word "Stoker" is derived from the German *Stochern*, "to stir," "to poke." The word is not to be found in our usual Dictionaries.

RAILWAY OFFENCES AND OFFENDERS.

The cases of trespass this week have been somewhat numerous, but none of them deserve much notice, unless it be the following, on the Manchester and Leeds line, which we take from the *Manchester Chronicle*. The case was heard at the New Bailey, Manchester:—

"Edward Dawson, a draper, from Rochdale, was brought up under the following charge:—Mr. Fletcher, inspector of the Rochdale Railway Station, deposed that the train started immediately after ten o'clock from Rochdale to Manchester. The prisoner, being rather late, ran after the train, and succeeded in getting hold of the step, clung to it for some time, and at length, by the assistance of a third class passenger, he got in. The engineer saw him attempting to get in, and, imagining that he was under the wheels, stopped the train. The prisoner had not taken his fare. *The prisoner said he had frequently done the same thing*, and was instructed to do so by one of the Company's servants, who informed him that whenever he was late, he had only to mention the matter to him, and pay at the next station.—Mr. Fletcher said, that in this instance the prisoner informed no one of his intentions, and he put himself in so perilous a situation that it was a great wonder he was not killed.—*Mr. Maude reproved the prisoner in very strong terms for his conduct, which was calculated to bring public odium on the railway officers, and fined him in a mitigated penalty of 5s.*"

What a lame and impotent conclusion is the fine of 5s., to the strong reproof which we are told was administered by his worship the sitting magistrate of the New Bailey! The conduct of this Mr. Edward Dawson, who, we suppose, is what is called a "respectable" man, was, in his worship's opinion, "calculated to bring public odium on the railway officers," and yet he is suffered to escape with just the penalty daily inflicted upon the drunkard and the sot who bring "public odium" or public contempt upon themselves alone. It is really scandalous that magistrates will thus take upon themselves to extend a virtual impunity to railway offenders. If they did not profess so great an anxiety for the public safety and public convenience, it would not look half so bad, but when we hear of severe lectures and strong reproofs, followed by five shilling penalties, one knows not which to marvel at most, the inconsistency or the incompetency of these dispensers of *justice*. The officers of the railway department of the Board of Trade, complain of the apparent reluctance of railway Managements to carry into effect the provisions of Lord Seymour's Act. They should have carried their censures farther, and noticed the marked discouragement which police magistrates offer to these prosecutions. Where is the use of taking the trouble to proceed against a man who has risked his own life, and nearly brought a "public odium upon railway officers," when the chances are, that he will be let off with a five shilling fine? This is an evil of no trifling magnitude, and we trust that in the new bill much less will be left to the discretion of the justice Midases of the police office, than has heretofore been the case.

THE POEM OF "POOH! POOH!"

To the Editor of the Railway Times.

Sir,—Having availed myself of your invitation to the "curious" to inspect this production of Mr. Bosanquet's at your office, and having been further favoured, through the kindness of your publisher, with the loan of it for an afternoon, I have read it through very attentively, and, I must say, with feelings very different from those which seem to have inspired your sarcastic comments upon it. I

Digitized by Google

really, Sir, can see nothing in it to laugh at, or of which its highly respectable author need feel in the least ashamed. The verses are "doggrel" to be sure, but so the author tells you he *intended* they should be. Doggrel! aye, capital doggrel! Whether a loftier style might not have suited the subject better may be a question; but the author having decided for himself that the doggrel vein was preferable to any other—on account of its colloquial ease and simplicity no doubt—it were hard to deny him the merit of having succeeded in it to admiration. I know of nothing in this style comparable with the opening verses of "Pooh! Pooh!" except, indeed, it be Cowper's immortal poem of John Gilpin, of the wit, point, and raciness of which Mr. Bosanquet's verses put one constantly in mind. See with what inimitable ease the author plunges at once in *medias res*—makes his reader in a twinkling acquainted with the whole scope of the poem—the scene—the actors—the argument!

"How d'ye do, Thompson, how are you,
How is the railway, aye?"*
"Progressing well, I thank you!" "Pooh!
Pooh! It will never pay.

"There's nothing but a van or two
Upon the Eastern road;
A bubble such as this wont do,
'Twill very soon explode."

"Why all the traffic of the East,
Must surely through it flow;
And forty coaches, at the least,
Through Chelmsford daily go."

"Pooh! Pooh! I don't believe it, pooh!
The country's wholly bare."
"I beg your pardon, now were you,
Perchance then ever there?"

"No, and I don't intend to go.
Why! you must go through Aldgate,
Or some such horrid place—Dog Row"—
"No, no, by Norton Folgate.

"A terminus, by which you see,
Those parts we don't go through,
But from the West End easily"—
"Indeed I don't—Pooh! Pooh!

"Really 'tis terrible, one sees
Whichever way one turns
Nothing but people mad for these
Gambling joint-stock concerns.

"But I'll take care they sha'nt catch me
In any of them—Aye,
And much less in this thing you see
Of your's that cannot pay."

The anti-railroader thus introduced to the notice of the reader is, it appears, but one of a numerous family, who all indulge in the use of the same stupid expletive "Pooh! Pooh!"—*pooh—pooh-ing* every thing to which they cannot give any more sensible answer. And hence the very appropriate title of the poem (which would have been more appropriate still, perhaps, had it been called after the manner of a celebrated production of Moore's, "The Pooh! Pooh! Family.") There is first the "Pooh! Pooh!" of Middlesex—that fine fellow of the "West End" who has never been so far East as Aldgate, and "don't intend to go;" second, the "Pooh! Pooh!" of Essex, a bull-calf sort of chap who never travelled by a railway in his life, and "don't intend it, Sir;" third, "Pooh! Pooh!" of Suffolk, a somebody in the grazier line—

"Whose will is still, that London be
With carcasses supply'd,
That on the road in agony
So over-driven died,

"With meat from beasts by ruffian force,
By brutal fury goaded,
That hurried on their hapless course
Lay down upon the road did."

And fourth, "Pooh! Pooh!" of Norfolk, a gentleman of the quorum, who though not wiser than the rest of the Pooh Poohs has a clever knack of talking in rhyme, as thus:—

"In Norfolk we have nothing, but
Some turnips and some turkies,
The doors of all our looms are shut,
And saleless all our work is."

Which, we are assured in a note, were the "*exact* words addressed to the author by a gentleman of great influence in the county of Norfolk," (!!!)—a fact which, but that it is vouched for by a gentleman of Mr. Bosanquet's well proven honour and veracity, some people might have been rather disinclined to believe.

How well "Thompson," the poet, refutes every thing these shallow Pooh Poohs have to say against railways, and the Eastern more especially—how cleverly he catches them up at every turn—refutes, confounds, and overwhelms them—is only to be known by a perusal of the poem itself; yet I must beg of you to find room for one characteristic specimen of the author's great success in this respect.

* * *

(Essex "Pooh! Pooh!" loquitur.)

"Oh we know well what we're about,
And what is best for us;
You cannot tickle us like trout,
And humbug us, Sir, thus.

"We want no Railway, Sir, our way,
And you've no right to thrust
Upon us what will never pay,
And if it would 's unjust.

* * * * * *

"To make cock'd hats of our fields and parks,
And separate our farms,
To satisfy a set of sharks,
And Irish bring in swarms.

"Lawyers and Engineers in shoals,
With impudent effrontery,
No pow'r in the world controuls,
To eat up all the country."

(*Thompson.*)

"Dear me, your feelings seem to be,
Upon this subject strong;
But your impression seems to me,
To be a little wrong.

"I do not think in point of fact,
It is as you, Sir, mention;
I think they laboured for the Act,
With some slight good intention.

* * * * * *

"Trust me, ere long you'll die to have
This boon, when perhaps too late;
And for this very Railway crave,
You now repudiate."

(Pooh! Pooh!)

"Not a bit of it, Sir; we don't
Want it all our way;
And if we did want it, it won't
I tell you ever pay.

"We seldom come to town at all,
And even when we do,
We only come to make a call,
Or buy a thing or two."

(Thompson.)

"But don't you think, you'd stimulate
Your agriculture so,
New sources for your crops create,
New energies bestow?"

(Pooh! Pooh!)

"I'm sure I do not know."

"But don't you think that easier thus,
Your cattle and your corn,
And of your crops the overplus,
To makets will be borne?"

(Pooh! Pooh!)

"We have no overplus, Sir, 'tis
As much as we can do,
To feed our own poor without this,
That will bring others too.

"Why, I'll be bound that you now hold
Of these said shares a lot,
And if you can but get them sold,
For us don't care a jot.

"And, like the fox without a tail,
By prattle and by prate,
Would have me, but without avail,
Your folly imitate.

"We'll see you d——d before we take
A twenty-five pound share,
For if we did, 'twould help you make
This nuisance sooner there."

So with th' anathema he took
His leave and caution wary,
And I went off forthwith to look
In Patterson and Cary;

And see if I was wrong or right,
In books topographical,
And really was astonished quite
At the amazing traffic-all,

The multitudes of people who
Travel here to and fro,
And the number of the towns through
Which this trunk line will go.

Some may think it would have been better had the poet adduced the "amazing" proofs from Patterson and Cary, before his Essex friend turned his back; but the shrewd critic will not fail to perceive in this, an unusually fine touch of poetic art. Allowing him to go his way, and then referring "to the books topographical," conveys, in a way that nothing else perhaps could have done so well, the utter impenetrability of the Essex booby. He is such a confounded dunderhead that the poet feels it would be idle to waste further words or erudition upon him; his is a stolidity not to be described. As Timanthes drew the mantle of Agamemnon over the deep grief he could not paint, so Bosanquet lets his Essex "Pooh! Pooh!" drop through a trap-door the moment he is *de trop*.

Mr. Bosanquet, as the reader will by this time have perceived, never commits the very common mistake—common, I fear, even with poets of very high degree—of sacrificing sense to sound, truth to fiction. If ignorance limp—as ignorance almost always does—he lets it limp. Easy it would have been to make the Pooh Pooh family discourse in as mellifluous numbers as any nightingale; but he judiciously preferred leaving them to speak in the doggrel twaddle which is natural to them.

But cavillers may say, the poet talks much in the same vein himself. To be sure he does—but therein again he only shows his consummate skill. Had he addressed himself to the Pooh Poohs in the language of a scholar and gentleman—as all the world knows the author to be—he would have been justly open to the charge of forgetting whom he was talking to. He lets himself down of purpose a good many pegs, in order to be on a level with the ninnies and bumpkins with whom his fancy has peopled his railway path. As wise would it be to think of tracing in John Gilpin the style of the author of the Task, as to judge of the real altitude of Mr. Bosanquet's poetical powers from his amusing but most useful trifle of "Pooh! Pooh!"

One thing only I see to find fault with—Mr. Bosanquet makes the Essex "Pooh! Pooh!" insult him personally in a very gross manner, and yet never offers a single word in his own vindication. Now that I don't understand. I cannot for the life of me see the beauty of a man's inventing calumnies to his own disparagement! It puts one too much in mind of the case of the fool of whom it is said that he "eateth his own flesh." I allude to the following verse in the argument between the poet and the Essex "Pooh! Pooh!"—

"Well, thank my stars, I've nought to do
With your said Eastern Counties;
And do not wonder, LIKE TO YOU
That it at a discount is."

* A mis-print, I suppose, for "Eh?" What d'ye think, Thompson, Eh?—*Printer's Devil.*

Digitized by Google

Let us hope that in the next edition of the poem this foolish suicidal libel will be expunged.

I remain, Sir, your obliged servant,
LECTOR.

London, 1st February, 1841.

THE EASTERN COUNTIES' LIVERPOOL DIRECTORS.

To the Editor of the Railway Times.

Mr. Editor,—I have observed, as other shareholders of the Eastern Counties Railway here have done, that Messrs. Rathbone, Cropper, Hodgson and Harrison, make no effort to clear themselves from that foul charge of the six guineas a trip, and twenty-five shillings a day feeding, extortion—and I may add with feelings exceeding the bounds of simple *surprise*. In this particular, they partake of that "*disgust*" which is attributed to one of the London Directors, Mr. Dunbar, as being the cause which led to his resignation. With that gentleman I have have had no dealings, but there are those in this town in the Calcutta, Bombay, and Sydney trades who have had, and who assure me that a more honourable, straightforward merchant cannot be found. However much the poor gentleman named may affect to consider beneath their notice the *travelling* and *feeding* charge affair, they cannot, and must not leave without contradiction the insinuation (groundless I hope) that such a man as Mr. Dunbar was so "disgusted" with their operations, and those of their other Liverpool colleagues, that he could not sit at the same Board with them. Unless they do contradict this damning report, and that speedily, they must not expect, as usual, to attend the general meeting which I believe takes place some time this month, with pocketfuls of our proxies to carry every thing just as they like, and continue a course that creates "disgust" in such high-minded and honourable men as Mr. Dunbar. His cousin Hoyes I know will never take his seat at the board for the same grounds which caused Captain Moorsom, R. N. to resign, and of which, perhaps, more anon.

I remain, dear Mr. Editor,
Your obedient servant,
A SHAREHOLDER AND SHIPOWNER.

Liverpool, 2nd February, 1841.

[Why then does not Mr. Hoyes resign at once? For ourselves we cannot make head or tail of a man's holding the office of a Director, and yet declining to act as one.]—Ed. R. T.

RAILWAY ADJUDICATIONS.

THE DIRECTORS OF THE AYLESBURY RAILWAY COMPANY *v.* THOMPSON.

Court of Queen's Bench, February 3.—This was an action for calls due from a shareholder in the company. It had stood over for the judgment of the Court, which was now delivered by

Lord Denman, who said that two points had been raised—first, that there was no evidence to show that the defendant had been at any time a proprietor of the Company; and, secondly, that, at all events, he was only liable for the second of the two calls now sought to be recovered in this action. The evidence to prove his proprietorship was the transfer-book, where the memorandum of the transfer was entered as of the 7th of April. It appeared that the call was made on the 6th of March, and became due on the 9th of April. The question of liability arose under these circumstances:—The plaintiffs contended that the owner of the shares when the call became payable, was the person to pay the call, and not he who was their owner when the call was made. The peculiar circumstances under which this call was made had not been contemplated by the Act under which the Company was formed; but, considering the whole form of the Act, the Court was of opinion that the liability on the calls attached when the calls were made, and could not therefore affect the defendant, whose purchase of the shares occurred after the date of the calls. The amount of the damages must, therefore, be reduced to that extent.—Rule accordingly.

THE BIRMINGHAM, BRISTOL, AND THAMES JUNCTION (NOW WEST LONDON) RAILWAY COMPANY *v.* HOLFORD.

Court of Queen's Bench, February 4.—This was an action to recover a sum of 460*l.* 18*s.*, being the arrears of calls upon fifty shares, with interest, which the defendant held in the above Railway Company, and which he had refused to pay. The case was tried before Chief Justice Tindal at the Essex Summer Assizes, in the year 1839, and a verdict was had for the plaintiffs for the sum claimed. A rule for a nonsuit or a new trial was subsequently obtained, on the ground that the registry book had not been kept according to the Act of Parliament (6th William IV.) and had been improperly admitted in evidence; and also on the ground that a sufficient number of duly qualified Directors were not present, or did not vote in favour of the motion at the time the calls were made.

Mr. Thesiger now appeared to show cause against the rule, and contended that, although some objection might be taken to the original book, yet the book containing the register of shares, and which was in existence at the time these calls were made, was kept according to the form prescribed by the Act of Parliament. With regard to a sufficient number of qualified Directors not being present, the evidence was, that five constituted a quorum—that there were never less than eight present; and although some of these Directors held shares in trust for other parties, on which the calls were not paid up, the calls being made unanimously, there was a sufficient qualified number assenting.

Mr. Platt and Mr. Peacock were heard in support of the rule.

The Court took time to consider its decision.

ACCIDENTS ON RAILWAYS—MANCHESTER AND LEEDS RAILWAY.

We have received a copy of No. 3, of a small pamphlet, issued periodically by the Directors of the Manchester and Leeds Railway Company, for distribution among the Company's servants. It is a collection (principally from the *Railway Times*) of notices relative to judicial enquiries arising out of Railway accidents, and is prefaced by the following notice. We think it calculated to have a very excellent effect.

To all Persons employed in the Service of the Manchester and Leeds Railway Company.

In consequence of the number of accidents which have taken place on railways recently opened—in many cases through the unavoidable inexperience of the persons employed—the Directors of the Manchester and Leeds Railway Company, with the view of affording their servants the means of acquiring most rapidly a knowledge of their duties, as well as of apprising them of the *frightful consequences* to themselves and the public from inattention to the rules and regulations prescribed by the Board for their observance, have determined to print and distribute for their perusal and information reports of all judicial inquiries arising out of accidents on railways caused by the negligence or disobedience of the persons employed. As the information thus furnished must tend to prevent accidents, if properly regarded, so it will increase the responsibility of those through whose negligence or ignorance accidents occur, should they neglect to make use of it.

The Directors therefore most earnestly request the attention of every person in the Company's service to these reports, and most particularly to the circumstances under which accidents are reported to have arisen; to their immediate causes; to the means by which they might have been prevented; and to the consequences which befal the culpable parties.

By order of the Board,
JOHN JELLICORSE, Secretary.

Manchester, January 28th, 1841.

Italian Railways.—The Italian papers contain a report of the traffic on the Milan and Monza railway, which states the number of passengers from the 18th of August to the 31st of December, four months and a half, to have been 158,218—receipts 155,659*l.* 25*c.* In noticing this result, the *Gazetta di Milano* calls attention to the satisfactory circumstance that not a single accident has occurred on the railway since it was opened, and in conclusion observes—"It is truly gratifying to be able to refer to so brilliant a result of the first undertaking of this kind in the Lombardo Venetian kingdom, as it will doubtless add to the powerful inducements which recommend the execution of other railways for rapid communication between the principal towns of the country. The time is now arrived when the construction of the Ferdinand Railway merits particular attention. It is a work of the highest importance to the prosperity of the two capitals of the kingdom and the towns situate between them. The commission which has already commenced its deliberations on the project for a much wanted railway between Milan and Brecia, it is also to be hoped will not long delay to respond to the public wish by their definitive decision."

MANCHESTER, BOLTON, AND BURY RAILWAY.

To the Editor of the Railway Times.

Sir,—Allow me, through the medium of your publication, to draw the attention of the railway public to the Half-yearly Report of the Manchester and Bolton Railway Company, in your last number; and in doing so, it may be well to state that this concern, up to last Midsummer, was so badly managed, that the shareholders derived little or no benefit at all from it—in fact it did little more than clear its own expenses, and the interest on the bonds was paid out of the proceeds of the canal. The proprietors at that time took the matter up, and insisted on certain reforms in the management, the consequences of which are now visible in this very gratifying Report; and this railway may now challenge a comparison as to economy of working with any line in the kingdom—nay, I question if any can be found to come up to it.

By the Report alluded to, it appears that the gross receipts are 14,755*l.* 1s. 2d., and the expenses 5,785*l.* 6s. 8d., leaving a balance of 8,969*l.* 14s. 6d., the expenses therefore are only 39.25 per cent. on the receipts. Now let us compare it with the London and Birmingham, which has hitherto been worked at a less per centage than any other line. The expenses, according to their last Report (*Railway Times*, Aug. 8th), were 40.379 per cent.; but in this comparison it is necessary to take into account the relative charges for passengers on the two lines, and we find that the charges on the Bolton are, for first class 2s. 6d., and second-class 1s. 6d., the distance being 10 miles; and as the proportion of second class is double the other, the average will be 1s. 10d., or 2¼d. per mile. The charge on the Birmingham, taking first class at 30s. and second class at 21s., and supposing the number of the two to be equal, will be 2¾d. per mile. There are some third class passengers conveyed on both lines along with the luggage waggons, but those we may leave out of view. If we put the Bolton passengers down at the London and Birmingham prices, we shall find the receipts would be increased by 2,328*l.*, and the expenses would then be reduced to the small proportion of 33.27 per cent. This economy of working the passenger traffic is still more remarkable, when we know (as is the fact) that the Company carry merchandise so low that, with the drawback of carting at both ends, it is not supposed they can get anything by it.

In looking over the different items of expense, one cannot help being struck with the small charge for maintenance of way, which may be taken as a proof of the economy of continuous wooden bearers, with a traffic prudently managed.

A good deal has latterly appeared in your valuable publication on the necessity of railway proprietors bestirring themselves to reform their several managements, and, therefore, I think we have all reason to feel obliged to the Manchester and Bolton proprietors for setting the example,* and to congratulate them on their success, and ourselves on the proof thus given, that a railway only ten miles long, and with only half the traffic, may yet be worked at a per centage even less than the London and Birmingham; and this too, without infringing at all on the convenience of the public; for while on the great Trunk lines we have had so many serious accidents through the winter, I believe there has not been a single casualty on this line by which any one has been injured.

I remain, Sir, your's obediently,

ECONOMICUS.

Manchester, January 28, 1841.

* It certainly is greatly to be desired that some other Companies would imitate the example of the Bolton and Bury.—Ed. R. T.

STRASBURG AND BASLE RAILWAY.—We quote the following from the *Courrier Francais:*—"The Strasburg and Basle Railway Company has just received from the Bank of France a sum of 4,200,000f., on a warrant from the Treasury, being the first of the three instalments of the 12,600,000f. which it is known the French Government is authorised to lend it. Some merely formal impediments had delayed this payment, but it is only justice to acknowledge that the ministers of public works and finances did all in their power to remove them. The Company, therefore, is about to adopt additional means of carrying on their works. Those already completed by the contractor are, it is said, about 28-40th parts of the whole, and are executed in the most solid manner, nothing being spared to render them durable as well as grand. The activity of the contractor has met with its reward in the punctuality of the government; and M. Koechlin is not a man to remain satisfied with producing only a first impression. We may hope, therefore, that in the course of next summer we shall see the whole line, from Strasburg to St. Louis, opened to circulation."

GRAND JUNCTION RAILWAY.—It is on this railway, according to the result of Mr. Whishaw's practical experiments, reported in his work on "The Railways of Great Britain and Ireland," that the highest average of speed is obtained. Yet it was stated, at the annual meeting of the Company, on the 29th ult., that, "in the year 1840," it had "carried 485,568 passengers *without one loss of life, or serious injury* to a single passenger, or to any engine-man, conductor, guard, or fireman, in charge of them."—*Morning Chronicle.*

SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 914, double number, price 6d., published this day, contains abstracts of the following recent Patents:—Cordes and Locke's, for a new rotary engine; Bennett's, for improved machinery for cutting and working wood; Lambert's, for improvements in the manufacture of soap; Bennett's, for certain improvements in machinery for cutting rags, ropes, waste, hay, straw, or other soft or fibrous substances, usually subject to the operation of cutting or chopping, part of which improvements are applicable to the tearing, pulling in pieces, or opening of rags, rope, or other tough materials; Tatle's, for improvements in roofing and slating houses and other buildings; Daft's, for improvements in inkstands or inkholders; Hodgson's, for a new mode of combining and applying machinery for the purpose of cutting and planeing wood, so as to produce plain or moulded surfaces. Also, description, with four engravings, of Cordes and Locke's new rotary engine; A geometrical investigation of the principles of the crank; On reversing the motion of locomotive steam-engines; New mode of setting stoves, and improved fireplaces; Simple instrument for finding a meridian line, with engraving; Safety apparatus for preventing accidents in ascending and descending mines, with three engravings; Galleries of Practical Science—a visit to the "Victoria" at Manchester; Further biographical notice of the late Mr. Wm. Hazledine; On rotatory and reciprocating steam engines, and on the supposed loss of power from the use of the crank; The Archimedes—Submarine propellers and paddle wheels compared; Decease of Dr. Olinthus Gregory, &c., &c., &c.

Published at the Mechanics' Magazine and Patent Office, 166, Fleet street, and sold by all Booksellers and Newsmen. Vol. XXXIII. is just published, price 10s. boards.

WATERPROOF LUGGAGE COVERS.—Manufactured by JOHN EMES, (late Milton and Co.), Cut Side, Limehouse, London, for Railway Trucks Waggons, Barges, &c. The great improvement in the manufacture of these Covers, which are now in use on the principal Lines, and which can be recommended with confidence to the notice of Dock and Railway Companies Barge and Waggon Proprietors, Contractors, Builders, and others, as an article of durability, possessing all the necessary qualities—viz., that of being perfectly Waterproof, and flexible, and not subject to adhesion, a fault much complained of in tarred Cloths; and can be made of either light or heavy quality to suit the purposes required. It is also prepared for covering Roads. Verandas Coach and Guard Aprons, Horse Cloths, &c.

A supply of Covers on hand for hire, to Builders, Excavators, Bargeowners, &c., requiring temporary Covering Rick Cloths, Poles, Blocks, Cordage, &c.

THE HULL ADVERTISER.—Establishment half a century, the HULL ADVERTISER has attained a circulation equalled by few weekly newspapers in England, while by a new and original mode of distribution, it secures to advertisements a degree of publicity equal to an absolute circulation of twelve thousand copies each impression.

Parliamentary Return for the quarter commencing on the 1st of January and ending on the 1st of March, 1840.

Hull Advertiser	73,000
Hull Packet	10,000
Hull Times	15,000
Hull Rockingham	10,000

With the commencement of the next July quarter, it is intended to enlarge the ADVERTISER, in order to provide for the influx of advertisements, and to make the journal, as an organ of commercial and agricultural intelligence, as worthy of the resources of the wealthy district the sphere of its local circulation, and of the rapidly increasing importance of the port of Hull, which will soon be connected by railway with Leeds, Manchester, Liverpool, and London.

The HULL ADVERTISER is published every Friday morn-

LONDON and WESTMINSTER WATER COMPANY.—To be empowered by Act of Parliament, for which notices have been given. Office, 7, St. Martin's-place, Trafalgar-square. Capital—£600,000, in Shares of £50 each.—Deposit (in order to comply with the standing orders) £5 per Share.

PROVISIONAL COMMITTEE.

(From whom the Directors will be elected.)

ENGINEER—Robert Stephenson, Esq.

SOLICITORS — Messrs. Winter, Williams, and Williams 16, Bedford-row.

The Sub-Committee for the consideration of the applications for Shares hereby give notice, that they will receive no further applications from the country after Tuesday, the 26th day of January instant, (being the first day of the meeting of Parliament), or from persons residing in or near the Metropolis after Saturday, the 30th day of January inst.

In the meantime applications may continue to be made to any of the following members of the Sub-Committee:—Wm. Chaplin, Esq., Lad-lane and Euston-square; Thos. De Vear, Esq., Lisle-street and Kensington; and Captain Mac-Dougal, Fir-grove, North Brixton; the Solicitors, Messrs. Winter, Williams, and Williams; to W. S. North, Esq., Parliamentary Agent, 4, Parliament-street; M. E. Wilkinson, Esq., Guildhall yard; or G. W. Blanch, Esq., 7, St. Martin's-place.

By order of the Sub-Committee.

Committee-room, Jan. 14, 1841.

THE MINING JOURNAL, RAILWAY and COMMERCIAL GAZETTE, forming a complete record of the proceedings of all Public Companies.

The MINING JOURNAL is the only newspaper devoted to Geology, Mineralogy and Metallurgy; combining therewith *Reports of the proceedings of Public Companies, Correspondence from the English and Foreign Mining Districts, Sales and Purchases of Ores, prices of Metals and Materials*, prices of English and Foreign Funds, Shares in Mines, Railways, Joint Stock Banks, Canals, &c., with much original and interesting Scientific Intelligence, &c., forming an invaluable record of every occurrence relating to

MINES, RAILWAYS, JOINT-STOCK BANKS, &c.

The Mining Journal is published at 2 o'Clock every Saturday afternoon, at the Office, No. 37, New Broad-street, City, price Sixpence, and may be had of all Booksellers and Newsvenders in town and country.

*** The Advertisements inserted being confined to Prospectuses of new Companies, Notices of Meetings, Calls, and Dividends, or other matters intimately connected with the Capitalist, as also sales of mineral property, form an interesting feature in this publication

Worcester and Cheltenham	5 6	4 0	3 0
Worcester and Gloucester	7 6	5 0	3 6

Passengers to Bath and Bristol can secure places throughout at any of the First Class Stations, and at Worcester and Tewkesbury horses and carriages must be at the stations at least a quarter of an hour before the time of departure. Passengers riding in their own carriages charged Second Class fares.

Post horses will be in waiting at Camp Hill, Spetchley, Cheltenham, and Gloucester. At other First Class Stations it will be necessary to make previous application.

Conveyances between Spetchley and Worcester are provided by the Company, the charge for which is included in the railway fare. There are also conveyances from Bromsgrove and Droitwich Stations to the towns, the charge for which is 6*d.* each person, *not* included in the railway fare.

No fees are permitted to be taken by the coachmen, or any of the Company's servants.

Omnibusses leave the Swan, Hen and Chickens, Castle, and Nelson Coach Offices, Birmingham; and the Crown Inn Coach Office, and Company's Coach Office, Foregate-street, Worcester, where places can be secured to any stations on the line, and to Bath and Bristol.

Passengers are particularly requested to see their luggage placed in the carriages before starting, and that it is legibly directed with the owner's name and destination.

By order,

WILLIAM BURGESS,
Superintendent and Secretary.

Office, Waterloo-street, Birmingham,
Feb. 1, 1841.

GRAND JUNCTION RAILWAY, LIVERPOOL.—MEETING OF DIRECTORS, Wednesday, 3rd February, 1841.

EXTRACT FROM THE MINUTES OF PROCEEDINGS.

The Treasurer having laid before the Board a letter from Messrs. Pickford & Co., dated the 27th ult. and published by them in the Railway Times of last Saturday,—

RESOLVED, that such letter does not appear to call for any reply; but that as Messrs. Pickford & Co. have invited public attention, to the fact of their having made a demand upon this Company, (since the failure of their late application to the Court of Queen's Bench), with a view, as they leave it to be inferred, to renewed legal proceedings for ascertaining their rights, it is expedient to publish such demand, and the replies of this Board, in order to shew clearly the real nature of the question at issue with Messrs. Pickford and Co., and that the Board have done all that can be necessary to enable Messrs. Pickford & Co. to try that question if they are so advised.

That the Board entirely approve the discretion of the Treasurer in declining any verbal communication whatever with Messrs. Pickford & Co., or any agent of theirs, upon any question in dispute.

That these Resolutions be transmitted to the Editor of the Railway Times, (with the copies of letters before alluded to.)

COPY OF MESSRS. PICKFORD AND COMPANY'S DEMAND.

London, January 21st, 1841.

GENTLEMEN,—In consequence of the decision of the Court of Queen's Bench as to our demands upon you in September and October last, we hereby demand that you should forthwith give us the same advantages and benefits, allowances or reductions, which you give to any other person, or that you cause the same to cease altogether. And especially we demand that you shall discontinue the practice of affording any benefit, advantage, or facility, in respect to the forwarding of trucks now afforded to Chaplin and Horne, or to the business conducted by them, or in their name, or that you afford to us the same benefit, advantage, or facility, and on the same terms. We also demand that you shall convey our goods upon the railway upon the same terms as goods are conveyed by or for Chaplin and Horne, or in their name, or by you for them, either by making the same allowances to us which you do to them, or the business conducted by them, or in their name, in respect of the deliveries and collections at the termini, or by discontinuing any such allowances made to them as aforesaid, or to any one in respect of the business carried on by them or in their name; and that by these or other means you equalize your charges, and make no reduction or advance in any charge for conveyance, or for the use of locomotive power, either directly or indirectly, in favour of any other Company or person, or against this firm.

We are, Gentlemen, your obedient servants.

(Signed) PICKFORD & Co.

To the Grand Junction Railway Company,
Liverpool.

COPY OF REPLY.

GRAND JUNCTION RAILWAY.

Messrs. Pickford & Co. Liverpool, January 27th, 1841

Gentlemen,—Having, as promised in my letter of the 23rd, laid your letter of the 21st before the Directors of the Grand Junction Railway at their first weekly meeting, held this day, I now reply thereto on behalf of the Company; and wish you distinctly to understand that the Grand Junction Railway Company do not, and never did, since the determination of their special agreement with you, give to, or withhold from you, any "advantages, benefits, allowances, or reductions," which were not equally given to, or withheld from, all other persons also, and have never intended or contemplated doing so.

Also, that Chaplin and Horne have been, and are simply and solely our agents in London for collecting and delivering goods, and performing other services of the like nature; and are not, and never were, in any way whatever, carriers over the Grand Junction Railway, or any part of it, and that we do not provide any power or carriages at all for them, or for any other persons in their name.

Also, that for our own business as carriers, we provide trucks, and that you are of course at liberty either to do the same, or to employ us as other people do, and on the same terms. If you employ us as carriers from Lancashire only to Birmingham, of course our trucks will not go beyond Birmingham. If we are to understand that you expect us to make you a present of the hire of trucks for the carrying on of your business over the London and Birmingham Railway, which railway we have no more to do with than you, and over which we are only carriers like yourselves, and many others, we beg distinctly to state that we decline to do so. And again, if we are to understand that you expect us to employ you instead of Chaplin and Horne, as our London agents for delivering and collecting goods there, we must decline that also.

We also state that all our charges, both as respects our character of Proprietors of the Grand Junction Railway, and carriers over it, and providers of locomotive power, carriages, and trucks upon it, and also as respects our other character of carriers over the London and Birmingham Line; indeed, all our charges of every description have been, and will continue to be, charged equally to all persons alike, and we shall not make, and have not made, any reduction or advance in any charge for conveyance, or for the use of locomotive power, or in any other charge, either directly, or indirectly, in favour of your firm, or any other person's.

I have stated the above in order to preclude any possibility of misapprehension, though I cannot avoid believing (not only from the affidavits which we had prepared on the application made by you to the Court of Queen's Bench, and which have been shewn to you, but from our prior communications), that you must have been fully aware of the relation in which the Grand Junction Railway Company and Messrs. Chaplin and Horne stand towards each other.

I am, Gentlemen, your obedient servant,

(Signed) J. R. CHORLEY.

PATENT SPELTER PAINT.—This paint is adapted for all purposes which other paint is now used for, and may be confidently recommended to the notice of the public. When applied to iron its effect may be compared to that of the galvanization of the metal; it resists the influence of the weather, of soft and sea water; and of the fumes in chemical works. When applied to wood, it gets so hard that the most intense heat of the sun makes no impression upon it, and will not make it blister and peel off. Applied to damp walls, or in positions which are much exposed, it affords a powerful protection against moisture and saltpetre. When it is used upon softer substances, such as paper, pasteboard, linen, plaster of Paris, it produces equally satisfactory results.

Apply to JAS. LE CREN, Agent, 26, Moorgate-street, or by letter to H. P. ROUQUETTE, Patentee and sole Manufacturer, 14, Mark-lane.

ANDREW SMITH'S PATENT WIRE ROPE.
WILLIAM FOX and CO. having obtained the exclusive licence for Manufacturing the above Rope, beg to inform the Public that Specimens may be seen at their office, 76, Old Broad-street, London, where every information may be obtained, and also at the following places:—

Fox, Hawkins, and Hickling, Wire-drawers, Birmingham
Robertson and Co., 12, Goree Piazzas, Liverpool.
Matthias Dunn, Newcastle-on-Tyne.
Joseph Bothway, Plymouth.
John Thompson and Co., Wigan.
Thomas Mooney and Sons, Dublin.
Coates and Young, Belfast.
James Kibble and Co., Glasgow.
James Gunn, Leith.

The Rope is now at work in various Mines in different parts of the Kingdom; and also on the BLACKWALL RAILWAY, where it answers every execttation. It has been used n Shipping Five Years.

IN consequence of the opening of the North Midland Railway, Messrs. HORNE and CHAPLIN have arranged with their connection, whereby they are enabled to secure places throughout by the Mail to Newcastle and Durham, leaving their respective offices at a quarter past Eight, and arriving at Newcastle at half past five P.M. the following day.

Also their Mails and Coaches as usual *via* Lancaster to Edinburgh, Glasgow, and Carlisle; and by London and Birmingham Railway to Banbury, Bourne, Boston, Grantham, Harborough, Kettering, Lincoln, Lynn, Northampton, Newark, Oxford, Oundle, Peterborough, Stamford, Leamington, Warwick, Stratford-on-Avon, Thame, Wellingborough, Wisbeach, Welshpool, and Shrewsbury—

From the
SPREAD EAGLE, Gracechurch-street.
CROSS KEYS, Wood-street, Cheapside.
SWAN-TWO-NECKS, Lad-lane.
GEORGE AND BLUE BOAR, Holborn.
SPREAD EAGLE, Regent Circus.
GOLDEN CROSS, Charing Cross.
GRIFFIN'S GREEN MAN AND STILL, and
THE EUSTON STATION.

Parcels also received at the above offices for the several trains to the above places and to Leeds, York, Nottingham, Derby, Leicester, Sheffield, &c.

Post Horses to any part of London, including the driver 10*s.* 6*d.* each pair.

Omnibuses to and from every train—Fare 6*d.*

TO RAILWAY COMPANIES, MERCHANTS AND OTHERS,—WANTED, a situation as Clerk, either in England or abroad, by a gentleman who has had the management of the accounts of one of the first Engineering Establishments in London for many years. Letters addressed to A. B., care of Mr. Mansell, Printer, 8, King-street, Borough.

A ditto with Mordan & Co.'s ever-pointed pencil	1 10 0
A ditto, ditto, with reserve of leads	1 14 0

December, 1840.

REPORT OF THE COMMITTEE

APPOINTED AT

A MEETING

OF

LANDOWNERS OF THE COUNTY OF NORFOLK,

Held at the Swan Inn, Norwich, on Thursday, the 7th inst., to consider the best means of securing with the least possible delay the advantages of a communication by

RAILWAY

BETWEEN THE COUNTY OF NORFOLK AND THE METROPOLIS.

To the Landowners of the county of Norfolk.—Your Committee submit to you the following Report:—

THE survey of a line from the present terminus of the Northern and Eastern Company at Bishop Stortford to Yarmouth was laid before your Committee, of which Mr. Rastrick attended as the engineer, and Mr. Beckwith, of Norwich, as the solicitor. The line proceeds by Cambridge, Mildenhall, Thetford, Attleborough, Wymondham, and Norwich to Yarmouth. The length of the line from Stortford to Cambridge is 22 miles, and the estimated cost 572,000*l.*; from Cambridge to Norwich 63 miles, and the estimated cost £1,126,695; from Norwich to Yarmouth 18 miles, and estimated cost £291,512; or a total estimated cost, exclusive of engines, carriages, &c. of about £2,000,000.

That portion of the line between Stortford and Cambridge was represented by Mr. Rastrick to be the Parliamentary line laid down by Mr. Walker for the Northern and Eastern Company, and granted to them in 1836; and that portion of the line from Cambridge to Wymondham, the same as the one surveyed by Mr. Walker for the above Company, some alterations having been made by Mr. Rastrick in the gradients of both portions.

There was also produced by the Solicitor to the line a summary of the estimated traffic, amounting to £400,000 per annum, but in what proportion the above traffic was divided between each portion of the line from Stortford to Cambridge, Cambridge to Norwich, and Norwich to Yarmouth, did not appear.

It further appeared that no legal Company had as yet been formed to carry out this project.

A communication was also made to your Committee by Mr. Bosanquet, the Chairman of the Eastern Counties' Company, respecting the extension of their line from Kelvedon to Bury St. Edmund's, by Coggeshall, Halstead, Sudbury, and Lavenham; and Mr. Braithwaite, the Engineer of the Eastern Counties' Company, attended on their behalf to produce a plan of the line. The length of the line from Kelvedon to Bury is 32 miles, and the probable cost is estimated at about 600,000*l.* The survey of this line was stated to be in progress, but was not yet completed. The line was represented to have been surveyed by Mr. Braithwaite, under the directions of the Eastern Counties' Company, and was to be taken up by an influential portion of that Company, but no legal Company had yet been formed to carry it out. No statement of the probable traffic on this line was submitted to your Committee.

Your Committee have also had a communication with the Northern and Eastern Company, from whom they learned that a new survey had been ordered by that Company, to be forthwith made of the line from Stortford to Cambridge, the probable cost of which is estimated by their Resident Engineer, Mr. Bidder, at £18,000 per mile. The Northern and Eastern Company represented also that they had abandoned their old line because it was not the best.

Your Committee had also laid before them, from Messrs. Rackham and Cooke, and J. O. Taylor, Solicitors, Norwich, and Messrs. Reynolds and Palmer, Solicitors, Great Yarmouth, the report of Mr. Robert Stephenson on the survey made under his directions by Mr. Bidder and Mr. Routh, of a line from Norwich to Yarmouth, the length of which is 20 miles, and the estimated cost, with a single line of rail, £200,000.

Your Committee also received a letter from Mr. Joseph Gibbs, Civil Engineer, containing an extract from a report to the Government Commissioners appointed to ascertain the best line of railway communication between London and York, *via* Derby and Rotherham, or Cambridge and Lincoln. The line proposed by Mr. Gibbs is to branch from the supposed northern line from Cambridge to York near to Long Stanton, proceeding between Rampton and Willingham, north of Cottenham, east of Stretham, and crossing the River Ouse, near Stuntney, a little south-east of Ely; thence by Quarnsey (? Quaveney) Hill over the River Lark, near the southern boundary of Suffolk, thence over the Little Ouse, south of Hockwold, near Brandon, to within two miles of Thetford; thence by Croxton and Roudham, south of Attleborough and Wymondham, to Norwich and Yarmouth. The distance from London to the point of junction near Long Stanton will be 56 miles 40 chains, thence to Norwich 59 miles or thereabouts, making the total distance from London to Norwich 114 miles 72 chains, and from London to Yarmouth 132 miles 72 chains.

Your Committee beg further to state, that without expressing any opinion as to the accuracy of the estimates either of cost of construction or probable amount of traffic which have been submitted to them, a majority of the Committee have come to the following resolution:—

1st. That as far as your Committee are able to form an opinion from the different plans and informations connected therewith that have been laid before them, they are of opinion that a line by Cambridge to join the Northern and Eastern would offer the greatest advantages to the county of Norfolk.

2nd. That the Committee do strongly recommend the county not to support any Company which will not undertake to carry out the whole line from Bishop Stortford to Yarmouth.

(Signed) SONDES, Chairman.

HAMBRO' WHARF, near SOUTHWAKR BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company

TAYLOR'S PATENT WOOD CUTTING COMPANY.—Capital £50,000, in 1,000 shares of £50 each. Deposit £1 per share.

The names of the Directors will be published on Saturday next. The object of this Company is to carry into profitable employment the patent which Mr. Taylor has obtained for England, Scotland, Ireland, and the Colonies, for cutting wood by machinery after it has been steamed.

For a quarter share of the profits arising from the manufactories, and one half from the licences, the patentee has consented to vest the whole patent right in a Company, providing adequate capital to carry out the great business likely to arise from it. That business may be measured by the fact that it is calculated to supersede all the cooperage in the kingdom in the making of casks, inasmuch as if the materials could be had for nothing, under the present system, the expense of labour alone would be greater than the entire cost of both materials and labour under this patent.

The machinery with but two-horse steam power, performs 120 evolutions, and with two cutters cuts 240 staves per minute, making no sawdust, and occasioning no further waste of material than the inequalities of the surface of the blocks.

The machinery can be applied to all other wood cutting, as well as the making of casks, and the patent granting the exclusive privilege of cutting wood softened by steam cannot be superseded or rivalled by any other mode of cutting of which the steaming of wood is a necessary element.

A very large manufactory would be required in London for the business to be carried on in the metropolis alone; other manufactories might be established in the large maritime towns of the United Kingdom, or licences might be granted to residents in such towns, upon terms to be settled by the Company; at present the square tower and adjoining premises east of Waterloo-bridge, on the Surrey side, are used for the purpose.

Individuals desirous of embarking in the Company may see the machinery at work daily, and satisfy themselves of the immense capabilities and great probable profits of the undertaking.

The capital may be expanded or contracted as may be expedient, hence no public company, whether large or small, can fail in profitably employing its money. The business may be carried on with £5,000 successfully, though 10 or 20 times that amount would create a much more than proportionate return.

Sixteen patents have been granted by foreign powers, but it is not proposed to include them in this Company.

The standing orders of Parliament have been complied with, and a bill in the present session may be expected to be passed, authorizing the transfer of the patent to more than 12 persons, and empowering the Company by Act of Parliament.

Should all the shares not be taken before the passing of the Act, the Company will go on with such capital as shall have been subscribed; but no further shares will be issued after the passing of the Act, save at a premium for the benefit of the original shareholders, who shall have the pre-emption of claiming them at such premium.

Applications for shares may be made to E. M. Elderton, Esq., solicitor, 40, Queen-square, Bloomsbury; or W. H. Taylor, Esq., the patentee, at the manufactory.

VAN BUTCHELL ON FISTULA, &c.

Fourth Edition, just published, in 8vo., cloth boards, price 7s. 6d., enlarged,

FACTS and OBSERVATIONS relative to the successful Mode of Treating Piles, Fistula, Hemorrhoidal Excrescences, Tumours, and Strictures, without cutting or confinement; illustrated with numerous cases; being a familiar exposition of the Practice of S. J. VAN BUTCHELL, Surgeon and Accoucheur.

H. PATTESON, Sec.

Offices, Warnford-court, Throgmorton street, London, Feb. 1, 1841.

NORTH MIDLAND RAILWAY.—Notice is hereby given, that the Ninth Half-yearly General Meeting of Proprietors of the North Midland Railway will be held in London, in pursuance of the provisions of the Act of Incorporation, at the London Tavern, Bishopsgate-street, on Friday, the 26th day of February inst.

The chair to be taken at 1 o'clock precisely.

GEORGE CARR GLYN, Chairman } of the Board
JAMES HUBBARD, Deputy Chairman } of Directors.
HENRY PATTESON, Secretary to the Board.

Office, Warnford-Court, Throgmorton-street, London, Feb. 1, 1841.

EDINBURGH AND GLASGOW RAILWAY.—NOTICE is hereby given, That the Sixth Half-yearly General Meeting of Shareholders in this Company, will be held pursuant to the Act of Incorporation, in the Company's Office here, on Monday, the 22nd instant, at One o'clock.

Certain shares, in consequence of the non-payment of several calls due thereon, having been declared forfeited, under minutes of the Board of Directors of 20th April, 30th June, and 30th November, 1840, the Declaration of Forfeiture will be submitted to the meeting for confirmation in terms of the Act.

The Transfer Books will be closed on and after the 15th instant, till after the meeting.

Proxies must be transmitted to, and received by, the Secretary, two days at least before the holding of the meeting, (section 134,) otherwise they will not give a right to vote at the meeting.

Blank Forms of Proxy may be had, on application at this office.

In terms of section 137, the proprietor of any share on which any Call shall be due, will not be entitled to vote in spect of such share.

By Order of the Directors,
(Signed) JOHN LEDBETTER, Chairman.

Edinburgh and Glasgow Railway Office,
7, North Queen Street, Glasgow, 4th February, 1841.

LONDON AND GREENWICH RAILWAY OFFICE, London Terminus, January 26, 1841.

NOTICE is hereby given, That the First Half-yearly General Meeting of the Proprietors of this Company, will be held at the London Tavern, Bishopsgate-street, on Tuesday, the 9th February next, at Twelve for One o'Clock.

The lot has fallen on the following gentlemen to retire from the Direction, namely, J. W. Childers, Esq., M.P., Thomas Corney, Esq., and James Cuniffe, Esq., of whom J. W. Childers, Esq., M.P., and Thomas Corney, Esq., offer themselves for re-election; and Andrew Bonar, Esq., will be proposed to fill the vacancy occasioned by the retirement of James Cuniffe, Esq.

The Transfer Books will close on Monday, the 1st, and re-open on Monday, the 24th of February next.

By order of the Board,
J. Y. AKERMAN, Secretary.

GREAT WESTERN RAILWAY.—Notice is hereby given, that the next HALF-YEARLY GENERAL MEETING of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Company's office, Princes-street, in the city of London, on Thursday, the 25th of February next, at 11 o'clock, for the election of six Directors in the place of the same number who will retire by ballot, and for other purposes of business. The chair will be taken at 12 o'clock precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGHT, Deputy Chairman.

The Directors retiring by ballot are re-eligible under the provisions of the Act. The Transfer Books will be closed on Monday, the 15th of February, and will not be re-opened until after the said Half-yearly General Meeting on the said 25th of February. Clause 123 provides that no person shall be entitled to vote as a proxy unless the instrument appointing him shall have been transmitted to one of the Secretaries of the Company at least five days before the Meeting.

By Order,
CHAS. A. SAUNDERS, } Secretaries.
THOMAS OSLER, }

Offices, 2, Princes street, Bank, London, and Corn-street, Bristol, Jan. 5, 1841.

MESSRS. MURRAY & SONS, Parliament-street, will receive Tenders until 15th February (the highest above the reserved prices, which may be had at their office, to be accepted) for LICENCES for PARKIN'S PATENT WOOD RAILWAY WHEELS, for each Railway having a Terminus in London, Bristol, and Birmingham, and the Llanelly and Taff Vale.

AT a MEETING of the Owners of Land and Hereditaments on the line of the proposed COVENTRY, LEAMINGTON, and WARWICK RAILWAY, held at the King's Head Inn, in Coventry, on Monday, the 21st December, 1840.

LORD LEIGH in the Chair.

It was Resolved,—That the proposed railway is unnecessary and uncalled for, and being a vexatious interference with the property of Landowners, without affording a corresponding benefit to the public, this Meeting is determined to oppose it by every means in their power.

It was Resolved,—That Mr. Heath be instructed to take immediate steps to carry the above Resolution into effect.

It was Resolved,—That a Committee, consisting of the Earl of Aylesford, Lord Leigh, the Hon. Charles Bertie Percy, the Hon. and Rev. C. M. Villiers, Sir J. R. Cave Brown Cave, Bart., A. F. Gregory, Esq., Mr. Greaves, Mr. Butler, and Mr. Handley, be appointed to protect the interests of the owners and occupiers of property on the proposed line, and to adopt such steps as they may deem expedient to oppose the measure.

LEIGH.

Lord Leigh having left the Chair, and the Earl of Aylesford being called to it,—

It was Resolved,—That the cordial thanks of the Meeting be given to Lord Leigh, for his kindness in taking the Chair, and the able manner in which he has conducted the business of the day.

AYLESFORD.

Of the whole distance between Coventry and Leamington, viz., 9¼ miles upwards of eight miles is the property of dissentients.

John Smart	Henry Catterns
William Barrett	

By order of the Committee,
THOMAS HEATH.

Warwick, Feb. 2nd, 1841.

TO RAILWAY COMPANIES—Public Security, Efficiency, and Economy, in FENCE for RAILWAYS, J. PORTER begs to state, that he has within the last month introduced a New Description of Iron Fence for Railways, so strong as to resist the heaviest cattle, and prevent the possibility of sheep getting through. It is bold in appearance, and will bear the weight of men passing over or jumping upon it, without injury.

This Fence will be sound and good 50 years hence, and the cost of post and rail fence to last 10 years would purchase it.

Lighter Fence of the same description, also strained Wire Fence of the very best kind, fixed in a superior manner, by experienced workmen, at any part of the kingdom, at the lowest possible price.

This Fence is also suitable for the use of private gentlemen, Iron Bedsteads for families, public institutions, and exportation.

82, Upper Thames-street, and the Grove Iron and Wire Fence Manufactory, Southwark.

TUCK'S HERMETIC ENVELOPES, on an entirely new plan (*Manufactured by Machinery, and registered pursuant to Act of Parliament*) offer advantages possessed by no other Letter cover yet devised. The Postage Stamp Label is affixed to the Envelope in such a manner as to serve at once to seal and frank the Letter.

Separate Waxing or Wafering rendered unnecessary.

Time in making up and dispatching less than the before introduction of the Penny Postage system.

All envelopes hitherto made on the old plan may be easily opened without breaking the seal, their contents read or abstracted, and the envelope re-placed in its original state, so as to defy detection. But this cannot be done with the HERMETIC ENVELOPES, which renders them invaluable for the enclosure of Bills of Exchange, Remittances, Confidential Communications, Legal and Official Documents, &c.

May be had at the Office, 122, FLEET-STREET, in quantities of not less than 250 of various sizes, in neat paper boxes, from 10s. to 15s. per 1000, and of all Stationers in the kingdom.

*** Orders also received at 138, Aldersgate-street.

This day is published,

TUCK'S MAP OF THE RAILWAYS THROUGHOUT ENGLAND AND WALES TO THE CAPITAL OF SCOTLAND, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 8s. 6d.

Published at the RAILWAY TIMES Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster-row; Hyde & Co., and G. Bell, Fleet-street; Mann, Cornhill; and by all Booksellers and Newsmen.

Just published,

TUCK'S ROLLER CALENDAR for the Year 1841.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda, indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board-Room, Counting-House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d. The Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Published at 122, Fleet-street, and sold by all Stationers and Booksellers.

Just published,

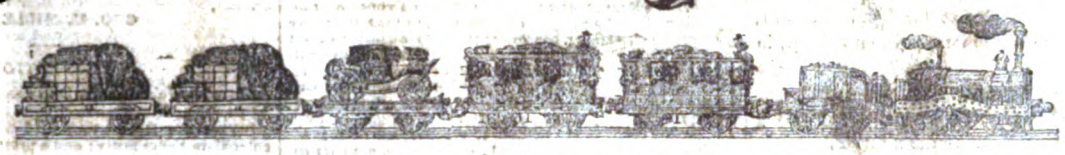
THE RAILWAY CALENDAR FOR 1841, illustrated with an elaborate and splendidly executed MAP of the RAILWAYS OF ENGLAND AND WALES, with their immediate vicinity, on a new and original plan, containing more information than was ever yet conveyed in so small a space.

The CALENDAR contains LORD SEYMOUR'S ACT for the Regulation of Railways, *verbatim*, and a compendium of Railway Information; besides answering every purpose of a general Almanack.

Price 1s. 6d.—In Case for the pocket, 4s.; mounted on canvass and rollers 5s.—In neat frame, 5s. 6d.

Published at 122, Fleet-street; and sold by all Booksellers and Newsmen.

This day is published, price 6d.,



RAILWAY TRANSIT, or the Means of ensuring Safety in Railway Travelling. A Letter to the Right Hon. Henry Labouchere, M.P., President of the Board of Trade.

By FRANCIS ROUBILIAC CONDER, Civil Engineer.
John Weale, Architectural Library, High Holborn.

LONDON: Printed by JOHN THOMAS NORRIS, 147 and 38, Aldersgate-street, in the Parish of St. Botolph, Without Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, February 6, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 163. Vol. IV.—No. 7.] SATURDAY, FEBRUARY 13, 1841. [Price, with Supplement, 6d.

MANCHESTER AND BIRMINGHAM RAILWAY.—TENDERS FOR LOANS.—The Directors of the Manchester and Birmingham Railway Company are now prepared to Grant Mortgages (under the powers of their Act of Parliament of the Tolls and Works of their undertaking, as a security for loans of money in sums of not less than £500 on each mortgage, and for the periods of four, five, six, or seven years, at the option of the lender. Interest warrants, calculated at the rate of £5 per cent per annum, and payable at the company's bankers, in London, or Manchester, on the half-yearly days on which the interest will become due during the whole period of the loan, will be delivered to the lender with the mortgages.

Particulars, explaining the peculiar eligibility of this security, may be obtained at the Company's offices, No. 43, Piccadilly; or at the office of Slater and Heelis, Princess street, Manchester.

THOMAS ASHTON, Chairman.

Manchester, 12th January, 1841.
43, Piccadilly.

MANCHESTER AND BIRMINGHAM EXTENSION RAILWAY COMPANY.—TO SCRIPHOLDERS.—Company's Offices, Bond-street, Manchester, January 29th, 1841.—Notice is hereby given,—That the time limited for the deposit of Scrip Certificates by the present holders, being the purchasers thereof, has been extended to SATURDAY NEXT, the 6th day of February, after which day no such scrip will be received for deposit, nor will the holders thereof be entitled to the benefit of any share or interest in the funds of the Company in respect of the same; and all out-standing Scrip Certificates will thenceforth become, in the hands of purchasers, void and of none effect.—By order of the Provisional Directors.

RICHARD FOSS, Secretary.

NORTHERN AND EASTERN RAILWAY.—Notice is hereby given,—That the next Half-yearly Meeting of the Proprietors of this Company will be held pursuant to the Act of Parliament, on Thursday, the 18th day of February, instant, at two o'clock precisely, at the London Tavern, Bishopsgate-street, at which meeting, the confirmation of the forfeiture of certain shares, upon which the 7th and 8th Calls have not been paid, and which shares have been duly forfeited by Resolution of the Board of Directors of the 10th September, 1840, will be proposed.

WILLIAM CRAWSHAY, Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, 2nd February, 1841.

ULSTER RAILWAY COMPANY.—In compliance with a Resolution of the Directors, this day entered into, I hereby give Notice, That they have made a Ninth Call, for the Sum of £2 10s. Sterling, on each and every Share of the Company's Stock. Payment to be made on or before the 1st day of March next, to the Northern Banking Company, Belfast, or any of their Branches; to Messrs. Boyle, Low, Pim, and Co., their Agents in Dublin; or to Messrs. Brown, Shipley, and Co., Liverpool.

Dated at the Ulster Railway Office, Belfast, this 7th day of January, 1841.

JAMES GODDARD, Chairman of Directors.

In tendering the Money as above, it will be necessary to state the number of each share on which the instalment is paid.

Interest at the rate of five per cent. per annum will be allowed to the first of March on all sums paid of this call in advance.

NOTICE.—R. B. WATSON & Co., of Leeds, beg to acquaint their friends and the public, that they have opened a branch house, in Hull, for the sale and purchase of shares of all descriptions, under the firm of R. B. Watson and Bell.

R. B. W. has known Hull for thirty years, and Leeds for twenty-five, having lived in the former place twenty years, and in the latter ten.

NORTH KENT RAILWAY, Office, 42, London-street.—Every information relative to this undertaking may be obtained by application at the above office, between the hours of 10 and 4 o'clock daily.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value: price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

Now ready, in 1 vol. quarto, 600 pages and 17 splendidly executed engravings of the various Classes of Locomotive Engines and Carriages, a Railway Map of the United Kingdom, &c., &c., price £1 11s. 6d.,

TAFF VALE RAILWAY.—Notice is hereby given, That the next Half-Yearly General Meeting of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Angel Inn, Cardiff, on Tuesday, the 23rd of February instant, at One o'clock, for the general purposes of business.

The Chair will be taken at Half-past One o'clock.

JOHN GUEST, Chairman.

The Transfer Books will be closed on the 16th inst., and will not be opened until after the said Half-Yearly General Meeting on the 23rd inst.

By order of the Board,
JOSEPH BALL, Secretary.

Railway Office, Cardiff, Feb. 6, 1841.

WATERPROOF LUGGAGE COVERS.—Manufactured by John Emes, late Milton and Co.), Cut Side, Limehouse, London, for Railway Trucks, Waggons, Barges, &c. The great improvement in the manufacture of these Covers, which are now in use on the principal Lines, and which can be recommended with confidence to the notice of Dock and Railway Companies; Barge and Waggon Proprietors, Contractors, Builders, and others, as an article of durability, possessing all the necessary qualities—viz., that of being perfectly Waterproof, and flexible, and not subject to adhesion, a fault much complained of in tarred Cloths; and can be made of either light or heavy quality to suit the purposes required. It is also prepared for covering Roofs, Verandas Coach and Guard Aprons, Horse Cloths, &c.

A supply of Covers on hand for hire, to Builders, Excavators, Bargeowners, &c., requiring temporary Covering, Rick Cloths, Poles, Blocks, Cordage, &c.

SOUTH-EASTERN RAILWAY COMPANY.—Notice of Call.—The Directors having this day made a CALL of FIVE POUNDS per Share, from the Subscribers to, and Proprietors of, this undertaking, have directed that the same be payable on Monday, the 15th day of February next, at either of the undermentioned places, viz.:—

London—Messrs. Glyn and Co., bankers, Lombard street.
Liverpool—Messrs. Moss and Co., and Messrs. Bansel and Co., bankers.
Manchester—Messrs. Jones, Loyd, and Co., bankers.
Leeds—Messrs. Beckett, Blands, and Co., bankers.
York—The Union Banking Company.
Dover—Messrs. Fector and Co., and Messrs. Latham and Co., bankers.
Ashford—Messrs. Jemmett and Co., bankers.
Cranbrook—Messrs. Wilmshurst and Co., bankers.
Tunbridge and Tunbridge Wells—Messrs. Feeching and Sons, bankers.
The Country Branches of the London and County Banking Company.

The Proprietors are hereby required to pay the same accordingly

Dated this 19th day of January, 1841.

T. W. TYNDALE,
Chairman of the Board of Directors.
J. S. YEATS, Secretary.

Railway Office, 10, Coleman street, London.

THE LONDON STOCK AND SHARE LIST, published every Saturday evening. Terms, £1 1s per annum. Postage, 9s extra, payable in advance.

This List contains the closing prices of each day's actual transactions in the Stock Exchange, from Monday to Saturday inclusive. The length in miles, number of shares, amount per share, amount paid on calls, amount of traffic, last dividend, and present value of the chief Railways in the kingdom.
